AUDUBON BIRD PLATES.

IN our next issue will be given the sixth of the series of half-tone reproductions of Audubon's famous bird portraits, from the rare first edition. It will be of the redhead duck. The list of plates already printed and to come includes:

THE BLACK DUCK, Sept. 26, 1896.
THE PRAIRIE CHICKEN, Oct. 24.
THE CANVASBACK DUCK, Nov. 21.
THE WILLOW PTARMIGAN, Dec. 19.
THE AMERICAN GOLDEN PLOVER, Feb. 27, 1897.
THE REDHEAD DUCK, July 10.
THE SHOVELLER DUCK.
THE PURPLE SANDPIPER.

CAMP FIRES AND FOREST FIRES.

IN the second annual report of Chief Fire Warden C. C. Andrews, of Minnesota, which has just been issued, responses are given from the several counties of the State to the question, "What are the principal dangers or causes of forest fires, and how how can they be lessened?" Out of sixty replies twenty-five ascribe the chief danger to hunters and campers. Outside hunters, run the answers, fishing parties, shotguns, non-resident hunters; by the time the hills are on fire the hunters are gone—hunters leaving camp fires; the best thing is to make an example of some of them—non-resident hunters and fishers—carelessness of duck and chicken hunters—hunters coming up from the cities in the fall—unextinguished camp fires of indifferent and lawless men passing through the woods. Nevertheless, in a total of eighty-seven fires the report records for the year 1896, only eleven are ascribed to hunters and fishermen, while land clearing is responsible for twelve, locomotives for nine, and other causes twenty-two, leaving thirty-three unaccounted for. Thus the comparative degree of danger imputed to hunters by the responses is not substantiated by the actual record, neither as to number nor as to extent of territory burned and damage done.

On the other hand, eleven forest fires caused by hunters and fishermen are just eleven more than there is any excuse for. No sportsman should leave behind him a fire-devastated country as the cursed fruit of his carelessness, thoughtless stupidity or criminal indifference. He should not permit his pleasure-seeking to result in ruin of prairie or woodland.

The average conflagration caused by campers is due to thoughtlessness or ignorance. The camp-fire is kindled in a spot where it is certain to spread to inflammable material in contact, and where, when once started, there can be no possible mastery of it. Or camp is abandoned and the fire is left burning, subsequently to communicate and spread. The tyro is apt to be blissfully ignorant of the dire result which may attend his striking a match in the woods. The man from the East cannot begin to realize until he witnesses it what a terrible phenomenon is a Western forest fire, how quick it is to start, how fierce to burn, how impossible to subdue. Only when one has had the teaching of actual observation can it be understood that an abandoned camp-fire may smoulder for days and days, making its way below the surface, until at last, coming to the top, it is fanned into flame. Of a hunting party in the Rockies, the members most in dread of setting the woods on fire are the old guides who have had the longest experience.

There are a few rules, the careful observance of which will prevent disaster from camp-fires, and which, though they are extremely simple and easy of observance, are often disregarded.

Never build a fire where its flame can communicate to grass or brush or branches of trees.

Never build a fire where the sparks can be carried to brush or trees, or leaves or grass.

Never build a fire without first noting the lay of the land with respect to controlling it after it is kindled.

Never leave camp for the day with the fire to burn unattended. Extinguish it thoroughly.

Under no circumstances, when moving camp, leave the fire to burn or smoulder. Put it out.

To extinguish a fire built upon the ground where there is turf, the roots of trees or other vegetable matter in the soil, pour water upon it until the ground is thoroughly soaked; then dig around about and well outside the circumference, throwing the earth in toward the center, and then wet it down again. It is cheaper to tote water even up hill for this purpose, than to bear the after burden of responsibility on one's conscience for a conflagration due to laziness or shiftlessness.

There is no fire more grateful than that which boils your coffee at the end of a long day's ride or tramp or paddle; no other one in all the world with the magic of that glow whose flame illumines the whispering pines and, sends its ephemeral sparks shooting and dancing and darting and dying, up into the upper mystery of night, with the stars beyond shining ineffably serene and clear. A sportsman's every camp-fire, whether it be of humble stomach-satisfying utility or spirit-uplifting sentiment, should be a blaze of blessed memory, unmarred by conscience pangs of disaster consequent upon its neglect.

Put out the fire.

A MONTANA ELK SCANDAL.

OUR Chicago correspondence this week reports the anticipated arrival in that city of a consignment of live game on its way to preserves further East. Among the game are buffalo from the Allard herd in Montana, and elk from Jackson's Hole, Wyo. The elk, we take it, are from the Moose Head ranch lot, illegally captured in the snow last winter. The case has attracted some attention in Wyoming, but by no means all the prompt official attention that should have been given to it.

The facts, as related by Attorney-General Benjamin Fowler in an official opinion submitted to Governor Richards in May, are briefly these: Some time during the winter, in a season of deep snows, seventy-seven wild elk entered through an open gate the fenced premises of J. A. Adams, of Jackson, Wyo. The gate was closed behind them and the elk were thereupon impounded in the corral, where they were held in possession by Adams and fed upon the hay ricks.

Section 14 of the Wyoming game law provides that it shall be unlawful at any time whatever to capture elk by means of any trap. Under this law, the game clearly having been trapped, the Deputy Game Warden of the county made a demand in April for the instant release of the seventy-seven elk. Mr. Adams refused to comply with the order, on the ground that, as he put it, "the elk were simply corralled without any effort at hunting or pursuing, on my own premises, while they were in the act of depredating upon my pasture land and hay ricks, inside my inclosure." But for his taking them into his possession, he added, they probably would have perished of starvation; and he insisted that he was holding the elk for domestication and not for unlawful export from the State.

The legal aspect of the case is summed up by the Attorney-General in these words:

> There is no doubt but that the ownership of the elk in question is in the State of Wyoming, and that the action of Mr. Adams in continuing to hold them contrary to the demand of the State game warden is in absolute violation, not only of the statutory laws of this commonwealth, but also of the well-settled principle that the ownership of such game is in the State. There is no way in which a private individual can acquire any ownership to game and fish except by proceeding in such manner as the statutes of the State may direct. Various methods are provided under the act of Feb. 20, 1895, by which game can be hunted and killed for food, and also by which game can be captured for the purpose of shipping to supply public parks, zoölogical gardens and places of public amusement. There has been no expressed intention on the part of the State, through its law-making power, to provide for individuals capturing game for the purpose of domesticating them, and thereby securing a property contrary to the ownership of the State, and until the Legislature makes such a provision, the authority of the State game warden to order the release and to insist that the game so held shall be given their freedom cannot be disputed. If a party can hold seventy-seven elk for the purpose of domesticating them, it would not be long before all the wild game in this State would become the property of private owners, and the State would have no ownership or control over it.
>
> In the letter which you have submitted on the part of Mr. Adams, he calls special attention to the fact that he has been a public benefactor to the extent of allowing wild game to come within his inclosure, to feed from his hay-stacks, and that he has thereby saved them from starvation. This action on the part of Mr. Adams was certainly commendable. He has fed the property of the State with his own hay, and thereby prevented it from destruction. There was no law, however, which compelled him to do this, and there is no way in which he can secure any compensation for caring for the property of the State except by action of the State Legislature. He certainly cannot appropriate the property of the State to his own use because he has been a philanthropist to the extent of feeding these animals in the manner which he has suggested.
>
> I am clearly of the opinion that the action of the State game warden and of his deputy, in demanding the immediate release of the elk held within Mr. Adams's inclosure, was not only justified under the statute, but was clearly in the line of their manifest duty as the guardians of the game and fish within the borders of the State.
>
> I would suggest that a formal demand be made at once for the immediate release of the seventy seven head of elk held by Mr. Adams by the State game warden, personally or through his deputy, and that, on account of a misunderstanding on Mr. Adams's part, no criminal proceedings be instituted in the event that the request be complied with. However, if there should be a renewed failure, the matter should be referred to the prosecuting attorney of Uinta county, and, if necessary, a civil action also be at once commenced for the purpose of maintaining the rights of the State as the proper and legal owner of the animals so held.

This very clear and entirely sound exposition of the law governing the case, and of the duty of the game warden was sent to the Governor on May 14, but up to the present time no further steps are known to have been taken by State or local authorities to vindicate the law and to restore to the State its own property. Either from lethargy or because the officials of Uinta county "stand in with" the Moose Head ranch proprietors, the game has been retained in gross violation and contempt of the law. The most scandalous feature of the case is the apparent connivance of the county officers, who, by their refusal to act in the matter, are violating their oaths of office.

The holders have even set up the claim that because they have fed the elk, and by so doing have saved public property from destruction, the State is indebted to them for the service, and that in lieu of other remuneration they have a right to hold the elk as compensation. This is of course a bald subterfuge, by which it is sought to cover up the unlawfulness of the original taking into possession; and even if it were a well founded claim, the value of the hay eaten would not be reckoned as equivalent to that of the elk by any other tribunal than one composed of the ranchers sitting as court, judge and jury on their own case. The form of procedure would not hold between private individuals. If the Moose Head ranchmen had unlawfully corralled a bunch of seventy-seven horses they would have had a lovely time in making their hay rick bluff. An affair of this nature between private citizens would be settled very expeditiously, and the owner of the horses would go home with his property. When the question involved is of private greed and public property, the State is shown to be less powerful than an individual to maintain its rights.

If our surmise is correct, that the elk now on the way East from Jackson are a part of the lot of seventy-seven unlawfully trapped elk of Moose Head ranch, the inference is that the Wyoming authorities have been scandalously derelict in their duty, for they have practically if not intentionally abetted and connived at the robbery of public possessions. Inasmuch as the statute expressly forbids the capture of elk for export from the State, the shipment of these animals presents a new phase of the case, based upon which the claim of the State is changed from a demanded release of the game, to a collection of the penalties for its unlawful capture and export. If, on the other hand, the original stock of seventy-seven contraband elk is still intact in the Moose Head corrals, State Game Warden Gustave Schnitger should, by prompt action to compel their release, give the public a welcome assurance that the Wyoming game laws mean something for the actual protection of Wyoming game. As the matter now stands, it appears that if a raid on the Wyoming elk be committed on a big scale and in broad daylight the authorities will wink at it.

The stocking of Eastern game preserves with elk and other desirable species is a most worthy and highly commendable enterprise, and the available sources of game supply are such that robbery of public resources need not be resorted to. No owner of a preserve would wish to have any taint of questionable capture attached to his game

The Sportsman Tourist.

SHEEP AND SNOWSHOES.—III.

A Winter Hunt on the Summit of the Rockies.

The Start for the Mountains.

THE morning after our arrival at the agency dawned fair, brilliantly fair as morning can be nowhere else in all the world. The air was keen and stimulating as some strange elixir, nor could it be believed that this was the same medium breathed in the stupefying cities. A strange exhilaration filled the heart, the feet hardly felt the snow carpet which they trod. Distance was no more. The storm was gone, and the sky was imposingly bright and luminous. Beyond us, seemingly but a very little way, lay the mountains which we had come so far to see, and which now we for the first time beheld in the four days of our stay in the country. There they lay, these mountains, serried range and peak reaching back and always upward, mass and mass of them, like the low and crowded mountains of the southern Rockies, but with a fabric now and then shot full of great towering peaks that sprung boldly above the maze of lower summits, in a way not seen in the lower portions of the Rocky range. Between us and the mountains lay no long swelling series of foothills, but the plain ran clean to the edge of the peaks, which swept upright above them imperially bold. A great garment of white lay over all the prospect, and against this high light we could see the deep shadows of the sides opposite the blinding sun. A faint pink still lurked on the higher peaks as we looked, but for a wonder—and indeed for almost the only time on our trip—there was not a single storm cloud playing on the summit of any of the dozen high peaks. The wonderful and stirring panorama for the time lay before us as though to tempt and fascinate us into pursuit of its meaning. We uplifted our eyes.

It being now obvious that we were to have at least a brief stretch of passable weather, we hurried on our last preparations for our start. Our sled came up to the door of Maj. Steell's residence, and there we packed and unpacked and arranged our load. Near the door of the house was the protected box in which Maj. Steell keeps his thermometer—for in this part of Montana even a thermometer needs protection. As we passed by we took a casual look into the box, and were startled to see that the self-registering thermometer had reached the point of 15° below zero, and was even then but a degree or so above that mark. The air was so bright and still that it seemed absolutely impossible it should be so cold.

Schultz warned me that if I intended to make any photographs at the agency, it would be wise to do so at once, while the sun was shining, so I set about getting a few portraits of the party and outfit, with very pleasing success, as it proved when we reached the development of the pictures. In this connection, so long as I have been so particular already in describing our outfit, I should say that I got a new camera purposely for this trip, choosing that recommended by the best amateur photographer I know, Dr. Fuller, of Chicago; a 5×7 long-focus Premo, which I got of the Photo Stock Co., of Chicago. With this machine I could take pictures at long range or short range, on glass or film. By unscrewing the front half of the lens, and pulling out the back bellows of the box, I had an instrument not to be surpassed for long-range mountain views, and with the short box and ordinary lens I could make as good portraits and camp scenes as one could ask. It is a comfort to have a good tool, for it gives good results, and I did not regret the labor of taking the camera in with me. McChesney had a smaller camera, a little Bullseye Eastman machine, using films, with which he was singularly fortunate also, getting some of the best of our views. He made all his exposures as snap-shots, his machine not having a time device in the shutter. My own elaborate instrument had a time shutter with pneumatic release, so that I could make an exposure of any length I liked. I think I would have had still better results if the time shutter had been off my camera; and in this connection I want to say a word which I believe will be of great service to anyone contemplating photography in the mountains during winter: Time the exposure as short as you dare to make it, and then give it half that time; you will still be slow enough. Nearly all the best plates and the best film (Eastman) are made so fast that they need little time even in the latitude, say, of Chicago. In preliminary practice at Chicago with my camera we found the twenty-fifth of a second long enough for the middle of the day on open subjects (this with the Eastman film). I got a little book showing a table of exposures marked for all sorts of seasons, subjects and hours of the day, and to this book I gave serious study, for I wanted to make no errors. I think the tables therein given are very useful and accurate for ordinary regions, but it is without doubt true that the light in the Rockies during winter is actinically about 20 per cent. faster than the light at even the same season in the eastern part of the United States. I studied my tables the best I could, and knowing from earlier experience in the winter mountains that the pictures should be made fast, I allowed yet a little for the rapidity of the light beyond what the tables told me. Even then I dared not make my pictures fast enough, and though I got beautiful pictures, in very many cases we had to restrain the negatives in developing, and in other cases I killed good views by giving too much time. This, in spite of the fact that I never went over a quarter of a second even in badly lighted scenes. If I had set my shutter right up to the one hundredth of a second I would have had a better lot of pictures. You can't make an exposure too fast for the winter light in the middle of the day in the Rocky Mountains. I had only a few glass plates along, on which I wished to make some good portraits, and this work I entrusted to a professional photographer who happened to be at the reservation at the time we did this work. He set the shutter at one second, the day being very dull and overcast, and the hour so late as 3:30 P. M. The pictures were made out of doors, but there was no glare nor any visible shadow on the snow. Result: a set of portraits overtimed at least four times too much! While I have no reason to complain of the pictures I got on this trip, I think if I were going to make such pictures again in that country, I would make everything straight instantaneous, bright day or dull. The snow adds very much to the intensity of the light, and the whole atmosphere is unspeakably luminous and clear. It is certainly a lovely country for photographing purposes.

At last our pictures were all made, the last of these being a shot or two at Maj. Steell himself, and his hospitable home; then we piled on top our loaded sled and pulled out on the serious beginning of our journey. Hardly had we gotten under way before the storm shut down again, the mountains disappeared instantly, and the whole face of the plains became a moving mass of grayish white. We were on the plains in winter.

Boak, our teamster, proved himself a good man with a horse outfit, and he clung to the winding trail which was to take us into the valley of the Two Medicine. The going was slow and bad, the snow, of course, getting deeper and deeper as we approached the edge of the high country.

It was about 2 o'clock in the afternoon, perhaps, when we got so far along as the ranch of old John Monroe, whom we found to be somewhat of a character. He is a half-breed, of a Blackfoot mother, his father being old Hugh Monroe, one of the old-time characters of the West, who died not many years ago at a very advanced age. John Monroe himself is some sixty years old, as near as he can figure it, and is living on the Blackfoot reservation with his third wife, a Cree woman. John is a tall, straight, white-haired man, knotted and gnarled, but on foot or on snowshoes he is a fast one, and hard to follow, even for a young and active man. We found it a trifle difficult to talk with him, for his language is a good deal of a mixture. With his wife he speaks Cree, of course, and at the agency he speaks the best Piegan he can muster, which, they say, isn't very good. He makes a sort of bluff at a little English, but pieces this out with about equal portions of very bad French. When he wants to say something very impressive and very important to you, he uses all four or five of his languages at once or in alternation, and the result is a little bit confusing.

Some time within the next two hours we arrived at Hunter Powell's ranch, and stopped for a time to give the team a rest. Here we met Powell, and also Campbell Monroe, John's son, who speaks very much better English than his father, and who is also married to a Cree woman.

A Possible Bear Den.

Both Campbell Monroe and Hunter Powell confirmed the stories we had heard of the presence of sheep in the Two Medicine country, and Campbell Monroe set at least one member of the party clear on edge by saying that he had that week seen what he took to be the den of a bear on the mountain side just above the lake where we would be encamped. He said that he had found a little round hole in the show, with some brush sticking out about it in a spot or two, and that a faint steam was coming up from the hole. Old John and everybody else said that this was very likely the den of a bear. Campbell had not molested the spot, as he said he did not care to do this alone; and everybody there said it was a most unwise thing to stir up a bear in his den, as he was sure to fight then, and was far more dangerous than under any other circumstances. I offered Campbell Monroe $10 if he would come up and show us the hole, and he said he would come early the next week (which he never did). Powell thought he could come pretty near to finding the place, as from the description he believed it to be near a den he had once found in the rocks during the fall, a place which he thought was regularly used by bears for denning up, and to which he thought he could get without much trouble.

I thought I was going to get my grizzly then sure, and when I said so old Boak began a most dreadful string of prophecies about the folly of tackling a bear in his hole. But Billy Jackson said it would be the simplest thing in the world to get the bear out of that, if we really got his den and found him home. "If he's in there we'll get him out all right," said Billy. "Yes," said Boak, "ef he's in there he'll come out by hisself without no urgin', an' he'll make the snow fly where he lands, too, you kin gamble on that. About then you fellers 'll wish't you was up a tree, an' you can't git to no tree, neither. You just try a bear fight on snowshoes onct an' you'll git enough mighty quick, I tell ye. Woof! Won't he come a-boilin' up through the roof o' his snow house when you fellers stir him up! But I don't think ary one of you is a-goin' to tackle it, so I guess they ain't no danger. If any of you do, why I'll be back here with the team in about two weeks an' I'll take the remains out to the railroad then."

There was one more ranch between Powell's place and the lower Two Medicine Lake, and as this was only about four or five miles above Powell's, we made it in about an hour. We stopped then at the last habitation on the reservation on that side, the ranch of a man by the name of Cook, who lives there with his Indian family. We were still some eight or ten miles from our intended camping place, but the way was doubtful and the weather was very threatening, the cold growing intense as night approached; so Schultz thought it would be best to stop at Cook's for the night, in spite of our anxiety to finally get under the lodge roof.

Morning dawned fair and clear and very cold, so that we could get a good notion of the icy realm that lay ahead of us. Schultz took the field glasses, and went out for a look at the mountains. He pointed out to us a distinct trail made by sheep far up on a distant mountain side, probably six or eight miles away. When the snow is heavy on the mountains it is possible to see the game trails at very great distances, and this in a way makes the hunting very much easier than when there is no snow, and the game itself must be sighted before the hunter has much notion of where it is.

Cook's ranch lies right at the foot of a sharp ridge which runs up some hundreds of feet above his little valley. Once on top of this ridge, as we learned, the snow would be either so thin or so hard packed that the team could get along all right, and we could travel rapidly almost to the Two Medicine Lake. This we were glad to hear, for we had now been five days in getting this far, not more than twenty-five or thirty miles from our start at the railroad, and time was short for the two city men. But to get to the top of the ridge was not so simple as it seemed. It was easy for us men, who put on our snowshoes and went up with no trouble but a general shortness of breath; but the poor horses had a more serious time of it. The extent of the rise was evident when we got to the top, for below us Cook's ranch house seemed like a little toy affair. Yet above us there was still another ridge, and beyond us, over where we intended to camp, rose the white mountains, their feet now seen to be wrapped in black and dense pine timber, while above the timber line the peaks rose bare and glittering.

As we struck the top of our ridge and found a bit of easy sledding for the team we made good time, and soon we got to a place where we seemed to look right off over the edge of the world, a sharp valley intervening between us and the mountain range across the lake.

We were now all feeling in great spirits and perfect health, and were overjoyed to think ourselves so nearly and so easily within reach of our hunting grounds. I fancy there are very few big game regions in America where one can get sheep and goats within so short a march from the railroad. Yet the Great Northern railroad runs directly over the range of mountains that now lay before us, and the road was less than six miles from where we then stood. Our friends said that the railroad did not seem to disturb the game a great deal, and it is a fact that some of the best sheep and goat country is within five miles of the tracks, though not within five miles of a station or an available trail. This, it should be remembered, was on one of Uncle Sam's game preserves. We were advised that not half a dozen Indians of the Blackfeet ever did much hunting in these mountains. O-to-kò-mi was about the best and most eager hunter of them all, his personal preference being for sheep, of which he killed a great many at times. O-to-kò-mi had a way of plowing through the snow somehow until he got up to the tops of the mountains, where the snow and ice were hard enough to render snowshoes unnecessary. He did well enough on the shoes, however, though not of very great experience at shoeing, and soon proved himself a man of great endurance and power. Though not a tall man, he was well developed and muscular, and a harder man to follow all day on the hunt one does not often meet. McChesney was on the shoes for the first time in his life that morning, and was of course meeting the awkward experiences which are part of learning the trade, but he took to it kindly enough to assure his success in the work ahead. Of course a man who first puts on the webs feels as a cat does with walnut shells on its feet. He steps very far and hard, and puts his feet down hard, flapping them down rather than letting them slide forward and drop of themselves; but it takes some pluck to face the Rockies as a novice on the webs, and McChesney was as good a beginner on the shoes as one would be apt to meet. He came out at the end of the trip, of course, entitled to tell his friends in the East a few things about the business of actual snowshoeing under conditions perhaps as severe as obtain in any country.

The Descent to the Lake.

At noon we paused on top of the high ridge, where I made my pictures. Our leaders sent couriers ahead to spy out the descent into the valley of the Two Medicine. It was all right on top of the high ridge, but we had to get down again now, and between us and the lake lay a strip of timber where the snow was soft and probably 5 or 6ft. deep, so that it was obvious that if we got through at all it was going to be a bit of a task. "Oh," said Boak, "all you need is plenty of faith. A man can drive a team o' horses anywheres on earth if he only has faith," a statement which seemed to me to offer a key to some sorts of Western driving of a somewhat pyrotechnic sort which it has been my fortune to witness at odd times in the past.

When we stopped at the end of sled navigation, Hunter Powell rode on ahead and soon was out of sight far below us in the heavy timber. It was chilly work waiting around in the cold, so I left the others of the party and started on down across country to the lake alone, it being but a few miles further to the place which was pointed out as our probable camping spot.

In the Hunting Country.

From the edge of the lake I had a view of the circle of great mountains, which came down close on every hand. The lake I saw to be about three-quarters of a mile wide and a couple of miles or more in length, the upper end of it seeming to run directly up against a wall of abrupt mountains. The big mountain at the head of the view across the lake we had been watching for a long time, and I knew it to be called Rising Wolf Mountain, after John Monroe's father, Hugh Monroe, whose Indian name was the equivalent for "Wolf-getting-up." Bold and wild enough this magnificent peak seemed as I looked at it, and wild enough the wilderness about, with its terrible silence and its impassive and uninviting front. Yet all around were other peaks, and it is proof enough of the character of the country to say that only one mountain of all these about the lake had ever been given a name.

It was growing dusky when at last Boak appeared on the white surface of the frozen lake, and we knew that we were at last safe, with our camp supplies, within reach of our main camp and on the edge of our hunting grounds. We got as far toward the head of the lake as we could, and set about finding a place to put up our lodge. As though to drive us away, the weather now grew colder, and a storm of wind and snow set in.

The Building of the Winter Camp.

The task of making camp was by no means as simple as might be thought. In the first place, we had to get fifteen poles, each about 15 to 20ft. long, and such poles do not grow all in a bunch in any forest. We needed to be near the lake for water, and we needed to have something of the forest for a shelter. It was evident we would have a hard run for it if we got into camp that night.

Billy and Schultz at length decided upon the spot for our lodge, and we all fell to work with our snowshoes to clean off the snow from the ground. This again sounds easy, but is not easy by any means. The snow was 3 or 4ft. deep at that point, and matted in with frozen boughs and roots, and we needed to dig a hole rather more than 15ft. across and clear down to bed-rock. We dug and dug and chopped and chopped, and threw out blocks and chunks of snow and ice, and at last developed the interesting fact that we were on top of a sheet of ice, this being in a part of the overflow of a little creek that came down to the lake near by, but which was entirely concealed under the snow. As there was no water, and as the ice was but about a foot thick, we concluded not to surrender our claim, but went on digging. Billy thought we would not have time to put up the lodge that night, but would have to make a shelter by throwing the lodge cover over a pole, sleeping under it the best we could. It was not a very cheerful prospect. The night was coming on very cold, and the snow began

to fall steadily, in a cold, determined sort of way, which made one's spirits drop only to contemplate. We could not get the horses through the snow away from the ice, but left them standing with drooping heads, covered up in a blanket of snow, and shivering in the keen wind that swept down the lake. After the sled got up to the edge of the lake and we finally got our luggage all over to the site of the lodge, it was nearly dark, and we did not have half a dozen lodge poles to our name. The bundles and boxes and cases about us were rapidly disappearing under a sheet of snow, and the air was growing colder very fast, so that we felt chilly as soon as we stopped shoveling snow. We had had nothing to eat since morning, and nobody was saying anything worth listening to, though under the skilled direction of Schultz and Jackson the work of making the camp was going on after a fashion.

A Stroke of Genius.

Billy Jackson is a mighty good man to have along, because he is always cheerful, no matter what the circumstances may be. Billy joked and laughed as we dug away at the ice at the bottom of our lodge hole, and finally announced his design of getting something to eat before we went any further. We had already built a big log fire in the middle of the hole in the snow, and this was melting snow about as fast as we could chop it. Billy took possession of a corner of this fire, and soon had a big kettle full of grub simmering away. He broke open a box or two that he found near at hand, and threw into the big kettle everything he could find—beans, tomatoes, pork, and I know not what else, breaking in also some pilot biscuits and odds and ends of material such as came to view in the hurried hunt in the snow. He also got on a pot of coffee, and in a short time the supper was ready. We all sat around on the edge of the snow pit, each man with a tin plate and a cup of coffee, the snow meantime falling thick and fast, and the temperature dropping every moment as night came on. Before our open-air supper was over we resembled a series of white-muffled mummies, and the thick snowflakes filled the plates nearly as fast as even our rude appetites emptied them. In a few moments, however, the shrewdness of Billy's plan was evident. The supper was a stroke of genius. We were no longer silent and dispirited, but became light-hearted and hopeful as our hunger vanished. We went with redoubled energy at the long task of shoveling out the ice and snow, and soon had a wide space clean d clean down to the ground. Schultz and O-to-kò-mi went out into the woods round about, and one by one brought in some lodge poles, which, while not the straightest in the world, were yet fit for service. Boak resurrected a shovel from somewhere in the cargo, and kept pecking away at the ice, until at last we relinquished our first design of making our beds on top of the lower sheet of ice, and determined to go clear to the ground before we quit digging. Hunter Powell found some firewood, and the rest of us hustled great piles of boughs from nearby balsams; so that by a couple of hours after dark our camp was gradually beginning to look at least like a possibility. All our work was then, of course, going on by the light of the fire, which cast odd shadows in the snowy air and upon the thick clumps of pine trees about us. The scene was so unusual and so unreal, that more than once I paused to ask myself if it were actual.

At length O-to-kò-mi fastened the ends of three of the lodge poles together, as they lay across the top of our pit in the snow. The top of the lodge was attached to the hoisting pole, and the three poles were spread out tripod fashion. Then we laid up the other poles against the top of the tripod, making a circle with their feet just inside the edge of the pit in the snow. Then the skin of the lodge was stretched around the lodge poles, and tightened by shoving the bottoms of the poles outward from the center. At last we were under cover! Then we hurried all the bags and bundles in out of the snow, piled up the bough beds, and made a rough arrangement of the interior of the lodge for the first night. The fire soon began to dry off the icy ground over which we had pitched our house, and gradually we began to dry out ourselves and to become more comfortable. It was nearly midnight before we had things in shape to stop work for the day, and we were all tired enough to rest. But we were very glad that we had pitched the lodge, and not gone into camp under a mere shelter, for the wind was coming up stronger and it was a very cold night. Billy's device of eating first and working afterward was all that saved us from an uncomfortable night of it. As it was, we slept fairly well, barring a few roots and knots which we found in our beds, and in the morning we all awoke hungry and hilarious.

The Lodge as a Winter House.

Since our return from this trip we have often been asked how we stood the intense cold of such a climate, with no better house than a canvas lodge, with no stove and no special features for retaining the heat. Some of our friends supposed that we kept fire in the lodge all night. This was not the case. While we were sitting in the lodge we kept up fire, not a very big fire either, and so long as this little blaze was going the lodge was warm. When we went to bed the fire went out, and we relied solely on our blankets to keep us warm, the thin walls of the lodge of course losing all the warmth very quickly after the fire went out. It was practically as cold in the lodge as it was out of doors then, but the snow and the wind were kept off by the canvas. It was necessary for one to get deep down into his blankets, and to cover up his head, leaving only the most diminutive hole open for his nose to stick out. If in the night one felt a cold streak creeping down his back, the remedy was to turn over, get his blankets closer up to his body, and to pull the flap of the blankets tightly over his head until the warmth of his breath had warmed up the interior of his bed. We crawled into bed for the first few nights with most of our clothing on, but gradually came to undress partially, as we found we slept better and were better rested in this way. Our wet stockings and other articles of wearing apparel we stuck up above our heads along the lodge poles and over ropes which we tied across from pole to pole. Here everything dried out very quickly, so that we always had dry clothing to put on in the morning. The more we studied the lodge as a camp house the more we liked it, and it is indeed the only really good tent for camping purposes, summer or winter.

One thing about the use of the lodge a novice learns very quickly, and that is to keep low down on the bottom of the concern, and not to stand upright. Ned Buntline, in one of his border books, makes mention of the fact that the "Indian chieftain was taking his comfort in his lodge, standing with his back to the fire, while Dove-eye, the lodge queen, was cooking supper as she sat crouched on the floor." Now it is entirely unlikely that any Indian chieftain ever did anything of the kind. He knew better than to stand up in the smoke and punish himself, and in all probability he kept as close to the floor as he could. We soon learned to do that at any rate.

A Squaw Architect.

The smoke was at times pretty bad in our lodge, especially before Madame Monroe, the Cree woman, came up one day, and took pity on us to the extent of setting up our lodge as it should be. Madame said that the trouble was that there was a bank of snow all about us, whereas a lodge should always be on a flat surface when possible, so the air can get under the edge of the lodge skin. Madame stretched the edge of our lodge tightly for us, holding it back with logs and pegs stuck down in the snow. Inside she constructed a lodge lining out of a piece of drilling which was intended for that purpose, but which had not been properly cut. This lining was fastened inside the lodge at the bottom, tight to the ground all around, by means of the loose bags and bundles which were thrown back of the beds. The top of the lining came just above our heads as we sat down, and the top did not fit to the lodge skin tightly, but was attached to the poles loosely, so that there was a spacious air chamber between the outer skin and the lining. Thus the air came under the edge of the lodge, passed up over the top of the lining, and so went on up through the hole in the top of the lodge, taking along with it all the smoke from the level of the lining top, though above that level it hung deep and dense. The Madame also advised us that our opening was left too large at the top of the lodge, and our door was too big and too loosely covered. She improved the door by stretching a piece of pole across its bottom, so that when anyone went in or out the flap always fell down straight behind him and shut up the hole of the door. We learned then what Schultz and Bily openly admitted, that no man can fix up a lodge as well as an Indian woman can. Madame Monroe had had long experience living in just this sort of house, and she savvied it a plenty.

How to Make a Lodge Fire.

A lodge can be rendered untenantable by the use of poor firewood, or by the injudicious use of good firewood. Schultz was particular to get the best and driest quaking asp he could find, this wood being split up into sections about 2 or 3ft. long, and not much thicker than one's arm. The fire was always made in the form of a pyramid, the sticks being crossed rail-fence fashion in the middle, their bottom ends spreading around fan shape. The top of the pyramid was always kept directly under the center of the lodge, and by no means was anyone allowed to build a hit-or-miss, scrambly fire with the sticks thrown on after any sort of fashion; nor was he permitted to put on a rotten or wet stick which would make smoke. After a time we all came to understand the etiquette of the lodge in these and other particulars, and to have a firmer admiration for this admirable dwelling devised by the native peoples of the plains.

O-to-ko-mi's Medicine Bird.

O-to-kò-mi, our Indian hunter, was wedded to many of the ways of the past, as we learned from Schultz and Billy Jackson. Superstitious to a degree, he has been known to leave a party in the mountains and go on back home alone, because some sign or other did not please him. Of course, O-to-kò-mi did not speak any English, and either Schultz or Billy interpreted for him. In the lodge, after we had our work pretty well finished, on the night of our arrival, O-to-kò-mi announced gravely that he was pretty sure he would see sheep to-morrow, as he had that afternoon seen his medicine bird (the raven). This bird, he said, had told him that there were sheep not very far away.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

ON THE EDGE OF THE GRAN CHACO.

TOLD BY WILLIAM KINGSBURY TO WILLIAM H. AVIS.

Chapter VI.

AFTER a breakfast of venison, dried ostrich, biscuit and mate, we struck out through the monte, which we found to be unusually thick and wild.

While we were crossing the next stretch of prairie, Tigre brought to us a muleta, which he had found in the grass. The muleta is a small species of armadillo, and is considered a great delicacy in the Argentine Republic. Its back and sides are covered with a bone-like shell, which is hinged here and there, thus allowing the animal to roll itself into a shell-protected ball. They weigh in the neighborhood of 5lbs. We had gone but a short way further when Chena, not to be outdone by Tigre, trotted to the side of my horse carrying a muleta in her mouth. As she depended on her nose rather than her eyes, it wasn't long before she had another one. We put them in a bag carried for that very purpose, and congratulated one another on the prospects of a feast at supper time. After working our way through another monte we came to a cañada four or five miles in width. It was covered with cattle and horses, and on its edge we could see the buildings of an estancia. The owner invited us to stop and have dinner with him. He said that we would find no more wire fences beyond his place and few estancias. He advised us to keep a sharp lookout, for we would soon be in a country considered unsafe, and where might was the only law observed by roving Indians and half-breed outlaws. He said that these delightful neighbors would enjoy nothing better than to cut our throats to gain possession of our outfit, should they meet us in force strong enough. We thanked him for his information, but told him that we considered we were perfectly able to give a good account of ourselves in case of attack. Had we been strangers in the Republic, we might have given greater heed to our well-intentioned host. We had not traveled the pampas, however, eleven years for nothing. We were well aware of the coyote caliber of the people he warned us against, and of their favorite pastime of slinking down upon some estancia in the middle of the night, and driving off large numbers of cattle and horses while the unsuspecting ranchmen slept. As these thieves are invariably armed with weapons of extremely ancient date, we also knew their deep respect for modern repeaters in the hands of resolute Americans and Englishmen. After a three hours' siesta in the shade of the buildings we started on. It took us fully two hours to cross the cañada. As we were in no hurry, we allowed the horses to walk the whole distance; in fact, unless we were hunting, we seldom sent the horses into a gallop. On the further side of the cañada, we entered one of the thickest and wildest montes we had ever seen. It seemed that all the varieties of trees of the Republic were growing here. So thick and rank grew the trees and the other vegetation, that we had great difficulty in forcing a passage through them. Gaudily-colored parrots and paroquets flashed from limb to limb, while signs of large game abounded on every hand. We went into camp on the further side of the monte; and for supper roasted the muletas in the shell. They were a treat, being in flavor similar to a young roasted pig.

While we were enjoying a siesta in the shade of a clump of algarroba trees the next day, we made out a great moving mass in the distance. Gradually it approached, and we saw that it was a tremendous herd of cattle. When the herd reached us we found it to be guarded by many mounted, well-armed men. An Englishman named Derwent, an old friend of mine, was in charge. Derwent and I had hunted a great deal together in times gone by, and as we had not seen one another for a long time, it was agreed that we would return with them to the edge of the last monte through which we had passed, and go into camp together. This took us three miles on the back track, and as Derwent and I went ahead, we shot three gamas and an ostrich before the rest reached the spot selected for the camp.

The herd numbered 7,000, and was for the estancia Rincon de San Antonio. Fifteen minutes after going into camp the herders had lassoed, downed and killed a young steer, and large pieces of beef were roasting in the flame of a large fire.

In my life of wandering I have looked upon many wild, strange sights, but as long as I live I will always remember the scene around the fire that night. There was no moon, but the stars shone brilliantly. When supper had been eaten vast quantities of wood were gathered from the monte and heaped on the fire. As the flames soared heavenward, carrying a rain of sparks with them, they cast about a circle of fluctuating light which caused the outside darkness to appear even darker than it really was. Gathered in this circle of light, some lying at full length upon the ground, some sitting and still others standing, but all unconsciously displaying poses of wild, untaught, natural grace, were the wildest, most reckless appearing lot of men I had ever looked upon. Wide open collars displaying brawny, sun-browned breasts; wide-brimmed hats set jauntily on the head and belts filled with weapons and ammunition, were features which caused the scene to stand out vivid in its reckless aspect. To heighten the strange wildness of the scene guitars tinkled on every hand, and to their soft accompaniment low, droning songs, not unpleasant to the ear, but, it seemed to me, mysteriously mournful as the æolian's wild, weird wail, moaned out on the soft night air. Despite their fierce appearance, however, these men made the truest of friends, and would risk life and limb to aid a friend in trouble. The Europeans and I smoked our pipes while the faces of the Gouchos and Indians were wreathed in rings of smoke from their glowing cigarillas.

Midnight had departed and the fire had burned to a huge bed of glowing coals before we betook ourselves to our blankets. Overhead, the stars twinkled brilliantly, while a faint breeze from the north played through the branches of the trees of the monte and seemed to murmur some of the strange songs we had listened to, while now and then the restless cry of some large animal sobbed out on the night from a distance. From about us on every hand came the steady maunch—maunch—maunch of thousands of feeding cattle, and mingled with the monotony of this sound could be heard the regular breathing of sleeping men. Suddenly, from out the bed of glowing coals, came human forms and I was surrounded by familiar faces, faces I had not looked upon for many years, for they were the faces of father, mother, sister and brothers; they smiled and gently spoke to me—I was in the land of dreams.

After an early breakfast with Derwent, we made ready for our departure. Just as the sun rose the herders started the immense body of cattle moving, and our small cavalcade set off in the opposite direction. In half an hour's time the herd had disappeared from view.

About the middle of the morning we made inquiry at an estancia and learned that the distance to the river was about twelve miles, and that we would strike a ranch owned by Juan Companion. This was good news indeed, for Juan Companion, who was a Frenchman, and I had camped and hunted together on many trips. I knew that if he had a ranch nearby it must be because there was a greater quantity of game in that neighborhood than elsewhere. Juan was a great hunter and would never be content to live in a poor game country. We made about eight miles in the direction of his place that afternoon, and camped by the side of a pool of brackish, though drinkable water, near the edge of a monte.

We had retired so late the night before, and had made such an early start in the morning, that we were completely tired out, and counted on a good night's rest. This, however, was not to be, for, hardly asleep, we were awakened by a racket among the horses. Chena and Tigre dashed out of camp in excitement, and we grasped our rifles and followed. The horses acted rather uneasy. They would paw the ground, snort, and walk back and forth until they reached the ends of their tethers. The dogs sniffed around for awhile, then Chena, followed by Tigre, broke away for the monte. Soon we heard them barking excitedly.

After scrambling among the trees in the dark for awhile, and getting torn and scratched by cactus thorns, we finally reached the dogs and found them jumping around the foot of a large tree in great excitement. After considerable trouble, we managed to gather some wood for a blaze, which revealed a large puma clinging closely to a branch directly over our heads and about 30ft. from the ground. "Now H.," said I, "here's your chance. You take the first shot, and remember the buck. Redeem yourself if you can." This sally caused H.'s eyes to shine, and his features became fixed with determination. Aiming carefully, he planted a bullet directly between the brute's gleaming

eyes. A tremor ran through the puma's body, it clung spasmodically to the limb for a second, then fell with a crash almost into the fire. The dogs sprang upon it instantly, but it was dead. H. had redeemed himself with interest; I had never seen any animal killed more suddenly. We skinned the puma and returned to camp.

Next morning my horse, Spotted Dick, was missing. Instead of tethering him with the manilla rope, as the others had done theirs, I had used my lasso. We found that some animal, possibly the puma, but more probably a fox, had chewed the lasso in two. After hunting for nearly three hours we found him on the further side of the monte. It was so late in the day by this time that we decided to stay where we were until the morrow.

Jim said that he could easily make my lariat as good as new, and stayed in camp. H. and I went to explore the monte. We hadn't gone far before the dogs struck a trail, and we soon heard them barking furiously off in the center of the monte. Hurrying forward we found that they had two wild pigs at bay; or, the pigs had them at bay; it was a hard matter to decide the point. The pigs snapped their tusks in a terrific manner, and the dogs showed their respect by keeping at a safe distance. We shot the pigs, and, as we were afraid that there might be a drove, did not stop to take any of the meat. Soon after this the dogs treed a monte cat, which I shot and skinned, as their hide is very beautiful.

In a swampy piece of prairie we came across a lagoon filled with ducks and geese, and were successful in getting some.

The next morning we reached the house of my friend, Juan Companion, who declared that we would have to spend at least a month with him. He introduced us to his wife, a full-blooded Indian. Juan was very enthusiastic in his descriptions of the hunting and fishing to be had in his vicinity, and said that there was a greater variety of game to be found in that neighborbood than anywhere else in the Republic. He had six dogs: five greyhounds mixed with other breeds, the sixth an otter hound. As Juan continued to give descriptions of the excellent hunting, and pressed us so strongly, we agreed to stay for a week. He proposed an ostrich hunt next morning.

The eastern sky gave golden promise of a beautiful day as we drove away from the house. In twenty minutes we reached a narrow stretch of cañada. On the northern edge of the cañada flowed the river, while its southern edge was skirted by a dense monte. To the west lay a large lagoon or lake, which was connected with the river by a narrow outlet. Juan explained that the best way would be to hunt from east to west toward the lagoon. After placing Jim and H. near the center of the cañada and telling me to take my position near the river, Juan rode over near the monte's edge. When all was ready we started on an easy gallop in the direction of the lagoon. While the grass grew very rank and thick, still, it was not so high as to hide us from one another.

Juan was first to reach the lagoon, and he signaled for us close up, quick. We put spurs to our horses and were pressing forward at a sharp gallop when a troop containing fully fifty ostriches started pell-mell through the grass ahead of us. Soon all was hustle and excitement, for the ostriches, finding themselves hopelessly penned in in the rear by dogs and mounted men, rushed, first in the direction of the southwestern end of the lagoon, hoping to escape into the monte by that way. Here, however, they found their way barred by Juan, with his old-style Winchester. Swinging to the north, the troop dashed wildly along the edge of the lagoon in the direction of the river. Here was our chance, and we took it. Now, the band are near the river's edge, and as a few more shots ring out, into the water dash the whole troop, and soon are flopping, scrambling and swimming for the other shore. Now, those birds may not have been swimming; they were getting there, though, just the same. There is one thing certain: they were not walking on the bottom, for the river is over 20ft. deep and 100yds. wide at that place. When we had collected the spoils we found we had fourteen birds. After skinning them and taking the best parts of the meat we returned to the house, arriving there about noon.

After supper we were lounging, smoking, and talking over our hunt, outside the house, when suddenly a tall figure, followed by an immense dog, strode silently among us from out the darkness. So quiet had been the approach, that they were in our circle before we knew it. Juan introduced the man to us as Rubio Antonio. In many respects Rubio was a remarkable man. He was a half-breed, and the only one of that class of people whom I ever recollect seeing with red hair and whiskers. He was nearly 6ft. in height, and very strong and wiry. His dog, Coffee, was a famous hunter, part bulldog and part mastiff. Coffee had wild, bloodshot eyes, and certainly was the fiercest looking canine I had ever laid eyes upon. He was covered with scars from head to tail, and Rubio told me one day that some of them had been received in an encounter with a puma. He said that the dog killed the puma, but nearly at the expense of his own life, as it took many weeks for him to recover from the wounds.

So fierce was the appearance of Coffee, and so little desire did he show to make friends with strangers, that it was some time before I overcame a habit of slipping my hand to the butt of my six-shooter whenever he would come near me. No man, woman or child loves a dog better than I do, but I confess that Coffee was a little too much for me. I gradually came to understand that his mind was centered entirely on the chase, and any little affection he might have to show was reserved for Rubio's little girl and wife. While we never knew him to attack a human being, still, he had a look which made me feel uncomfortable; after we got a little used to him, however, we didn't mind him so much as at first. While I never loved him to any extent, I must give him the credit of being the most fearless creature I ever knew. No matter what the animal, Coffee never hesitated an instant about attacking it.

Natural History.

SOME OF NATURE'S WAYS.

Two barn swallows made a nest under the balcony roof of our house. The little old man with his buff vest and swallow-tail coat used to sit by the old lady when she was on the nest and twitter to her by the hour. Perhaps he was congratulating her on her nice home or perhaps he would twit her of a fondness for another buff vest, or perhaps wondering if their young ones would be worn on the fall hats. Both of them would fly in and out while we were quite near. Soon the babies came and then the trouble began. Either because of the work of catching insects on the wing or because the nest only contained two young ones, the old birds became cross and would dart at any one who went to that side of the house. Every time one of the old birds came near the nest two big mouths were wide open for the small amount of food brought. On watching the nest closely we found that one old bird fed the young one at the right of the nest and the other one that at the left of the nest.

For several years we have had about the house a number of gray squirrels. They became quite tame, and one of them—we called him Bobby, because he had lost a part of his tail—would sit on a person's lap and eat or take nuts from the hand. Last seasor the nuts left over from previous year we thought were too dry for this pet, who had now been coming every spring for four or five years; so we cracked some of them to feed it. The other squirrels came around just then, and Bobby deliberately drew the cracked nuts into a heap and spread himself so as to cover the lot. He was willing that the others should eat uncracked nuts, but the easy ones were for him alone.

During the wet, cold weather of early June, we noticed a single song sparrow come under the balcony one evening just at dusk, and nestle in the vines, away from the wet and cold. After this she came every night about the same time until the fall. She never attempted to make a nest, although others did about her, but just came in for a night's lodging. At first we thought she might be a widow whose home and family had been destroyed, but later on we judged from her precise habits that she must have been an old maid. She never stayed out nights, but attended all the morning concerts.

One day I heard the distress cry of several birds from the lawn. As I approached an evergreen tree a robin flew toward me and back again to the tree. I soon located a blacksnake near the bird's nest and shot it, with a young robin in its mouth. The old bird did not fly away from fright, but as soon as the snake dropped to the ground she flew to the nest to look after her young. If ever a bird could talk this one told me of her troubles and thanked me for ending them. SAYVILLE.

LONG ISLAND.

Editor Forest and Stream:

I am glad to see that my "Cat Story" has drawn out more evidence in favor of the positive possession of reasoning powers in animals, as contrasted with the purely instinctive faculties, which they also share in common with the human race. I have seen two illustrations of the latter within a week, which will illustrate the difference. Sitting on the doorstep after tea, smoking, one evening last week, I was startled by a sudden rush of the house cat, who came through the fence like a rocket, followed in hot chase by a robin, and both disappeared around the corner of the house in an instant. On investigation it was found that the cat had picked up a young bird, which had evidently fallen from the nest, and the mother bird was trying to rescue it.

It was too late when help arrived, however, for the tragedy was over. The next evening my daughter mentioned the incident to a friend at the other end of the village, who in return showed her a young fledgling in a cage on the piazza, which she had picked up on the ground (the bird, not the cage), and hung up on the piazza, where the mother came and fed it regularly, and which was thriving very well apparently,

Now, I call these cases pure instinct; they do not involve cause and effect, like ringing a bell or lifting a door latch.

I am glad to see that Awahsoose hears more birds in his region than last year; I have seen more here, and, although I did not see any bluebirds, there are plenty of robins, sparrows and fly catchers, and the same pair of orioles seem to be nesting in the big elm in front of my window, for, though I cannot see the nest, I see them shoot up and down every day and occasionally hear them, but there is my weak spot, and if Awahsoose and I could combine his ears with my eyes, we might note the birds pretty well. VON W.

CHARLESTOWN, N. H., June 22.

Hawk and Martins.

A GALLANTLY-CONTESTED battle between a small sparrow-hawk and a flock of black martins was seen the other day among the hills near Duarte. The hawk had captured a half-grown dove and was flying low and heavily when he was viciously attacked by a flock of black martins.

He dropped his prey and dashed upward, then swooped down upon one of the martins With the little bird in his claws the hawk dropped toward the earth, tearing at his unfortunate little antagonist as he came. A trail of black feathers followed the pair until they were about 50ft. from the ground, when the martin fell like a stone, and the hawk shot upward again. The flock of martins instantly closed around him, and within another moment or two a second bird was torn to pieces and dropped. This maneuver was repeated three or four times, ending each time in the death of a bird, before the flock of martins gave up the pursuit and allowed the hawk to escape. Upon examination each one of the dead birds was found disemboweled and terribly mutilated.—*Tucson (Ariz.) Citizen.*

Faith and Works.

A PRETTY anecdote is related of a child who was greatly perturbed by the discovery that her brothers had set traps to catch birds. Questioned as to what she had done in the matter, she replied: "I prayed that the traps might not catch the birds." "Anything else?" "Yes," she said, "I then prayed that God would prevent the birds getting into the traps, and," as if to illustrate the doctrine of faith and works, "I went and kicked the traps all to pieces."—*Household Words.*

Game Bag and Gun.

A KENTUCKY RABBIT HUNT.

THE Kingfishers, sun-browned and tanned by the winds of the lakes, were returning from one of their annual trips to the North Woods. Seated in one of the easy coaches of the Grand Rapids line and chatting, as they sped southward, of the humors and adventures of the trip, the talk gradually drifted from fishing to hunting.

Culbertson, whose more extended experience gave him first seat in the circle as the big hunter of the gang, recalled in thrilling description deer hunts and bear hunts in canebrake and tangled wood; closing with pathetic recital of the death of a companion whose finger was punctured by the fangs of a dead rattlesnake.

Morris told of outings with Kentucky quail, and Furr gave vivid pictures of possum and coon hunts, noisy with their retinue of darkies and dogs. When "Kingfisher's" turn came, he professed a profound ignorance of the mysteries of the chase, "Though, said he, "when I was a boy, long about the 20s, I did shed the blood of some birds and animals, whose presence I could not endure, with weapons adapted to my youthful arms." This hint, in default of specific facts, was presumed to refer to his forays with bow and arrow upon the tribes of woodpeckers and jaybirds, and to shots from the window with the family musket, in the dead hour of night, when all was still—except the cats—that immediately became stiller.

Harry Foulds closed the round of story-telling by stating that in the vicinity of Cincinnati, where he earned his bread, or, rather, made his flour (and good flour at that), "by the sweat of his brow," game was an article so scarce that a day's raking with a fine tooth comb would scarcely scratch a rabbit from the weeds. And that the rabbit, when found, would be lank and lean, with variegated scars adorning his body, as proof of daily battles with the small boy and his dog, and "Chawles" and his "purp," in the desperate effort to prolong a miserable life.

Having a rabbit or two left in Kentucky, we forthwith invited the Cincinnatians to come over to Frankfort in the fall and take a hunt.

Late in November following Harry Foulds and Ack Hall, responding to the invitation, stepped from the cars at the Midland Depot and were shortly banging at my door, chipper as larks, and loudly vociferating, "Show us them rabbits!"

A hearty handshake, and they unloaded an inundation of apologies from the balance of the gang as to why they couldn't come. Hickman had just gotten in forty bags of mail matter from Goshen, Ind., 200 from Alaska, and 700 from Japan—all to be distributed at once as extra. Culbertson was preparing his kit for a Florida trip, and Murray was "lost," as usual. A message from Capt. Tinker advised the use of frequent "durkees" if the weather became warm—a decoction that is said to be mixed in a big tumbler, with ice, and a little sugar, and a little water, and some lemon peel, and a bit of gin, and some other harmonizers. Uncle Jerry Kiersted sent his blessings, and hopes that "the boys would live long and prosper."

The greeting over, I casually glanced at the outfit of my two friends. Each had a 12-gauge Parker and lugged a grip whose bulging sides denoted hunting clothes. Just then the baggage man drove up with a dray on which was a big box about the size that incloses parlor organs for packing. It was strongly nailed and securely bound at the corners with hoop iron.

"What's in the box, Harry?" I inquired.

"Ammunition," he responded, indifferently.

Taking a good square look at the box, and making a fair estimate of its capacity, I judged it would hold somewhere between 5,000 and 10,000 shells, with plenty of spare room for loading tools, gun cleaners, corn oil flasks, bootjacks, etc.

As my friends had written me they could only spare time for a two days' hunt, and measuring the amount of death in the box, I began to feel sorry for the rabbits. Then I pondered whether they had not misunderstood me when I said in the cars "there were a few rabbits left in Kentucky," and were expecting a sort of round-up of a million or so jack rabbits or "other rabbits," when they were to take stands and shoot into the thick of them as they went by, sixty shots a minute.

I thought best not to disturb the enchantment of view embraced in spending so much ammunition so quickly, but to let events work their own revelation. However, Dick Morris and Charley Furr came over that night, and after an evening spent in reminiscences of hunting trips, fishing adventures and "reminders of old times," I managed to get a private conference with them, and whispered my suspicions as to the meaning of the big box. "Oh, well!" said Dick, "perhaps it isn't all ammunition; they may have a lot of fossils—you know you dote on fossils—and perhaps Old Hickory, Culbertson and the balance have sent you a contribution of rocks for your cabinet from some of those big piles we saw along the road near Big Rapids and Cadillac; and then maybe Kelpie has added a boulder from Central Lake." His eyes twinkled and his broad shoulders shook at the demoniac suggestion, while Charley amiably chuckled, for it is the impression of the gang that I am weak in the upper story when fossils are mentioned.

Charley, however, was inclined to take a more serious view of the situation, and to lament any disappointment our visiting friends might suffer.

"Can't we shorten their misery," said he, "if they don't find rabbits as abundant as they expect, by giving them some diversion? Let's show 'em the country—take 'em out to Elkhorn, up Devil's Hollow, out to Old Crow distillery, and then to the cemetery."

The idea seemed good, and before parting for the night it was agreed to have a double team at the door in the morning, with seats for six, and spend the day till noon in sightseeing, and after a hasty lunch devote the afternoon to the rabbit hunt. I was deputed to impart the programme to Harry and Ack ere they retired for the night, and be prepared to dilate extensively on the beauties of Frankfort scenery if they manifested any impatience at not being sooner permitted to "get at them rabbits."

Luckily, they seemed content to have us map out the programme, and I merely concluded the announcement with the precautionary inquiry, "Do you think you have shells enough to last you for the hunt? If not, I will load a few more."

"Oh, yes," replied Ack, "I guess we have plenty, though Frank (Harry's big brother) said when we were packing the box he thought we ought to put in a few hundred more."

The team was at the door at 8 o'clock sharp next morning. Dick Morris was unable to join us for the day, and in fact, for the hunt, through illness of a near relative. We missed him greatly.

With a skilled driver at the reins we left the city rapidly, taking the road by the State Penitentiary and climbing the long ascent near the Cove Spring. Beyond the ridge we descended to the edge of a broad valley where, in the olden time, was a race-track on which the horse Gray Eagle won a famous race, to the delight of Henry Clay and the hundreds of onlookers in attendance. The plain was now seamed with ditches for drainage, and dotted with shocks of gathered corn.

Beyond this we passed the Todd farm with its fourteen miles of stone fencing, and noted as the site of a block house, built in Indian days, still standing with its wedge-shaped port-holes in the second story, concealed from outer observation by a more modern lining of boards. Half a mile further, the pike ran beside Elkhorn Creek, famous for its gamy black bass. Following the rocky stream a short distance we halted opposite the Lover's Leap, a bold bare headland that projected from a turn in the cliff, 100ft. above the water. Surmounting its pinnacle was a solitary dead cedar. The foxes were wont to come to this point, after night, and bark in hearing of the dogs in the farm-yard opposite—a challenge that seldom passed unheeded, for their music was speedily ringing along the steep hillside in hot chase.

Below, a few hundred yards, at a turn in the road, was the mouth of the Pond Branch, the outlet of a small swamp where, thirty years ago, wild geese were wont to stop over night, and some of them make a fatal stop in their flight across the country. Close by was the site of the cabin where several women in frontier days successfully defended themselves from an attack of savages, enforced with rifle and blazing arrows. One of the women, biting a bullet in two, loaded a rifle with the piece and shot an Indian through a crack in the door. His dead body was afterward found lodged in the creek below, against a big rock, that to day goes by the name of Indian Rock.

Retracing our course up the creek, we turned off by a country road and followed the Elkhorn banks on higher ground. The dam at Steadmantown, since washed out, was soon in sight with a vista of Elkhorn at one of its loveliest bends. Halting only long enough for a brief glance at the winding creek with its rocks and rapids, pools and shallows, we drove rapidly to the Forks, the junction of the North and and South branches. The little village, nestled by the united waters, encloses an unpretending frame structure on whose front is painted: "Buck Run Baptist Church—Organized 1818."

Turning the horses' heads toward the city we soon reached Black's Pond, a noted local fishing resort, three miles from Frankfort. This pond of fresh water, fed by springs, was first sought for its supply of bream or "mongrels"—next, for bream and silver perch—and now, the black bass are disputing supremacy with the silver perch, the bream scarcely appearing. Last season one fisherman took sixty-three bass from its waters as the result of a single day's catch.

Skirting the city, a quick drive of four miles was made along the banks of the Kentucky River to the "Old Crow" distillery, where the fire water of that famous brand is produced. With much persuasion some of the party were induced, under the seductive wiles of Tom Shy, the genial superintendent, to touch an atom of ten-year old, oily and fruity, washed down by a glass of cold sulphur water flowing from an artesian well on the premises.

Harry objected strongly to surrendering his prohibition scruples, but when told he could not get the sulphur water without the "medicine," he reluctantly yielded, with the avowal that he was ever ready to make sacrifice "on the altar of his country."

Returning to the city, a short whisk was made up the defiles of Devil's Hollow Pike, where one can readily imagine, from the wild scenery, that he is miles from civilization. Returning, the team was again at the door, at sharp noon, each passenger fully cognizant of an appetite.

While lunch was being disposed of, and while the party were getting into their hunting togs, a change of horses was made.

Some uneasiness was felt as to whether Harry and Ack would insist on carrying their "ammunition box" along in the wagon—room being at a premium. This fear was speedily dissipated when both appeared with belts bristling with cartridges and the pockets of their hunting coats apparently burdened with half the contents of the big box. Each was evidently loaded for war—"world without end."

On the front seat sat Claude, a skilled colored driver; and beside him, in high feather, was Will, another colored "gemman" of darker hue, who was going along to assist in packing game. The fresh team sped rapidly along the Cedar Run pike, leading southward, and within the hour drew up at the gate of Marvin Averill, a hospitable farmer, near whose house the rabbits were expected to leave their beds for the last time. Stabling the horses, guns were put together, overcoats discarded, and under the guidance of Bob Averill, a son of the farmer, the party started for the fields.

It was noticed that both Harry and Ack were solicitous as to how the hunt was to be made, who were to go together, etc. Evidently each had great respect for the shooting qualities of the other. A mile or so between seemed desirable. All tremors of this sort soon vanished in the excitement of the hunt.

Crossing a deep gully severing the sparsely wooded hill slope, the party in irregular line were advancing up the opposite side when a cottontail sprang out from a small brush heap in front of Foulds and started for the hilltop. His gait was sixty miles an hour, but at the crack of the gun he turned several summersaults and lay still, a dead rabbit.

"Good boy!" shouted Charley Furr.

It was evident that Foulds could shoot. He said "Fetch!" to the colored aid-de-camp with a nonchalance equaling Brewer when he makes a difficult double of wild drivers.

Before the worm fence at the top of the hill was reached, a second rabbit was frightened from a bunch of wire grass in front of the writer. As he scudded away with all canvas spread, I gave him the right barrel, cylinder, and then the left barrel, choke. The dirt flew along the path he was traveling, and yet, singularly enough, he never stopped. The boys laughed.

How strange they never understood that my object was to badly frighten the rabbit and cause him to come round again so our visiting friends could kill him. Rabbits always come back near the place they start from when eluding pursuit, a trait I have long known. One must utilize his knowledge.

Beyond the rail fence was a long, double hillside, separated by a ridge, and grown up in orchard grass, with bunches of yellow sage, low bushes, clumps of briars and brush heaps—a typical place for mollies. Everywhere in the heavy grass were seen their runways and crossings, along which at night they sported and courted.

Furr and Foulds, with Will as beater, followed the slope to the right along the line of fence; young Averill took the center, while Hall and the writer, with Claude to carry game, bore up the ridge on the left. But a few a steps were taken before the game was afoot. As the line progressed and the covers were invaded, the popping of guns was frequent and exciting.

Encountering a brush pile I gave it a kick and a rabbit resulted. This time, feeling that the boys did not properly understand the higher motives and promptings that should actuate one hospitably inclined, I shot to kill. At the instant the rabbit executed a right angle, and the corner being abrupt my shot followed the straight line—on harmless mission bent. A snicker from Claude in the rear emphasized the miss. I glanced at Hall to see if he noticed the discrepancy between shot and rabbit. The sly rascal was looking straight ahead with a forced smile of commiseration on his face that seemed to say—plainer than words—"I thought somebody said these Frankfort boys could shoot—oh my!" Worse still, just then two rabbits bounced out in the path ahead of him, and with a neat double he bagged them both.

In my direction matters were getting serious. Unless I settled down to business, ceased philosophizing, and went to killing rabbits instead of scaring them over to the next farm, it wasn't likely that any casual hints I might drop about that "ammunition box" would have much weight. Practice is better than theory, as was evidenced in such bracing up as enabled me to drop the next three rabbits in three shots, wiping Ack's eye with the last. He was doing good work, too, gathering meat.

For the next hour, as we beat the bushes and kicked the brush heaps, there was fun galore. Rabbits were pattering in every direction to escape the pursuer, stirred by gun shots and shouts "There he goes!"—"Look out!"—"bang!" "bang!" Here and there one was toppled over, others left scraps of white wool on the bushes, some crept off before the hunters were in sight, and others still broke covert so close at hand that to shoot was cruelty and destruction. When the fence was finally reached at the far end, and the game was inspected, it was found we had bagged thirteen rabbits.

After a brief rest the party crossed the fence into a thin woodland where heavier patches of briars were encountered, rendering it more difficult to route the mollies and still harder to make successful shots. Stones were thrown where neither hunter nor darkie could penetrate, and as the fleeing mollies zigzagged along the tortuous path the shots often went wild. Then the scattered trees had something to do in defense of rabbit bacon, as the scarred bark testified.

In the midst of the briars we met another party of hunters with a big bunch of rabbits, and deeming it useless to trace their tracks we turned to the left. The woods became open, almost bare, and the ground covered with dead leaves. As we were descending the slope to reach some thickets, visible in the bottom, Charley Furr, on the extreme right of the line, started a big brown woods rabbit from the shelter of a rock. The agile animal scudded diagonally down the slope with that ejaculatory motion of the hinder parts that suggested intermittent springs along the backbone.

"Kill him! kill him!" cried Furr, whilst his own gun reposed peacefully on his left arm, wholly forgotten.

The rabbit meanwhile was getting a little more electricity in his legs, and the pattering of his feet on the dead leaves was incessant as April raindrops. Harry, who was next, let go a bang harmless as air, and that cotton-tail seemed to feel there was "a tide in the affairs of" rabbits as well as men that required all the "git up and git" that existed in his anatomy. He flattened his ears on his back, gave an extra hitch to his white blossom of tail, elongated his body, and skimmed the surface in marvelous jumps that surpassed any previous record. Just as he seemed to feel a gloating satisfaction in his gait Averill threw a load of shot into the ground ahead of his nose, when, with reckless audacity or aimless fright, he abruptly turned and started up the hill in a bee line for Ack Hall. To blunder, head on, into the very jaws of death seemed the height of madness.

Perhaps we ill-judged that rabbit's measure of cunning. As Ack saw him coming flippity-flip, he braced his legs, cocked both barrels, and prepared to send the poor hare headlong to the other world. I could already imagine the grass-nibbler turning flip-flaps under the shock of lead in body and brain.

In a few seconds he was in short range. Ack threw up his gun, pressed the trigger without sighting—and overshot. The leaves flew awful. So upset was he by the miss and the evident determination of the rabbit to run him down that the other barrel went off of itself, sending the load to cut the twigs in the tree-tops.

The gang were by this time wild with delight, which a moment later verged on hysterics as I added two more shots in harmless combustion to facilitate that charmed rabbit's exit from the field of bloodless battle. Avoiding Ack's clubbed gun, he darted safely by and went galloping over the ridge toward Cincinnati—not a hair on his body touched nor an eyebrow left behind.

Leaving the scene of our discomfiture, we hunted the thickets in the bottom, adding two more to our stock of rabbits. Furr bagged one and Averill the other. Crossing next a cornfield with little cover, we entered a field grown up in ragweeds - thin in places—with briars and green creepers along the drains. Several mollies were killed in the open spots as they ran the paths or crossed from one cover to another, but the weeds were generally too thick for accurate shooting.

As the sun was now getting low in the west, we circled toward the house, making the last hunt on a hill slope dotted with brush heaps, bunches of brown sage, and well set with clumps of long bluegrass. Harry was first over the fence, and first to make a kill, starting a rabbit from the fence corner as he leaped to the ground. Ack was next fortunate in starting one from a brush pile, but his recent narrow escape from being run over by the woods rabbit had evidently upset his nerves, for he scored a clean miss.

"Hold on, dar! Hold on, dar!" ejaculated Will, the colored attendant, who was a little in advance on the right, as he raised one hand warningly toward us, retreating slowly, with eyes bulging, and excitement in his every movement. "I done cotch dat rabbit, shore!" said he, as he backed slowly away from a little tuft of long grass, under which he had discovered a mollie snugly sitting.

"Dat rabbit sleep," said he; and as Claude came up he angrily added, "Here, you nigger, keep back! You gwine spile everything."

Making a short circuit to get the tuft of grass between himself and the rabbit, he laid aside his bunch of game, dropped on his hands and knees, and began a stealthy crawl toward his victim. The rabbit, if asleep, was no doubt dreaming of courtship or cabbage leaves, and unconscious of the dark destiny creeping toward him.

"Dat fool nigger ain't gwine to cotch dat rabbit," said Claude, with evident disgust and distrust; "he's too slow, and rabbit ain't sleep nuther. Never saw rabbit sleep 'cept wid both eyes open."

Will, meanwhile, was getting closer to the unsuspecting rabbit, stopping occasionally to look around and see if the party was keeping back. Scarcely 3ft. separated him from the grass tuft, when he slightly raised his body, shoved his knees well forward under him, and with a sudden spring launched himself forward, while both hands came greedily down on the empty bed, as the rabbit, with elusive feet, was going down the hillside at ninety miles an hour.

The crestfallen darkey turned a face toward us so full of pitiable misery that the whole party burst out with laughter, while Claude rolled on the grass in an ecstasy of delight.

"I know'd it," said he, as soon as he could get his breath; "dat nigger better go and ketch a cow. He ain't fit to 'rastle wid wild animals."

"Fore de Lawd," dejectedly added Will, who had now got on his feet and gathered his bunch of rabbits, "dat ha-are jes' too slick—he warn't 'sleep—he des possumin'."

This incident, with the bagging of one more rabbit on the hill slope, closed the day's sport, as the treetops in the West were already drawing frescoes on the sun's face. Crossing the pasture to the house, we stopped at the gate, and, counting game, found we had twenty-five plump rabbits as the result of the afternoon sport.

And Henry and Ack had a few shells left. OLD SAM.

FRANKFORT, Ky., June, 1897.

GOVERNMENT GAME RESERVES.

Editor Forest and Stream:

Having read the comments upon my article advocating game preserves under the control of the United States Government, I would like to add that although I confined myself in that article to discussing means for the protection of the birds while on their migrations, I entirely agree with Mr. S. F. Fullerton in regard to the importance of protecting them when on their breeding grounds. Whether this could best be attained by a system of reservations would depend on the extent to which large numbers of birds are accustomed to congregate to nest in or about the same place. I have heard such places described, and they must be above all others the places to be protected. But where the nests are scattered over a wide extent of territory protection by such means would not be possible. More information about the breeding localities of our game birds, and in regard to the numbers of birds and eggs which are annually destroyed during the breeding season is very much to be desired, and it is to be hoped that the efforts of FOREST AND STREAM to discover the truth about the albumen industry will result in a great deal of light being thrown upon these matters.

There can be no doubt, however, that the incessant shooting the birds are subjected to during their migrations has something to do with the scarcity of game of this kind. The extraordinary exertions which the birds are obliged to make to accomplish their journeys make rest and an abundant supply of food particularly necessary. They are very often too much fatigued to seek food except in such places as will furnish it in plenty and in a form easy for them to obtain, and to these places they must return again and again in spite of the losses caused by the gunners. It is no doubt true that under the most favorable conditions the migrations cost the lives of great numbers of birds. In the case of the small birds, I have noticed how often one comes across dead birds, which have apparently died from natural causes during these seasons.

I may perhaps be pardoned for repeating once more that I would not propose the establishment of large reservations, but of small ones, perhaps one or two square miles in extent, or sometimes less, in the places where the most destructive shooting is done; one man, backed up by proper authority, could look after such a preserve and generally have time to do something else besides. And, far from thinking that the whole country would have to be covered with such preserves, I believe that each and every one, rightly located and taken care of, would have its effect, though of course the more of them the better.

The best indication of what the State laws can be expected to do for the preservation of the migratory birds is what they have done in the past and are doing at present. No doubt, if the State laws of the present time had existed and been enforced for a century past there would now be plenty of game, but nothing can be more evident than that they are not accomplishing their purpose. They have always been behind in the race with the increasing destruction of game; they are getting more and more hopelessly behind. Can any one believe that public opinion would sanction the passage or co-operate in enforcing laws sufficiently stringent to even preserve the amount of game of this kind that still exists? Certainly not until it is too late.

I think, however, that game laws alone will never suffice to preserve the birds. The number of places suitable for them is rapidly diminishing, and it is only by means of reservations, public or private, that this can be provided against.

From private preserves I think little protection for the migratory birds can be expected. Their partridges or pheasants will be carefully looked after and the shooting limited to what they can stand, but if a duck, snipe or plover once gets away he will probably not return, and it is only natural that every effort should be made to bag him.

The great amount of change, making the ponds, streams and woodlands less available as game localities, which is going on, especially in the thickly inhabited States, but also all over the country, is hard to realize, as it is a gradual process.

Thousands of marshes have been more or less completely drained, and ponds formerly frequented by ducks and other water birds are now unsuitable because of the banks being cleared and buildings erected on them, the increase in the number of boats on the ponds, and the growth of reeds and water plants which formerly afforded food and concealment for the birds being destroyed by raising the level of the water or otherwise. Of course, a great deal of this is the inevitable result of the progress of civilization, but as Mr. C. A. Shriner has pointed out, there has been a great deal of useless destruction of the natural features of the country. The owners of the lands have derived little or no benefit from it, and the

country as a whole has suffered greatly. Possibly, if some of these places were allowed to regain, as far as possible, their natural condition, and were carefully protected, they might, especially in the West, become again available as breeding places for the water birds which formerly bred throughout most of their range; though, now, a pair of ducks which undertake to breed in any of the thickly settled States do well if they live through the summer, not to mention raising any young. This contraction of the breeding range which is constantly going on, is doubtless in a considerable degree responsible for the present scarcity of birds, and will, without the least doubt, result in the extinction at no distant date of many species that do not extend their migrations far northward.

Admitting the necessity of game reservations, there can be no doubt that they would be more judiciously chosen and managed by the United States Government, whose undertakings are generally well carried out and its laws well enforced. Would the difficulties of such a plan be greater than to secure concerted and judicious action from all of the States concerned? It seems as if nothing could be more difficult than the latter alternative. For the reasons I have already stated, I do not think private reservations are likely to afford much protection to migratory birds. If the matter is to be left entirely to the States, those States where the most destructive hunting is going on would probably be the last to take any action, and results of importance to the whole country would be subordinated to private interests.

That a system of Government reservations would take anything away from State rights I cannot see. Where the interests not of one State but of many are involved, it becomes a proper subject for the attention of the United States Government. I think the sportsmen in those States which now have stringent and well-enforced game laws will some time get tired of seeing the game, which should belong to them as much as to any one else, destroyed by unsportsmanlike methods and at unreasonable times and seasons in other States. But the plan under consideration would not interfere with or supersede the State laws, but yet could do something to make up for their deficiencies.

W. G. VAN NAME.

NEW HAVEN, Conn.

OFFICE OF STATE GAME AND FISH WARDEN OF MICHIGAN.—Sault Ste. Marie, Mich., June 21.—*Editor Forest and Stream:* I have read with interest and approval the article by Mr. W. G. Van Name contained in your letter of June 5, which, on account of illness, I have seen to-day for the first time.

The scheme involved is not altogether a new one to me and certainly possesses great merit. Natural game preserves have been set aside in several States. There is a marsh in Michigan devoted to this purpose, and in the Oneida county section of northern Wisconsin quite an area of wooded country, diversified by lake and stream, has been set aside as a State reserve. The arguments for government reserves as set forth by Mr. Van Name seem to be practical and reasonable, and only need the active interest and united influence of the sportsmen of the country and such journals as FOREST AND STREAM to have them materialize into meaningful form.

CHASE S. OSBORN.

CHICAGO AND THE WEST.

Rumbles of the Tolleston Case.

CHICAGO, Ill., June 26.—A few remaining and distant rumbles still arise from the Tolleston game warden cases, of which mention has been made from time to time. In the main event the club has been far more successful than it expected to be and has won a practical victory. Theodore Prott and others have this week brought damage cases against the club amounting to over $100,000, and these cases have just been taken from Crown Point to Porter county on change of venue. The venue is something all-important to the Tolleston trespasser. If he can get his case into a local court he thinks he has a chance with the jury, but if he gets into a clearer atmosphere he is gone so far as his legal chances are concerned. These cases will come up in the circuit court at Valparaiso. The club will win.

The Mongolian Pheasant.

It was fifteen years ago that Judge Denny introduced the Mongolian pheasant in Oregon, putting down twenty-eight birds. This week, reports from Linn county, Oregon, state that over 13,000 of these birds were killed in that one county this year during the open season. The birds are reported to be swarming, it being estimated that they run into the hundreds of thousands. How about these birds for the middle West? Why do we hear no more of their introduction than we do? There is room for a healthy, iron-clad bird of some sort in this part of the world.

Large Shipment of Wild Game.

Mr. H. K. Glidden, of New York city, manager of the Moosehead ranch of Jackson's Hole, Wyo., writes me that there will appear some time next week in Chicago, en route from Wyoming, what he thinks is the largest shipment of wild game on the hoof every made in this country. The animals are coming on in charge of Mr. H. B. Adams, who leaves Wyoming about June 26, and the cars will be for a time at the Union Stock Yards here Among the animals in the shipment the following are mentioned: Thirteen head of buffalo, one "cattleo" cow, twenty head of blacktail deer, and a lot of antelope, these to go to the estate of Hon. Wm. C. Whitney, ex-Secretary of the Navy. There will be also thirty-six head of elk for Hon. Edward H. Litchfield, of Litchfield Park, Tupper Lake Junction (Adirondack Mountains), N. Y. All this stock is coming through in palace stock cars. I do not learn where the buffalo are coming from, or who is the breeder of the cattleo cow, which is reported to be a beauty; but I suppose the buffalo are from the Allard herd of the Flathead Reservation. Charlie Allard lately died, and I have heard that the herd was to be broken up. Moosehead ranch is in the Jackson's Hole country of Wyoming, one of the famous game grounds of America.

Indians Exempt.

Executive Agent James F. Fullerton, of Minnesota, has lost a case against the notorious game dealer Davis, who was arrested for shipping birds out of the State contrary to the law. Judge Baxter, of Moorhead, decided that as the birds were sold to Davis by Indians, and as Indians were not subject to the action of the State game law, no cause would lie in this instance. Agent Fullerton, somewhat surprised at this latest instance of what law can be in the hands of an able-bodied and husky jurist, throws up his hands, and says that he can see no reason why the Indians should not depopulate the streams and covers of the State with impunity or any other thing.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

GAME IN IOWA.

NEVADA, Ia. June 9.—*Editor Forest and Stream:* In a recent number of FOREST AND STREAM your Western representative, Mr. E. Hough, expresses surprise at the fact that there yet remains in central Iowa a goodly number of that royal game bird, the pinnated grouse, or, as it is commonly known, the prairie chicken.

If Mr. Hough will make me a visit about the first of next September, I will guarantee him a fair day's sport at chicken shooting. If our game laws were only half enforced, we would have chickens a plenty, but, as it is, with shooting commencing in July, it is something to be wondered at, that the pinnated grouse have not disappeared long ago. Since the last of March I have been able any clear still morning, to hear the boom-oom, boom-oom, of numbers of the male pinnated grouse, and this while standing in my own door yard in the midst of our little city, with none of the grouse nearer than one mile. I love to listen to this royal suitor, as he wooes, with all his energy, his modest lady love. This has been a cold damp spring in central Iowa, not the most favorable weather for the young grouse, many of which are already hatched.

John Corbin living several miles northeast of town, last week informed me that he had just purchased a new .32 cal. Winchester, to be used in keeping the gray wolves from totally annihilating his poultry. So you see, we still have something left besides the prairie chickens to remind us of the pioneer days in Iowa. Yes! and that reminds me. Arvil Batman was telling me an experience which he had about two weeks ago. Arvil was walking along the edge of the timber which borders a small stream just south of town and was accompanied by his pointer dog. Noticing some bushy tailed animal come out of the brush and start across the open ground, Arvil on the moment's impulse, set the dog after the "critter," expecting, of course, that the dog would kill it in very short order. But the "critter" in the "fracas" that followed, whipped the dog badly and in a very short time. Arvil concluded that his dog was not much of a fighter anyhow, though he had always taken care of himself pretty well in his "scraps" with other dogs. Picking up a club Arvil started to meet the "critter," which was chasing the dog. As the animal noticed its new enemy advancing, it turned from the dog and met the man half way. This was more than Arvil had expected, and raising his club he struck at the snapping snarling brute, the club proved to be rotten and broke, then Arvil concluded he did not want the "critter" anyway, so he turned and ran. Across the pasture they went, both doing their best, and Arvil now badly scared as the sound of snapping teeth drew nearer, showing that the "critter" was gaining on him. After running about 150yds. Arvil noticed another club and stooping he grabbed it, whirled and struck with all his might, and was lucky enough to knock his pursuer down; it was then but a short task to beat his enemy to death. The "critter" proved to be a good sized badger, and the only one seen in this vicinity for a good many years. Arvil says he has not lost any more badgers.

JOHN C. BRIGGS

SOME NEW HAMPSHIRE NOTES.

Editor Forest and Stream:

The trout-fishing in this vicinity has been rather better this season than for some years, that is, more trout have been caught. The brooks, however, are fished to death and it seems as though there would hardly be a trout left. The law imposes a fine of $200 on anyone fishing with the intent of selling or trading the trout caught, but the fishing goes on all the same. A certain individual who lives alone in a shanty in a back pasture a few miles from here, spends about all his time on the trout streams and catches twenty times as many trout as any other fisherman in this section. It is a mystery what he does with them, as it is claimed he never sells any.

I own an old-fashioned black, white and tan foxhound, he is rather a small dog, standing about 18in. high, but compactly built. I consider him a first rate dog for our style of hunting. During part of last season I killed thirteen foxes with him. This dog is peculiar. Since the snow went off he shows no inclination to chase foxes on his own account. He is never tied up and could easily find a fresh track in a few minutes any morning. He would be glad to go if I went with him, but will not go alone. He has taken to looking up woodchucks, seldom going over a quarter of a mile from my house. He has killed thirteen so far besides several skunks, and a short time ago treed four coons within 300yds. of the house.

A day or two since, while going to help him get a woodchuck out of a stone wall I started a woodcock, and saw it was carrying one of its young. The woodcock jumped up within a few feet of me and flew straight away on open ground, and I could plainly see the young bird it carried between its legs. I have heard of woodcock doing this, but never saw it before.

The Platform Plank of FOREST AND STREAM seems to be growing in favor. The true sportsmen of the country realize that it is needed. At the meeting of the Hillsboro Game and Protective Association, Mayor Clarke, of Manchester, said: A number of years ago, had anyone urged the necessity of better protection of fish and game, he would have been looked upon as a sort of shiftless cuss. To-day the feeling is changed, and the more intelligent class of people realize the necessity of protecting our fish and game.

C. M. STARK.

DUNBARTON, N. H., June 22.

The Chukor Partridge.

GILGIT, Kashmir, May 13.—*Editor Forest and Stream:* I see from a remark in your "Snap Shots" of the 3d ult. that Dr. Blaisdell is importing Indian chukor in order to stock Illinois with this bird among others. It is mentioned as a matter for regret that the plague in India has put a stop to the proposed importation. So far from its being a matter for regret that this bird has not been introduced into Illinois, it would appear in the opinion of those who have more than a passing acquaintance with *Caccabis chukor* to be a matter for sincere congratulation that the Doctor's efforts have been frustrated.

The chukor, as your readers are probably aware, is a near relation of the French partridge, and he possesses all the faults, from a sportsman's point of view, of that aggravating bird. He can run pretty near as fast as he can fly, and infinitely prefers this mode of progression. He spoils your dogs for standing to any honorable bird that is not afraid to rise, he spoils your temper, and last, but not least, he teaches his evil tricks to any other species of partridge that may inhabit the same district.

The only indigenous Indian partridges which would repay the cost and trouble of introducing into Illinois or elsewhere are the common gray partridge (*Ortygornis ponticeriana*), the black partridge (*Francolinus vulgaris*), and the painted partridge (*Francolinus pictus*). The last two named are the finest birds, but the first is stronger on the wing and perhaps affords better sport.

R. L. KENNION.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

TWELVE YEARS EXPERIENCE WITH RAINBOW TROUT.

HIGHLANDS, North Carolina.—I am glad to give Mr. Cheney some facts in regard to the rainbow trout, gathered from twelve years experience here in the North Carolina mountains. This locality is the highest land east of the Rocky Mountains, that is, inhabited land, for we have here a very pleasant and popular health and pleasure resort much patronized by the Southern people from Atlanta, New Orleans, and the Atlantic coast cities, something over 4,000ft. above sea level. It is a dense forest region, and besides the fishing we have a perfect garden of flowering plants and shrubs that delight the eye, and as well the olfactory nerves of all. Just now the woods are radiant with the kalmia, and azaleas of various shades of color, not forgetting that odoriferous variety known as the clammy azalea, on account of the sticky character of the tubes of the pure white flowers. By and by we shall have the rhododendrons, which here grow 20 or 30ft. tall, and I have counted 2,000 blooms on one bush, without getting all of them in. Of course these dense woods are filled with game quail in the open spaces and the fields, even in the gardens; pheasants and turkeys; occasionally we have ducks on the ponds; deer are quite plenty, and in the season may be got with little trouble.

It is a land of cold ever-flowing springs, swift brooks, and larger streams which form the heads of the great Tennessee, and the rivers which flow east and south to the Atlantic. I have a considerable tract of some 4,000 acres, which has seven miles of a river and two large ponds, which I have been stocking with fish for the time mentioned. These waters were stocked originally (it is said) with the common trout by General Wade Hampton, who has (his brother as well) a summer place in the neighborhood. There were plenty of brook trout (*Fontinalis*) when I came here, and by preserving the fish, the stock has been largely increased. My belief, however, is that trout were always here—*ab origine.*

Twelve years ago my friend, the late United States Fish Commissioner, sent me on my request some rainbow trout, of which 300 come to hand safely out of 1,000 sent. The rest I have good reason to think were sold by my messenger to parties on the route, and thus helped to stock other waters. Two thousand of these fish were sent at my request to another locality on a large affluent of the Tennessee and the French Broad rivers, by Commissioner McDonald.

The second year after the 300 fish were planted in my waters, one of 22in. in length and 2½lbs. weight was caught, as told by your correspondent Kelpie, recently, by a young lady, and since that time fish of 7lbs. have been taken. This fish is naturally a straggler, as suggested by Mr. Cheney, but nevertheless they come back again, or at least some stay where they are put. Most of the fish, however, in my water have left my upper pond and have gone down-stream, but plenty still remain in my lower pond, which is now swarming with them, ranging from ¼lb., and quite young fish, up to three or more pounds. My son took four fish in five minutes with the May fly the other day, averaging between 1½ and 2lbs. The waters below have become well stocked, and one of 7lbs was taken below my dam last summer. These fish are now in the French Broad and the Tennessee rivers, and are taken plentifully, and sold in the markets of Asheville as salmon.

As a measure of precaution I made an opening in the bottom of my lower dam so that these fish might come up to spawn in the river at the head of the pond, where there is a long succession of rapids with pools between, and a precipitous cascade of 90ft., above which of course they cannot go, and on this account it is that the upper pond is not so well stocked as the lower one. But there are some big ones yet in this pond, for one of my men fishing for his supper recently from a bridge which crosses the upper part of the pond, hooked a big one which snapped his cane pole and got away with the bigger half of it. This part of the pole, with the line and hook, were found the next day floating in the pond, which shows that a fish has some way of getting rid of hooks which he happens to carry off, and does not suffer from them as might be thought, and this may relieve the minds of some tender-hearted fishermen.

This is a late season here for the fish, or the fish have been too well supplied with food by the unusually copious rains. They are now biting freely, and are excessively fat, being literally lined with it as a pig is with lard. I never during forty years of trout fishing saw fish in such fine condition.

By sending a man down the stream late in the season to take small fish and plant them in my upper pond I find I can keep up a good supply of the rainbows with ease. The river is well stocked with this fish, which shows that the two kinds live in entire harmony. Indeed, I never found in any single Iridea any trace of a *fontinalis*, which I should

certainly have done, as I carefully examine the stomachs of all the fish I take, to study their feeding habits, had the former practiced cannibalistic propensities. The food of both kinds of trout I find consists of newts, crawfish, tadpoles, mature frogs, and a great quantity of minute microscopic organisms, as diatoms chiefly, which exist in vast quantities on the submerged timber and the roots of water plants, as arrowheads, pond lilies and pussey willows. I have not yet found the trace of any fish in the stomachs. Of course a large quantity of flies, beetles and other insect food is gathered by the fish, the May fly (Ephemerid) is taken in large numbers during the very short season of their ovipositing in the late spring.

There is no other kind of trout which resists capture more gamely than the rainbow. I have spent half an hour in bringing to the net a fish of 1lb., for as soon as the net is presented the fish darts off like a flash for another fight, and does not give up until it is utterly exhausted. There have been several broken rods, and involuntary baths in the cold water from a slippery rock, by fights with the larger rainbows in my stream of visitors. Only one thing detracts from its fine qualities, which is that its flesh is not equal in flavor and dryness to a *fontinalis*, but it is good enough when the appetite is whetted by a few miles walk home after a day's fishing. H. STEWART.

P. S.—Our genial friend Kelpie, I regret to say, had very poor luck when here a few weeks ago. But he will do better next time he comes; the weather was too wet and cold for the fish.

A DAY'S FISHING AT COOEY COFFRE.

THE driver left us at a point on the road about fifteen miles from the village of Canso, in Nova Scotia. We had been tramping through the woods, following our French Canadian guide, Louis, for probably half an hour, when, through the trees, a sheet of water was seen ahead of us. A few minutes later we found ourselves on the banks of a large lake. Louis conducted us to a rustic low tent covered with spruce. Here we found the boats. As there had been a freshet, it was decided to take the flat-bottomed boat called a dory, which we carried to the edge of the stream running from the lake.

Having shipped our fishing gear and provision hampers, we launched the dory with Louis in it, and jumped in as expeditiously as possible, for the stream was running swiftly after the rain. This stream, which is the connecting link between two lakes, is but a series of rapids, so down we shot. Louis, in the stern of the boat, directed our craft with his steering oar, but notwithstanding his vigilance, it would be carried against the side of a rock with such force that we narrowly escaped being dumped on several occasions. This shooting the rapids was very exciting, and in our mirth we made enough noise to frighten all the fish in the neighborhood. The stream ran through a wild woodland section of Guysboro county. After considerable dodging of branches and trunks of trees stretched half way across the stream, we slid out into the lake. On the island in the center of this lake was built the lodge of the fishing club, of which two of our party were members.

We intended to start our fishing from the point formed by the lake and the stream, so we landed, leaving Louis to row to the lodge and prepare dinner, etc. Our rods were put together with alacrity, while our tackle, gut casts and flies were allowed to soak in water as a precautionary measure. The sea trout, as we hoped, were going up the stream. Duncan, who was an expert angler and up to every time-saving device, had been soaking his lines in the bottom of the boat, which, it is needless to say, leaked somewhat, and thus was able to begin fishing as soon as his rod was pieced. A sudden splash and a swi h attracted our attention, and by

ON THE COOEY COFFRE.

the commotion in the water we knew he had hooked the fish. A little maneuvering and with the aid of Samuel, our amateur photographer, who took charge of the landing-net, the trout was bagged. This put us in excellent spirits.

We were all soon fishing, and in about two hours we had landed forty-nine speckled beauties, none of which weighed less than ¾lb., while the largest tipped the scales at 3lbs. Our catch of large fish was mainly attributable to our using a large brown hackle fly with red tail. I have ascertained from sportsmen, both in Newfoundland and Cape Breton, that the brown hackle is generally effective, and is used more than any other fly.

There is a smaller stream about three hundred yards to the south, which was known to abound in trout. As we were getting comparatively few rises after two hours' fishing, to that stream we decided to repair.

We found the fish voracious. Considerable merriment was occasioned by James, who struck a sea trout so heavily that his rod snapped at the second joint. The fish being securely hooked, rushed off at a frantic rate, carrying the line with it, into a shoal portion of the stream. James' first and only thought was to jump in after it, and to our surprise, after some skirmishing, he threw himself bodily on the fish, and by clasping it to his body, inside of his coat, he succeeded in capturing it. He was justly proud of his achievement by such a novel method, for his fish turned out to be the largest one caught. It weighed over 4lbs.

The trout in this stream were generally small, but so gamy that our arms after awhile became positively tired from casting and playing. The little black flies, which had become numerous around the pools, made our stay very uncomfortable. They viciously attacked the exposed parts of our anatomy, leaving our faces, in particular, in a swollen and bloody condition. These flies soon monopolized our attention, and being unable to longer withstand their assaults we decided to embark for the lodge.

On the island we found Louis at work, in the capacity of chef, over a wood fire. The pure atmosphere and healthy recreation more than sufficed to prepare us for a hearty meal.

While we fishermen lay off digesting our dinner and recounting fish stories, Louis cleaned the trout so that they would keep better, and incidentally be lighter to carry. In accordance with our desire he left the six larger ones intact; their average weight being 3lbs. they were well worth photographing.

We were quite satisfied with our luck, for when we embarked for home Louis informed us that he had counted ninety-two fish.

Leaving the island, we rowed toward the stream we had descended so rapidly. Our return had to be effected by the same route. The gear, etc., being made secure in the stern of the dory, we proceeded to haul ourselves up the stream by means of a small anchor, which we would throw ahead on to the most convenient projection. The process was slow, but we managed, after innumerable difficulties, to reach the place from which we had started. FISHER.

A SULLIVAN COUNTY FISHING TRIP.

WALTON, N. Y., June 18.—A fishing trip is one of the pleasantest experiences that a person can have, if the conditions are all favorable; and the conditions are not favorable unless the companionship is congenial.

I was met one morning last May by the Doctor with: "Say, you don't dare go down fishing next week?" After some conversation it developed that the Doctor; his brother (insurance agent), the Superintendent and myself, were to go to Stevensville Lake, which is in the heart of the summer boarding portion of Sullivan county, for a day's fishing for pickerel. I had never been fishing with any of the parties, therefore did not know exactly the kind of fellows I was to be out with. As a friend says, "If you want to find out just what kind of a man he is, you want to go fishing with him." But I was not long to remain in ignorance.

The day before the starting the Doctor came around, and said he and the Superintendent had been out and caught a lot of bait, and that the Superintendent was keeping them at the house, but was fearful some would die, and the Doctor thought he and I had better go out and get a fresh lot in the morning. I was awakened at about daybreak the next morning by a heavy thump on the door, and there was the Doctor, with his horse, at the door, and I hastily donned my old clothes with my old shoes, expecting to wade for the bait. We drove to a place that the Doctor had been to before, and had dug a ditch to let the water down a little, and then we were ready for business, as I supposed, but could not go on until the Doctor had given me his high-topped boots to wade in; and I thought this a very peculiar transaction, as he had just gotten off the bed having been confined with rheumatism. But I supposed he knew what he was about. It developed later that he was that kind of a man. We went down to the binnacle and made two hauls with the minnow net, and secured about eighty as fine bait fish as ever were seen, as well as sundry tadpoles and lizards.

We made our start on the noon train with a magnificent day. The bait cans were lashed fast to the car platform, and the motion of the cars sufficiently areated the water to keep the fish in nice condition. We arrived at Liberty, where we were met by Mr. Goff, to whom the Superintendent had written to meet us. We found him a character very pleasant to meet. At his place the Superintendent had stopped for many years of fishing. He drove us over to the lake, which is about five miles from the station. At the lower end we secured boats, and started up the lake for our fishing grounds, and for Mr. Goff's home.

Of course we could not row up the lake without throwing out the spoon hooks, and we had but nicely gotten under way, the Superintendent and the insurance agent in one boat, and the Doctor and myself in the other, when the Superintendent began to pull in his hook and to act very funny; the Doctor says, "He has one; let's watch him." He landed his fish, and the Doctor shouts, "Ha! ha! that is a counter;" and to me says, "That will make about three baits." And so we row along up the lake, and soon are fast to one, and then they are fast to another, and we find upon counting up our fish when arriving at the landing of Mr. Goff, that the other boat has caught seven pickerel, and that we have but five.

We then get the rods and live bait, and have a very busy time with them, occasionally catching a large bullhead on a bait, which struck our party as a little unusual. After a short time the Superintendent and the agent tire of fishing with the bait, and start off up the lake to skitter, and so we work until nearly dark when we go in for supper, and then we of course count up and compare. The Doctor and I find that we are somewhat behind, as the other boat have thirty-six pickerel to our nineteen pickerel and seven or eight bullheads, and the other boat has one pickerel that considerably overtops anything that we have. The Doctor raises the fish up and says, "How much will it weigh?" The Superintendent says, "It will weigh about 3lbs, a little more, if anything." We weighed the fish, and found it to weigh 3lbs. 2oz. We tried the Superintendent several times after that and found him about as accurate as the average scales, in fact he did not miss the weight more than 2oz. on a single fish weighed during the trip.

After supper three of us decide to go out in the boat to try the bullheads, and leave the Superintendent on shore, who said he did not care much to fish for bullheads. After three hours of industrious fishing we row back to shore, and there find the Superintendent sitting in the back end of a boat with his line in the water, industriously depositing the bullheads in the bottom of the boat, although I suppose he was not fishing for bullheads to any great degree. We, however, found upon counting up, that he had twenty-six bullheads, and that our whole party had only taken nine. We thought that very good for a party who did not care to fish for bullheads.

The next morning we were out at the first peep of day and found that we had had a heavy rain during the night, and the remnants were with us upon our rising. We, however, make for the lake, and without stopping to consider the weather start out for fishing. The shower is soon over, and we are at them, only reversing the order of the night before, the Doctor and I skittering and the insurance man and Superintendent tending the live bait. The Doctor and I work along the far shore, and take one out of almost every likely place, it seeming as though there never was such pickerel fishing. We keep at it until the breakfast hour when we go ashore, and don't stop to count up but make a rush for breakfast and Kate's coffee, which we can appreciate to the highest degree.

After breakfast we resume fishing, the Doctor and I going still further up the lake, and the whole time are kept about as busy as we care to be, taking off fish and cutting bait, although the wind is blowing quite hard. We fish until the dinner hour, and then repair to the landing to count up our fish, feeling that we have done fairly well, and if the other boat has caught as many as we there will be a fine showing of fish. We have fifty-six pickerel in our boat and the others have forty-three; but they again can show some larger ones than we have, although we have some very nice ones. Here again comes the Superintendent's chance to tell us how much the largest fish will weigh; he carefully lifts him up, and says he will weigh about 3¾lbs., but we had better get the steelyards. We do this, and find the fish weighs 3lbs. 11oz.; and to this day the Superintendent says that the largest fish weighed 3lbs. 11oz, while some of the others of us say that it weighed 3¾lbs.

After dinner we dress our fish, and then start out to catch enough to make our total catch 175 pickerel, which is easily done as we are rowing the boats to the boathouse. There we are met by Mr. Goff with his team.

We arrive home in the best of spirits, with a magnificent catch of pickerel, and with the knowledge that this fishing in no way diminishes the supply, as we are informed that the fishing at this lake is better each succeeding year, owing to the magnificent opportunities that the fish have to propagate themselves, and the determined stand that is made against fishing through the ice. The fishing, the fellowship, and the knowledge that the supply is not materially diminished by our enjoyment, lends the best of feeling to such an outing.

Stevensville Lake, as I understand, is mostly artificial, a New York individual having rebuilt the dam at quite a heavy expense, and having bought as much of the land that surrounds the lake as possible. I understand, also, that there have been several suits brought by him to prevent the promiscuous fishing of the pond; but that there is no trouble in getting on to the lake if a person goes like a gentleman to his boathouse and engages one of his boats, of which he has a number, and which he lets at a reasonable price. The lake is about five miles from Liberty station, and it is a very delightful ride. M. J. STANTON.

Is the White Perch Musical?

NEWTON, Ill., June 21.—*Editor Forest and Stream:* A few days ago while down the Ambraw River on a fishing trip, I got into an old fisherman's boat, and as we oared over a deep hole at a bend in the river a grating noise came from the water near the boat, and seemed to follow the boat in any direction as long as we stayed in deep water. The man I was with said the noise was made by a white perch fish, and that he had heard of his neighbors running them into nets, and even catching them on hook and line by tolling them with a boat, which always attracts them this time of year, from 4 P. M. until after dark. I have made some search since returning home for some information on the subject, but fail to find anything.

The noise is something like a mixture of bullfrog and turkey gobbler, and seems to come from under the boat mostly, getting stronger and weaker alternately as the fish seems to raise or lower himself in the water. Racket made in oaring or talking does not interfere with the growling, snoring, or whatever it is.

Can you or any of your readers explain what this is?

CHAS. M. HONEY.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.*

CHICAGO AND THE WEST.

With the Saginaw Crowd after Trout.

CHICAGO, Ill., June 19.—All readers of FOREST AND STREAM know about the Saginaw crowd and its doings in different parts of the country. This unique body of sportsmen is organized under the name of the "Forest and Stream Co., Ltd." Ten members own the special car Wm. B. Mershon, without doubt the best appointed hunting car in the country, and when they feel like going on a trip they load into this wonderful vehicle all their plunder and start whither their fancy listeth. The car accommodates ten men with perfect comfort, and has lounging room, dining room, bath room, sleeping room, kitchen, closets, and a whole system of shelves and lockers, by which all confusion of goods and chattels is avoided. It has ice boxes and storage rooms for boats underneath the body of the car, and inside the car are gun closets and racks, and hooks and nails, and all sorts of things which make convenience and comfort. The car is something over 60ft. in length without the platforms, and is so admirably built that it runs like a bicycle for smoothness. It is a wonderful vehicle, and it has seen sport in many portions of the country. It has been to the Cascapedia, it has been to California two or three times, has seen Texas and Dakota, and many other famous shooting and fishing regions. It always carries a goodly company of jovial souls, and when the Wm. B. Mershon goes into commission there is going to be a grand good time. Nothing is overlooked by this peculiar body of sportsmen, whose like in purpose and equipment perhaps does not exist in all the land.

FOREST AND STREAM has told of some of the doings of this company in the field, but I think has not made mention of their accomplishments upon the stream. Be it known that they are each as fond of fishing as of shooting, and as expert and diligent in the one pursuit as the other. Deer shooting, duck shooting, goose shooting, salmon fishing or trout fishing, it all comes handy to the Saginaw crowd.

The Pere Marquette Club.

Some of the members of the Saginaw crowd and owners of the palace on wheels above briefly noted, belong also to a club of anglers known as the Pere Marquette Club, another select and favored organization. While most of the members live at Saginaw, upon the east side of the Michigan South Peninsula, the club stream, known as Kinne Creek, is something like half a day's run to the west, upon the opposite side of the peninsula. Here there is a little forlorn, deserted village of the pine woods saw-mill sort, whose empty houses tell the story of the exhausted forests. This is Wingleton, on the Flint & Pere Marquette Railroad. Within a few minutes' walk of the club house there is a beautiful lake, deep, clear, blue and cold, well filled with trout and bass. Out of this little lake springs the bright and rapid creek, augmented each few hundred yards for several miles by icy springs which trickle out from under the sandy, pine-clad hills. The club owns this stream throughout its length of about four miles to its mouth in the Pere Marquette River. This is one of the most remarkable trout preserves in the West, one of the best of the trout fishing clubs, and one of the most admirably planned and arranged. There are but seventeen memberships in the club, and only a few more will be sold. I do not know of any club in any part of the country where so much is owned by way of actual sport at trout and comfort in the pursuit of them. The stream is a wonder. It abounds in natural food, and it swarms with natural trout. There probably does not run out of doors in Michigan or Wisconsin any stream the superior of this as a trouting water or one showing a greater number of trout.

From Experience.

I speak thus knowingly of the Saginaw crowd, of the special car, and of the Père Marquette Club from the best grounds in the world, those of actual experience. Last week my friend Dick Merrill and myself accepted the invitation of Mr. W. B. Mershon to meet him and some of his friends at the station of Wingleton, to have a look at the fishing resources of that portion of the country. I left Chicago at 3 P. M., reached Milwaukee two hours later over the C., M. & St.-P., and Dick and I took the 8:45 evening boat of the Flint & Père Marquette line to Ludington, reaching the latter town at about 6 the next morning, after a most comfortable voyage. We then took rail to Wingleton, and by 7:40 were in the hands of our friends, Mr. Mershon welcoming us to the car and introducing us to the other gentlemen, Messrs. Watts S. Humphrey and Geo. B. Morley, of Saginaw, and W. A. Avery and J. B. Keena, of Detroit. We all took breakfast together on the car, and soon were flying up the railroad a dozen miles or so, it being the plan to fish the Little Manistee River first for a day, and then to come back to the club waters at Kinne Creek.

All arrangements had been made with perfection of detail, and I soon saw the reason of Mr. Mershon's wide reputation as a successful business man. He is one of the naturally executive sort, a man who is always doing something or getting something done, not wondering how it is going to be done. You will sometimes see such a man. He is always busy, and always looked up to as the one of whom things are expected. It seemed perfectly easy for the car to get up into the wilderness there somehow, and it seemed very natural that a couple of teams and wagons should be there waiting for us to get out of the car. It seemed a matter of course that there should be a couple of Bond sectional boats waiting to be put together, to add to the pleasure of the trip on the river. Everything was done magically smooth. Perhaps there may be those who have learned of the difficulty of attaining such ideal smoothness on a trouting trip into the pine country.

The Little Manistee.

Before noon we were in the river, the Little Manistee, and a more ideal trout stream never ran out of doors. It would be a pleasure to fish that river even if there was not a trout in it. Indeed, it required something of persuasion at the time to induce the belief that there was a trout in it. We met nearly a dozen "bait plunkers," all diligently at work fishing with all kinds of bait, but each and all of these reported very bad luck. Our own party only averaged about a half dozen trout apiece, of course, fishing with the fly, no very large fish being taken by anyone. Our friends thought that the stream had been fished to death. We made a very delightful afternoon of it, none the less. Mr. Mershon, Mr. Humphrey and myself fished together, taking one of the boats with us. Into the boat we put our coats, rod cases and other stuff we did not wish to carry, and we found this transportation very welcome. Mr. Humphrey waded on down the river ahead of us, and after a time Mr. Mershon and I overtook and passed him. Then we left the boat pulled up on the bank, and waded down ahead for some distance. After a time Mr. Humphrey overtook us in the boat, and passed down to again disembark. In this way, by using the boat in turns as a means of locomotion, we made the stream easily, rapidly and with fairness to each other's sport. This is the nicest way I ever saw of fishing a trout stream, and it is, I believe, the invention in those parts of Mr. Mershon himself. We enjoyed this very much, and found that there was no weariness attached to covering five or six miles of water in this way.

During the afternoon, while we were not meeting very much success with the trout, a little incident occurred to break the monotony. Mr. Humphrey had just passed Mr. Mershon and myself with the boat, and just as he swept around the bend beyond us we heard him call out to attract our attention to an animal he saw on the bank. At first he thought it was a woodchuck, but then he concluded it was too big for that, and as it straightened up he saw it was a cub bear, a yearling that had come down to drink. At the first jump it disappeared in the cover, and he saw it no more.

At the end of our water journey, by some magic, our team was waiting for us, to take us home in the dusk. And at the end of this ride through the forest there greeted us the light of the special car of the Saginaw crowd As we pulled off our waders and hung them out to dry, stowed away our loose clothing in the lockers, dressed for dinner, and sat down to the hot and well cooked meal, it surely seemed that this was the only way on earth to go trout fishing, and that it was not of the least consequence whether the trout rose or not.

But to the gentlemen who were in charge of affairs it appeared that the fishing offered by the Little Manistee at that point was not up to the proper point. It was decided to run back to the club at Kinne Creek. But how to get there was the question The Wm. B. Mershon was a bit too bulky to push by hand, and unfortunately there was no train due to which we could hitch our wagon. We were anchored here in the woods for a time against our will.

The Sable.

At this juncture came Bonne, the guide, one of the best and most practical men that ever went with a party into the woods, and he told us that on the day previous a man had told him of taking fifty-seven trout in the Sable River, five miles away. (This is not the Au Sable of fame, but a humbler stream upon the opposite side of the State. It runs into Lake Michigan) Fault of better, it was made up that we should try this Sable and see what was in it.

We did try it, and we found it just as satisfactory as the Little Manistee had been unsatisfactory. Not one of the party had less than thirty trout that day, and of these one or more ran up toward the 1lb notch. Mr. Mershon had forty-two, and said that he threw back twice as many of illegal length. Dick Merrill had thirty-seven. Mr. Keena had his basket nearly full, and Messrs. Morley and Humphrey, who fished side by side all day, took each a goodly portion It was left for Mr. Avery, however, to put all the rest of us to blush, for he made a grand catch of sixty-five fine trout. Of these he had one over 1lb., and many over ½lb., his fish being much larger in average than those taken by any of us. Mr. Avery said that he had not fished over 50 rods of the stream all day. The stream was literally alive with trout. In the evening when we left, they were rising like mad all over the stream in every reach and bend. Mr. Mershon and I had taken all we wanted before this time, but while we were waiting for the others to come we amused ourselves casting for a few minutes among the trout which were breaking in the bend below where our horses were put up. We took several more trout here, but put them back in the water again. We all agreed that this stream was one of the best wild streams we had ever seen. It appears that it has not been fished very much since it was last stocked. The Little Manistee is a handsomer and easier stream than the Sable, but is more fished. The Sable is the opposite of the Little Manistee, being a broad, shallow stream, full of logs and trees, which make it very hard to fish. A boat could not be used on the Sable by any means. The trout were abundant under the fallen tree tops and logs, and Mr. Avery proved himself a past master when he learned that the best way to take them was not to hurry, but to fish up stream, going very slowly, and not trying to cover much of the water. The bottom in this stream was soft and sandy, with a few reaches of hard gravel. We found the best fly was the Montreal, that used by Mr. Avery. John, one of the teamsters, took a rod, and before lunch caught fifteen trout near the luncheon camp, using the Montreal fly. We saw four or five other men on the stream during the day, and nearly all of these reported good luck. Our own party took out about 250 trout that day, and probably 500 were taken on that part of the river in all. The other fishermen came from the town of Freesoil, some five miles away It is very likely that the news of this stream was not yet fully spread. The market fishers had been operating steadily on the Little Manistee, but had not yet gone into the Sable. During my day on the stream I fell in with a boy with a long cane pole, about 15ft. long. He was using worms, and by means of his pole could fish a good way ahead of himself, so that he took quite a number of trout. His companion, an older man, was also successful, and he gave me the good advice not to get in a hurry, but to take the stream very slowly. Any trout fisher knows how sterling this advice is. If one hurries over a trout stream he gets no idea of its resources, for trout have a great way of being absent from sight when they like. The loiterer who waits till all has quieted down may peer over a log and see a score of trout where he would have suspected none had he rushed on down the stream in haste to find a better place a little further on. Happiness is nearly always at our own door if we only look for it there.

Kinne Creek.

We had now had two pleasant days on the streams of this locality and had a nice lot of fish, but Mr. Mershon was bound to show us the club stream at Wingleton. By some mysterious agency a switch engine happened along our way, and by the time dinner was begun we were on the siding opposite the club house. Here we were met by Mr. Geo. M. Brown, of Saginaw, the Nestor and general grandpapa of the Pere Marquette Club. We had, upon the morning of our arrival, met for a moment at our car Mr. B. B. Mitchell, general freight agent of the Michigan Central Railroad, a very ardent angler, with others of his friends who had put in a couple of successful days on the creek, but these had now all gone, so that Mr. Brown was alone at the club, except for his young son. Mr. Brown showed us eight or ten handsome trout, each some 10in. long, which he had taken for amusement that evening. It seems that he rarely ever catches a very big lot of fish, because he never wants to, but he can always, on any day, go out and catch all the trout he cares for. The trout seem to take a liking to him. There is always such a man as Mr. Brown about a club, who is there to take care of the general welfare of the fish, but who has a fatal gift of the fly when he wants a mess of fish. We learned that much of the perfection of the club hatchery arrangements, the screens, breeding pens, etc., were built upon Mr. Brown's plans. He is the roadmaster of the F. & P. M. road, and all mechanical improvements come to him naturally. In the five years of this club's life, 1892 to 1897, there has been perfected one of the most admirable trout preserves of the country, and the members vie with each other in giving all kinds of credit for this to the grandparent of the club.

During the evening we temporarily abandoned the car and rounded up in front of the big fire-place in the club reception room. Here the surroundings were of high piscatorial suggestion. On the wall were outlines of big fish, taken at Kinne Creek or streams adjacent thereto. There was one tracing in blue print of a rainbow trout weighing 8¼lbs., which was taken in Baldwin Creek. This was a most symmetrical fish, and is the record trout for that country, so far as is known to-day. It was taken by Van Valkenberg, a keeper and local fisherman. Another tracing showed a trout taken by Mr. Mershon in the Cascapedia, weighing 4½lbs. This fish, however, though a pure brook trout, was not so shapely and handsome a fish as the rainbow above noted. As to the fishing of Kinne Creek itself, the stream contains a large number of fish running to 2 and 3lbs. On one evening Mr Mershon took seventeen trout, weighing 13½lbs. Mr. Brown once took seven trout, which weighed 7¼lbs. Mr. Morly, in one day's fishing, took eighty-six trout, all over 7in. in length. It is a rule of the club that all fishing must be done with the fly, and any trout less than 7in. in length must be returned. For a time the club placed an 8in. limit on the fish, and that limit could even now be well maintained. The club members take each season about 3,500 trout, and they annually stock the stream with much more than that number, including some 200 or 300 large trout from the breeding pens. This supply, with the natural increase in the stream, keeps Kinne Creek fairly alive with trout. There is no stream in that part of the State which compares with it. Of course, there was at first much local enmity to the club, and on one occasion over 800lbs. of breeding trout were stolen from the pens; but the policy of the club has been so broad that to-day there is little or no trouble with poachers; but, on the contrary, a very friendly feeling is entertained for the club by the residents and visitors of the neighborhood. The club annually distributes from its own hatchery, among the adjacent streams, two or three times the amount of young trout which it places in its own stream, thus doing much to keep up the fishing in the country round-about.

A Great Trout Country.

We were now in the center of one of the best trouting regions of the South Peninsula, and one hardly to be surpassed in the middle West for the extent and variety of its fishing resources. For the benefit of anglers of this portion of the country I may state that from the town of Baldwin alone there are accessible, at distances of two to six miles, no less than seven fine trout streams, in any one of which good fishing can be had even to day, subject to the varying conditions which govern this changeable sport. Baldwin Creek has been a famous stream. Dannahar Creek is another, less known, but good. Then there are the south and middle forks of the Père Marquette River, offering many miles of good fishing. Sanborn Creek is also accessible from Baldwin, and so are the Little Manistee and its branches, usually affording excellent fishing. The Pine River is not far away, and it is thought that there may even yet be a grayling or two in the Pine. The Sable River I have already mentioned as being full of trout.

The Disappearance of the Grayling.

It was interesting, but in a way sad, to hear our friends speak of the disappearance of the grayling from all the above streams, in which it once swarmed. Mr. Mershon, who knew every pool in the Little Manistee, told me time and again of the wonderful catches of grayling he had made on that river. Mr. Brown spoke of the time when he and a friend took 163 grayling in one day's fishing. In the old days the catches of grayling were measured by the basket, the bag or the bucketful. Yet it seems not to have been altogether the fishing which destroyed the grayling. It is commonly supposed that the trout drove the grayling out of the streams to which they were formerly native. I expressed the wish that I might have seen this country fifty years ago, at the time that it was a virgin wilderness; but Mr. Mershon told me that had I been there at that time I would have found no trout at all in the streams, which were then inhabited only by the grayling. The trout is purely an artificial product in all these south peninsula streams, and many is the regret at the exchange which gave it in place of the grayling. Yet Mr. Brown and other old-time fishermen think that the grayling would have been destroyed even had the trout never come into the streams. Every considerable stream in that country is used for logging purposes, and during the drive the bottom of the stream is continually torn and stirred up. The brook trout is a fall spawner, and it deposits its eggs chiefly upon rocky bottom, where they are less apt to be disturbed by the shifting of the natural bottom Upon the contrary, the grayling is a spring spawner and leaves its eggs upon sandy bottom. When the spring drive of logs comes down a sandy-bottomed stream, such as the grayling most loves to frequent, the whole bottom of the stream is stirred up and shifted so that the eggs are covered and destroyed.

For a considerable time after the introduction of the trout the fishing in these streams was of a varied and interesting nature. The rainbow trout has been introduced and has in many instances attained great size. It was no unusual thing to catch brook and rainbow trout and grayling in one day's fishing. The keeper of the Père Marquette Club, C. H. Bates, at one time caught at one cast of three flies in the Père Marquette River, near the mouth of Kinne Creek, three fish, one trout, one grayling, one rainbow trout, weighing in all 3½lbs. It has been some time now since any grayling have been heard of in the streams of this region. The gentlemen whom we were with are well acquainted with all the main streams of the South Peninsula. They told me that the Au Sable River of the east side, that once famous stream for grayling, now has but few grayling left but is this sea

son a magnificent stream for trout. I asked Mr. Mershon if this was a good place to go for the grayling, and he said no, but that he knew a much better place when I got ready to make the trip. When I inquired where his grayling stream was he replied with a smile that it was "Up north," for which vagueness I do not in the least blame him. There seems to be a general regret among Michigan anglers at the extinction of the grayling, nor is there any hope entertained that it can be restored to these streams.

Sport on Kinne Creek.

The morning of our day on Kinne Creek came off very clear and hot, so that before breakfast was over we were convinced that we should have poor fishing. Mr. Mershon, Mr. Brown, Mr. Merrill and myself made a brief trip to the headwaters of the stream, the beautiful little lake which I have earlier mentioned. This lake is the special fishing ground of Mr. Brown, who goes there once in a while with minnows and wages war on the bass, which abound in that water. It is the wish of the club to exterminate the bass, but this is now conceded to be almost an impossibility, since the big fellows hold their own with dogged tenacity. Mr. Brown often has good sport taking bass on the fly in the lake, and often gets them up to 3½lbs. There are both large and small-mouthed bass and large brook trout in this lake, and while we were opposite the clear and shallow water of the outlet, we saw great droves of big bass, some of them, I should think, weighing over 4lbs., sculling along in the transparent medium, almost as swift and fully as wary as the trout. They could see us perfectly, and at the least motion would dart away like lightning, the surface of the water being quite glassy and unbroken in the calm, hot morning.

Mr. Brown took me in the boat out over the lake, and instructed me to cast my fly over the black spots, which indicated the deep spring holes in the lake, where he often took some very heavy trout. This I did, though not expecting a strike when the water was so smooth, but suddenly and much to my surprise there was a swirl and boil, and though I struck very tardily, I found myself fast to a nice trout, which had swallowed the fly and started down with it. There was a yell from Mr. Mershon, who was standing on a float inshore some hundred yards away, and who saw the bending of the rod. We had a lovely fight of it, and I could see every motion of the trout deep down below us in the water absolutely clear. The fish showed all the tactics of its kind, but could do nothing against the supple rod. We could see all the gold and crimson of his rounded sides as he came in close by the boat, the screw of his tail working vigorously, his head drawn a little to one side by the pressure of the rod. It was the prettiest trout picture I ever saw in all my life, and one with ideal surroundings. Our trout was what we call a large one in this country, weighing a little less than a pound. It was a beautiful specimen in every way. Meantime Mr. Mershon had taken a fine trout from the shore, whence both he and Mr. Merrill could see numbers of trout and bass swimming not far away in the bright water.

It was about 10 o'clock and very bright and sultry when we four left the lake and started to try some of the stream fishing below. Then ensued an ideal day of pleasure, though not one ideally perfect for trout fishing. The full fascination of this seductive form of sport was present. A lovelier stream never ran out of doors than this one. Icy cold and fed by innumerable springs, it broke and ran and rippled, eddied and swirled, lay placid or reached invitingly in all those fashions known on no stream save that beloved of trout. I found that the creek had been brushed out in a few places a little to make fly-casting more practicable, though all the wild cover remained untouched along the margins. Here and there a board was laid over a boggy spring run so that the path along the bank was easy and accessible. Mr. Mershon and I thus lapped over each other in our fishing once in a while, going out and passing below the man then lowest on the stream, leaving him a strip of territory for himself. I confess I did very poorly on that morning's fishing, and Mr. Mershon seemed to have almost equally poor luck. Yet when we got down to where we met Mr. Brown on the stream, we found that veteran of the charmed fly with half a dozen fine trout in his basket. I discovered the trout in this stream to be educated in a high sense, and that the man who makes a good basket there must be a trout fisherman in every sense of the word.

How the Trout are Raised.

There are two dams and a number of vast pools on the upper part of this stream where numbers of large trout are taken, usually late in the evening. We stopped for a time at some of these pools and paid an extended visit to the club hatchery, which is a most interesting spot. Here we saw in one pen something like 200 or 300 big trout, each of which would weigh from 2 to 3lbs. In another pen were some hundreds of trout a little bit smaller, and so on down to a pen full of yearlings. When we threw in bits of food the trout would fairly pile over each other in the rush to get to them, and this flashing and brilliant spectacle was curious and interesting enough to hold us for some time. Then Mr. Brown took a big dip-net and scooped out a dozen or so big trout for us to look at. I can think of nothing handsomer, unless it were a bunch of jacqueminot roses.

This fortunate club has a little stream which it calls its "nursery," a cold creek something over a half mile long, which rises in the sand and again disappears in the sand. Here there are no enemies to the trout, and here there are annually planted some 25,000 to 50,000 trout fry from the hatchery. At the end of the season there will be about 3,000 trout left to every 25,000 of the fry placed in the stream. These 3,000 yearlings are then placed in the stream, and there are also turned loose, at the close of each season, the big breeding trout of the upper pen, some 200 or 300 in number, the trout in the next lower pen being advanced to take their place. There are about 1,500 trout in the breeding pens all the time. This admirable system results in a perfect supply for the stream, which has more trout in it than any water I have ever seen. There is abundance of food in this stream, and of course no attempt is made to feed the fish artificially, except in the breeding pens, where the large trout are fed on liver. As the large trout are turned loose at the end of each season, and are not caught until the following year, their flavor is exactly that of the wild brook trout, and better fish than those of the Kinne Creek do not swim.

About half-way down the four miles or so of fishing water there is a screen placed across the creek, so that the fish cannot escape down stream. This leaves considerable fishing water between the screen and the mouth of the creek in the Père Marquette River. The latter is a good trout stream, and contributes its share of trout to the club preserves. Gentlemen who have seen the Castalia and Caledonia streams say that they are naturally not so good as Kinne Creek, which certainly is in a wilder country, and has a less artificial aspect. Indeed, Kinne Creek is simply a wild brawling stream, the cast of a fly in width at places, and offering body of water and abundant food to give fishing to twice the men who now make up the club, and under conditions twice as destructive Clearly enough was in evidence here the difference between open fishing and preserved fishing. If unprotected, Kinne Creek, lying close to the railroad as it does, would be cleaned out within a year. As it is, it will always have trout, though trout educated and wary enough to make their capture extremely difficult.

Along the bank at intervals I noticed little wooden signs giving the names of localities for the sake of identification for the purposes of lucid fish narrative around the club fire of an evening. Thus I remember that at the point called the Five Pines I saw a fine trout feeding and tried to catch him, but couldn't. At noon we all rounded up at the big pool happily named the "Glory Hole," one of the most noted waters on the stream, where a cold run empties into the creek from under an awning which has been put up for the shelter of warm and thirsty anglers. Near by here also is a little shed, put up as a road house for the hungry. Here, in some mysterious way, we were joined again by Bonney and the club team and the lunch baskets, and had a merry meal, with plenty of the best ice water on earth to drink, and the free spectacle of leaping trout. In the city it was hot, but here on the trout stream all was fresh and full of pleasure.

Expert Anglers.

As I had taken no trout of any consequence myself, I supposed that no one else had done so, but in this I found that I was reckoning without any just premises. Dick Merrill and I had fallen into a red-hot nest of trout fishers, and for my part I lost any little conceit which I may have had lingering about me since my day on the Sable. Mr. Keena came in with a guileless look and a basket swinging down with thirty odd trout. Mr. Avery had good account to make, though he was not high man this time. Mr. Brown had fooled along and taken quite a smattering of fine fish. But Mr. Morley, one of the most skillful trout fishers of the club, was the lucky member. He modestly said that he had only taken thirty-seven, and so showed his basket nearly full of glorious fellows. Mr. Humphreys had, I was happy to see, somewhat the same luck as Mr. Mershon and myself. We learned that the Montreal fly was the one the trout were coveting most that day, and Mr. Morley said that he had left the stream with the trout rising very well. He advised us to fish up stream, as the trout were very wild, and to use only the finest of gossamer leaders.

After luncheon we separated and scattered along the stream, Mr. Morley and Mr. Avery going to the lower part of the creek, and the rest of us clinging more nearly to the middle reaches not far from the Glory Hole. Toward evening the trout began to rise very nicely, and I found that it was as Mr. Morley had said, much easier to take them by fishing up stream than by fishing down. I got but a few fish over the size limit, however, nor did Mr. Mershon nor Mr. Merrill, as we three were obliged to leave the stream just about the time the fish were rising best, since Dick and I were obliged to take our train at 9 o'clock, and had to get to the car in time to change into traveling dress.

As we rode along the top of the bluff toward home we saw Mr. Keena fishing in the stream below us, between the Glory Hole and the Five Pines. He called out good-bye to us, but shouted to us asking us to wait until he showed us the big trout he had just taken. As he held it up he seemed nearly half as long as his arm, though he said he thought it weighed only about 1½lbs. He said that he had taken this fish on the coachman fly, just above the Glory Hole. A little further we saw the burly form of Mr. Humphrey mid deep in the stream and patiently whipping away. He called out a hearty good-bye to us. And so we turned away reluctantly from this pleasant stream and its pleasant inhabitants, whether of finny or of human sort.

Since our return home Mr. Mershon has written me, telling how the others came out on the evening's fishing after we left them. He says that Mr. Avery got a fairly good catch, two of them large. He had about thirty-five in all. Mr. Keena got yet another large one, nearly as large as the one he showed us. He took this in the swift water just above the hatchery, a spot which I know very well, as I had a vicious strike there in the morning which took away my entire cast, breaking the leader close to the line. Mr. Mershon says that Mr. Morley still had his luck with him, and took in all sixty-eight trout. He is a very skillful fisherman Mr. Avery was taken sick on the stream and did not fish very late, though the trout were rising well in the best water by the hatchery, near the pond.

This is the last word we have had from this fortunate country, though one may be sure it is far from the last thought one will have of it. And now comes Mr. Mershon, not content with giving us this treat on the trout stream, and says that Merrill and myself must come over and shoot grouse with him next fall, for that he knows a place where they are as thick as trout in Kinne Creek. Verily there is somewhat in this Michigan country. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Chicago Fly-casting Tournament.

CHICAGO, June 21.—*Editor Forest and Stream:* The Chicago Fly-casting Club will give an open-to the-world tournament to be held in this city Aug. 13 and 14, of this year. There will be six events, as follows: 1. Long-distance fly-casting. 2. Distance and accuracy, with rod not to exceed 8½oz., at buoys 50, 55 and 60ft. 3. Accuracy and delicacy, with rod not to exceed 5¾oz , at buoys 35, 40 and 45ft. 4. Bait, with ½oz. solid rubber frog, on the lawn in 30ft. court. 5. Roll casting for accuracy, with rod not to exceed 8½oz , at buoys 40, 45 and 50ft

A championship diamond medal will be given the contestant who has the highest average score of the six events. The club will offer as first prizes seven diamond medals. For the other prizes we will offer merchandise prizes of various values. Fishermen from New York to San Francisco have promised to be here and take part in the contests, and we feel certain that a large gathering of the most prominent ones in the United States will be the result.

GEO. A. MURRELL, Sec'y-Treas.

Bluefish Running.

GOOD SIZED bluefish are now running in considerable numbers in Great South Bay. Catches of from 60 to 100 per boat are reported. Boats can be procured at Sayville, Islip and Bayshore.

NEW ENGLAND FISHING.

BOSTON, June 26.—Fishing is good at Sebec Lake, in Maine, if reports are to be believed. The lake was formerly stocked with landlocked salmon by the Commissioners, and now they are captured there in considerable abundance, weighing from 1lb. to 6lbs. Recently Capt. McPherson, of a local steamer, caught thirteen salmon, trolling, while making his regular trips.

Sportsmen who frequent Third Buttermilk Pond, in Piscataquis county, Me., are reported to be indignant at the order of the State Fish and Game Commissioners to destroy the colony of great blue herons there. The objectors say the Commissioners are wrong in supposing that the herons kill trout; that their natural food is frogs, snakes and lizards. They seldom kill trout; for they are in too deep water, and far too wary and swift for the heron to catch. The colony of herons at Third Buttermilk is one of the last colonies left in the State, a great attraction to the neighborhood, and well worth a journey to see. About sixty nests have been counted there of a season. The Commissioners are reported to have given the objectors a hearing, and to have taken the matter of destruction in consideration.

Trout fishing at Lake Cobbosseecontee, Me., is better than my first report indicated. A good many brook trout are being taken there this year. Mr. Albert Fowler is reported to have taken one a week ago of 6½lbs., and Mr. Frank Bartlett one of 5½lbs. Mr. Atherton, of Lewiston, took five handsome trout in one day. The trout taken are identical with those found in the Rangeley waters. As already noted, Cobbosseecontee waters have for some time been given up entirely to black bass fishing, following the pickerel of years ago. But this year it is turning out that there are really fine trout there.

Now it is reported that a good many salmon have been taken in the weirs in the lower Kennebec, below Augusta. It is certain that one fisherman has taken a good many in his weir, though he is particularly anxious that no noise be made about it, for fear that some restriction will be put on his fishing by the Commissioners, or that other people down river will be setting nets. It is known to a few that the Commissioners have put a great many young salmon into the Kennebec, each year for several years, and the wonder has been that they have not been taken before. It is well known that the Kennebec was once one of the best salmon rivers in Maine. I am acquainted with a lady whose great-grandfather was drowned while trying to land a big salmon at the Ticonic Falls at Waterville. It is possible that salmon fishing is to be restored, in part, to the waters of the Kennebec. A sportsman, living at Augusta, believes that salmon can be taken below the dam at his town, and he will try them as often as the opportunity offers.

Mr. William J. Leckie is just back from a successful trouting trip with three or four friends. They went to the West Branch of the Penobscot, and thence to the lakes and ponds above. On several of these ponds, with exceedingly hard names, they found excellent trout fishing, the fish coming to the fly handsomely. But alas for the Maine woods in June! The black flies and the "no-see'ms" were simply horrible, the gentlemen coming home blotched and bitten sufficiently to last them a lifetime. On most of the black fly preventives they had with them the pests would actually feed. The minges they could keep away with a smoke, standing in it all the time.

The water is reported to be falling since the fair and warmer weather, and better catches of trout are the result in many waters. At Middle Dam, Richardson Lake, Mr. Jones, who has been there on quite an extended trip, says that the flow of water below the dam is much lessened from what it was all the last of May and early June, and that the fishing has greatly improved. A trout of 10½lbs. is reported to have been taken there, with another of 8½lbs. At Moosehead the fishing is better since the rain ceased, especially fly fishing.

Good fishing is reported at Four Ponds, off from Houghton Station, on the Rumford Falls & Rangeley Lakes Railway. A Rumford Falls merchant, in Boston the other day, says that the sportsmen of his town are having great sport up there, but hardly want outsiders to know it. SPECIAL.

MAINE WATERS.

KINEO, Me. June 22.—Your Boston correspondent, in an interesting review of the spring fishing in Maine waters, credited the Maine press with doing "some tall lying" regarding successes met with by parties, and characterizes the fishing as anything but good. In his rather sweeping assertion, however, are embodied several paragraphs that show the sport at old Moosehead very keen, and indeed such it has been and is even to-day. Old timers who have wet their lines in these waters every June, since the lake was reached from Bangor only by stage, say that they never have seen trout take hold so well, and as a result many have been here and many handsome catches have been recorded. The heaviest fish was a togue weighing 22lbs. and one of the best individual strings twenty-two square tails tipping the scales at 34lbs. Unvarying success has been with the numerous large parties that have visited the lake and their day's catches have run from 50 to 150 square tails and togues, aggregating as high as 350lbs. Live bait has been and is now the favorite, although there are those who have taken out good strings with the fly The water is yet quite high and is going down slowly. The West Branch is now open, and several parties have run down to Chesuncook Lake.

There is, of course, lots of dissatisfaction expressed over the shortening of the season on moose and caribou, especially the former, and the Moosehead Guides Association has sent in a petition to the commissioners praying for an interpretation of the law that may permit killing as heretofore. It has been said that one result of the change will be to drive sportsmen into the provinces, but the inferior sport there will probably prevent any considerable bolt. There has also been a deal of kicking relative to the law compelling guides to register, but that has had its run and now nearly every guide has sent in his name.

Much interest is being manifested in the scheme to open up the region north of the West Branch by an electric line to Eagle Lake, and Manager Dennen is in receipt of many inquiries from prominent engineers and land owners relative to the same. Although no definite steps have been taken as yet this spring, it is expected that the matter will assume tangible form before early fall. QUINSIGAMOND.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the test by Monday, and as much earlier as practicable.

SUCKERS IN MISSOURI STREAMS.

ABOUT the first week in May the suckers move out of the deep waters of the White River, and begin to ascend the smaller creeks and tributary streams, taking advantage of the April rains, which have by this time raised all the streams considerably. All the streams in this section are fed by springs, and after the spring rises, instead of the river immediately falling or running dry, it is thereby kept full, and soon assumes a bluish tinge calculated in a measure to hide the movements of the fish.

As the suckers come out of White River in great quantities, hundreds of thousands of them in a school, and ascend the smaller streams, it is a signal for a general fish-fry the entire stream's length. So regular do the suckers move that not a day's difference intervenes in their movements from one year to another. On May 13 without fail the suckers begin to shoal, and they occupy the shoals about three days before they leave to descend the streams. For a week or more previously, however, they may be found playing on the shallows or shoals, as the long, shallow stretches between deep holes are called.

At this season of the year there is a lull in farm work; corn has been planted and pretty well plowed, and wheat is not yet ready for harvesting. The farmers, therefore—who do not indulge much in fishing, for the gamy bass and trout of these streams are beyond their patience and skill to angle

WORKING THE DIP-NET.

for, and indeed, they have no taste for hook and line, anyway—now lie off for a big fish-fry. They flock to the streams in great numbers and bring with them all sorts of contrivances for capturing the sucker Large parties come many miles and camp for days at a time on the river banks. Scarcely a shoal for the entire length of each stream but has one or more camps. All day and all night they drag the shallows, dip with the nets, seine, gig and shoot suckers. Thousands upon thousands of fish are killed annually in this way. Not until the wagon beds are full of fish do the fishermen break camp, and, returning home, divide the catch among the neighbors. For the next few days or until the supply is quite exhausted, no other meat is eaten but fish, and the way these bony suckers are dispatched is a wonder to behold.

Last May my wife and I spent a week, during the shoaling or spawning season, at Nelson's Mill, on the James fork of White River, and were considerably amused with what we saw. The season had been extremely wet and farming was greatly behind. We had taken advantage of a spell of dry weather to spend our usual week of vacation at our old friend, John Nelson's mill, hoping that the good weather, the first in a long while, would set the farmers busy at their crops and leave the river free from the usual crowds that in-

HOOKING A BIG REDHORSE WITH GRAB-HOOK ON THE SHOALS.

fest it during bad weather; for farmers in this region only indulge in fishing, if at all, during the planting season, when it is too wet for farm work.

We arrived on Saturday afternoon, and with us came an old-fashioned April downfall, putting plowing for the farmer and bass fishing for myself quite out of the question. The miller told me that the next day would bring crowds of natives to the mill, and I might witness a big fish for suckers and join in it if I would. Now, sucker fishing had always been beneath my notice, but as everything else was out of question and I had to wait until the river cleared up before there was hope for bass, I did the best thing under the circumstances, and fell into the sport gracefully.

With the morning, and, indeed, that very evening, wagon-loads of noisy countrymen began to assemble, fixed their camps and secured places for their dip nets. These nets are constructed as follows: A square net, about 5ft. each way and very baggy in the center, is suspended to four prongs of hickory wood fastened into a block, which works in a slot at the end of a long pole. The one managing the dip net lowers it to the bottom of the stream in some eddy near the bank; after few moments it is quickly raised, and often has a number of fish struggling within. I have known as high as nine suckers, averaging 2lbs. each to be caught at one dip. It is quite a load and about all one man can lift out, especially when the entire weight comes at the further end of a long pole.

We had a specially reserved place directly underneath the mill, where the water eddied around, and beyond which the ascending fish could go no further. By daylight the river bank on either side was lined with dip-nets. The river banks for some distance below the mill were walled up with rock, and formed an excellent place for dipping. Then, it so happened that, this spring, the apron of the dam had been washed away, and it was quite impossible for fish to go higher. So here they congregated in great numbers, and fell easy prey to their destroyers. Thousands of fish crowded themselves below the dam, and all day long the busy dip-nets were raised and lowered, casting the struggling suckers on the rocks above.

For some hours I became quite interested in catching, after this fashion, the abundant fish. Now and then the dip-net would bring out a great, flopping redhorse that would tip the scales at 6 or 7lbs. Then a school of sunfish, or perch, would become entangled in its meshes. We even caught crappies and catfish, and a few—though a very few—bass were brought out. The hogsuckers that chanced to come up were thrown away; so were the hickory shad, a pretty but worthless fish. On one occasion I got a gar clear of the water, but it was only momentary, for he shot his slim length through the meshes in a jiffy.

Before very many hours I had more fish than the miller's family and his neighbors knew what to do with, and surrendered the net to one of the many spectators so he might catch himself a "mess."

Wandering along past the row of dip-nets down to the ford, I came upon a crowd of men seining Provided with a 60ft. seine, and wading up to their waists, they dragged out quantities of fish upon the shore. Further down, there were scores of men and boys on the high banks overhanging the shoals, dragging for redhorse. They had long cane poles, with about 2ft. of line at the end, attached to which was a grab hook, made by tying three ordinary hooks together at angles from each other and welding them by means of melted lead, thus forming a sinker and grab hook at the same time. This they would drag over the bottom of the stream; and so plentiful were the fish that every few drags would hook one. This was quite exciting, and differed largely from the wholesale slaughter going on around. For though the suckers are not a game fish by any means, yet when a grab-hook fastens into an 8lb. redhorse, he makes it pretty lively for the man at the other end of the pole. Along with the grab-hook men were others wading out in the stream, armed with gigs—long poles provided with a three-pronged spear at their ends. These men, though not able to see in the muddy water, were nevertheless reaping a harvest by merely plunging their weapon on this side and that side, often missing, but now and then securing a prize.

There was one party with trammel nets, though they had to keep it pretty quiet, and another with old-fashioned hoop nets. They say, but I never come in contact with such proceedings, that very often those who have no nets or traps and lack skill or patience for the grab-hook or gig, use giant powder or dynamite to get a mess of suckers, as well as other fish.

Each man and party were using that mode which they happened to possess or found best to their taste, but all bent on the same purpose. Outside of these were another set of loungers, who, either caring nothing for the sport or not being provided, stood ready to beg or buy, and sometimes to steal, the coveted mess.

Toward night the white corn juice whisky, which is distilled in this section, began to get in its work; and as night drew on and the many camp fires lit up the river, the air resounded with drunken yells and shouts, while boozy country Jakes reeled around, threatening every moment to tumble into the river or the camp-fires. When one set of men grew tired working a net or seine, another crowd took their place, and the fun went merrily on all night long. Even the grab-hooks, gigs, trammel nets and traps worked as well in the dark as in the day.

You see, shoals are not very plentiful, often many miles intervenes between them; and as the fish will not stay long, no time is lost catching them.

As fast as one party secured a load they departed; and the next day found many new faces, but all at the same work. For two or three days the fun was fast and furious. How many fish met their fate I have no means of estimating, but certainly thousands. As this scene was repeated at nearly every shoal on the river, as well as on every other stream in this part of the State, hundreds of thousands of fish certainly perished in a few days.

As the river ran down and cleared up we knew the fish would soon take their departure, and since the sport was short-lived to us, and having assumed more the aspect of a wholesale slaughter than anything else, we looked forward to their going, since with them would depart the rough, noisy and too often drunken crowd. The day before, which I think was Wednesday, following our arrival on Saturday, had been the best day of any for dipping. Our live-boxes were overflowing with white and yellow suckers and redhorse. Next morning, however, John Sanders, who had been running a hoop net along the Sanders shoals a mile below, came up to the mill and reported the suckers gone. Which, indeed, they were. He had caught but three that night, against 140 the preceding night. His traps were all set mouths down stream to capture the fish as they ascended, but they were no longer coming up. A day more and not a sucker would be caught on the shoals, only a few lingered now. Only six or eight fish were dipped up at the mill, where many hundred had been caught the day before.

By noon not a countryman was to be seen anywhere save in the fields. Yet the sucker fishing was not entirely over. There were a certain few proud possessors of fish traps, who had been biding their time until now. These fish traps, which now come in for their share of the plunder, are constructed about as follows: A low dam is built in the shape of a V, the apex pointing down stream. At this angle of the dam the water escapes over a slightly inclined upward shoot constructed of long boards closely laid at the base, but gradually widening at the tip, so that some of the water escaping through the cracks will reduce the weight on the shoot's extremity. At the end of this shoot, and underneath it, standing with its sides well above water, is a wooden framework made of slats, fitted together close enough to prevent the escape of fish on either side, but open at the top, and permitting the easy outflow of the water as it tumbles in from above. As the suckers descend the stream the low dam obstructs their passage, they are carried by the current to the apex of the angle and thus over the shoot into the cage below, from which there is no escape. Fish travel at night, and often of a morning these traps are found to contain many hundred pounds of fish of all kinds, but at this season largely suckers.

Following in the wake of the suckers and feeding upon their spawn or roe, come the game fish. An unusually large migration of the suckers always guarantees an ample supply of the others. Game fish in our rivers are endeavored to be protected by law, yet I know, to my positive knowledge, that no heed whatever is paid to the law. Fish of all kinds are ruthlessly destroyed in their spawning season, just when they should be most jealously protected. They are netted, shot and blown up by giant powder and dynamite. And while the suckers are looked upon in disdain by sportsmen

GIGGING SUCKERS.

and lovers of bass and trout fishing, and therefore permitted to be destroyed by hundreds of thousands, they are slowly thereby exterminating the game fish. Nature has made a wise provision; the despised sucker, feeding upon the vegetation and refuse in the muddy river bottom, provides, in the shape of its roe and young, food for the game fish. These two widely different families must dwell or die together. A full-grown sucker will deposit over 300,000 eggs. You can soon see what an immense amount of eggs and young must be eaten by other fish, when you stop to consider that a

A NATIVE WATCHING THE SEINERS SEINING BELOW THE DAM.

million or more suckers ascended the James this spring, at a very low estimate. But each year sees the crop of suckers, as well as all other fish in our streams, grow less and less, and if our Legislature and courts are not awakened to some cold, hard facts very soon, these streams will be depleted.

WILLIAM H. JOHNSON.

Gone Fishing.

MR. W. A. HOISINGTON, of the Page Fence Company, left New York June 26 for a six week's absence, to be devoted to rest and recreation. Mr. Hoisington's headquarters will be at his home in Adrian, Mich., where, parenthetically, it may be stated the bass fishing is excellent; but several weeks of the time will be spent in camp in company with Mr. W. N. Swift, also of the Page Company, at Gull Lake, Kalamazoo county, Mich., where both gentlemen have purchased cottage sites.

Fishing near New York.

A CORRESPONDENT in Forked River, N. J., writes that the blue fishing at that point at present is excellent, and that some weakfish and striped bass are also being taken.

A gentleman who spent two days at Greenwood Lake this week caught an Oswego bass weighing 5lbs. and a smallmouth of 4¼lbs. weight. B.

MEN I HAVE FISHED WITH.

XLIV.—Franklin Satterthwaite.

FRANK was the kennel editor of FOREST AND STREAM when I first met him, some seventeen years ago, as an enthusiastic sportsman who favored the gun more than the rod. He was tall, broad-shouldered and strong, with a pleasant face, on which he wore a full, but not long beard. We became well acquainted, and one day he said: "A friend of mine keeps a hotel on Greenwood Lake, and wants me to come up and have a few days' black bass fishing. He says they are biting good, now. Will you go up there for a few days?"

Beyond a knowledge that the lake had a reputation for black bass, was only a short distance from New York city, and lay partly in New Jersey and partly in New York, I knew nothing of it; but we went. The "hotel" was one of several similar houses built of light boards and standing on piles—evidently made for summer use only—and could probably accommodate a dozen people, if they were not too particular. Frank introduced me to the landlord, whom I will call Bill—not that that was his name, but merely to be able to refer to him. Bill would not impress one as a model landlord—he was too familiar and aggressive. He wore great cowhide boots, which echoed on the thin board floor of the "office," which was destitute of all covering except dirt.

It was evening, and June was young. Supper over, Bill and his family soon retired, but Frank and I were not used to such early hours, and we we sat and admired the night in ignorance of the fact that these people who went to bed with the fowls got up with them, and made no attempt to stifle their noises after it was "time to get up." We were at the northern end of the lake, and a light, southern breeze kept the mosquitoes off the piazza, if any were about. Frogs piped, croaked and gurgled in a marsh, a whippoorwill reiterated its complaint on the hill, and an occasional owl challenged some other owl, and we were enjoying life with feet on the railing of the porch and chairs tilted back when a single stroke of the clock warned us that it was technically morning, and time for bed.

It seemed but a few minutes when we were aroused by a series of bumps and a clatter that would have awakened all of the famous seven sleepers, and I sat up in bed and rubbed my eyes. It was daylight, and a glance at Frank's bed showed him to be aroused. "What is it?" I asked. "What has happened?"

"It's Bill going downstairs in his boots, that's all; at first I thought it was an earthquake."

We heard him go out of the back door and down two or three steps; the clock struck 4, and then all was quiet and peaceful again and we slept. How long one sleeps he can never tell, but it seemed to be about five minutes when Bill hailed from the back yard: "John, get up and milk the cows, it's most 5 o'clock, an' you've got a lot of things to do before you go out on the lake." We dozed again, and then John's boots were so much in evidence on the resounding stair that I missed something Frank said. He may have been saying his prayers; I only caught a word or two. Again silence reigned and eyelids closed in that blessed peacefulness which comes just before consciousness is lost, and then the dreadful voice of Bill again broke in on us from below. This time he bellowed: "Mayre-e-e! Come down and get breakfast, it's about 6 o'clock." Mary went down; we heard her, although apparently she did not wear cowhide boots. Frank merely grunted, and I was too sleepy to care to express any views on what we afterward concluded was an outrage on men who were paying for sleep but not getting it, so off I dozed again, and the next thing we heard was a clumping of boots coming up the stair and then a pounding on our door. Bill called: "Hey! You fellers, ain't you goin' to get up today? Breakfast's ready."

We were both on the floor at the first alarm, and as Bill opened the door a trifle my shoe struck across the crack, which was not wide enough to let it through to its destination. A small pitcher from Frank crashed on a panel, and Bill closed the door and clumped down, step by step, to the main floor. "Sorry I didn't have a pistol," said Frank; "but the little pitcher was the only thing at hand and I gave him the best I had. There's no use in trying to get any more sleep this morning, so we might as well dress and go down."

"Frank," said I, "let us go to some other hotel, where our chances of sleep will be better and the landlord will not dictate to us the proper hour for rising, and where he does not wear 6lb. cowhide boots, nor play checkers with them on bare floors over our heads. Then, if he has a way of calling his help at daylight without our knowledge, we may be happy during our stay."

"There's no such place on the lake," said Frank, "except at the club, and we have no invitations to go there. Let's go down to breakfast and say nothing, go out on the lake and fish, lay off in the middle of the day, fish in the evening, and then, when we are not angry, we will talk to Bill like a Dutch uncle. We will not feel so much like killing him then, and I think I see murder in your eye. What d'ye say to that?"

"You are a philosopher, Frank; nothing we can do will restore our lost sleep; but if we can partially civilize Bill so that he will either not wear boots or will leave them on the back porch, and get him to use other means than bawling to arouse his household at unseemly hours, it will be a good deed. Better than killing him, but I have doubts of success in these experiments. We will try, but must not let him bully us a little bit."

The ham and eggs, potatoes, bread and coffee were disposed of without any reference to the annoyances, and John appeared. He was to row the boat. By some distortion of language the men who do this on Greenwood Lake are called "guides"; we have no word equivalent to the English "gillie," but we need it. Bill came to the landing, and learning that we wanted some baits to use if the bass wouldn't rise to the fly, he put in the boat a box of live frogs, a can of live minnows and a box of helgramite larvæ, Dobson's, in moss, and away we went. Frank had fished the lake before, and told the boatman where to go, and as we cast we took two good bass with a green and gold fly, and three with a frog. These fish we unhooked and let go, and John was displeased, and said that if we didn't want the fish we might give them to him. He did not understand the thing at all, and after we had pulled up ashore for a lunch and a midday siesta, he said to me in an injured tone: "When gentlemen catch fish they don't want they give 'em to me an' I sell 'em, but you let 'em go, an' they don't do nobody no good."

"John," said I, picking his meaning from the wreck of grammar, "when I catch a fish it is mine, to do with as I please. When I hire you to row this boat for the day, and choose to lay off from noon until two hours before sundown you have no cause of complaint. The fish are mine, your time is mine, and if I want to let you off for a few hours I do so, and if we wish to let a bass off until we come again, it is the same thing."

After lunch Frank and I went up on a hill where there was a chance for air and shade, to smoke, chat and possibly regain a small portion of the sleep which had been robbed from us, and after getting settled under a broad tree, close to the eastern edge of its shade where we might stay for some hours, Frank said: "These yokels exasperate me as much as they do you, but I think they afford me more amusement than you get out of them. You've been angry all day because you didn't get enough sleep, and in this spirit you let all the bass go when you knew that John wanted them. It would be a safe wager that you don't always refuse to give a portion of your catch to your guide or your boatman, in addition to his pay, come now! I challenge you to deny it."

"It's a safe challenge. Ordinarily I give the boatman all the fish I don't want to keep, but there is no reason why he should demand them. I pay for his services, and that ends the business transaction. I paid for a whole mess of sleep last night, which I didn't get and I don't like it, and when we get quieted down after dinner to-night Bill will learn that I didn't like it. I did not come here to be told when I should sleep nor when I should rise, nor did you, and I will have no more of it if I have to buy a tent and camp out. In that case there will be no thin-carpeted stairs for men with cowhide boots to tramp up and down on in the obnoxious hours of the morning."

Frank raised himself on his elbow, and refilling his pipe naively asked: "What are the obnoxious hours of the morning?"

The question brought up a family reminiscence and I replied: "You only ask this question in order to draw me out on the question of early rising, and I will tell you frankly that I usually avoid the unnecessarily early-rising crank and, from what I know of your habits, you do the same. The early-rising man thinks that he is a model for all mankind, and that's the aggravating part of him. He misses the most glorious part of the day, that from sundown to midnight, and to that no man could object if he didn't brag of it. Like the man who is never sea-sick, or who lies about it, his brag that he is a superior man is annoying. The early riser goes to bed with the chickens, and that would be all right if he did not boast about the hour that he got up in the morning. I'll tell you, Frank, a personal yarn about early rising: my father always went to bed with the crows and got up with them. When I was a school-boy he would pull the clothes from my bed at 8 A. M., spank me and say: 'What! not up yet! Why, I've been up four hours.' And so it went, but he took an afternoon nap and kept on bragging about his early rising."

Frank listened to this and said: "I could never see why rising early should make a man 'healthy, wealthy and wise.' My work has kept me at it night and day, but the beauties of the night cannot be ignored; what did your father do when he became older?"

"Kept the same thing going, and the same brag about it. I fail to see why a man should boast about meeting the day at an early hour, as long as he gets a certain amount of sleep, but, after many years absence from home, father found me in bed about 8 in the morning, and with a tone of regret said: 'I don't see that you've improved any in the matter of getting up, now that you are a man.' 'No, father,' said I, 'during six years in the West and three in the army I mastered most of the vices of civilization except early rising, but I never could catch on to that.' He gave up hope of reforming me then and there."

We rested and slept until the afternoon was well gone, when we went to the boat and called John. Frank tried a Dobson and took one small fish, while I changed flies for an hour and gave it up. Then we tried the live minnows and took eleven fair fish, and it was dark. We gave the fish to Bill and I told him that we wanted them for breakfast, or a part of them, and also that we wanted them skinned.

"Why do you want them skinned?" Frank asked.

"To get rid of the muddy, weedy flavor which fresh-water fish that live in weedy lakes always have in the summer. I don't regard the black bass as a good table fish at any time of year, but it is sure to be flavored with weeds now, just as the water is. Even the yellow perch, a much better table fish at all times, is better for being skinned in summer."

Our dinner was the same as the breakfast, except tea was served instead of coffee. Frank protested in this wise: "When I was up here last fall, woodcock shooting, Bill, you fed me on ham and eggs until I was ashamed to look a hog or a hen in the face, and to-morrow night I want a steak, chops, or a roast of beef or lamb, for I'm not going to live on ham and eggs, nor fish, either."

Bill looked at me and asked: "Don't you like ham and eggs?"

"Yes, I like ham and eggs, but I think as Frank does, there is a limit to the liking. I don't want them for dinner at any time, but can use them for breakfast about twice a week, if the ham is not too hard and salt, and the eggs are fresh. Your eggs are very good." This last as a smoother.

"Well, I declare," said Bill, "some of you city fellers is queer. Now, give me plenty of ham and eggs and I don't want no meat." This was a phase of vegetarianism new to us, and one that we often referred to in after years.

As we smoked on the piazza Frank remarked: "This landlord is a skin. He'll charge us $2 50 per day for board, $2 for the boatman, who gets a little more than half of that, and 50 cents per day for the boat, making $7.50 per day for both, and he will feed us on ham and eggs all the time, if we will stand it. I know him, and I propose to make him feed us decently or we will go somewhere else, although I don't know that there is anything better here."

"I think you have his exact measure," I replied, "and as I followed your advice this morning and said nothing to him while I was angry, I propose to talk to him now, on the subject of unnecessary noises in the morning. Call him out here and I'll lay the law down to him."

Bill came out and sat down. I began my discourse with: "Bill, I am very sorry that my shoe didn't kill you this morning, as I intended it should, but we will be prepared for you to-morrow morning, and if we miss killing you again we will patronize some other hotel. I probably got three hours' good sleep before you came thundering down the stairs with your big boots about 4 o'clock."

"Well," he replied, "what be I a-goin' to dew? I've got to get up an' feed the stock an' get ready for the day's work. I should think you'd want to get up, anyway, an' enjoy the mornin' fishin'—many of 'em do—an' get out on the lake as soon as they can see; that's the time to catch the most fish."

"That, Bill," I replied, "is a matter of individual taste, but we don't want to catch the most fish. We want to enjoy life after our own fashion, and that is to fish four or five hours a day and sit half the night out of doors, and get up when it suits us. If you consult the comfort of your guests you will leave those boots in the cow-shed and wear slippers in the house, and devise some means to get your servants up, and down, without bawling under our windows. You should know this without having a guest explain it. We will fish at such times as we choose, or not at all; but we will not submit to be awakened at daylight by your boots, or any other noises."

Bill made no reply; he was evidently shrinking all his thought on the rights of guests and landlords, and after a pause, Frank asked him to the rear to look after the cleaning of the fish, and I sat alone as the echoes of his boots had died away. Minutes passed; a flying squirrel ran across the balcony rail, and over my shoes before it scurried away in alarm. The moon burst from behind a cloud, and the frogs became silent for a moment until they found there was no cause for alarm, and I had forgotten Frank, Bill, and all other human beings, when suddenly Frank returned.

"Well?"

"It's all right. As I told you, he is a skin; but, like all of his class, he only wants to know how far he can flay a man. At present we are his only guests, and he will play us to the limit if he can; but you put it to him squarely, and while we stop here we will be allowed to remain undisturbed till 8, unless we order breakfast before; and we will not have ham and eggs more than twice a week for breakfast, and fish not more than three times with dinner, as I told Bill before. I told him that we would stay about a week, and that we were both journalists who might write up his hotel unfavorably. He took off his boots in the kitchen, and said that there was no good reason for wearing them up and down stairs, and so you got in your work to good advantage."

A faint creak on the stair told that Bill had left his boots below. I was not flushed with victory, but just felt that calm self-appreciation which one feels when others acknowledge that his point has been carried. We sat, talked, smoked and kept silent as our humors prompted. After an unusually long fit of contemplation of the moonlight on the water, Frank asked: "How do you like this place? Not for the fishing, the cuisine, nor the dormitory which we have, but the lake and its surroundings I mean; and as a place to enjoy life in the open, fishing, shooting, or simply sitting on a piazza and looking at the lake?"

"It is grand," I replied; "and if our landlord reforms most of his bad habits, I will enjoy another outing here, mainly during the hours from sundown to midnight, on this piazza, watching the moon on the water and listening to the voices of the night. I love to fish and sometimes to shoot; but to me the grandest enjoyment is an inland lake on a moonlight night, when the air is vocal with voices that are never heard at any other time."

After a few whiffs at his pipe in a contemplative sort of way, Frank said: "You seem to be extra poetical to-night; suppose we get off some verses that will amuse us by recording our thoughts on this night, writing the lines alternately. How does it strike you?"

"You mean for one of us to write a line and the other to follow; is that it?"

"Yes; like a composite poem. You write a line and then I'll follow. Do you catch on?"

"Yes, I have the idea and think there is some humor in it; but as this is your own suggestion it seems to me that you should write the first line."

We squabbled over this question of precedence for a while, and then one of us, which one fame will never know, wrote a line and passed it to his friend. In its complete form the "poem," written on the shore of Greenwood Lake that June evening, was as follows:

'Tis cool on Bill's piazza, where the voices of the night
Are mingled with the whispers of the bass;
The snoring of the hired man fills the rabbits with affright,
And the owls sing, "Don't blow out the gas."

The moonbeams kiss the bullfrogs, who lament unto the moon,
That Bill's boots resound upon the stair;
The kitchen-maid rejoices that morning comes too soon,
And the skeeters cause the pollywogs to swear.

Right here on Bill's piazza it is pleasant now to sit,
And listen to the singing of the rats;
While we gaze out on the lake, where the festive mermaids flit,
As they chase the tuneful, iridescent bats.

In autumn it is pleasant to hear the chestnut burr,
And in spring to hear the young trees as they shoot;
The maiden clubs the milch cows when they toss a horn at her,
As we wake in morn at sound of Bill's big boot.

The first line was all right, but the man who wrote the second one started in the direction of levity, and there was no hope of holding the verses up to the standard; but it served to pass half an hour pleasantly, and that is what we were out for.

One day as we were on our way to the place of our afternoon siesta we saw a man lying in the sun by the roadside. "Some old tramp," said Frank; but the man began to toss and roll over, as in agony, and we ran to him. It was Charles F. Murphy, of Newark, N. J., the man who made the first complete split-bamboo rod, and he was merely able to say "buttermilk," and I diagnosed his case at once, and from my creel drew a vial of Jamaica ginger, or similar remedy, and gave him a generous dose. He lived, and said that some miles back he had stopped at a farmhouse and had absorbed a quart of buttermilk, but would hereafter abstain from its use. Said he: "Boys, you have saved my life, sure, I couldn't have lived another hour in such pain; I couldn't walk, and I dropped my rods somewhere, in my agony, but I can't tell where."

We found the package of rods, and took him to our resting place, where, with frequent interruptions from Frank, who was disposed to jolly his old friend on his buttermilk spree, I heard the story of the evolution of the split-bamboo rod from the man who first made it. Some other time I may tell it. Frank's suggestions were like this:

"Murph, never mind about rod-making; we all know about that; tell Fred about the time you whipped Awful Gardiner when you didn't know that he was a heavy-weight prize-fighter; that'll be more exciting."

"Never mind that," Murphy said, "Orville Gardiner is all right, he's reformed now and is a decent man; let me tell how the first rod of this kind was made; you see Sam Phillipps, out at Easton, Pa, began to use a natural Calcutta bamboo cane for a fishing rod, as far back as 1848, but—"

"Tell us about the fight, Murph., Fred wants to hear how

you, a little, slim, skinny duffer who weighed about 125lbs. cleaned up 'Awful' Gardiner.' That is a story that is of historical and ethnological interest, and —"

"Frank, will you please keep still?" I asked. "You are wrong in saying that I would prefer to hear about the fight. Let Murphy go on about the building of the rod and I will assume that the big prize-fighter was drunk and assaulted the little man, and came to grief; not an unusual case, but the first split-bamboo rod is a thing that is made but once." And so I heard the story.

When the heat and glare of the June day had passed we invited Murphy to fish with us. We found the boat all right, and John dead drunk in it. We pulled the boat ashore, broad side, dumped John out, and proceeded to fish As we fished I told the story of how Frank Endicott's boatman, on Greenwood Lake, got drunk and tried to bail out the perforated bait can which hung outside the boat so that he could find a minnow; and Murphy declared that John was the man, for he was there with Endicott and Harry Pritchard at the time.

We took turns rowing that afternoon, and had fair fishing, but we all rebelled in unison against having John as a boatman any longer. Then it turned out that John was a relative of Bill's, or he owned the boat, and we must employ him or nobody. No outsider could be hired to row the boats at this hotel. Here was a labor trust which confronted the capitalists. We held a council of war and decided to row our own boat—we were paying for the boat, and would not have John as a gift. The fact was that the boatman had little to do; we drifted and cast, or anchored and cast, and when we had to row, the distance was short. This stroke made us independent, and we had beaten Bill at every extortionate point, so far, and we rejoiced thereat. That night, on the piazza, we three cussed and discussed Bill and his wife's brother John, the cook, chambermaid, and all the appurtenances of the "hotel" to our complete satisfaction. Bill was simply a brute who looked upon a guest as a hyena looks upon a bone; we all agreed to that, and more, we felt relief in having a common opinion.

So far it was well, but it has been said that he who laughs last laughs best, and it was at our final settlement where Bill's laugh came in. His bill was:

5 days' board for two @ $2.50 each	$25.00
5 days' services of boatman	10.00
5 days' use of boat	2.50
200 helgramites @ 2 cents	4.00
50 minnows @ 3 cents	1.50
40 frogs @ 5 cents	2.00
Total	$45.00

Frank read the items and then said: "How about all this bait? We couldn't have used that amount, not by a long shot. That's out of the question."

"But you took them," said Bill; "John counted 'em all in before you started, didn't you, John?"

John nodded assent and Frank asked what I thought of the matter. My idea was to pay for the amount of bait that we had used, as we had not ordered the extravagant amount put up. We then had John count out what was left and found that we had used fifteen helgramites, ten minnows and four frogs. These we paid for, and Frank said:

"It is lucky that Bill did not see the contents of your fly-book or he would have charged us for them; let us laugh now."

Franklin Satterthwaite was a genial sportsman, well posted on matters relating to the gun and the kennel. He died at his home in Newark, in 1888, at the age of forty-six.

FRED MATHER.

IN THE ADIRONDACKS.

NEW YORK June 23.—*Editor Forest and Stream:* A party consisting of Messrs. Yale, Nelson, Brooks and Redner went fishing to the Adirondacks last week. We took the train at the Grand Central Depot, and went to Port Henry on Lake Champlain via the D & H. R. R. A drive of thirty five miles over a fairly good road brought us to the Boreas River, where we put up at the Sand Pond Hotel, which is run by one of the oldest pioneer loggers in the mountains—a man who remembers when the woods were filled with wolves and "painters."

Arriving at the hotel, Mr. Nelson made a bee-line for the kitchen to try and hurry the dinner, as he was near starved, while Yale got out his fine trout tackle and began arranging his Stony Point flies, which he swears by, while I dug worms for the crowd.

Finishing a dinner which we all relished after a six-hour drive through the invigorating mountain air, we went down to Sand Pond and fished with varied success until evening. Just as the shade of night had drawn her sable mantle lightly over the mountain tops and kissed her finger-tips to the fast-fading sun, Yale, who was in the boat with me, suggested to try trolling. It was the work of a moment to change his fly leader for a small troll, and the trolling began. We rowed about half way around the pond, when Yale suddenly exclaimed: "Hold on, John! I'm foul of a stump!" I brought the boat, which was scarcely moving, to a sudden stop. But Yale's reel still hummed like a buzz saw. "Stop her, John!" he shouted, "my line is near run out and will soon part!" Just then the line slackened a little, and when Yale, who handled the reel equal to Ike Walton, tightened up the line; there was a ripple on the surface of the water for an instant, and then, great guns! the biggest trout I ever saw broke water, and rising about 2ft., fell back with a splash equal to a porpoise.

There was great excitement in our boat the next few minutes. The fish sounded, and came to the surface like a black bass, trying to dislodge the hook; again he sounded and again he ran, and Yale was with him all the time.

I told Yale that I would like to see him get the fish up near the boat, and then lose it. "That would be too bad," said he, "I would not lose it for anything; why, he weighs 6 or 7lbs." He worked adroitly with the fish for about forty minutes, and finally reeled it up close to the boat. I reached with the landing-net to take in the prize, but somehow the net struck against the hook, the leader parted, and away went our trout Yale looked at me in a I'll-throw-you overboard manner, and I feared for an instant that he would carry the looks into execution. But he broke into a hearty laugh, and simply said it was too bad. We rowed around the pond six times afterward, and did not get a single strike.

Next morning Brooks and Nelson went to Wolf Pond, a small feeder about a mile from the hotel. They fished there a couple of hours, and caught forty trout; they then started for the house. When they came near the clearing, Nelson says that Brooks, who was walking ahead and humming his favorite song, suddenly exclaimed "I see my finish!" and dropping his rod and fish, started on a 2:40 gait toward a house at the other edge of the clearing, shedding his coat and hat as he ran.

A few minutes after Brooks reached the house, Nelson saw him, accompanied by the occupant of the house and a Winchester, hurrying towards him. "What's the matter, Brooks?" asked Nelson when they came up to him, "Are you crazy?" "I'm all right," said Brooks, "there's motive in my madness. I saw a bear, and want this man to shoot him."

Nelson turned, and the trio started to bang the bear. When they had gone about 100yds. in the forest, Brooks pointed out the bear. The trained eyes of the man of the woods saw at a glance that Brooks' bear was nothing but a big black stump partly covered by a cedar bough.

Yale and myself fished down Clear Pond and caught fifty nice trout. In all we caught 163 trout; aggregate weight 57½lbs.

Next day we went to Mim Ville, where there is pretty good fishing. Nelson and I went down to Bartlett Pond Stream to try our luck. We had fished down stream probably a quarter-mile, when Nelson, who was some distance below me, commenced to yell like an Indian on the war-path. I hurried down to him, thinking he was cornered by one of Brooks's bears. But it was no bear; it was a trout, and a beauty that tipped the scales at 2½lbs, the biggest fish caught. The rain came down so heavily then that we were obliged to give up the sport.

We then went back to look for Brooks and Yale, who we found in the Hotel de Hayes with a dozen natives. Each one told the best place to catch trout, and one wanted to sell some to Brooks, who indignantly refused to buy, saying that he always caught his fish Of course we all have our private opinion about what Brooks would do if he chanced to meet a lone fisherman with a nice string of fish. NOVICE.

Smelt and Trout.

CHICAGO, June 14.—*Editor Forest and Stream:* I have read with much pleasure an article in the June 5 number of the FOREST AND STREAM, entitled, "Are Smelt a menace?" by Bainbridge Bishop, and I think that the sooner these ideas are carried out the trout and landlocked salmon fishing will be much better. I agree with Mr. Bishop, that the large smelt are scavengers, and that they are a menace to small trout.

I have just returned from a trip to Swan Lake, near Belfast, Me., which is a natural trout pond, and which has been stocked with landlocked salmon. This lake is only seven miles from the sea coast, and smelts have run up the river and become landlocked. The smelts grow to a very large size, some even weighing a pound or more. I have fished in this lake every year (with one exception) for the past seven years, and the fishing seems to get poorer every year. There have been large quantities of young trout and quite a lot of landlocked salmon put in during the past five or six years, and the fishing ought certainly to grow better. I can't account for it in any other way except that the smelt eat up the young trout.

Mr. Fred H. Francis, of Belfast, Me., who is a close observer, and one of the best known fishermen in that part of the State, fully believes in this theory. He is a firm believer in the pond, and thinks that it would make one of the best trout ponds in the State if all the large smelt were taken out every season when they run up the brooks to spawn.

I think that the State Fish Commission are not alive to this fact, and that the sooner they realize and remedy it the sooner their expectations of good fishing will be a fact.

J. A. GAMMANS.

Editor Forest and Stream:

I was on the point of writing you to defend the fresh-water smelt against the imaginary fears of Mr. Bainbridge Bishop, when I read Commissioner Stanley's letter, and it only needs to be said that I fully indorse it. The only objection to the smelt is, that they furnish so much food for the trout and salmon that the angler does not find it so easy to lure them with live bait, but when the trout are in search of flies, I do not think the smelt are any obstacle.

The heavy rains and long continued cold weather made early fishing in most of the New England waters poor, but I hear it is picking up very well lately, though June has been very cool so far. The weather records in Boston yesterday showed the thermomoter 20° lower for the day than it was on June 21 last year. The result of so much rain is that all our brooks are much fuller than they have been for years, and the prospect is encouraging for a good supply of trout next year.

One word more about the smelt. Besides the Maine waters mentioned by Mr. Stanley, they are also indigenous in Lake Winnepesauke, and from them they were obtained to stock our other New Hampshire lakes, and it is a noted fact that the winninish, fed on them, grow much larger than they do in Grand Lake stream, where smelt did not exist, and from which we got our parent stock. The same difference is also noticeable in Sebago Lake, where the smelt were aboriginal.

I was very glad to see Mr. Cheney's illustrations of the difference between pike, pickerel and muscalonge, and hope to see them called by the right name some day, as well as the pike perch, who now figures as a wall-eyed pike and a jack salmon. Why not take the French name, and call him a Sandre. VON W.

CHARLESTON, N. H.

American Fisheries Society.

AT the Detroit meeting of the American Fisheries Society a resolution was adopted authorizing the chairman to appoint one representative member of the Society in each State bordering on the Great Lakes, to form a commission to bring about, if possible, the enactment of uniform fishing laws in all the lake States.

Omaha was selected for the next meeting, which will be held in July, 1898. The following officers were elected: President, W. L. May, Nebraska; Vice-President, George F. Peabody, Wisconsin; Recording Secretary, Herschel Whittaker, Michigan; Corresponding Secretary, J. E. Gunckel, Ohio; Treasurer, L D Huntingdon, New York. Executive Committee: James A. Dale, Pennsylvania; E. E. Bryant, Wisconsin; A. N Cheney, New York; J. W. Titcomb, Vermont; J. L. Penton, Michigan; F. N. Clark, Michigan; Professor S. A Forbes, Illinois.

A Fishcultural Opportunity.

WE invite notice to the card signed "Fishculturist" in our advertising columns. The advertiser is known to us to be a fishculturist of rare accomplishments, thoroughly competent to fill any position in connection with the work.

Camp-Fire Flickerings.

"That reminds me."

Asbury Park's Champion.

ASBURY PARK, N. J.—Perhaps there are no more cosmopolitan people on earth than the angling fraternity. Occasionally a boor is found among them, but it is a most rare occurrence; and then it is not the real Simon Pure angler such as work hard at desk or profession all day, and haunt the rivers and bays at night, giving up their needed rest for the sport they love so well; but rather the man who has an abundance of leisure, and who uses fishing as a time killer. A visit to our piers at evening or early morning now is full of interest. The regulars are nearly all here, and making good use of their time. The relaxation from business cares puts all hands in great good humor, and woe betide the angler who catches a worthless specimen, misses a strike, or fouls his cast; he at once becomes the butt of an endless run of good-natured badinage until he redeems himself by some exploit, or passes the cigars. One evening recently an individual, lanky in form and laconic in speech, a stranger to all of us, was lounging lazily upon one of the benches, spinning yarns of wondrous catches in Southern waters, when some one ventured the remark that they must have been "whales." Quick came the rejoinder in most contemptuous tones, "Humph! we were baitin' with whales." In recognition of his talents the boys have posted the following placard on the pier: "Ananias Jonah, champion fish liar of the world, is now with us, and the old gang is not in it."

FIXTURES.

FIELD TRIALS.

Sept. 1.—Continental Field Trials Club's chicken trials, Morris, Man.
Sept. 6. Manitoba Field Trials Club, Morris, Man.
Sept. —.—Northwestern Field Trial Club's Champion Stake, Morris, Man.
Oct. 25.—Brunswick Fur Club's ninth annual trials.
Nov. 1.—Dixie Red Fox Club's third annual meet. Waverly, Miss.
Nov. 1.—New England Beagle Club's trials, Oxford, Mass.
Nov. 2.—Monongahela Valley Game and Fish Protective Association's trials, Greene county. Pa.
Nov. 8.—Union Field Trials Club's trials, Carlisle, Ind.
Nov. 9.—Central Beagle Club's trials, Sharpsburg, Pa.
Nov. 15.—E F. T. Club's trials, Newton, N. C.
Nov. 16.—International Field Trials Club's eighth annual trials, Chatham, Ont.
Nov. 22.—U. S F. T. Club's autumn trials.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

AS TO THE JUDGES.

ON the part of a few pointer men there seems to be an undercurrent of dissatisfaction with most of the judges who have been engaged to officiate at the trials of this year, added to which is a feeling of resentment as expressed by unfriendly words and the withholding available support which would otherwise be given. The ground of complaint of the men aforesaid is that the judges are all pronounced setter men, and that they therefore are prejudiced, unconsciously prejudiced, against the pointers, and that they have prejudgments in favor of the setter. More specifically, last year some of the competing pointers suffered injustice, unintentional injustice, at the hands of the judges, as shown by the fact that some of the owners of some of the defeated pointers disapproved of the judges' decisions, and were sustained in their opinions thereon by the opinions of a handler or some handlers. Incidentally, it may be mentioned that there is no grievance relative to any competition in which the pointers were winners though the judges were the same so-called setter men. A win under those judges was valued and made much of, notwithstanding their unfortunate failing of having opinions of their own. The pointers made an excellent showing in the competition and records of the past year, and it is safe to presume that the judges in that relation were wise, impartial, accomplished, learned and fit for the high trust reposed in them; their unfitness begins with good dogs, beloved of their owners and nevertheless losers. Still the defect of a dog and a grieved human heart are often coincident, for which the judge is often considered responsible. The inefficiency of the dog and the prejudice of the owner are rarely considered. Where there are winners there must be losers, and there are good and bad of both. The worst bad loser is he whose grievance is founded on hearsay, the sympathy of of a friend or two, disappointed hopes and unalterable predisposition in favor of his own wares, whether the same be valuable or worthless. The hopelessly wrong kicker is bad enough at best, but it is deplorable when he gives expression to his disapproval by malicious words and acts

Let us consider the absurdity of the position of the few pointer men who disapprove of the setter men, so called, and the setter judges, so called. They refuse to participate in the trials because they do not like the judges, alleging that they favor the setters. Furthermore, for the same reason, they will exert themselves to keep others from entering. At the outset, it may safely be laid down as a fact that such men are much more valuable when absent in every way from the trials than when present. Their few dollars of entry fees are trifling in the way of good when compared with their surly nature and malicious acts when they do not receive what they consider adequate return for the money invested

But returning to setter men and setter judges, so-called. The records show that the pointers were not discriminated against All the best judges consider the work, not the dog. To the judge it is immaterial what the breed of the dog is, whether he be pointer or setter. The pointer gets his deserts, not because he is a pointer, but because he is a competitor; the same with setters. It is absurd to allege that men of the experience, broadness of view and scrupulous honesty of the best judges should be swayed by the relatively puerile issue as to whether a pointer did the best work because he was a pointer, or a setter did the best work because he was a setter. There is a juvenility about the grievance in question which makes it unworthy to be cherished by grown men.

And yet it is an old, old story, this stealthy, insidious enmity of the setter man to the pointer's interests. Under the circumstances, it would seem to be fitting that the pointer men would do something specially for themselves. The

dreadful setter men so far have done most of the work, assumed most of the responsibility, and sustained most of the odium which came from the disgruntled few. It is an easy matter to let others do the work, and then find fault with results. The work and responsibility are free to all alike. If the so-called setter men do not do the work to suit, it would seem a wise and beneficient course for the disgruntled to shake up and do something for themselves.

As to the pointer judges who should have been engaged during the coming season, it may be asked, who are they? Who are the pointer judges, anyway? Any man who would declare himself a pointer judge would be unfit to act. A true judge is he who judges the competitors on the work done. He is not a pointer or setter judge; he is impartial and alike to both. The judges engaged this year are not setter men in the sense of being officially prejudiced in favor of setters. The only reason for the assertion on the part of the few disgruntled pointer men is the grasping after a colorable pretext to justify a bad position.

The fame and value of their dogs are from the benefits of field trials. To withhold their support does not harm the clubs. If the clubs were destroyed it would not harm the members, for they are merely an incident to them, a means of pleasant diversion during a few days of each year. Most of the judges accept under pressure the arduous position of judge, and they do not care a hang which dog wins, whether the same be setter or pointer. Often they serve without compensation, and in return for several days of the closest and most fatiguing labor, their sole remuneration is the hostility of some gentlemen whose sportsmanship and love of the dog consist of a *tout ensemble* of stud fees, puppy sales and revenue in general.

Pitti Sing.

WINNIPEG, Man.—I noticed in the English *Field* a short time ago, an article alluding to the celebrated dogs of England. Tutsham Tip, Woodhill Beta and Woodhill Bruce were particularly mentioned, and the fact was commented upon that a sister of the above celebrated dogs had gone to America and had made a splendid record, but unfortunately the strain (on this continent) had not been perpetuated. The allusion was to Pitti Sing who, ten years ago, won her first aged stake, and a puppy of hers winning first in the Derby of the Irish setter field trials the same year, and second in an English Derby stake.

Seven years ago this remarkable bitch ran in the four-hour heat race at Lexington, N. C. Mr. W. W. Titus wrote me at the time that at the conclusion of the week's running, and at the end of the final heat of four hours, she was just as game as when she started. Years ago I put her away to end her days in the kennel, but as she seemed with increasing years and no work to be getting skittish, I bred her this spring, and yesterday she had a litter of healthy puppies. There may be instances of a similar nature; but I have bred hundreds of dogs, yet this is the most remarkable case that has come under my notice personally, or that I have heard of.

THOS. JOHNSON.

POINTS AND FLUSHES.

Under date of June 24, Mr G. B. Borradaile, honorary secretary of the Manitoba Field Trials Club, writes us as follows: "To permit dogs being brought into Manitoba to compete in the M. F. T. Club's 'Derby' and 'All-Age' stakes, free of duty, they must be first entered in either of the above stakes before they will be allowed to pass the Customs Port of Entry without paying duty. Our weather seems to be from reports received from the country, just the kind required for raising large broods of prairie chickens. From nearly every part of Manitoba and the territories most favorable reports are reaching me of their numbers, etc. Present indications point to our club's trials being a success."

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

WHEELING NOTES.

It was only nineteen years ago last March that the first bicycle of domestic manufacture was sold in this country.

The winner of the recent Chicago road race was a man fifty-one years of age. He covered mile after mile at a 2:40 gait, and effectually demonstrated that the younger generation was not in it with "Papa" Smedley.

Mr. David King, Jr., of New York, has found a very practical use for the tricycle in shore bird shooting. He covers the frame of his machine with a grass screen and wheels slowly along in his perambulating blind to various feeding grounds of the birds, thus securing more shots, and at closer range, than those who rely upon stationary blinds or other means of approach.

During the late Greco-Turkish war a number of the newspaper correspondents used bicycles on the scene of the hostilities. In an interview given an English paper, Wilfred Pollock, who claims the honor of being the first war correspondent who has been through a campaign mounted on a wheel instead of a horse, gives some interesting facts. He says that the Greek roads are my no means impassable for bicycles. To quote from the interview:

"Sometimes I had to get off and walk a mile or two; sometimes it was I that did the carrying and not the machine, but this was seldom and never for any great distance. On the other hand the zigzag cuttings up the many mountain passes are so well graded that it is quite possible to ride up them if the surface be good and the wind friendly.

"Riding down—and my machine had no brake—one had to remember that the corners of these twists are not banked, and the Knud, as they call it in India, often offers many hundred feet of sheer drop."

Further on Mr. Pollock says: "By this time my success in outstripping other correspondents in the several races to telegraph offices was becoming notorious, and bicycles became quite common adornments of the carriages in which my colleagues chiefly traveled. * * * Not only did the bicycle prove much faster, even on the Greek roads, than even the Greek horse or carriage, but to sling it on to a train or steamer was the work of a moment, and a horse is by no means so easily manipulated. On three most important occasions my material reached England at least a whole day in front of that sent by any other English correspondent, thanks to the bicycle every time."

On general principles it would seem that oil would prove a good surface lubricant to reduce the friction of the chain over the sprockets. There is a serious objection to its use for this purpose, however, in the fact that with the ordinary adjustment it makes the chain slip on the teeth and clang in a way that effectually destroys the peace of mind of the rider

Wheelmen who have failed to wipe the oil from their chains after lubricating the joints frequently imagine that something serious is the matter with the bicycle from the noise that it makes, and sometimes they send it to the repair shop, when, as a matter of fact, all that it needs is rubbing with a cloth to dry the chain, and then a little graphite or other prepared surface lubricant on the inner side.

The excessive use of oil is never to be advised. A few drops over each bearing is sufficient at any one time for all practical purposes, and any oil which escapes should be carefully wiped off.

An overflow of oil collects dust and spoils the appearance of the wheel, and is also open to a yet more serious objection in that it is a great cause of loosened nuts and the resultant accidents.

In the case of screwed on sprockets, oil has been known to loosen the check nut, which has a left-hand screw, and then the simple act of back-pedaling unscrews the sprocket itself. The loosened chain jumps the sprockets, and a general smashup may result.

There has been a great demand this year for the so-called anatomical saddles, and the old front-and-back-supported soft saddle has fallen off in popularity correspondingly.

The old saddles were comfortable when the rider was well broken in to their use, and they insured a firmer seat than many of the more recent contrivances, but they were wrong physiologically, and had to go.

Saddles on similar model are made over wooden or metal frames so as not to sag at the sides, while saddles with double points of support, provided with pads for the pelvic bones, represent the most advanced type.

It is worth noting that the initiative for this movement came almost exclusively from the riders themselves, and that the manufacturers of bicycles and saddles were slow to take it up. Three years ago it was not uncommon to see wheelmen riding saddles embodying the features so generally recommended at present, that had been constructed or adapted by altering the old-style saddles to meet their views.

The demand for such saddles was very marked before a single prominent manufacturer took up their construction.

Connecticut Legislation.

THE Connecticut General Assembly has adjourned, after a notable session from the cyclist's standpoint. Although at one time the indications pointed to action inimical to the wheelmen, in the end things were cleared up satisfactorily and both the measure imposing a tax upon bicycles and that requiring a lighted lamp to be affixed to wheels after nightfall, regardless of roads or conditions, were defeated.

Instead, several wise measures have been passed, notably the general bicycle law which goes into effect July 15 and supersedes the numerous and conflicting local ordinances and by-laws of towns, cities and boroughs. This general law limits the speed of bicycles in thickly settled sections to ten miles an hour. Bells are required, and must be sounded on approaching within a reasonable distance of any person. Riding on the sidewalks is prohibited and liable to punishment by a fine not exceeding $20, but the word "sidewalk" does not apply to cross walks nor unimproved foot-paths.

Among other measures passed by the Legislature affecting bicyclists are laws imposing penalties for the theft of wheels, for throwing into the highway tacks, glass, crockery, scrap iron or wire, and for willfully or maliciously injuring bicycle paths.

A new section deals with the amount of road to be given wheelmen by drivers of vehicles, which provides for "a fair opportunity to pass," though not necessarily one-half the traveled path.

Another section, which is aimed at that class of riders who put wheeling into disrepute and are at the same time a menace to the pleasure and safety of other cyclists, provides a fine not exceeding $500 or imprisonment up to six months for any bicycle rider, who having run against and injured any person on the highway does not stop, render aid, and give his name and address.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

Copies of the FOREST AND STREAM *race report blanks, for recording and reporting races, will be sent to all clubs requesting them.*

The racing and measurement rules of the Yach Racing Union of Long Island Sound (the Seawanhaka rule, with allowance tables) can be had of Thompson & Co, 55 Dey street, New York; price 10 cents per copy.

The handbook of "Yacht Flag Etiquette" can be had of Rehm & Co., 157 Fulton street, New York; price 10 cents per copy.

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

JULY.

1. Miramichi club cruise, Newcastle, N. B,
1. Royal St. Lawrence club, all classes, Dorval Lake, St. Louis.
1. Royal Canadian Queen's cup, Toronto Lake, Ontario.
M 3. Jeffries, off Jeffries Point, East Boston.
3. Cohasset, club, 15-footer, 4th cham, Cohasset.
3-4-5. Cor. San Francisco, cruise Martinez, Vallejo San Francisco.
3. Roy. St. Lawrence, 20ft. class, Dorval, Lake St. Louis.
6. American, 1st club, Newburyport.
3. Fox Lake, club, Mineola Club, Fox Lake, Ill.
3. Royal Nova Scotia, handicap; 3-rating class, Halifax.
3. Beverly, 2d open sweeps, Wenaumet, Buzzard's Bay
3-4-5. American, cruise to Boston, Newburyport.
3-10. Brooklyn, annual cruise, L. I. Sound.
3-4-5. Buffalo, Lake Erie:
5. Larchmont, annual, L I. Sound.
5. Cohasset, club, 15-footers, 5th cham., Cohasset.
5. Burgess, open, Marblehead, Mass, Bay.
5. Fox Lake, club, Dr. Brophy's Cottage, Fox Lake, Ill
5. Lake Michigan, Y. R. A. annual, Racine, Lake Michigan:
5. Beverly, 2d cham., Wenaumet, Buzzard's Bay:
5. Wollaston, cup and club cruise, Boston Harbor.
5. Cor. Marblehead, club, Massachusetts Bay.
M 5. City of Boston, regatta, off Marine Park.
7. Roy. St. Lawrence, 20ft. class, Dorval, Lake St. Louis.
8. Absequan, open, Cricket Bay, Atlantic City:
S 10. Riverside, annual race for 25, 20 and 15ft. classes of sloops and all classes of catboats.
10. Roy. Canadian; 1st and 37ft. classes, Toronto, Lake Ontario.
10; Queen City, 27ft class, Toronto, Lake Ontario.
10. Cohasset, club, 15-footers, 6th cham., Cohasset.
10. Roy. St. Lawrence, 20 and 15ft. classes, Dorval, Lake St. Louis:
10. Royal Nova Scotia, open, all classes, Halifax:
10. Burgess, 2d cham., Marblehead, Mass. Bay.
10-11. Cor., San Francisco, cruise, San Mateo, San Francisco:
12. Miramichi, Adams cup, Chatham, N. B.
S 12-16. Seawanhaka Cor., trial races for 20ft. class of sloops.
13 Taunton, ladies' day, Taunton, Mass.
13-18. Rhode Island, annual cruise, Narragansett Bay.
13. Fall River, ladies' day, Mount Hope Bay.
M 17. Winthrop, off Winthrop.
17. Cor. Marblehead, 1st cham., Mass. Bay.
17. Queen City, 20ft. class, Toronto, Lake Ontario.
17. Winthrop, open, Winthrop, Boston Harbor.
17. Columbia, annual club, Chicago, Lake Michigan.
17. Cohasset, club, 15-footers, 7th cham., Cohasset.
17. Rhode Island, annual club, Potter's Cove, Narragansett Bay.
17. Fox Lake, club, East Side, Fox Lake, Ill.
17. American, 2d club, Newburyport.
17. Wollaston, club, Boston Harbor.
17. Pewaukee, interlake, Pewaukee Lake, Wis.
17. Royal Nova Scotia, knockabout class, Halifax.
17. Roy. St. Lawrence, A, 30, 25 and 20ft. classes, Dorval, Lake St. Louis.
M 19-20-21-22-23. Manchester series, off Manchester.
24. Brooklyn, special, New York Bay.
24. American, cruise to Annisquam, Newburyport.
24. Winthrop, evening race, Winthrop, Boston Harbor.
24. Absequan, Cricket and 15ft. classes, Atlantic City, Absecon Bay.
24. Queen City, 16ft. class. Toronto, Lake Ontario.
24. Burgess, ladies' race, Marblehead, Massachusetts Bay.
24. Roy. Canadian, 27ft., 22ft. and skiff classes, Toronto, Lake Ontario.
24. Cohasset, club, 15-footers, 8th cham, Cohasset.
24. Roy. St. Lawrence, 20ft. class, Dorval, Lake St. Louis.
24. Royal Nova Scotia, Wenonah cup, open, Halifax
24. Beverly, 3d open sweeps, Wenaumet, Buzzard's Bay.
25. Winthrop, cruise, to Nahant, Winthrop Boston Harbor.
S 28. Stamford, special race for 51, 30 and 20ft. classes of cutters and sloops.
M 31. Revere, Lynn Bay.
31. Gravesend Bay, cruise, New York Bay.
31. Cohasset, club, 15-footers, 9th cham., Cohasset.
31. Royal Nova Scotia, squadron cruise, Halifax.
31. Fox Lake, club, Dr. Tooker's Cottage, Fox Lake, Ill.
S 31. Indian Harbor, annual, all classes except cabin catboats.
S 31. Sea Cliff, special, 30 and 25ft. classes, cabin catboats
July 31-Aug. 1. Cor. San Francisco, cruise, Vallejo, San Francisco.

JULY.

Y. R. U. of Long Island Sound Racing Circuit:
3. Saturday. New Rochelle, annual regatta, for all classes
6. Tuesday, American, annual regatta, for all classes.
7. Wednesday. Riverside, annual race for schooners and all classes of sloops 30ft. and over.
Atlantic Y. C., cruise, Long Island Sound:
5. Rendezvous, Larchmont.
6. American, regatta, Milton Point.
7. Riverside, regatta, Riverside.
8 1st squadron run, Riverside to Black Rock.
9. 2d squadron run, Black Rock to Morris Cove
10. 3d squadron run, Morris Cove to New London.
11. Informal run, New London to Shelter Island.
12. Race off Shelter Island.
Inter-Lake Y. R. A. Meet, Put-In Bay, Lake Erie:
5. Rendezvous, Put In Bay.
6. 52ft., 42ft. and 37ft. classes.
7. 32ft. and 27ft. classes, catboats and launches.
8. Open, cup held by Zelma.
Lake Y. R. A. Circuit, Lake Ontario:
15. Cobourg.
19. Kingston.
23. Charlotte.
27. Hamilton.
29. Toronto.
31. Niagara.
Larchmont Race Week, Larchmont, Long Island Sound:
17. Open, all classes.
19. Special classes.
20. Rowing and launch races, water sports.
21. Open, all classes.
22. Smaller classes.
23. Schooners and smaller classes.
24. Open all classes.

AUGUST.

2. New York, cruise, rendezvous Glen Cove.
M 2 Burgess, Marblehead, Mass. Bay.
2-3-4. Roy. St. Lawrence, 20ft class, trial races, Dorval, Lake St. Louis.
M 3. Beverly, Marblehead, Mass. Bay.
S 4. New Rochelle, special classes, 43ft. and under.
4-5-6 Cor. Marblehead, midsummer series, Massachusetts Bay.
5-6-7. Taunton, cruise to Newport, Taunton, Mass.
6. Absequan, invitation race, Atlantic City
7. Cor. Marblehead, open, Massachusetts Bay.
7. Buffalo, club, Lake Erie.
S 7. Hempstead Harbor Club, annual, classes 43ft. and under.
M 7. Corinthian, off Marblehead.
7. Queen City, 22ft. class, Toronto, Lake Ontario.
7. Beverly, 3d cham., Wenaumet, Buzzard's Bay.
7. Wollaston, ladies' day, Boston Harbor.
7. Cohasset, club, 15-footers, 10th cham., Cohasset.
7. Roy. Canadian, 1st and 37ft. classes, Toronto, Lake Ontario.
7. Fox Lake, club, Island Fox Lake, Ill
7-8. Winthrop, cruise to Marblehead, Winthrop, Boston Harbor.
7-14 Cor. San Francisco, summer cruise, San Francisco.
7. Royal Nova Scotia, knockabout class, Halifax.
10. Winthrop, evening race, Boston Harbor.
11. Taunton, ladies' day, Taunton, Mass.
12. Miramich, Stewart pennant, Oak Point race.
M 13. East Gloucester, Gloucester Harbor.
M 14. Squam, Annisquam.
S 14 Horseshoe Harbor, club, annual, classes 26ft. and under.
14. Cor. Marblehead, 2d cham., Massachusetts Bay.
14. Brooklyn, special, New York Bay.
14. Queen City, 16ft. class, Toronto, Lake Ontario.
14. Winthrop, 2d cham., Winthrop, Boston Harbor.
14. Beverly, 4th cham., Wenaumet, Buzzard's Bay.
14. Cohasset, club, 15-footers, 11th cham, Cohassett.
14. Wollaston, cup, Boston Harbor.
14. Fox Lake, club, East side, Fox Lake, Ill.
14 Royal Nova Scotia, open, handicap, Halifax.
14-21. Roy. St. Lawrence, 20ft. class, Seawanhaka cup races, Dorval, Lake St Louis.
M 17. American, Newburyport
S 18. American, special, classes 43ft. and under
19. Winthrop, cruise to Weymouth, Winthrop, Boston Harbor.
M 19-20-21 Quincy, series, Hull Bay, Boston Harbor.
S 21. Huguenot, annual, classes 43ft. and under.
21 Roy. Canadian, 27ft, 22ft. and skiff classes, Toronto, Lake Ontario.
21. Roy. St. Lawrence, club, all classes, Dorval, Lake St. Louis.
21. Beverly, A. M., Van Rensselaer cup, Marion, Buzzard's Bay.
P. M., 2d open.
21. Taunton, 1st cham., Taunton, Mass.
21. Cohasset, club, 15-footers, 12th cham., Cohasset.
21. Queen City, 20ft. class, Toronto, Lake Ontario.
21. Royal Nova Scotia, knockabout class, Halifax.
21. Burgess, 3d cham., Marblehead, Mass Bay.
23. Absequan, open, Atlantic City, Thoroughfare.
23. Rhode Island, annual open, Pawtuxet, Narragansett Bay.
24. Minnetonka, Interlake races, Lake Minnetonka.
25 Fall River, open, Mount Hope Bay.
S 25. Corinthian Fleet, special, 51, 30 and 20ft. classes.
M 26. Duxbury, Plymouth Bay.
26. Taunton, open, Taunton, Mass.

M 27. Kingston, Plymouth Bay.
28. Cor. Marblehead, 3d cham., Massachusetts Bay.
28. Buffalo, 27ft. and smaller classes, Lake Erie.
28. Gravesend Bay, cruise, New York Bay.
28. Brooklyn, special, New York Bay.
M 28. Plymouth, Plymouth Bay.
28. Queen City, 27ft. class, Toronto, Lake Ontario.
28. Cohasset, club, 15-footers, 13th cham., Cohasset.
28. Royal Nova Scotia, open, handicap, Halifax.
28. 3d cham., Winthrop, Boston Harbor.
S 28. Huntington, annual, classes 51ft and under.
28-29. Cor., San Francisco, cruise, McNear's, San Francisco.
M 30. Cape Cod, Provincetown Harbor.
M 31. Wellfleet, Wellfleet Harbor.

THE completion of the first steam pilot boat in the present year of grace, 1897, marks another epoch in the history of naval design. The history of the American, and especially the New York, pilot boat is very similar to that of the American yacht. At one time, nearly half a century ago, both were renowned for their speed and other good qualities, which placed them far ahead of the vessels of all other nations. The fame of the schooner yacht America, practically a modified pilot boat, was almost equaled by that of Mary Taylor and the other famous pilot boats designed by George Steers. The models of these vessels, yacht and pilot boat alike, were copied by foreign builders in both new and old vessels. The reputation so well earned by George Steers and his contemporaries was by no means upheld by their immediate successors, and for many years the American pilot boat shared with the American shoal sloop and schooner the hearty condemnation of impartial experts. There was in the later boats no trace whatever of the ability, ingenuity and individuality that characterized the America and other craft of her day, but on the other hand, builders were content with a blind copying of stereotyped features, with no better guide than prejudice and tradition. The same methods which produced the old centerboard sloop or schooner, shoal, wide, badly ballasted and wretchedly rigged, produced the regular New York pilot boat. Both were lamentably deficient in the essentials of a good ship, and yet both were considered by their builders and owners as the most perfect craft of their kind ever floated. Boston gave way in course of time to the advance of improvement, and her pilot fleet was greatly improved through the efforts of the late D. J. Lawlor, who has left a fitting monument in the pilot boat Hesper No. 5; but New York clung to the last to the old models of both yacht and pilot boat.

It is now twelve years since the change came in yachting and the designer was finally recognized in his true place, so long accorded to the builder. For fourteen years before, from 1871 to 1885, the first American designer, Mr. A. Cary Smith, had been turning out vessels far superior to those of the rule-o'-thumb builders; Vindex, White Cap, Madcap, Intrepid, Norna, Fortuna, and the most famous of all, the sloop Mischief, all from his board, had borne testimony to the value of technical training and systematic work in designing; but it was not until the great success of Puritan, the work of another designer, that American yachtsmen as a class recognized the two distinct functions of designing and building, and did due honor to an American designer. The innumerable successes of American designers in the field of sailing yachts from that day to this has settled the matter forever, and to the advantage of both parties; a new profession, of yacht designing, has sprung up, and at the same time the builders have prospered far more than under the old system.

It is not a little surprising that the success of the different big schooner yachts should never have induced the pilots to go to the same source for a design; but such is the case. As long as wooden pilot schooners were in vogue about New York no attempt whatever was made to improve the very defective models, or to bring them back to the high standard established by George Steers. Vessel after vessel was built of the same ancient model, and with the same stereotyped faults.

The day of the sailing pilot schooner passed in due time, the old fleet giving way to steel and steam, as was inevitable, and with it came a change of policy on the part of the owners, the New York and New Jersey pilots. In the natural order of things it would have been a matter of course for them to intrust the production of the new craft to some firm renowned for the construction of tugboats, car-floats or steam canal barges, leaving the design to take care of itself. Far from this being the case, however, the pilots have shown themselves fully up to the times, in that from the inception of the first definite idea of a new vessel they have placed the matter entirely in the hands of a competent naval architect. Long before it was known who was to build the vessel, all details of the design were decided upon in conferences with Mr. A. Cary Smith, the exact conditions of the proposed work, about New York Harbor and outside Sandy Hook, being laid before him. The complete plans and specifications were prepared by Mr. Smith before bids were asked from the different builders.

While only practical work at sea can test the exact merits of the new craft, she has thus far in her trial trips more than met the expectations of her designer and owners, and there is every reason to anticipate that she will prove a complete success.

The fight for the recognition of the designer as not only equal to but preceding the builder, was first begun in the FOREST AND STREAM nearly twenty years ago. Slow and discouraging as the progress was for many years, we have at last had the satisfaction of seeing full honor accorded to the designer of sailing vessels, while one of the leading yacht designers has won, in his first attempts, a wonderful triumph over the rule-o'-thumb builders in the production of the great Sound steamers Peck and Lowell. Now the pilots have fallen in line on the side of the designer. It is not too much to hope that before many years the yacht designer will be as fully recognized in the field of steam as of sail in this country, as he has long been in Europe; and that the process of producing a steam yacht by altering and patching up old blueprints, and of building the engines from the old junk of the pattern loft, will give place to such exact and systematic methods as are recognized as essential in the case of sailing yachts.

THE racing of the past week has added little to the numbers or reputation of the new 20ft. class. The Seawanhaka C. Y. C. race on June 26 found but five boats at the line—Shark, Skate, Arauca, Keneu and Asthore. The Crane boats, Pioneer, Momo and Al-Anka, had not arrived, in fact, the former had not been shipped, and it is reported that she will not come to New York. Arauca, William Williard Howard's new boat, arrived at Oyster Bay on Friday night by rail from Clayton, on the St. Lawrence. She was hastily launched and rigged, starting in the race at noon next day. A few minutes of pounding in the moderate sea smashed and wrung her hull so badly that it is very doubtful whether she can be made serviceable for smooth-water sailing, and she can never be made safe in a little sea. Her beam of 10ft., with canoe planking and a heavy steel board, account for her speedy dissolution.

The honors on Saturday went to the new Huntington boat Skate, another freak of most extreme type, in a breeze and sea she repeated the performances under similar conditions of the old Question, beating the fin-keel Shark very badly. At the same time it is doubtful whether she will be an even all-round boat, fast in light weather, such as usually prevails in the Sound races. The other Huntington boat, Keneu, gave up, as did Asthore.

In Monday's race only Shark and Asthore started. The former sailed very fast, judged by larger boats sailing the same course, while Asthore was beaten 7 minutes. The coming week will see several additions to the fleet, and presumably more regular racing as a class.

IT is reported that a movement is now under way among the numerous small yacht clubs of Michigan, Wisconsin and Illinois for the formation of an association on the lines of those existing in other parts of the country.

THE winner of the Emperor's cup in the race from Dover to Heligoland was the yawl Freda, formerly Constance, designed by Dixon Kemp and built by A. E. Payne in 1885 for C. W. Prescott-Westcar.

The Swedish Jubilee Regatta.

ROYAL SWEDISH Y. C.

Stockholm, July 7–14.

THE programme for the regatta of the Royal Swedish Y. C. is as follows:

July 7.—Meeting of yachts at Stockholm; at 8 o'clock P. M. supper at Hasselbacken, price 5 kr. a head.

July 8.—Sailing of the yachts for Sandhamn; in the evening reception in the new club house at Sandhamn; to this reception will be invited members of the Royal Swedish Y. C., residing outside of Stockholm, as well as all on board of the racing yachts present members of recognized foreign yacht clubs and of Swedish yacht clubs stationed outside Stockholm.

July 9.—Race on the Kauholm fiord, about 4 miles from Sandhamn, for classes 2–6; the racing course about 10 miles, will be sailed twice round by classes 2–4, and once by classes 5–6; after the race a trip to Saltsjabaden will eventually be arranged.

July 10.—Race for the Jubilee cup of His Majesty, King Oscar II., open to yachts not exceeding 2.5 rating with a waterline length not exceeding 7.20 meters; the racing course is 10 miles, and will be sailed once round.

July 11.—(*a*) Race at sea outside of Sandhamn, open to yachts belonging to classes 1–2; special races for yachts built prior to 1890; the racing course 20 miles, will be sailed once.

(*b*) Race on the Kauholm fiord for classes 3–6; special race for yachts built prior to 1890 and belonging to class 3; the racing course will be sailed twice round by classes 3–4, and once by classes 5–6.

July 12.—Race at sea outside of Sandhamn for all classes.

(*a*) Classes 1-3 will race on an outer course of 20 miles, which will be sailed twice round by Class 1 and once by classes 2-3.

(*b*) Classes 4-6 will race over an inner course of 5 miles, which will be sailed twice round.

July 13.—Mainly the same sort of races as on July 11, but no special races for "senior yachts," towing of the yachts up to Stockholm in the evening.

July 14.—At 11 o'clock in the forenoon race for small coast traders. Raslagsskutor outside of Saltsjabaden. At 5 o'clock in the afternoon banquet, with distribution of prizes at Hasselbacken under the presidence of His Majesty King Oscar II.; to this banquet will be invited, besides other guests of honor, owners of all Norwegian and foreign yachts having partaken in the races. Other members of recognized yacht clubs and naval officers are entitled to partake in the banquet for a price of 30kr. each person.

GENERAL RULES.

The races are to be arranged, sailed and decided in accordance with the sailing rules, rating rules and time allowance tables of the Royal Swedish Y. C., whose rating rule reads as follows:

$$\frac{L. \times S.A.}{131} = \text{Rating length in meters.}$$

and sail area in square meters. Yachts are measured with no crew on board.

CLASSES.

The prizes will consist of particularly precious pieces of silver, several of them valued above 1,000kr. One prize will be given for every three yachts racing.

Communication by steamer.—A large steamer, Bare, is chartered by the Royal Swedish Y. C., and will on racing days, in the morning, sail from Stockholm for Sandhamn in order to afford opportunities to see the races for members of the R. S. Y. C. and of other yacht clubs partaking in the races. Ticket for the day 3kr. excl. of meals, etc.

The Atlantic Y. C. Improvement.

THE work of removing and re-establishing the Atlantic Y. C. in its new station at Sea Gate, Norton's Point, is now well under way, and under active and efficient management; by the beginning of next season the club will be in possession of such a station as has long been needed at the port of New York. It has long been evident that there was no place on the Upper Bay suitable for a yacht station and anchorage. The New York Y. C. many years ago gave up the last of several costly and unsuccessful attempts to establish a suitable station on the Staten Island shore just inside the Narrows; the Seawanhaka C. Y. C. was compelled reluctantly to abandon the Bay for Long Island Sound, and the Atlantic Y. C. has had good reason to be dissatisfied with its present Bay Ridge station, the best on the Bay, but very bad at that.

Outside the Narrows there is nothing to the westward; inside the West Bank are miles of sandy shoals extending the entire length of the Staten Island shore. To the eastward there is deeper water, but the shore is even more exposed, being, with the exception of Gravesend Bay, directly open to the sea. The one practicable location for a yacht station is at Norton's Point, the westerly end of Coney Island, where deep water may be had, and the construction of basins and breakwaters is possible.

This spot has long been considered by yachtsmen; the question of a station there has been discussed more than once by the New York Y. C., and the Seawanhaka C. Y. C. examined the location very carefully in 1887, just prior to the move to Oyster Bay. The one serious objection was the lack of transportation facilities, making it necessary that a club located there should run its own steamer between New York and the Point. Most fortunately for the Atlantic Y. C., the march of improvement has settled this question satisfactorily; the Point has recently been taken up by an improvement company, which will establish regular communication with the city and build up a villa colony on the sea front. Satisfactory arrangements have been made between the club and the company for the leasing of land, with privilege of ultimate purchase, and the plans have been prepared for an extensive system of improvements which will give the club one of the finest and most eligible yachting stations in the country. The following circular has been sent out by the committee:

Acting under the authority given by you at the annual meeting, the Board of Trustees appointed a committee to secure the plot of land at Norton's Point and to make all necessary arrangements looking toward the removal of the club station by the opening of the season of 1898.

After several interviews with the officers of the Norton Point Land Company, who met the committee in the most liberal spirit, the westerly point of land, 350×250ft., was secured, and the option for three years from May 1, 1897, obtained of the easterly plot of land of about the same size, making the entire plot 650×250ft., together with all their riparian rights.

This action was ratified by the Board of Trustees, and the contract signed by the chairman, J. Rogers Maxwell, and the secretary of the club, thereby securing the land.

The company has given out the contract for the necessary bulkheading and filling, which is to be completed by November; but the erection of the club house, basins, piers, etc., can be commenced at any earlier date.

The committee are of the opinion, and this opinion is shared by the flag officers and trustees, that it may be desirable that the old club house should be sold or removed to the new site, and a new house erected suitable for the future needs of the club, and conforming to the advantages of the site. The determination of this question is left to the action of this committee. They have carefully estimated the expense, and present to you the financial plan of same. It remains for the members to say whether we shall have the new house and improvements, or be compelled to move the old house to the new site and therewith be content.

It may be desirable to secure the easterly plot of land, and to build on the westerly plot, in order that the basin may be erected in front of the easterly plot, thereby giving an unobstructed view from the club house on the westerly site.

To accomplish all we desire will necessitate an outlay of about $65,000.

It is proposed to raise this amount partly by loan on bond and mortgage on the property, and partly by bonds to be secured by second mortgage; the latter to be subscribed for by the members. These bonds will be protected by lands, buildings, basin, etc., valued at $75,000, and which in a few years will be of still greater value.

Before closing any contract it is necessary for the committee to know that the amount required will be promptly subscribed for, and your generous response to the enclosed application is confidently expected.

This is issued by authority of the flag officers and board of trustees, and upon the general and liberal character of the responses will be determined the nature of the improvements.

It is expected that every member will be sufficiently interested to subscribe for at least one of the bonds, and as many more as he feels able to do. In case the issue is over-subscribed for, the allotment will be with the view expressed, viz., to have every member a bondholder.

The bonds will be in denominations of $500 and $100 each, principal payable in five years; interest at 5 per cent., payable semi annually; principal and interest secured by mortgage as stated.

The time is limited. The committee have given much thought and labor to the work, and much remains to be done. They are willing to do their part toward creating the finest located and most comfortable yachting station in the world.

It now remains for you to do your part.

Please respond promptly, in order that the necessary plans can be prepared at once and the work pushed vigorously to completion.

The committee will most cheerfully give any further information desired upon application.

N. D. LAWTON, Chairman, 40 Wall street,
J. FRED ACKERMAN, 66-68 Duane street,
THOMAS L. WATSON, 55 Broadway,
Committee.

Royal St. Lawrence Y. C. Ross Cup.

DORVAL—LAKE ST. LOUIS

Saturday, June 19.

THE fourth Ross series race was sailed on June 19. There was a very light air from south to eastward, and the start was postponed for half an hour in the hope that it would increase sufficiently to enable the boats to stem the current. The boats got away in a bunch after the gun was fired, in the following order: Glenowen, Shirley Davidson; Millie, Rev. Hy. Kittson; Avoca, G. H. Duggan; Islander, Arthur Hamilton; Rogue, J. C. C. Almon; Maida, H. B. Young.

Avoca, with a spinaker spilling into her reaching jib, drew out of the bunch in the first quarter of a mile, passed the fleet and began to work up a lead which kept on increasing throughout the race. Rogue and Millie came into contact on the first leg, aud double protests were the result.

The first round was completed as follows:

Avoca	4 47 00	Millie	4 54 32
Glenowen	4 50 20	Maida	4 52 20
Rogue	4 53 05	Islander	4 52 00

The second round was uneventful, except the time between the different boats was pulled out a little, and the race was completed as follows:

Avoca	5 42 13	Millie	5 52 05
Glenowen	5 53 05	Maida	5 60 35
Rogue	5 55 20	Islander	6 12 00

The standing of the boats in the series by points is now as follows:

	Points.		Points.
Avoca	77	Islander	50
Rogue	62	Maida	43
Glenowen	56	Millie	33

Corinthian Y. C. of Philadelphia—Baine Cup.

ESSINGTON—DELAWARE RIVER.

Saturday, June 19.

THE Corinthian Y. C. of Philadelphia sailed a race on June 19 for yachts of the 30ft. class, for a silver cup offered by Alexander Baine. The course was from the club pier to Red Spar Buoy No. 38, thence to the Spar Buoy southeast of Chester Island, thence to Black and Red Buoy west of Little Tinicum Island and return to starting line.

The wind was S.S.W., fresh, and the times were:

Start 3:07.	Finish.	Elapsed.	Corrected.
Lenni Lenape	4 57 30	1 50 30	1 50 16
Flirt	5 01 20	1 54 20	1 52 43
Dawn	5 00 34	1 53 24	1 53 43

Philadelphia Y. C.

TINICUM—DELAWARE RIVER.

Saturday, June 19.

THE Philadelphia Y. C. sailed a race on June 19 in a strong S.S.W. wind, the times being:

Start 3:00.	1st round.	2d round.	Finish.
Vagabond	4 01 34	4 46 11	5 28 36
Daw	4 07 21	4 56 01	5 50 50
Coryphee	4 06 33	Disabled.	
Vinn	4 09 18	Disabled.	
Claribel	4 12 22	Disabled.	
Iona	4 20 00	Disabled.	

Daw and Coryphee were in collision, the latter having her side stove in.

Larchmont Y. C. Spring Regatta.

THE winner in the 25ft. sloop class of the Larchmont Y. C. spring regatta, on June 19, was Quantuck, and not Vaquero I., as first announced. The official times are:

Quantuck, 24.63ft. racing length; Vaquero, 22.96ft. racing length; Quantuck allows Vaquero 5m. 20s. The starting hour was 1h. 15m. Homeward, first round, Quantuck, 2h. 17m. 58s.; Vaquero, 2h. 28m. 7s.; finish, Quantuck, 3h. 21m. 5s.; Vaquero, 3h. 36m. 54s.; elapsed time, Quantuck, 2h. 6m. 5s.; Vaquero, 2h. 21m. 54s.; corrected time, Quantuck, 2h. 6m. 5s.; Vaquero, 2h. 17m. 34s.. The Quantuck wins by 11m. 29s. on corrected time.

Seawanhaka Corinthian Y. C. Annual Regatta.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, June 26.

Y. R. U. RULES.

THE Seawanhaka Corinthian Y. C. sailed its twenty-seventh annual regatta on June 26 in exceptionally fine weather, a clear, bright day, with a lively breeze from N.W. by W., making a quick and exciting race. There were no thunder squalls, calms, fogs or other drawbacks of yacht racing, but fast and even sailing in a good working breeze. There was a good list of starters, thirty-five in all; but, as usual, they were of many classes, with few boats in each. The race was sailed under the Sound Y. R. U. rules, with the regular Seawanhaka prizes in all classes of schooners, cutters, sloops and cats, to which were added the following special prizes:

The Leland Corinthian challenge cup, open for competition to members of the Seawanhaka Cor. Y. C. only, for this season offered in the 20ft. class of sloops. The winner of this cup in the annual corinthian race and in each subsequent contest will receive a prize recording the names of the competitors.

Center Memorial Prize.—A permanent fund has been established in memory of the late Com. Robert Center, a portion of the annual income from which, amounting to $50, is to be invested in a prize to be competed for annually in corinthian races between yachts not over 30ft. load waterline length. It is offered this year in this race in the 20ft. class of sloops.

COMMODORE'S PRIZES.

(*d*) Com. Rouse offered the following special prizes: First, a prize open to all schooners; second, a prize open to sloops of the first class; third, a prize open to sloops from the 70ft, class to the 43ft. class (inclusive).

The following special conditions will govern the award of these prizes:

1. The measurement for time allowance will be computed according to the following formula:

$$\frac{3A+B+C+L.W.L.+\sqrt{S.A.}}{2}=R.L.$$

A=Excess of draft over $1.4\sqrt{L.W.L.}$

B=Excess of over all length above 1.33 (L.W.L.).

C=Excess of $\sqrt{\text{sail}}$ area above 1.05 (L.W.L.).

2. Yachts must sail in cruising trim, defined as follows:

Cabin, galley and deck furniture and fittings and equipment to be in place, two anchors and full lengths of chain on board, at least one anchor on the bow with cable bent; full complement of cruising boats on deck, but not including naphtha launches; lug foresails barred on schooners and club-topsails barred on schooners, cutters, sloops and yawls.

Conformity with these requirements to be subject to the inspection and determination of the race committee.

The right is reserved to withdraw any one of these prizes for which there are less than three entries.

(*e*) Individual prizes will be given to the Corinthian members of crews on winning yachts, whenever all or all except one of the crew are amateurs.

COURSES.

1. For schooners and the first, 70, 60, 51 and 43ft. classes of cutters the Sound triangular course—from the starting line N.W. by N. 5 miles, around a mark about one mile S.b.W. from Greenwich Point, keeping it on the starboard hand; thence E ½N. 5 miles around a mark about 1¾ miles off Long Neck Point, keeping it on the starboard hand; thence S.S.W. 5 miles around the stakeboat, keeping it on the starboard hand: course to be sailed over twice, 30 nautical miles.

2. For 36 and 30ft. classes of sloops, cutters, yawls and catboats, the Shippan triangular course—from the starting line due north 5 miles around Cow's Buoy, keeping it on the starboard hand; thence E ½S. 2 miles around a mark about 1¾ miles off Long Neck Point, keeping it on the starboard hand; thence S. S. W. 5 miles around the stakeboat, keeping it on the starboard hand; course to be sailed over twice, 24 nautical miles.

3. For 25ft. class, once over Sound triangular course, 15 miles.

4. For 20 and 15ft. classes, once over Shippan triangular course, 12 miles.

The rowing races at Poughkeepsie had attracted many of the yachts and the big race finished only on the preceding evening, Colonia took a tug at once, Com. Postley and family being on board, and towed all night in order to reach Oyster Bay for the start. She arrived in time, but found only Amorita and Iroquois; Emerald was under way through the day sailing with the fleet, but she did not start. Vigilant was in harbor, but went out only to follow the race, having no competitor. Bedouin also was alone in her class, but sailed the race. Queen Mab likewise sailed alone in her class. Wasp had a new competitor, the 46ft. fin-keel Carmita, designed by Waterhouse and built by Lawley & Son in 1893; and thus far anything but a success as far as speed is concerned. She has recently been purchased by W. K. Vanderbilt, Jr., who brought her on from New London solely to enter this race. Mr. J. F. Tams sailed her, with a Corinthian crew picked up on the day of the race, he having never sailed on her before, and, strange to say, in his long yachting experience, never having steered anything but a small boat with a tiller. In order to make a race between her and Wasp, Mr. Lippitt agreed to give a handicap of 7m. for the 30 miles, a very fair allowance under the conditions. The result was a complete surprise, Carmita sailing a good race and almost beating Wasp on even time. She was handicapped by an unusual accident at the start. In some unexplained way a copy of the instructions for 1896 was given out to her at the club house and she made a very good start according to the directions there given, but ahead of her proper gun, being recalled. There was then an uncertainty as to what to do, the result being that she was late for her proper gun.

The 20ft. class had four starters, this being the first race of the Howard boat Arauca. The two Crane boots, Al-Anka and Momo, had been shipped from Boston the day before, of course not arriving in time. The Crane fin-keel, Pioneer, will probably not come to New York at all, having proved less speedy than the other two.

The club steamer, the unreliable and irresponsible Dunderberg, chose this particular occasion, as she has done before, for one of her periodic sprees, and on being tested by the Government inspectors a day or two before disclosed a number of badly leaking tubes, so that she was temporarily disabled. It was necessary to press a couple of launches into service between the railway station and the club house, and the committee sent word to Rear-Com. Van Liew that his steam yacht Aquilo was needed as a committee boat. She was at Poughkeepsie for the races, and was only able to reach Oyster Bay at 12:30, or half an hour after the advertised time of the start.

The morning brought a fine N.W. by W. breeze, and by good luck it held until nightfall, so that the delay in the start was of no consequence. The preparatory was fired at 12:55, and the start for the schooners at 1. Colonia, Iroquois and Amorita, each alone in her class, were placed in one class for the Rouse prize under Mr. Cox's formula. Iroquois was first over the line, on port tack, standing out to the middle of the Sound, Colonia and Amorita crossing on starboard tack and standing along the Center Island shore. There was a lively little lop and plenty of wind, though all carried jib headers only. The rest of the fleet were sent off in divisions, by the Y. R. U. signals. Before Amorita had gone far on her way her dolphin-striker doubled up and she was compelled to light up her headsails and abandon the race. When about a mile from the first mark, Iroquois took a puff and rolled down until her light sails, on deck amidship, slid to leeward and washed out of the scuppers into the drink. She did not stop to pick them, though in the heap were her balloon maintopmast staysail, working maintopmast staysail and large jibtopsail, but hailed with the megaphone the steam yacht Orienta, E. H. Ladew, the only yacht near by. Some time was lost, in the strong wind, in attracting the attention of those on the Orienta, but when they understood the trouble they promptly headed for the sails, visible on the water. Before they reached them the ballooner had sunk, but the other two were recovered. Without these sails on the reach, Iroquois had no chance against Colonia, even with some 13 minutes of allowance.

The 20-footer Arauca soon came to grief in the sea, though it was nothing more than any good canoe should stand. She is 10ft. wide and very shoal; her bottom, in spite of a slight S section, being to all intents flat; in construction she is little better than a canoe, the planking being about 3-16in. thick, with very light frames. She pounded until her garboards were smashed in on each side just forward of the mast; while the topsides wrung until the planking was split and the fastenings started. She of course filled and was compelled to withdraw. The Huntington boat Kenue also gave up. The other Huntington boat, Skate, an extreme of flatness and ugliness, simply stood on one edge and slid along at a great pace, with her crew of three big men stretched along the weather plankshear; she sailed a fast race and easily beat Shark. Asthore started but withdrew.

Gossoon dropped a man overboard, but picked him up safely, however she withdrew.

The larger yachts had the first leg dead to windward, with reaching over the other legs; the smaller also beat across to the first mark of their course, reaching on the other two legs, no spinakers being set during the day. The first round was timed:

Colonia	2 37 07	Veda	2 52 28
Iroquois	2 46 44	Queen Mab	2 54 49
Vaquero III	2 49 52	Wasp	3 00 45
Surprise	2 51 00	Carmita	3 09 15

Jester Eugene N. Robinson	26.67	3 38 15	3 38 15
Zahra, William H. Browning	....	4 16 51	.. .. ..

Under the Cox formula the allowances were as follows: In the schooner class Colonia allowed Amorita 13m. 21s., and Iroquois 14m. 30s. over a 30-mile course; while Wasp allowed Carmita 52s., Queen Mab 7m. 8s., Syce 8m. 54s., Uvira 19m. 35s., and Norota 23m. 28s. over the same course.

The obj ct of the formula was to offer opportunities for racing to yachts of the old type, in which draft, overhang and sail area are not carried to the extreme. The owners of these yachts, however, did not avail themselves of the opportunity thus offered them, in spite of the exceptionally handsome prizes presented by Com. Rouse to induce a practical test. Iroquois was the only vessel of the old type to start in the schooner division, and with her smaller measurement, even a quarter of an hour is too little to enable her to beat Colonia. In the larger class of cutters only Bedouin started, so the Rouse prize was not awarded; in the smaller class Queen Mab, a modern boat, but of very moderate proportions in overheng, draft and sail area, won from Wasp and Carmita.

The three prizes were: for the schooners an elaborate after-dinner coffee service in silver and fine china; for the larger cutters a "Raines Law cabinet," so called, a large case of polished oak, with an outfit of bottles, glasses, corkscrew, etc., a drawer for cards and poker chips and another drawer for cigars. The prizes for the smaller cutters was an imitation marine glass, in silver, each side being a flask, with silver cup as a cap, the whole being carried in the usual leather case.

The race was managed by Messrs. Wetmore, Sherman and Kerr, of the committee.

Columbia Y. C., Michigan City Race.

CHICAGO—LAKE MICHIGAN.

Saturday, June 19.

THE annual Michigan City race of the Columbia Y. C., of Chicago, from that port to the former, was sailed on June 19 in very bad weather, the race being practically a drift over the thirty-three miles, the yachts arriving all through the night. The race was started in a calm at 1 P. M., some of the yachts towing out to the line and only going over by dint of their headway. The fin-keel Vanenna, sailed by Capt. Barbour, who was a quartermaster on Defender, won easily in her class, but finished by running into a dock at Michigan City. The schooner Mistral came for the line in the lead of her opponent, but took the ground and had to be hauled off. The official times were:

	Start.	Finish.	Elapsed.	Allowance.	Corrected.
SCHOONERS—STEFFENS CUP.					
Mistral	1 10 00	Disqual'd.	.. .. ..	Scr	.. .. ..
Toxteth	1 10 00	11 20 40	10 10 40	4 20	10 06 20
SLOOPS—PECK CUP—FIRST, SECOND, THIRD AND FOURTH CLASSES.					
Vanenna	1 04 20	9 15 10	8 10 50	Scr.	8 10 50
Charlotte R.	1 10 00	9 43 45	8 33 45	9 44	8 24 01
Peri	1 10 00	11 20 20	10 10 20	35 48	9 34 32
Genevieve	1 10 00	11 40 50	10 30 50	28 13	9 52 37
Blade	1 10 00	12 01 40	10 51 40	37 21	10 14 19
Wizard	1 10 00	Not taken.	.. .. ..	49 25	.. .. ..
Arline	1 10 00	Not taken.	.. .. ..	Not computed.	
MICHIGAN CITY CUP—TIME PRIZE.					
Vanenna	1 04 20	9 15 10	8 10 50	Sc.	8 10 50
Mistral	1 10 00	Disqualified.		7 25	
Toxteth	1 10 00	11 20 40	10 10 40	12 15	9 58 25
Charlotte R.	1 10 00	9 43 45	8 43 45	9 44	8 24 01
Peri	1 10 00	11 20 20	10 10 20	35 48	9 34 32
Blade	1 10 00	12 01 40	10 51 40	37 21	10 14 19
Genevieve	1 10 00	11 40 50	10 30 50	38 13	9 52 37
Wizard	1 10 00	Not taken.		49 25	
Vixen	1 10 01	12 09 20	10 59 20	53 03	10 06 17
Arline	1 10 01	Not taken.		Not computed.	

Toxteth wins the Steffen's cup for schooners, Peri wins a handsome shield, the first prize in class 2; the second prize, marine glasses, going to Genevieve. Vixen wins in fourth class, with Arline or Wizard second, the times being in dispute, as both yachts finished very late at night.

Unless disqualified on protest for measurement, Vanenna wins the Peck cup, for which she already holds a leg, giving her permanent ownership; the Michigan City cup, for best elapsed time, and the Berriman cup, for her own class.

The late arrival of the fleet disarranged the plans of the Michigan City yachtsmen for a hospitable reception. Next day the fleet started home in a strong north wind which dismasted the new fin-keel Blade and also Arline. The latter was towed back to Michigan City and remained there for repairs, but Blade was taken in tow of the club steam and towed the remaining 30 miles with her crew still on board, in a breeze and sea.

Several steam yachts and steamers followed the yachts both ways.

Royal Nova Scotia Yacht Squadron.

The new club book of the Royal Nova Scotia Yacht Squadron shows a membership of 285 and a fleet of 37 yachts. The club has arranged a very full programme of races for the season, as follows:

June 5—Open to all yachts of the squadron, Col. Isaacson's R. A. cup and squadron prizes. Start, 2:30; course, 4 miles; time limit, 4 hours; officers of the day, Com. and Lieut.-Col. Collings.

June 12—Open to yachts of one-design knockabout class, squadron prizes. Start, 2:30; course, 7 miles; time limit, 4½ hours; officers of the day, Vice-Com. and W. H. Troop.

June 19—Open to all yachts of the squadron, Russell cup and squadron prizes. Start, 1:30; course, 2 miles; time limit, 5½ hours; officers of the day, Rear-Com. and C. E. Willis.

June 26—Open to yachts of one-design, knockabout class, squadron prizes. Start, 2:30; course, 7 miles; time limit, 4½ hours; officers of the day, G. C. Hart and Lieut.-Col. Anstruther, R. A.

July 3, Handicap—Open to yachts of the squadron of special 3-rating class, Edward's cup and squadron prizes. Start, 2:30; course, 4 miles; time limit, 4 hours; officers of the day, J. W. Stairs and W. B. Slayter, M. D.

July 10—Open to all yachts of the squadron, squadron prizes. Start, 1:30; course, 2 miles; time limit, 5½ hours; officers of the day, C. J. Wylde and Col. Isaacson, R. A.

July 17—Open to yachts of one-design knockabout class, squadron prizes. Start, 2:30; course, 7 miles; time limit, 4 hours; officers of the day, F. S. West and F. K. Warren.

July 24—Open to all yachts of recognized yacht clubs, Wenonah cup and squadron prizes. Start, 11 A. M.; course, 6 miles; time limit, 9 hours; officers of the day, J. F. Stairs and Wm. Black.

July 31—Squadron cruise.

Aug. 7—Open to yachts of one design, knockabout class, squadron prizes. Start, 2:30; course, 7 miles; time limit, 4 hours; officers of the day, W. G. Jones and J. P. Knight.

Aug. 14—Handicap, open to all yachts of the squadron, Hesslein cup and squadron prizes. Start, 1:30; course, 2 miles; time limit, 5½ hours; officers of the day, L. J. Hesslein and F. C. Stimpson.

Aug. 21—Open to yachts of one design, knockabout class, squadron prizes. Start, 2:30; course, 7 miles; time limit, 4 hours; officers of the day, Lieut. Crichton, R.A., and Thos. Forhan.

Aug. 28—Handicap, open to all yachts of the squadron, ladies' cup and squadron prizes. Start, 2:30; course, 4 miles; time limit, 4 hours; officers of the day, J. N. Duffus and Lieut.-Col. Anstruther, R.A.

Sept. 4—Open to yachts of one design, knockabout class, squadron prizes. Start, 2:30; course, 7 miles; time limit, 4 hours; officers of the day, A. W. Cogswell and Capt. Fitz-Herbert.

Sept. 11—Handicap, open to all yachts of the squadron, Surgeon-Major G. E. Weston's cups and squadron prizes. Start, 2:30; course, 3 miles; time limit, 4 hours; officers of the day, Commodore and Capt. Chase.

No second prize will be awarded unless at least three yachts start. No third prize will be awarded unless at least four yachts start.

During the season prizes will be offered by the Squadron for a race between the boats of H. M. ships in port.

A prize will be presented by Rear-Com. J. E. Butler to the knockabout winning the greatest number of first places in the knockabout class races.

A pewter will be presented by the secretary to the helmsman scoring the greatest number of points in the knockabout class races during the season. In each race each helmsman shall score one point in excess of the number of boats he has beaten.

Royal Canadian Y. C.—Queen's Cup Race.

TORONTO—LAKE ONTARIO.

Monday, June 21.

LAKE Y. R. A. RULES.

THE Royal Canadian Y. C. sailed its annual race for the Queen's cup on June 21 in a fresh southwest wind, the course being on Lake Ontario. The times were:

Start 10:02	Finish.	Elapsed.	Corrected.
Aggie	12 36 04	2 34 04	2 16 36
Zelma	12 41 22	2 39 22	2 21 32
Frou Frou	1 30 15	3 28 15	2 23 13
Vivia	12 49 10	2 47 10	2 23 33
Oriole	12 28 55	2 26 55	2 26 55
Vedette	12 59 02	2 57 02	2 27 22
Lady Adeline	1 35 58	3 33 58	2 27 34
Kittie Lou	1 35 31	3 36 31	2 28 22
Bat	1 50 51	3 48 51	2 42 28
Mirage	1 25 42	3 23 42	2 43 11
Wona	1 41 07	3 42 07	3 01 39
Euroclydon	2 03 30	4 01 30	3 08 04

Oriole grounded her board at the east buoy and entered a protest on the ground that the mark was improperly placed, in too shoal water. The race committee upheld the protest and ordered the race resailed.

Atlantic Y. C. Adams Cups.

BAY RIDGE—NEW YORK BAY.

Wednesday, June 23.

THE race for the Adams cups, postponed from June 5, was sailed on June 23 over courses in the Upper Bay, the starters being: Eidolon, James Weir, Jr.; Penguin, George E. Brightson; Akista, George Hill; Dorothy, George Hill; Qui Vive, George A. Freeth, and Uncas, J. S. Negus.

The race was sailed in a moderate southerly wind, the times being:

SLOOPS—13½ MILES.

Start, 3:15:	1st Round.	2d Round.	3d Round.	Finish.	Elapsed.	Cor'cted.
Penguin	0 54 05	0 47 29	0 46 41	5 43 15	2 28 15	2 28 15
Eidolon	0 52 50	0 46 55	0 45 46	5 40 31	2 25 31	2 20 32
Akista	0 55 45	0 48 48	0 49 22	5 48 55	2 33 55	2 20 57

CATBOATS—10½ MILES.

Start, 3:20:						
Dorothy	0 56 30	0 46 50	0 45 48	5 44 08	2 24 08	2 24 08
Qui Vive	1 03 15	0 50 30	0 52 17	6 01 42	2 41 42	2 36 47
Uncas	1 09 05	0 53 53	0 58 04	6 15 02	2 55 02	0 49 11

Another race was sailed on June 26 in a fresh N.W. wind, the times being:

SLOOPS.

	Length.	Elapsed.	Corrected.
Eidolon, J. Weir, Jr.	42.61	2 16 48	2 16 48
Akista, Geo. Hill	54.75	2 16 18	2 08 19
CATBOATS.			
Dorothy, Geo. Hill	28.61	2 05 10	2 05 10
Qui Vive, G. A. Freeth	25.00	2 16 52	2 11 57
Uncas, J. S. Negus	24.41	Did not finish.	

Akista thus wins a leg for the cup, so that another race between her and Eidolon is necessary. Dorothy wins the cup permanently.

The Thirty-foot Class.

THE first sweepstakes of the 30ft. special class was sailed on June 22, in a moderate, southerly wind, the course being from off Larchmont around the Captain's Island Buoy, Red Springs Buoy and home, 16 miles. The starters were Hera, Musme, Wa Wa, Vaquero III. and the new Veda, this being her first race; Mrs. Cornelius Vanderbilt, Jr., sailed on the yacht. They ran to the first mark with spinakers to port, beat up to the Red Springs mark and reached across the Sound to the finish. Wa Wa led at Captain's Island, with Veda second; on the wind Hera took the lead and held it. The times were:

Start, 2:25:	Finish.	Elapsed.
Hera, R. N. Ellis	6 00 00	3 35 00
Musme, J. B. Macdonough	6 01 09	3 36 09
Veda, C. Vanderbilt, Jr.	6 01 30	3 36 30
Vaquero III., H. B. Duryea	6 01 40	3 36 40
Wa Wa, J. A. Stillman	6 02 44	3 37 44

Stamford Y. C. Regatta.

THE Stamford Y. C. sailed its annual regatta on June 28 in a moderate and steady S.W. wind, the course being a 10 mile triangle on the Sound, sailed twice by the 60ft. 36 and 30ft. classes.

Wasp beat Syce 9m. 5s.; Surprise walked over; Vaquero III. beat Heralm. 58s.; Wa Wa 8m. 59s.; Carolina 10m. 44s.; Madrine beat Pyxie 2m. 2s.; Penelope 3m 53s., and Ninita 4m. 14s.; Quantuck beat Vaquero I. 17m. 58s.; Shark beat Asthore 8m. 29s.; Volsung beat Dosoris II. 3m. 25s.; Ethel beat Win or Lose 16m. 52s.; P. K. Pigeon beat Jib 13m. 38s.

YACHTING NEWS NOTES.

The numerous American subscribers to Lloyd's *Yacht Register* have lately received the book for the current year, the usual large and handsomely made volume. The new book contains no material changes from that of last year, but the numerous lists of yachts, owners, racing flags, builders, etc., are fully extended and corrected up to date, making an invaluable volume for reference. The total number of yachts listed this year is 7,848, in which number are included 1,429 American yachts not measured by Lloyd's rule. This leaves 6,419 yachts, with a tonnage of 249,787 in the Lloyd's list proper; these including 5,050 sailing yachts with a tonnage of 89,866, and 1,369 steam yachts with a tonnage of 159,921. Of this total 4,448 are British yachts. The Society is represented in New York by Mr. Thomas Congdon, its principal surveyor for the United States and surveyor for the port and district of New York.

The year book of the New York Y. C. is rapidly growing to a thickness disproportionate to its other dimensions, as its list of members and yachts increases. The book for 1897 lists a fleet of 352 yachts, of which 75 are schooners, 91 cutters, sloops or yawls, 168 steamers, with 10 steam launches and 8 naphtha launches of such size as to be enrolled. The total membership is 1,425, of which 54 are life members, 124 navy members, 5 flag members (ladies) and 1,242 active members. The club has been for some years past most fortunate in the possession of an energetic secretary, the result of whose labors is seen in the complete and handsome book.

The Corinthian Y. C., of Marblehead, founded in 1885, has been remarkably successful in all ways, and at the present time has a membership, as shown by its new book, of 444, and a fleet of 157 yachts. It has taken a very prominent place in the racing about Massachusetts Bay, and has long been established in a large and comfortable club house, which it now proposes to replace by something much better adapted to its growing needs.

The combined firms of the Gas Engine and Power Co. and Chas. L. Seabury & Co. still take the lead in the matter of elegant and artistic yacht catalogues, their new book being the finest yet produced by yacht builders. It is of large size, printed on fine paper, with an artistic cover in green and gold on white paper. Handsome half-tone portraits are given of different yachts built by the firm, the steam yachts Embla, 163ft.; Hiawatha I., 135ft.; Hiawatha II., 170ft.; Kanawha, 140ft.; Huntress, 120ft.; Washita, 100ft.; Silva, 80ft.; Mayita, twin screw, 85ft.; Hirondelle, twin screw, 86ft.; Linta, 85ft.; Aztec, 77ft.; Marjencha, 65ft.; Margaret, twin screw, 75ft.; Charlietta, 65ft.; Alma, twin screw, 56ft.; Outoga, 60ft.; Strae, 55ft.; Beatrice, 56ft.; Anemone, twin screw, 48ft.; Claymore, 80ft.; Allegra, 76ft.; Levanter, 48ft.; Coot, 42ft.; Seawanhaka, 44ft.; Alva, 30ft. Full descriptions of these different yachts are given, and also of the Seabury patent water tube boiler, as well as illustrations of the engines, large and small, designed and built by the firm. Sailing yachts and naphtha craft also come in for full descriptions and illustrations. The book is a complete guide for those in want of fine yachts of any kind.

The New Rochelle Y. C. will sail its twelfth annual regatta on Saturday, July 3 over the regular club courses, starting off the station, Echo Bay, New Rochelle. The regatta will be sailed under Y. R. U. rules, and will be open to yachts of all regularly organized clubs. Entries should be made to the regatta committee, box 735, New Rochelle, N.Y., not later than the morning of July 1. Paticulars of the race may be obtained of the regatta committee, Chas. P. Tower, chairmrn; Paul A. Meyrowitz, S. R. Thomas, J. C. Lippincott and A. P. Weston.

Since the discontinuance of that interesting little paper *The Model Yachtsman and Canoeist* the sport of model yachting has had no journal in England. We have just received the first number of a new monthly, the *Model Yachtsman*, published at 337 Strand, London, England, at 4 shillings per year. It is similar in size to the *Yachtsman*, with a cover of the same light green, but has no connection with the older paper. It contains news of model yacht racing, building, etc., and is well worthy of the support and assistance of all interested in the sport.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. W. Fleischman, 1611 N 21st St., Phila., Pa.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Francis H. Macnee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

New York C. C.

THE New York C. C. has announced the following programme for the season:

NEW YORK C. C. RACING PROGRAMME.

Gravesend Beach, Bensonhurst, Brooklyn.

Saturdays at 3:30 P. M. June 12 and 26, July 17 and 31, sailing canoe races, two classes, junior and senior, 6 miles triangular course; prize to the winner in each class in each race, and prizes for the canoe making the best records in all four races in each class. A junior is one who has never won an open race. American Canoe Association rules to govern.

Saturday, Sept. 11, 2 P. M. General open regatta, all kinds of canoeing contests except sailing. Sept. 18, annual sailing canoe regatta, 2 P. M. Special programmes for these two events will be published later. All races open to members of the A. C. A. and Brooklyn, Yonkers, Knickerbocker and Passaic River canoe clubs.

Saturdays at 3:30 P. M. June 19, July 10 and 24, and Aug. 7. Fifteen-foot class (half-raters) six mile sailing races. Prize for winner in each race, and for the yacht making the best record in the four races. Races open to members of New York, Atlantic, Seawanhaka, Larchmont, Knickerbocker, New Rochelle, Marine and Field, Riverside and American Yacht Clubs, Staten Island Cricket Club and the Long Island Sound Yacht Racing Union.

C. BOWYER VAUX, Capt.
Nineteenth street and Fourth avenue, N. Y.,
R. DEF. BAYLEY, Mate,
46 Gold street, N. Y.,
FRED A. MILLER,
111 Mercer street, N. Y.
} Regatta Committee.

Canoe race, June 12, seniors: F. E. Moore, Pioneer, winner, 10 points; J. C. Mowbray, Tornado, second, 5½ points; Wm. Whitlock, Guenn, third, 1 point.

Four juniors entered; one withdrew and three capsized; no one finished, therefore no prize awarded; first and second prizes given to seniors; heavy wind and sea.

Fifteen-footers, June 19: Tornado and Rosette broke down before start and retired; Cyclone got over the line at gun fire and secured a good lead; Julia and Æolus were badly handicapped; Julia got lead on wind and finished first round well in lead, and maintained it to finish; Cyclone second, Æolus third. Cyclone sailed with reefed mainsail, heavy wind and sea. Julia and Æolus carried full sail, Æolus lugging it all the way. Julia, Brown Brothers, built by Clapham, 6 miles in 1h. 5m. 43s.; Cyclone, E. S. Ives, Rigby model, 1h. 8m. 52s.; Æolus, George E. Ashley, Rigby model, prize marine glasses presented by Rigby, the builder.

The big Peterborough war canoe, owned by members of the Crescent Club, of Brooklyn, was presented to the N. Y. C. C. last week. It is now housed in the shore boat house, and the club have set apart Thursday nights each week for war canoe trips.

Second canoe race of series, June 26: One mile to windward and return; strong and puffy N.W. wind:

Senior: First, F. C. Moore, Pioneer, 10 points; series, 20 points. Second, J. C. Mowbray, Torment, 1 point; series, 6½ points. Moore covered the course, which was over a mile each way, in the remarkable time of 19m. 42s.

Junior: First, F. G. Palmer, Scrap, 10 points, first race; W. H Fales, Kit, did not finish. Prize winners, F. C. Moore and F. G. Palmer. No races will be sailed July 3d or 5th. Half-raters, second race of series, July 10.

CANOE NEWS NOTES.

We have received from D. H. Heckman, Kennebunkport, Me., a catalogue of the canoes and boats built by him. While building all classes of boats and canoes, Mr. Heckman makes a specialty of the light cedar canoe with an outer skin of canvas, a special preparation of his own being employed to give a very hard and glossy surface to the canvas. These canoes and boats are of moderate cost, and very light, convenient and durable, standing rough usage.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 5.—OTTUMWA, Ia.—All-day shoot of the Ottumwa Gun Club. Open to all.

July 5.—BUFFALO, N. Y.—All-day invitation target shoot of the Bison Gun Club. C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

July 5.—LINCOLN, Neb.—All day shoot of the Capital City Gun Club. Targets and live birds. R. M. Welch, Sec'y.

July 5.—HOBE SOUND, Fla.—Tournament of the Gilbert's Bar Gun Club.

July 5.—HAVERHILL, Mass.—Tournament of the Haverhill Gun Club.

July 7-8.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

July 8.—ORANGE, Mass.—Tournament of the Orange Gun Club. W. L. Mann, Sec'y.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-21.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 20-23.—CLEAR LAKE, Ia.—First annual Indian Wolf shoot. Three days targets; one day live birds. $500 added. For programmes and particulars write to C. M. Grimm, Clear Lake, Ia.

July 21-22.—CRAWFORDSVILLE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Crawfordsville Gun Club. Chas. E Lacey, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

July (last week).—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Company.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O. Bush, Manager.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept 14-16.—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Co. Merchandise and amateurs

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Emerald Gun Club, of New York, has appointed the following committee to carry out the programme given below: Dr. G V. Hudson, chairman; H. P. Fessenden, P Woelfel, G. Banzer and L H. Shortemeier. The programme will be on the lines set forth in this letter: "On Thursday, July 29, the Emerald Gun Club will hold a live-bird contest for merchandise prizes, open to all members of Long Island clubs, and also of other local clubs, including the Jeannette, of New York, and probably others, which will be announced later, when the committee has decided on conditions, etc. Among the prizes will be many useful sportsmen's sundries, gun cases, cartridge cases, cleaning rods and quantities of smokeless powders. As at present decided, each entry will shoot at 7 live birds, 28yds. rise for 12-gauge guns, and 30yds. rise for 10-gauges; 50yds. (approximate) boundary of an 18in. wire fence. Gun in any position and no other handicap. Those who kill straight to divide the prizes in that class; those who kill 6 the several prizes for that class; and those who tally 5 the prizes in their class. This is simply an outline of the tournament; other conditions, such as the probability of shooting-off prizes, re-entries, etc., will be decided by the committee at its meeting on Monday, June 20. You will be notified so that you can publish a full report of conditions in time to allow those interested to decide on attending this tournament, which, as the conditions show, is of a novel kind. The entrance fee will be the price of birds and probably $2. If the number of prizes exceed the number of contestants killing straight, the prizes of that class shall be added to the 6 class; and if any shall be in excess in the 6 class, the balance will go to those who kill 5."

In a letter which we hope to find room for in this issue, Mr. W. E. Post sends some suggestions regarding changes in the ratio points of the Rose system. The changes noted are worth considering, and have much to recommend them. The chief drawback to the popularity of the Rose system has been in many cases the radical changing of the ratio points by clubs and their managers. For small local shoots we believe in some such changes as suggested by Mr. Post, but for large tournaments, with added money, we still hold to Mr Rose's figures. Another drawback to its popularity has been the number of moneys set for some events, such as five moneys in 15-target events; six, seven or eight in 20-target and 25-target events. Four moneys should be sufficient in 15 target events, and five moneys in 20 and 25-target events. We are speaking now solely in reference to large tournaments; in small club tournaments and club shoots we believe in reducing as far as possible both winnings and losings, being of the opinion that by so doing more shooters will be induced to step up and try conclusions with one another. A man will shoot better and more carefully, and will learn more quickly, if he has an additional incentive to keep him up to the mark. The "honor and glory" features of practice work at the traps do not tend to improve a man's shooting as quickly as when he has a small something at stake. Too often a man gets careless when he is shooting "for targets only."

It may seem rather out of place to tell a poker story in Drivers and Twisters, but the following is too good to keep: The Indian squad often relaxes a little in the evenings and indulges in a small 10-cent limit game, or more often a pigmy freeze out. At Oil City last week Charlie Budd and Harvey McMurchy occupied adjoining rooms with a connecting door. On Wednesday morning, just when it was time for breakfast, Charlie was awakened by a sound that was rather familiar to him—the rattle of chips. Opening his eyes he saw Harvey at the table in the middle of the room, attired in his usual bed costume. Harvey had a deck of cards and two piles of chips in front of him, and was dealing most industriously and betting in moderate quantities. Charlie lay still and watched him, but what he thought he'll never tell now; for presently Harvey picked up the hand right in front of him and opened the pot. He then looked at the other hand, and came back with a raise out of the other pile. He saw the raise from his own pile, and then drew cards for both hands. After the draw he bet both hands freely, finally shoving in all the chips of both piles. Then he showed down, and his hand apparently won, for he drew the chips toward him. Without saying a word he arose and went to Charlie's pocketbook, took a dollar out of it, and started to leave the room. "Where are you going with that dollar?" said Charlie. "To my room," said Mac. "You lost all right. I froze you out."

A reference to our advertising columns will show that the King Powder Company, of Cincinnati, O., is putting a new powder on the market. This powder is to be known as King's Semi-Smokeless, and is "an entirely new compound, and is neither black nor nitro powder, and will certainly prove most popular with the millions of amateurs who do not wish to shoot black powder, and who feel that they cannot afford to shoot high-priced smokeless." The above is the company's own definition of its new product. The company has also this to say about it: "King's Semi-Smokeless was practically perfected one year ago, but we were not willing to give it to the public until it had had satisfactory tests of all seasons, both as to its shooting and its qualities for storage. This first run of powder was stored in our black powder magazine, and taken out from time to time under all conditions of weather and temperature, and tested on chronograph, pressure gauges, etc. The results show marvelous uniformity, and the velocity is almost as high as King's Smokeless. Breech pressure is very low, the smoke thin and quickly dissipated. In rifles the trajectory is exceedingly flat, and notwithstanding the tremendous velocity, it does not cause stripping of ordinary lead bullets."

The Schmelzer Arms Company, of Kansas City, Mo., announces that it will hold its tournament Sept. 14-16. Below is an extract from a letter which we have received from that firm: "We are at work on the programme for our fourth annual shooting tournament complimentary to the amateurs of the Western States, to take place here on Sept. 14, 15 and 16. After carefully studying the target situation, we have concluded to give a strictly amateur merchandise shoot. We find that within a radius of 100 miles of Kansas City we have over 1,000 target shooters. All of the smaller towns having their target clubs; still at our State tournaments or large shoots, not one of these shooters put in an appearance, and it will be our main object to interest this class of target shooters. We shall bar the manufacturer's agents and professionals, and classify the amateur shooters as class A and class B. Class A men, all who have a record of 85 per cent or greater, to shoot at 18yds. rise and at reversed angles; while the class B men will shoot at 14yds rise, known traps and known angles. The entrance fee in all purses to be participated in, to be only the price of the targets, at 3 cents each. As there will be no races to exceed 25 targets, the highest entry fee in any of them will be 75 cents."

The choice of Springfield for next year's shoot of the Ohio Trap-Shooters' League shows that the Springfield Gun Club managed things to the satisfaction of its guests The following extract from a Cincinnati daily paper tells what was done at the annual meeting, held on the evening of June 3: "The Ohio Trap-Shooters' League has elected officers as follows: President, C. A. Young, Springfield, O.; Vice-President, J. A. Flick, Ravenna; Secretary and Treasurer, J. A. Reid, Springfield; Executive Committee—Rolla Heikes, Dayton; J. P. Easton, Monroeville; G. R. Haswell, Circleville; H. E Norton, Ironton; R. S. Waddell, Cincinnati. It was decided to hold the tournament in Springfield next year on the first Tuesday in June. Fifty dollars will be used for ten $5 low average prizes. It was decided to offer merchandise prizes next year. A committee to secure the same was appointed, being John A. Flick, Ravenna; R O. Heikes, Dayton; Paul North, Cleveland; Milt Lindsley, Cincinnati; George Haswell, Circleville."

The Oil City shoot was a dandy. The weather was glorious and the accommodation all that could be asked. Western Pennsylvania outdid herself; it's Reading's turn next.

From New Haven, Conn.; from Montpelier, Vt., and from Lewiston, Me., come reports that the local clubs in those cities are all working hard to make the Interstate Association's tournaments, respectively to be given under the auspices of the local gun clubs, decided successes Trap-shooting has taken on a new lease of life in Connecticut, and despite the melancholly condition of affairs said to exist in that State (according to our friend Paradise Lost) the New Haven Interstate tournament, July 14-15, will have a large attendance to reward the efforts of the home club. In Vermont and in Maine the tournaments held by the Association in 1896 in those States did so much good in the line of booming trap-shooting that the Lewiston and the Montpelier shoots, held respectively on Aug. 4-5 and Aug. 25-26, are sure to be successful, provided the weather is fine.

The Bergen County Gun Club, of Hackensack, N. J., elected the following officers at its annual meeting, June 10: President, George P. Griffiths; First Vice-President, Capt. A. W. Money; Second Vice-President, Marshall Herrington; Secretary, E. A Jackson; Treasurer, H D Warner. Trustees: Graham Van Keuren, H N. Hall and H J. Blauvelt. In sending us the above notice, the secretary, Mr. E A. Jackson, writes as follows: "The annual report for the year just closed shows that the number of targets trapped during the past year was 100,000, and that the number of loaded shells sold by the club amounted to 17,000." For the first year of a club in the vicinity of New York, where gun clubs are so numerous, the above is a remarkable showing.

The summer meeting of the Limited Gun Club, of Indianapolis, Ind , takes place July 7-8. The programme on each day will consist of alternate events of 15 targets, $2, and 20-target events, $2.50. Ten per cent. of each purse will be deducted before division is made, and will be paid each day to the five high guns shooting in the first ten events. The balance of the purse will be divided thus: In 15-target events, four equal moneys; 20-target events, five equal moneys. Targets 2 cents each; 10 gauge guns, black powder, and "paid shooters" are barred. (Paid shooters, according to the programme, are those who receive compensation in any form from a maker of or dealer in trap-shooting supplies.)

"The Art of Pigeon-Shooting," by Blue Rock, published by Forest and Stream Publishing Co., is a book that has stood the test of criticism most satisfactorily. As its title implies, it is a work that treats of the shooting of pigeons from the trap—a sport that is yearly becoming apparently more and more popular. The author—none other than the well-known shot Capt. A. W. Money—has given in the pages of this book the result of his years of experience in front of the traps. The expert, as well as the novice, will find in "The Art of Pigeon-Shooting" many valuable hints that will stand him in good stead when it comes to his turn to call, "Pull!"

On our return from the New York State shoot at Auburn on Saturday, June 12, we found on our desk the following letter, dated June 10, and signed Peter Gibson: "I am on my way to Europe (Russia and Norway), and called in to say, 'How are you?' Now, my friend, you should, as soon as possible, publish in FOREST AND STREAM a map entitled, 'How to Find Friend Banks.' You have a fine set of offices, but it's the devil's own time finding you—however, you are worth it. I will take a beer to your good health on Nord Cap, Norway, July 5. Farewell." So Lieut Gibson has left us, and his match with Ed Taylor has not been settled yet!

There is every probability that Fred. Gilbert will meet Rolla Heikes in a contest for the E. C. championship cup some time prior to the fall of the leaf. Fred is shooting so well that he is fully justified in taking steps to recover the cup he won at Guttenburg, but lost at Chicago. We don't know any match that we'd rather watch than this one, the conditions of which are: 50 singles, unknown angles; 50 singles, expert rules, and 25 pairs. The race will unquestionably be shot at Dayton, as Rolla has the right to name the grounds, and that's where he says the challenger will have to come for it.

The Orange, Mass., Gun Club will hold a tournament on July 8, to which shoot everyone is cordially invited. The prices for entrance fees are what are commonly known as 'popular prices," with three moneys in 10-target events, four in all events over that number of targets. In sending us a copy of the programme for this shoot, Mr. W. L. Mann, the club's secretary, writes: "It isn't far from New York to this place. All the same I would like to see some of those shooters, with whom I am so well acquainted through the columns of our beloved paper, FOREST AND STREAM."

Can any one suggest a system of dividing purses at tournaments that would give satisfaction to everybody, crackerjacks and duffers alike? In working out the problem, remember that everybody must win; and remember, also, that the duffer will kick if he doesn't get just as much as the expert does. To our mind, the only really plausible scheme for pleasing everybody, evolved to date, was that which came to Rolla Heikes in the nature of a dream last September at the State shoot in Harrisburg, Pa. We published the text of that dream in our first issue of 1897.

The Indian Wolf shoot at Clear Lake, Ia., July 20-23, $500 added money, will be a shoot well worth going to. The "Indians" promise everybody a good time, and we can safely guarantee that what these Indians promise, they'll carry out to the letter. There are to be three days at targets and one at live birds. If Clear Lake were not so far from New York we might go to scalp or get scalped, with probabilities strongly in favor of the latter. It would be a pleasant operation anyway when performed by Indians such as those we speak of.

Last week's "Drivers and Twisters," the whole bunch of them, got lost in the shuffle, something having to give way to the weight of matter that poured into this office from Cleveland on Monday morning, June 21. As we were then about 500 miles away from our desk, the Drivers got twisted and never reached the hands of the printer's devil.

July 14-15 are the dates for the New Haven Interstate shoot; time has flown so rapidly that the shoot is upon us almost before we knew it. But the New Haven Gun Club has not been taken unawares; everything will be in readiness on the afternoon of July 13 for the visitors to have a little preliminary practice and get acquainted with the background.

Uncle Ben, president of the Catchpole Gun Club, of Wolcott, N. Y., and E. A. Wadsworth, secretary of the club, have issued an invitation on behalf of the club to everybody interested to attend a bluerock shoot at Bonnicastle (Sodus Bay) on Monday, July 5. The shoot will be under the auspices of the Catchpole Gun Club.

Ralph Trimble, who represents the Du Pont Powder Company, won fresh honors at the annual tournament of the Ohio Trap Shooters' League, held at Springfield, O., June 2-4 In the programme of open events for the three days Ralph won first average, with Rolla Heikes and Frank Parmelee close behind him.

A gun club has been recently organized at Westfield, Mass., under the title of the Woronoco Gun Club, W. N. Clifford, president. The club has a field on the line of the Woronoco electric cars, and will hold practice shoots every Wednesday. Westfield can boast of some very fine shots, and much interest is being taken in the new club.

Owing to the pressure on our trap columns during the past three or four weeks, we have been unable to keep up with our correspondence, several interesting scores and items having had to be withheld from week to week. Club secretaries and others will accept this as an explanation of apparent neglect.

Neaf Apgar, late of Plainfield, N. J., but now proprietor of the Pine Point Club Hotel, Orange Lake, near Newburgh, N. Y., finds time to take a rest from his labors as "mine host" to do a little trap-shooting and some fishing now and then. The shooting grounds and the lake are both handy to the hotel.

JUNE 29. EDWARD BANKS.

Soo Gun Club's Third Annual Amateur Tournament.

THE third annual tournament of the Soo Gun Club, of Sioux City, Ia., on June 8, 9 and 10, was a complete success in every particular; and the Soo Gun Club has established a reputation for giving the most successful amateur tournaments held in the country.

On Monday, before the tournament commenced, shooters from all over Iowa, Nebraska, Minnesota and Dakota commenced to arrive, and when the first event of the tournament was called there was the greatest aggregation of crack amateur shooters that has ever been called together in the Northwest. The weather was all that could be desired, viewed from every standpoint. The set of five expert traps and the magautrap worked smoothly, and during the tournament there was no delay in the delivery of birds. The scores on the set of five traps were very good, but the magautrap seemed a mystery which but few could solve.

Dr. Day and Mrs. Day, of Duluth, were present during the entire tournament, and it is needless to say that Mrs. Day was the center of attraction. Her shooting was not as good as she has done at other places, on account of her extended trip through the country, being very tired when she was here. On the third day the Soo Gun Club presented her with a handsome medal in appreciation of her presence at the tournament.

Mr. T. H. Keller, of the King's Smokeless Powder Co., was the only representative of the manufacturers attending the tournament, and in very short order he was acquainted with every shooter on the ground, and rendered the club a great deal of assistance in handling the large crowd. He organized a King's Smokeless squad from Nebraska, and their work speaks well for his powder. Tee Kay shot all the way through for the price of the birds, and his scores show that the Soo Club acted wisely in barring experts. Mr. Keller, while not ranking with Grimm, Budd, Gilbert, and a number of other shooters, showed himself to be too speedy for a large majority of the shooters, and if he had been in on the money would have carried away a number of first moneys alone, and been in on first average money. The Soo Gun Club has demonstrated that a strictly amateur tournament can be given with the best results attending it. At no purely target meeting in the United States this year has there been such a number of shooters, and every one went away absolutely pleased with the tournament and with the treatment they had received. So far as this section of the country is concerned it is demonstrated beyond a doubt that the most successful tournaments are those in which the professionals are barred. An amateur cannot compete with a professional, and the only way to give an amateur a chance is to classify the shooters. The Soo Gun Club has a reputation of giving every one an even break, and all the shooters say they will be on hand at the fourth annual tournament of the Soo Gun Club. While the club is grateful to the manufacturers for the assistance received from them, it is assured that they could have done themselves a great deal of good by having representatives at this tournament, as a large majority of the shooters were representative business men and men who shoot for pleasure, and take an interest in all kinds of guns and ammunition, and are looking for information and instructions in this line.

Promptly at 9 o'clock on the morning of June 8, Mayor Jonas M. Cleland pressed the electric button at the Soo Gun Club's grounds and sent a bluerock spinning in the air, which Mrs. Day quickly powdered, and the best amateur tournament held in the United States so far this spring was on.

The programme for each day consisted of only 120 bluerocks, all odd events being on a set of five traps and all even events on the magautrap. The events on the magautrap were 15-bird events, and on the five traps 10 and 20-bird races. Event No. 1 of the first day was at 10 bluerocks, and in this race there were 102 entries. While the programme for the day called for only 120 bluerocks for each gun, there was a total of 31,710 bluerocks thrown in the three days. John Otten and J. W. Gray are a pair of squad hustlers hard to beat, and kept the boys lined up to the traps all the time.

Scores of the First Day.

The attendance on the second day was equally as good, if not better than on the first day of the shoot, and in event No 5, for the interstate championship, there were 110 entries. The interest of the day centered on this event, being a race of 10 birds, ties on 10 to be shot miss and-out. In this event there were thirteen who broke 10 straight and lined up to settle the championship.

All except S. A. Smith, of Hartley, Ia., and Charlie Hamilton, of the Soo Gun Club, were out on the first 6 birds From then on Smith and Hamilton both shot brilliantly, but on the 15th bird Hamilton missed; Smith powdered his and won the medal on a score of 25 straight.

On this day Mrs. Geo. R. Slocum, of Springhar, Ia., attended the tournament and showed herself to be an expert with the shotgun. The gun club, in appreciation of Mrs. Slocum's presence and the good work done at the traps, presented her with a beautiful bouquet

Scores of Second Day.

Pennsylvania's State Shoot.

NEVER to our knowledge has the Pennsylvania State Sportsmen's Association held a shoot the equal of that which closed last week at Oil City. June 22-25 set a pace for future tournaments of the Association that most gun clubs will find it hard to compete with. Having been personally connected with the Pennsylvania State Sportsmen's Association for a matter of five or six years, we can well recall the efforts made from year to year by John A. Wilson, of Franklin, Pa., to induce the delegates at each successive annual meeting of the Association to give the shoot to his portion of the country across the Alleghenies. His efforts were finally crowned with success at Harrisburg last year, the shoot going to the Oil City Gun Club. The success of that shoot has been the most thorough vindication Mr. Wilson could desire in behalf of western Pennsylvania. The choice of Oil City for 1897 was no error on the part of the delegates at the meeting of 1896.

A PICTURESQUE LOCATION.

A picturesque location had been chosen for the scene of the State shoot. We had been prepared during our 130 miles' run up the Allegheny River from Pittsburg, in the cars of the Allegheny River Railway, for something choice in the way of scenery around Oil City. The Allegheny River, whose course the railway follows from point to point, flows through some of the most beautiful mountain scenery it has ever been our lot to see in this or any other country. We had also been told by Mr. H. C. Reeser, Secretary of the Oil City Gun Club, in letters written prior to the State shoot, something about the character of the country in which his club was going to hold the shoot. But even with the above warnings we were scarcely prepared for the reality

Electric street cars which bore the sign of "Hill and Park," carried us about two miles southwest of the city, following the course of the river. The line then left the river and turned more to the south, following a valley that marks a sharp turn in the river. After covering another mile and a half the track crosses a road that runs at right-angles to another road which has left the main road down by the river and followed the course of the valley. The signpost at this cross-roads reads: "3½ Miles to Oil City," pointing down the valley the way we have come. The other hands point about east and west. The one pointing east, across the car track, reads: "Salem, 2 Miles;" the other, pointing west, says: "Franklin, 5 Miles." But the shooting grounds are not here. We have to go about another mile and a half, still right in the heart of the woods, and with an arch of trees meeting over the car track, before we leave the cars and dive down into the valley, which forks at this point Here, right in the fork, with mountains and woods on all sides, and with the strongest suggestions of ruffed grouse and woodcock on every hand, were located the shooting grounds. "Deep Hollow" is, we believe, the name given to the spot.

A VERY HARD BACKGROUND.

Under such conditions as regards location, the extremely hard nature of the background can well be imagined. A few weeks ago there was only a small open space in the woods at this point. The club went to work and cleared additional space sufficient to run two sets of live bird traps, the 50yds. boundary line on each set of traps being right at the edge of the woods. These woods are not very dense, although there is plenty of undergrowth, and at first sight, before a target was thrown, one could scarcely realize how extremely hard it was going to be to locate accurately the whirling bluerocks. The trouble chiefly lay in the brilliant sun that shone all the time through the leaves of the trees which clothed the slopes of the mountains in front of the traps, causing the green of the leaves to assume a yellowish tint that matched very well with the yellow circles on the bluerocks. Against such a background it was next to impossible to see the sight on one's gun and find out where one was holding when the referee decided "lost"—as he very often did.

Fred Gilbert gave us a good, but brief, description of the background. We arrived in Oil City, accompanied by Capt. Money, Billy Wolstencroft, James Schmeck and Whiting, in time for dinner on Monday, June 21. Going up to the dining room of the Arlington Hotel, headquarters for shooters, we found several shooters at work with the knife and fork, among them the members of the Indian squad. In the course of conversation we asked Gilbert what the background was like. His reply was as follows: "It's all right; there's none of that nasty blue sky to bother a person." And there wasn't.

CAPITAL ACCOMMODATIONS FOR SHOOTERS.

The arrangements at the ground for the accommodation of the shooters were capital. A club house, with an ample cashier's office, held guns, shells, coats, etc. Gunracks at the scores of the two magautraps were also well tenanted. Benches and chairs were everywhere in profusion, and the trees of the woods at the back of the scores gave much desired shelter from the burning rays of the fierce June sun that were only slightly tempered by a gentle breeze that swept up the valley on the left of the opening, crossing the traps from left to right. There were tents, too, in sufficient numbers to give one the idea of a camp meeting. Milt and Wanda had their tepee; J. M Carson, the local gundealer, had a large tent in which he kept shells for sale; and, be it noted, he did a good business in that line. There were other tents, too, but we cannot recall any other special ones, except the dining tent, in which Mr. W H. Loots, assisted by a most courteous and willing brigade of helpers, dispensed one of the very best meals we have sat down to, served in a similar *al fresco* style. Mr. Loots, his assistants, his gallons of ice cream, quarts of strawberries, cases of well iced "soft stuff" (for "hard stuff" was very fitly barred), and his 50-cent dinners, must be numbered among the list of attractions at the State shoot of 1897.

Under the management and direction of Elmer Shaner the club was scarcely likely to be lacking in the matter of help; nor was it. The following list of the help employed on the target days will show that the club did not allow the expenditure of a few dollars to stand in its way when the success of the shoot might depend on the extra outlay for additional help. In the cashier's office were W. H. Magee, cashier; assistant cashier, Philip Engelsgerger; compiler of scores, Alf. P. Pope; assistant compiler of scores, Chas. Moyer; squad hustler. J. B. Deegan. For the State events on magautrap No. 1 there were two or three referees: the puller was Wm Watterson; trappers, Chas. Huff and Tom Lynch; scorers: blackboard, Pope, Jr.; manifold, Sherrick; messenger, Cook. On the No. 2 magautrap for the open events the officials were: Referee, W. J. McCrickart; puller, Jos. Huff; trappers, Fred Lynch and John Frye; blackboard, Walter Wolf; manifold, Russel Lay. The trio of water boys, who were kept very busy filling up the buckets with fresh, cold, spring water, were Bernard Elert, Joseph Lynch and Ellis Soles. The above makes a big list of help, but all were needed, and all helped to smooth out any kinks that might temporarily arise.

THE CLUB INCURRED GREAT EXPENSE.

In making arrangements for this shoot the club incurred great expense. Its own grounds, nearer the city, were felt to be totally unfitted for so big a shoot as this one promised to be. It therefore looked around and chose the site mentioned, putting up the club house specially for this occasion. It also went to the expense of putting up a pigeon-coop capable of holding some 3,000 birds, close to the grounds. This coop alone cost the club $200 in cold, hard dollars. The club house, too, although we did not learn what its cost was, could not be far behind the above figures.

And all this expense was incurred in all probability for just this one shoot. Mr. J. B. Smithman, the gentleman who owns the street car system, all the ground surrounding the place where the shoot was held, and also Smithman's Park, a new pleasure resort about half a mile from the shooting grounds, intends to add to the attractions at this end of his car line by turning the valley where the shoot was held into a lake about a mile in length, by building a dam at the western outlet. From this it will be gathered that, should the Oil City Gun Club at some future date give another shoot (and it is to be hoped that it will do so), it is scarcely likely that such shoot would be held where so many bluerocks were smashed last week.

Taking into consideration also the $200 added money, added by the Oil City Gun Club, and also taking into account the outlay for buildings and the help to run the shoot, it is hard to see how the club could hope to come out even. We could not figure it out at all, and were, therefore, glad to learn from Mr. Reeser on Friday, June 25, that two residents of Oil City had approached him and had asked to be permitted to aid by means of checks if the club ran behind the game; and these two gentlemen were not members of the club, so far as we could learn.

AN UNUSUAL NUMBER OF SPECTATORS ON HAND.

A special feature of this shoot was the large attendance of spectators present at the grounds every day of the tournament. They came early and they stayed late, watching even the target shooting with a degree of interest we have never seen equaled anywhere before. Ordinarily a corporal's guard is about what turns out to look at the boys break targets, the bulk of the crowd showing up when live birds were to be trapped and shot at But at Oil City it was different from anything we have noted before. Ladies and gentlemen, the former gracing the tournament with their presence in large numbers, came out all days alike and took a most active interest in all that was going on, watching the bluerocks being smashed and scanning the score board with an interest that was evidenced by the closeness with which they followed the proceedings.

It is not too much to say that every member of the home club did his best to make the shoot run smoothly. The officers of the club are: President, L. L. Graham; Vice-President, A. Smedley; Secretary, H. C. Reeser; Treasurer, H. C. Dorworth. Directors: F. S. Bates, C. H. Lay, Jr., and C. T. McClintock. All the above, together with many of the rank and file, were always on hand to look after the comfort of their guests At the Arlington and the other hotels of the city, everything was done to make the visitors feel at home.

In short, the shoot was a great social success; and the social features of such gatherings mean far more than most people and most clubs properly appreciate.

TWO MAGAUTRAPS WERE USED.

Paul North being unable to attend the shoot through sickness at home, Charlie North, his brother, was on hand to look after the magautraps if they got balky, something that only happened rarely. When such a thing did occur, the cry went up: "North, North," and a figure was seen trotting off to the refractory machine with a movement of the pedal extremities that made Charlie North a dead ringer for the better known Paul of that ilk; knickerbockers, bicycle stockings, pneumatic calves and all.

So much has been said about the background that the scores will scarcely excite any comment; but it must also be borne in mind that the magautraps were throwing the targets far and fast all the time. On the preparatory afternoon the targets flew as we have never seen them fly from any trap more than once or twice previously. And during the entire shoot there would be occasions when the targets got to going as far as was consistent with our notions of what constitutes the limit. But it was interesting shooting, and nobody was safe until the last target of his string had been broken. One was never out until the bell on the blackboard had rung. Nos. 1 and 5 were hard positions to get through safely. From No. 1 there would sometimes come a succession of stinging left-quarterers, that would tax the best skill of either Rolla or Fred Gilbert. At No. 5 there would be some right-quarterers that beat the best of them; while as for straightaways—they were overshot time and time again It was corking hard shooting, but it was decidedly interesting. And it was the same for all. No excuses.

STATE REPRESENTATION.

The long list of shooters in the State events will best tell who was on hand. Philadelphia, Reading, Harrisburg and Pittsburg were all well represented, the Philadelphia contingent making a clean sweep of all the trophies in the target events. Harrisburg took the individual championship at live birds, Brewster winning it after a shoot-off with holder, Jos. Thurman, Jr. Pittsburg took the team championship trophy at live birds, the Herron Hill Gun Club's trio, A. H. King, W. S. King and J. G. Messner, each making a clean score of 15 birds.

Meadville, Newcastle, Franklin, Oil City, and several other cities were also well represented in the State events, but the bulk of the contestants in these events came from the four large cities above mentioned.

FROM OUTSIDE THE STATE.

From outside the State came several of the most noted crackerjacks in the country: McMurchy, Heikes, Budd, Grimm, Powers, Gilbert, Brewer, Van Dyke, Glover, Fulford, Dickey, Crosby, Fanning, Winston, Trimble, H. G Wheeler, Hood, etc.; if that contingent isn't warm company, what is?

Gilbert, although our list of general averages shows him tied with Heikes for first average, really carried off the honors by four targets, as he broke 49 out of 50 in the E. C handicap against 45 broken by Heikes. As, however, we have never taken handicaps into account in figuring averages, the results should stand as shown in the table of general averages given elsewhere. Like all the rest, Gilbert would fall off temporarily in his work, and then again he made some brilliant runs, showing that, as the boys put it, he is "pointing the best of any of them."

The trade representatives, many of whom are included in the above list of crackerjacks, also included Capt. A. W. Money and Gus E. Greiff, both representing the American E. C. and Schultze Powder Company, Limited; Milt Lindsley and Mrs. Lindsley, King's Smokeless and Peters' Cartridge Company; L D. Thomas, of the Laflin & Rand W A Powder Company; U. M. C. Thomas, of the U M. C. Company, who only showed up for the live bird events; A. G. Courtney, of the Remington Arms Company; Dan Lefever, of the Lefever Arms Company; E. H. Knickern, representing the firm of Schoverling, Daly & Gales; A. W. Du Bray, of the Parker Gun Company; George A. Mosher, of the Syracuse Arms Company, who was unfortunately called home by a wire on June 24, announcing the death of a near relative.

Among the crackerjacks were the representatives of the following firms: W R. A. Co., Rolla Heikes and Ferd. Van Dyke; Harvey McMurchy, L. C. Smith (Hunter Arms Co.), Syracuse, N Y.; Budd, Grimm and Gilbert, a strong Du Pont-Hazard trio; Ralph Trimble, Du Pont Smokeless; Sim Glover, Parker gun and Schultze powder; Fulford, Remington gun and Schultze powder; O. R. Dickey, Parker gun and E. C. powder; Winston, Austin's 147 load; Jack Fanning and Gold Dust; H G Wheeler, King's Smokeless; Billy Crosby, of the Baker Gun Co., Batavia, N. Y.; Jack Brewer, Francotte gun and Schultze.

As we shall have to review the shoot in comparative detail, it will be better, perhaps, to proceed with that portion of the report without further prelude.

STATE EVENTS.

The target programme of State events was as follows. First day: Three 15-target events; the Wolstencroft trophy contest for the individual championship of the State, 50 targets per man; the American Wood Powder trophy for 3 men teams; and a 50-target event, handicap allowance, for a Parker gun. Second day: Three 15-target events; a 50-target event, handicap allowance, for a Remington gun; and the contests for the Reading and the Harrisburg trophies for 5-men and 6-men teams, respectively.

THE 15-TARGET EVENTS.

Below will be found a table giving the averages made by those who shot in the 15-target events, sixty-one shooters in all taking part in these events:

Events:	1	2	3	4	5	6			
Targets:	*15*	*15*	*15*	*15*	*15*	*15*	Shot at.	Broke.	Av.

THE WOLSTENCROFT TROPHY.

Harry Thurman, of the Keystone Shooting League, the Independent Gun Club of Philadelphia, the Wingohocking Gun Club, the Germantown Gun Club, and goodness knows how many other clubs, is now the champion of Pennsylvania at targets. He won the William Wolstencroft & Sons' trophy on June 22 by breaking 45 out of 50, a score that is far better than it looks on paper. Whiting, of Pittsburg, and Brewster, of Harrisburg, were second and third with 43 and 41 respectively. This event was, of course, a scratch event. The scores made in the race will be found under the head of No. 1 in the table that follows. Nos. 2 and 3 were the Parker and the Remington handicaps, respectively:

Events:	1	2*	3†
Denny (10)	38	37—6—43	33—2—35
Fuller (10)	29	32—4—36	40—6—46
Brewster (5)	41	40—4—44	38—2—40
Whiting (10)	43	36—6—42	39—10—49
Burnham (8)	39	36—3—39	41—7—48

* No. 2 was the Parker Gun Handicap. In this event 45 was the 'highest possible," and, as will be seen from the scores, there were six ties on that number, among them being W. H. Wolstencroft, one of the scratch men. On the shoot-off Guess won the gun. The handicaps were as below: Wolstencroft, Thurman and Landis scratch, Denny 7, Fuller 7, Brewster 4, Wilson 8, Burnham 5, Pope 5, L. D. Thomas 2, Shaaber 4, Ritter 2, Harrison 4, Whiting 6, Schmeck 4, Alexander 4, Cam 6, Reeser 10, Lay 5, Nye 5, Duncan 7, Guess 1, Marlowe 8, Bates 6, S. P. Life 4, Smedley 5, Born 4, Cokey 5, Ross 7, Cartright 7, Kuntz 10, Oliver 5, W. N. Stevenson 6, A. C. Stevenson 4, Colbert 7, Miller 7, J. P. F. 7, H. F. Brown 5, McClintock 10, Newton 7, Starr 7, Husselton 7, Dorworth 4, Motz 4.

† No. 3 was the Remington Gun Handicap. In this event 45 was again the highest possible, unless more than that number was broken by some shooter out of his first 50 targets. A C. Stevenson and H. A. Johnson both broke 46 out of their 50, and thus raised the highest possible one point. There were seven ties for the gun: Johnson, Stevenson, Fuller, Burnham, C. H. Miller, Cam and Whiting. On the shoot-off at 25 targets, with proportionate reductions in their handicaps, Fuller and Cam both made highest possibles again. On the second shoot-off Fuller won with a highest possible to Cam's 23. The figures in brackets after each man's name shows his handicap in this event.

AMERICAN WOOD POWDER CO.'S TROPHY.

Milt Lindsley and Wanda were forcibly reminded of old times on June 22, the date set for the 3-men team race for the American Wood Powder Co.'s trophy. The conditions of the race are 26 singles and 5 pairs. The Keystone Shooting League's team won the race with a score of 82, the Independents, of Reading, being second. Below are the details of this race:

Keystone Shooting League.

W H Wolstencroft	01111111111111111111111110	11 11 00 10 11—30

THE HARRISBURG TROPHY FOR 6-MEN TEAMS.

Only two teams entered for this contest—the Independent Gun Club, of Reading, and the Herron Hill Gun Club, of Pittsburg. The former team won, Philadelphia thus making a clean sweep of all the trophies offered for annual competition at targets:

Independent Gun Club, of Philadelphia.

W H Wolstencroft	1111011111110111110111111—22

OPEN EVENTS.

A good idea of the difficulty experienced by the shooters in locating the bluerocks may be gathered from a glance at the following table of scores. Gilbert was high with 91.5, Glover following him closely with 89.6; Heikes and Fulford were tied for third place with 89 per cent. exactly. Now look at the names of the shooters that follow the four above-named in order of merit and then judge whether the game was an easy one or not!

OPEN EVENTS, JUNE 22.

The following also shot in one event only, with the following result:
No. 1: Thurman 14.
No. 2: Brewster 13, Hoy 8.
No. 4: Cokey 14, Born 17, Oliver 14, Brown 13, Motz 13.
No. 5: Bort 17, W. M. Stevenson 14, L. D. Thomas 11.
No. 6: Smedley 18.

Fifty shooters took part in to-day's events.

On the second day forty-nine shooters took part in the open events, the scores of which are given in the table below. In addition to the five races given, there was also a 50-target handicap race for a cup presented by the American E. C. & Schultze Powder Co., Ltd.; as the race did not figure in the general averages, it is kept separate and follows the table.

It will be noticed that the boys were rapidly getting on to the background, seven men having averages of 90 per cent. or better. Heikes led to-day with 93 per cent., Budd and Brewer tying for second and third places on a 92.3 per cent. each. Trimble was fourth with 91.5; Gilbert, Van Dyke and Landis tying for the next three places with just 90 per cent. each.

OPEN EVENTS, JUNE 23.

Born	14	11	..	..	..	40	25	61.5
B R P	..	8	14	..	..	40	22	55

The following also shot in one event, making the scores given below:
In No. 1: Cam 16, Brewster 13, Denny 7, Burnham 14, Fuller 10 E H. K. 11, P. L. Murphy 16, A. H. King 17.
In No. 4: L. D. Thomas 16, Ergott 14, A. H. Donley 12, Bates 9.

GENERAL AVERAGES.

The table of general averages shows better than anything else just how hard the game was. When only two men out of the eighteen who shot through the programme events can make an average of 90 or better, shooters will know, when they scan the names of those eighteen, that there was something difficult in the shooting. As stated above, Gilbert really beat Heikes out by 4 targets, making 49 out of 50 in the E C. Handicap to Heikes's 45. This event, however, following the usual practice of not counting handicaps in the general averages, is kept separate. Brewer's position as third on the list was won by steady and meritorious work on both days. The figures below speak for themselves:

	June 22		June 23			
	Shot at.	Broke.	Shot at.	Broke.	Total.	Av.
Fred Gilbert	165	151	130	117	268	90.8
R O Heikes	165	147	130	121	268	90.8
J L Brewer	165	144	130	120	264	89.4
E D Fulford	165	147	130	115	262	88.8
C W Budd	165	141	130	120	261	88.4
R Trimble	165	142	130	119	261	88.4
S Glover	165	148	130	113	261	88.4
F Van Dyke	165	142	130	117	259	87.7
W Crosby	165	145	130	114	259	87.7
H McMurchy	165	136	130	116	252	85.4
C M Grimm	165	137	130	115	252	85.4
J L Winston	165	136	130	116	252	85.4
C M Powers	165	139	130	111	250	84.7
J S Fanning	165	136	130	114	250	84.7
O R Dickey	165	138	130	111	249	84.4
F S Edwards	165	141	130	106	247	83.7
W Hood	165	124	130	116	240	81.3
A W Money	165	121	130	102	223	75.5

In addition to the above, H. G. Wheeler and B Leroy shot in every programme event except No. 1 on June 22. Their averages for the 275 targets shot at were 84.7 and 79.6, respectively. Redwing also shot in all the programme events, except the 50 target event (the last event) on June 23. His average for the 245 shot at was 86.1.

THE E. C. CUP CONTEST.

The conditions of the E. C. cup contest were as follows: 50 targets per man, handicap allowance of extra targets to shoot at; the highest possible was set at 45 unless some shooter should break more than that number out of his first 50 targets. Gilbert, who ran 24 out of his first 25, losing his 4th target, followed this up with 25 straight on his second string, thus raising the highest possible to 49. Hood ran 24 each 25 and had no difficulty in breaking his first target on the allowance, thus joining Gilbert in the tie. G. H. J. (G. H. Jones, of Warren, O.,) scored 41 out of his 50, and then broke 8 straight on his allowance of 10, making three ties for first place and the cup. Glover with 47 out of 50, and an allowance of 1 target, had no difficulty in collaring second money on 48. Three tied for third money on 47, five men getting into fourth money on 46, and three men splitting up fifth money on 45. The scores were as below, the figures in brackets after each man's name showing his handicap allowance:

Gilbert (0) 49, Hood (4) 49, G. H. J. (10) 49, Glover (1) 48, Grimm (1) 47, Powers (1) 47, Fanning (3) 47, Crosby (1) 46, Fulford (1) 46, Heikes (1) 46, Wheeler (2) 46, Leroy (7) 46, Dickey (1) 45, McMurchy (2) 45, Brewer (1) 45, Trimble (1) 44, Edwards (1) 44, W. S King (5) 44, Fuller (10) 44, Winston (4) 43, Murphy (6) 42, Burkhardt (10) 42, Budd (1) 40, E. W. E. (4) 40, Brewster (4) 40, Chick (5) 39, Arno (5) 39, Guess (2) 33, Burnham (7) 37, Money (7) 36, Donley (6) 35, J. R. Miller (6) 34, Hoye (10) 26, Pope (4) 24, Denney (8) 20, Wilson (10) 20, Wanda (19) 19.

Pope, Denny, Wilson and Wanda did not shoot out their allowances.

The shoot-off was at 25 targets, Hood receiving an allowance of 2 targets, and G. H. J 5 extras. So well was G. H. J. shooting, that it was odds on his making 25 straight with his allowance; while it was felt that Hood, who had regained his true form, had no small chance of running him close. It was recognized by all that Gilbert had a hard contract on hand, but he pluckily went to the score to show that he was willing to take his medicine.

When G. H. J. dropped his 1st and 4th targets, things did not look so bright for him; he then steadied down and broke out straights, ending with 23 Gilbert's chances went glimmering when he dropped his 6th and 11th targets; he finished with only 20, his 18th and 20th targets both being lost. Hood ran 14 out of his first 15, and seemed likely to make a highest possible, but losses of his 16th, 17th, 19th and 23d targets effectually disposed of his chances. The scores stood: G. H. J. 23, Gilbert 21 and Hood 20. Thus G. H. J. won the cup on the shoot-off without having to take advantage of his allowance. The detailed scores of the shoot-off are:

Gilbert.....11111011110111111010111111—21
Hood.....11111111101111111001011011—20
G H J.....01101111111111111111111111—23

The conditions under which the purse in this event was to be divided had been overlooked when it was decided to make a highest possible. The conditions were as follows: "Trophy and 20 per cent. of the purse to the winner, 35 per cent. to the second, 20 per cent. to the third, 15 per cent. to fourth, and 10 per cent. to fifth." As all other purses had been divided under the Rose system, it was supposed that this purse would be divided in a similar manner; hence the highest possible was fixed. The result was most eminently unsatisfactory to the high men, as they only received $6.60 each, whereas Glover, with 48 breaks to his credit, scooped in $35 alone! Highest possibles in handicaps will only work right when it is "high guns" or the Rose system.

THE LIVE-BIRD EVENTS.

The extremely warm weather which had prevailed on the first two days of the shoot, kept up for the first day of the live-bird programme, and had its effect on the birds. On this day there was no wind at all until late in the afternoon, and the consequence was the birds were sluggish to start, there being no buildings to draw them out, and no scare-ropes to start them with until after dinner had been disposed of. Once the scare-ropes were put in position the birds started much better.

With slow birds good scores were only to be expected, and several were made. The King brothers from Pittsburgh easily carried off the honors with 46 each out of 47 shot at, W. S. King losing the first bird he shot at, and then running 46 straight. There was a good deal of luck in the draw on this day, a man who got a screamer (and there were a few on tap) was generally a victim, as he was often totally unprepared for anything of the kind.

ON THE STATE TRAPS.

In the State events, the Williamsport trophy for the individual championship of the State at live birds was the first thing to be decided. In this event Joseph Thurman, Jr., Harry Thurman's father, the holder of the badge, which he won at Harrisburg last year, scored his 15 and tied with F. W. Bacon and H. Brewster, the latter being the winner ultimately. During the shoot-off, it is only fair to Mr. Thurman to state that the squall of wind and rain which struck the grounds when the tie was being shot off had much to do with his two ciphers, the rain beating on his spectacles and causing him much inconvenience. Brewster, however, well deserved his victory, as he gave Mr. Thurman a long race last year at Harrisburg in the shoot-off, and was also in the shoot-off at Altoona in 1894. Mr. Bacon is a new shooter in State circles, and made a good impression as a result of his day's work.

The detailed score in this event is as follows; also the details of the L. C. Smith trophy.

	Williamsport Trophy.	Ties.	L. C. Smith Trophy.

For the L. C Smith trophy for 3-men teams, only three teams entered: Herron Hill Gun Club, Pittsburg Gun Club and Corry Gun Club. The detailed scores are given above, the result of the race being as below:

Herron Hill: W. S. King 15, A. H King 15, Messner 15—45.
Pittsburg Gun Club: J. O'H. Denny 15, McPherson 13, Wilson 11—39.
Corry Gun Club: Bacon 13, Pope 13, Wetmore 11—37.

ON THE OPEN SET OF TRAPS.

The programme for the open set of traps contained a 7-bird race and three 10-bird events. Owing to the number of entries and the delays inevitable to slow birds, great heat, etc., only the 7-bird event and one 10-bird event were decided. The 7-bird event resulted in a division between fifteen men, while the 10-bird event was divided up among sixteen shooters. From the above it will be seen that no one carried off any large amount of money after birds and other expenses were paid for. All events were high guns. The detailed scores follow:

No. 1 was the Smithman Introductory, 7 birds, $5, birds extra, high guns. No. 2 was the Deep Hollow Handicap, 10 birds, $7, birds extra. No. 1 had thirty-two entries; No. 2, thirty-eight entries. A total of 547 were shot at in these two events. No. 1 paid $10.65 for $7.10; No. 2 paid $16.60 for $10.

THE OIL CITY SPECIAL.

The Oil City Special was the chief attraction on the live-bird programme. The conditions were 25 birds, $25, birds extra, $1,000 guaranteed to the three high guns, all surplus added. The division of the surplus was patterned after that system which has been adopted with such success by the Interstate Association at its Grand American Handicap. The event was set for Friday, June 25.

Contrary to our expectations, the number of regular entries only reached forty-four; P. L. Murphy was a post-entry, bringing the total up to forty-five. Of this number four forfeited, thus bringing the number of actual contestants down to forty-one. Geo. Mosher was among those who forfeited, but his absence from the score was for the reason given above, the sudden death of a near relative.

Of the forty-one shooters four ran straight: Glover, Grimm and McMurchy, all 31yds. men, and Fanning, who was placed at 30yds. These four divided $1,032.50, or about $258 apiece. There were five 24s and all they had to divide was $32.50, not quite enough to pay for their birds. Wheeler, one of the 24s, was unfortunate enough to lose his 25th bird, while Pete Murphy lost his 23d.

Taken as a whole the pigeons were an excellent lot of summer birds, and those who ran straight fully earned their positions. W. J. McCrickart and L D. Thomas acted as referees at the two sets of traps. The weather was bright and warm, but a brisk breeze blowing from left to right across the traps made things pleasant for everybody who could sit still in the shade. The detailed scores of the Oil City Special and of an extra 10-bird event, $7, birds extra, four high guns, are given below:

U M C.....2121202200

THE ANNUAL MEETING.

The annual meeting was held in the parlor of the Arlington Hotel, at 9 P. M., June 22. President J. O'H. Denny and Recording Secretary Wilson were on hand. Mr. H. C. Reeser, Corresponding Secretary, was also present The treasurer, Jas. Wolstencroft, was unable to be present, on account of business.

The roll-call showed the following seventeen clubs represented by delegates or by proxy: Herron Hill Gun Club, of Pittsburg, A. H. King, Harry Vandergrift and Louis Lautenslager; Iroquois Rifle and Gun Club, of Pittsburg, J. Motz and H. L. Born; Independent Gun Club, of Reading, John Shaaber and Brooke Harrison; Franklin Gun Club, John A. Wilson; Wingohocking Gun Club, of Philadelphia, Harry Thurman (proxy); Independent Gun Club, of Philadelphia, Harry Thurman; Altoona Rod and Gun Club, H. M. F. Worden (proxy); Luzerne County Sportsmen's Association, H M. F. Worden (proxy); Harrisburg Shooting Association, H Brewster Shoop; Reading Shooting Association, James Schmeck and W. H. Ritter; Pittsburg Gun Club, Elmer E. Shaner; Keystone Shooting League, of Philadelphia, W. H. Wolstencroft and H. L. David; York Gun Club, W. H. Burnham; Philadelphia Shooting Association, H. L. David; Germantown Gun Club, Harry Thurman; Oil City Gun Club, A Smedley, C. H. Lay and H. C. Dorworth; Florist Gun Club, of Philadelphia, Will K. Park.

The following six clubs were duly elected as members of the Association: Meadville Gun Club, Butler Gun Club, Franklin Sportsmen's Association and Game and Fish Protective Society, Bradford Gun Club, Greenville Gun Club, and the Shamokin Gun Club.

The Franklin S. A. and G. and F. P. S. (too long a name to write out in full again) was represehted by Jesse Sinclair and John F. Leasgang. The Butler Gun Club by H. B. Colbert, J. E. Starr and C. H. Miller. Messrs. M. Henlon, C. A. Miller, Dr. Alexander and McNeary represented the Greenville Gun Club.

The contest for the next meeting of the Association was a sharp one Three clubs were placed in nomination for the honor of giving the tournament. These were, the Independent Gun Club, of Reading; the Herron Hill Gun Club, of Pittsburg, and the Iroquois Rifle and Gun Club, of Pittsburg. Mr. Motz, of the latter club, withdrew his club's name from the list, being unwilling to handicap the chances of Pittsburg for the shoot. The ballot showed 33 to 30 in favor of Reading, so the State shoot in 1898 will be held under the auspices of the Independent Gun Club of that city.

A vote of thanks was tendered the Governor of the State and the members of the Legislature (and in particular those members to whom the State is chiefly indebted for the new game laws just passed) for the work done at the present session of the Legislature. The committee on revision of trap-shooting rules, appointed at the annual meeting in 1896, made its report, presented a copy of the revised rules, and was discharged with a vote of thanks for its services.

After the transaction of routine business, the following officers were elected: J. O'H. Denny, President; Harry Thurman, Vice-President; James Wolstencroft, Treasurer; John A. Wilson, Secretary; Edward Yeager, Corresponding Secretary. Directors: George F. Nesbitt, H. M. F. Worden, J. A. Shaaber, W. H. Wolstencroft, E. E. Shaner, and W. H. Burnham.

All of these officers have filled the positions during the past twelve months, and were reelected, with the exception of Corresponding Secretary. This office perforce falls to the secretary of the local club in which the tournament is to be held.

LEGISLATIVE COMMITTEE'S REPORT.

The following is a copy of the report presented by Mr. H. M. F. Worden, chairman of the Legislative Committee, upon the work done by that committe since last September:

OIL CITY, June 23 —*To the Officers and Members of the Pennsylvania State Sportsmen's Association*—GENTLEMEN: In submitting to you the third annual report of the work which this committee was instructed at your last meeting to urge as of most importance, I am pleased to make this report:

Your chairman appointed committees to frame and present the following bills: An act to provide for the appointment of a game and fish warden, and prescribe his powers and duties; an act or acts to make more uniform the game season; an act to regulate the possession, use, transportation and sale of fish and game.

At the time these committees were ready to report the State Game Commissioners had been named by the Governor, and it was decided that they should present these bills instead of the Association. The general codified game bill is the result of the final action of both the Game Commissioners and these various committees, and the bill which was finally passed and signed by our Governor on June 4, is one which should meet with the approval of every citizen of this State who is interested in preserving the game of our commonwealth. I do not think it necessary to enter into any argument to defend the act Public sentiment demanded its passage, and it is one of the best in the United States to preserve, as well as to increase our game It was not framed with a view of enabling large bags of game to be made, and this is the only objection apparently urged against it.

We should not forget to give due credit to our Game Commissioners for the active part they have taken since their appointment in the matter of this legislation, or the aid which was given by those outside this Association. We would be most ungrateful to forget the services of the member introducing this act in the House, and defending it against the attacks of those opposed to any law which might deprive them of the privilege of destroying game life at any season of the year. Neither should we forget to give due credit to the Senator who acted in the same capacity in the Senate The fact is, our thanks are due these two gentlemen, the Hon. Frank G. Harris and Senator C. C. Kaufman, the members of the House and Senate, and also to the Governor of this Commonwealth for his final approval of the bill.

The game and fish warden bill, now known as the Baldwin bill, or House bill No. 342, has given your chairman more work than all other measures introduced. The cause of this has been the administrative opposition to this measure, so far as the fish, and a majority of the Game Commissions were concerned. It was then, and is now, the opinion of this committee, and of the State Association, that it should have been immediately indorsed by them. The object of the bill was to create a system of protection which would harmonize the interests of both fish and game preservation, and to unite every individual's, club's and association's influence to further such enforcement of our game and fish laws as to make them in every sense of the term operative. Argument true and convincing has been made on the act, and it would not be of interest for me to continue it, from the fact that it has not been answered by those who have opposed it.

The only argument of the opposition to this bill has been by misrepresentation. Your chairman and J. H. Worden have been represented as working for the bill for personal gain; the president of your Association as aiding the bill that there might be a place created for a brother in law (who so far is an unknown quantity to our president). These are a few of the able arguments which have been urged against the bill that have thus far come to light

The importance of the measure as a protective feature, was appreciated at the start by the State Association and by this legislative committee; and it has received the strongest individual endorsement of any act which has ever been introduced by all classes of our State's citizens. Its constitutional construction has been passed upon by one of the ablest jurists in the State, and after having given his opinion that it was such, added that he hoped it would be speedily enacted into law. The weekly journals and daily press have also aided in placing the bill in the shape it is in at this writing, final passage in the House and on third reading in the Senate.

If this bill fails of passage there can be no protection to game, other than that which may be accorded it by individuals and clubs at their own expense, for at least the next two years. Do not forget that your Game Commissioners' hands at this time are tied by the proviso, in the act which creates them, from spending any money for this purpose. That this bill, if put into operation, will revolutionize the enforcement of our laws there is no question. Its provisions are just in the powers conferred, and in the amount to be expended annually.

Our thanks are specially due the member of this committee from Delaware county, the Hon. R. J. Baldwin, and Senator C. C. Kaufman for their aid in their respective branches, and also to all those who have not failed to find merit in the act, and who have given it their endorsement by their vote and voice.

The work on this bill has necessitated the writing of many letters, and while I could give the number I refrain from doing so. The fact that nearly every one had to be in a different form did not permit the use of circular letters. Owing to the time, aside from business duties being given to this act, I am unable to make such report on the game statistics (which were, through your aid, reported to me) that I desire to compile I therefore ask your indulgence for a few weeks longer, and will report to you through the weekly journals and daily press.

In summing up the reports of the sixty-seven counties, and examining the totals of these reports, I feel safe in asserting that the value of the game taken in the State annually will exceed $1,000,000.

I desire to thank the members of this committee for the very able support which they have given me, and without which, you are well aware, nothing could be accomplished; for the wise suggestions of many of you regarding the various subjects of this committee's work. I also appreciate the honor which you have conferred on me by electing me as chairman for the past three years of this committee's life. It has been a pleasure for me to have served in this capacity. If I have commanded your confidence in the work, this will be a source of gratification to me, and I shall always remember with pleasure the period in which our friendship commenced.

H. M F. WORDEN,
Chairman Legislative Committee P. S. S. A

POSTSCRIPT.

So much has been written on the State shoot of Pennsylvania for 1897, and so much more could be written on that subject, that we will have to ask permission to hold some of the matter over until our next issue.

Au revoir. EDWARD BANKS.

Springfield Shooting Club.

SPRINGFIELD, Mass., June 23.—The Springfield Shooting Club held a shoot to day, the affair being well attended, twenty five shooters taking part in the sport. Events Nos. 1, 3, 6, 10 and 12 were at known traps and angles; No. 8 at reversed order and No 14 at expert rules; all the rest were at unknown angles. Scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	15	15	25	15	15	10	15	10	10	15	15	10	10
Tucker	10	10	12	13	22	14	15	10	13	10	9	15	15	10	..

Miller	..	..	3	5	4	6	3	5	7	8	8	7	7	14	6
McKinnow	..	..	..	..	..	..	..	..	..	1	2	..	..	..	..
Sprague	..	..	..	..	..	..	..	..	..	..	1	4	5	..	..

GEO. F. STEVENS, Sec'y-Treas.

There was so much championship talk last week at the Oil City shoot that the inexperienced thought that a match would actually be made. The pow-wow was finally broken up when Will Park and Edwards came up with a barrow to carry off any one who had been talked to death. There were so many applicants for assistance that more ambulances were pressed into service.

Western Traps.

WEST RN ILLINOIS TRAP-SHOOTERS' LEAGUE.

CHICAGO, Ill., June 19.—The Western Illinois Trap-Shooters' League was organized at Galesburg, Ill., Saturday June 12, after a convention of delegates from the gun clubs at Galesburg, Kewanee, Neponset, Rock Island, Canton, Pekin and Peoria. E. E. Baker, of Kewanee, was elected President; R. H. Lamb, of Kewanee, Secretary and Treasurer; H. R. Harries, of Galesburg, Captain. Monthly meets will be held in the towns above mentioned, in alternation, the first tournament going to Monmouth, June 24, at which time and place the organization of the League will be completed. This movement is of importance enough to merit attention. The avowed purpose of the organization is to protect amateur shooters who feel that they have no chance in open tournaments where they are asked to compete upon even footing with professionals. If professionals are allowed to enter the League shoots they are to be subject to handicap, same to be determined by a committee to be chosen later.

GARDEN CITY, OF CHICAGO.

The following scores have thus far been made in the season competition of Garden City Gun Club for the season prize, the Donnelly gold watch. The conditions are at 25 targets, under handicap.

	April 24	May 1	May 8	May 22	May 29	June 5	June 12

AT KANKAKEE.

On the second day of the tournament of the Kankakee Gun Club the following scores were made, Ruble, of Chicago (Garden City Club), being high average man with 164 out of 170 targets shot at. His nearest competitor was T. I Magruder, of Kankakee, who shot a gait of 90.17 per cent. Abe Kleinman, of Chicago, and J. H. Mackie, of Cincinnati, were tied on third, 90 11 per cent. Scores:

Twenty targets: Mackie, 20; Magruder and Antoine, 19 each; Giles, Patterson and Ruble, 18 each.

Twenty targets: Thompson, Ruble and Fortier, 20 each; Antoine and Magruder, 19 each; Kleinman, Mackie, Giles and Slow, 18 each.

Ten targets: Magruder, Ruble, Antoine, Thompson, Mackie and Slow, 10 each; Willey, Wells and Patterson, 9 each; Fortier, Giles and Kleinman, 8 each.

Twenty target: Magruder, Kleinman and Thompson, 20 each; Ruble, Antoine and Willey, 19 each; Mackie and Giles, 18 each.

Twenty targets: Ruble and Wells, 20 each; Thompson, Antoine and Willey, 19 each; Magruder, Kleinman and Mackie, 18 each.

Twenty targets: Kleinman and Ruble, 20 each; Willey, 19; Slow and Park, 18 each.

Twenty targets: Patterson and Ruble, 19 each; Antoine, Willey, Park and Kleinman, 18 each; Magruder, Thompson and Slow, 17 each

Twenty targets: Ruble and Mackie, 20 each; Magruder, 19; Kleinman, Thompson, Giles and Slow, 18 each.

Twenty targets: Magruder, Park and Kleinman, 19 each; Thompson, Ruble and Mackie, 18 each; Fortier, 16.

CLARION SHOOT.

The gun club of Clarion, Ia., held a pleasant amateur shoot last week—two days—with an attendance of about twenty-five. The affair was voted successful, and a second shoot will be held next September. Several shooters were present from Iowa Falls, and there were visitors also from Ackley, Dayton and La Verne. The tournament was considered to be one of the best amateur affairs ever held in upper Iowa

CHIPPEWA FALLS SHOOT.

Chippewa Falls Gun Club, of Chippewa Falls, Wis., held a little practice June 12, with following scores: W E. Dorland 11, S. L Riddell 8, M. A. Poznanski 6, H W. Martin 8, R. E. Chinn 15, F. G Martin 11, F. Hanzlik 7, E. B. Chinn 19, P. T Favell 7, J. H. Stanley 6.

FOX RIVER THIRD ANNUAL.

The third annual tournament of the Fox River Hunting and Fishing club will be held at Oshkosh, July 14 and 15. Previously these shoots have been open to all, but this year the bars are up, and the clubs desired will be invited as follows: Waupaca, Weyauwega, Neenah, Menasha, Appleton, Kaukauna, Fond du Lac, Rosendale, Eldorado, Omro and Winneconne.

LINCOLN, OF NEBRASKA.

Lincoln Gun Club, of Lincoln, Neb., has secured desirable club grounds on O street, near the city, and will fit up the place with modern improvements.

LEWISTON, OF MONTANA.

Lewiston Gun Club, of Lewiston, Mont., has gone into trap with vigor this month. At the club shoot last held the following were among the scores: Kane 16, Weaver 16, Wright 14, Lehman 20, Hooper 7, Kearney 19, Croft 8, Hobensack 15.

JAMESTOWN, OF DAKOTA.

The Jamestown Gun Club, of Jamestown, N D., held its weekly shoot June 12, with the following results, at 25 targets: John Clark 21, Perry Carnegan 20, Martin and Haas 19, Con Donnelly 18, Marion Nashold and Sheriff Severn 16, Dr. Rankin and Pierce Blewett 15, Will Miller 12, Geo. Game 9, L B. Niemeyer 8, W. H. Coggeshall 3.

TO REVIVE

Efforts are being made to revive the gun club of Watertown, N Y. It is proposed to set the membership fee at $5, with no annual dues. Targets will be shot at 1 cent.

MINERAL SPRINGS SHOOT.

A tournament will be held at Indiana Mineral Springs, Warren county, Ind., Aug. 4-5, it is hoped, with more than local attendance. Address H. L. Kramer, manager.

NEPONSET SHOOT.

Zimmerman, of Monmouth, won first average in Neponset, Ill., tournament last week; A. T. Kellogg, of Kewanee, second average, only 2 birds behind.

LAUDERDALE SHOOT.

Green Lake and Hilburn gun clubs held a friendly shoot at the grounds of the Sterlingworth Hotel, near Lauderdale Lakes, Wis., last week, a lively time and good sport being enjoyed.

CLUB ORGANIZATIONS AND ELECTIONS.

Kewanee Gun Club, of Illinois, last week elected as officers Dr. S. J. Sharp, President; A. T. Kellogg, Secretary and Treasurer; E E. Baker, Captain. The club was shown to be in flourishing condition.

The Belvidere Gun Club, of Belvidere, Ill., was organized June 14, with a large membership. It will hold a series of eight shoots this season for a gold medal indicative of the club championship.

The Salina Gun Club, of Salina, Kan., has been organized by a number of amateurs who do not wish to shoot in the professional class. The club has seventeen members enrolled, and has elected the following officers: President, J. F. Olling; Secretary, Ray Harvey; Treasurer, M. B. Stevenson One club shoot has been held.

The Ideal Gun Club, of St. Paul, Minn., elected this year's officers as follows: President, C. N. Turner; Secretary, Charles Young; Treasurer Frank Novotny. All members of gun clubs of either St. Paul or Minneapolis will be free to shoot in the Ideal club shoots.

The Jubilee Gun Club, of Salt Lake, Utah, was recently organized with the following officers: President C. E McCormick; Vice President, Harry Edwards; Secretary, D. E. Brockbank; Treasurer, J. Wash. Young. The Board of Directors are Messrs. D. H. Parry, Jr., Dr. George E. Ellerbeck, M. B. Bradley, John L. Maw, W. M. Brown, E. E Crooks and J N. Sharp

The Mason City Gun Club, of Mason City, Ia., has been newly organized, Judge J. C. Sherwin being chosen president.

The Grinnell, Ia., Gun Club has been organized with the following officers: President, George Houghton; Vice-President, W. L. Howland; Secretary and Treasurer, Fred Card Directors are Messrs. M. C. Timmerman, G. F. Thayer and W. W. Berry.

The Stanley Gun Club, of Stanley, Wis., has been organized with the following membership: Messrs. D. J. Kean, E. Graham, James Wocelka, T. Eagan, B E Shilts, A. T Birdsall, L G. Chapman, L G. Moon, R. G. Palmer and W. H. Bridgman. E. HOUGH

1206 BOYCE BUILDING, Chicago.

Do Not Wish to Compete.

DULUTH, Minn., June 11.—*Editor Forest and Stream:* An article which recently appeared in the *Sportsman's Review* states that Mrs. D. H Day recently refused to shoot a match with Mrs. W. P Shattuck, of Minneapolis, although Mrs. Shattuck had made a trip to Duluth to attend a tournament with the object of shooting a match with Mrs. Day. This article does Mrs. Day a great injustice. She never refused to shoot a match with Mrs. Shattuck. Mrs. Shattuck has not been in Duluth for three years, and there has not been a tournament given in Duluth this year. Mrs. Shattuck is a very warm friend of Mrs. Day's, and we doubt very much if anything could induce them to shoot an individual match. They are both excellent shots, and each is as much interested in the other's success at the traps as in her own. They both shoot L C Smith ejector guns, Hazzard's Blue Ribbon powder in Winchester shells, and two more enthusiastic woman shots it would be hard to find. But they are both amateurs in the strict sense of the word, and neither one will ever shoot an individual match with any one under any consideration whatever. D. H. D.

Answers to Correspondents.

No notice taken of anonymous communications

E. K., Davenport, Ia.—The Nessmuk hatchet is made by Colclessor Bros., El Dorado, Pa.

J. D P., New Orleans, La., desires the address of some one from whom he can secure the spawn or stock of perch for Southern waters.

S. W. P., New York.—I see on the bill of fare in restaurants, "doe birds." Will you kindly inform me what a doe bird is? Ans.—The doe bird is the Eskimo curlew (*Numenius borealis*), also called the jack curlew, and short-billed curlew. It is one of the smaller curlews, and is found all along the eastern part of North America, breeding in the Arctic regions and migrating south to the southern extremity of South America.

A. E. S., Littleton, N. H.—I have a part beagle and part foxhound dog, five years old, that was taken sick Sunday last. He has difficulty in using his hind parts. When going up or down stairs he will whine and cry out with pain His kidneys and bowels seem all right; eyes clear; appetite good; is in most pain when walking; does not flinch from pressure along the spine. He is a valuable dog and has always run excessively. Please prescribe. Answer. Give the following mixture:

℞ Sodii salicyl..... 3 iss
Syr. simple..... ʒ ss
Aq ad..... ʒ vi
Mix. Give one tablespoonful three times a day.

PUBLISHERS' DEPARTMENT.

Fishing Tackle at the Brussels Exhibition.

THE *Belgian Times and News*, in commenting upon the exhibit of Messrs. Allcock & Co., Redditch, Eng., at the Brussels Exhibition, says: "Among the many novelties in this stand may be mentioned their luminous float, composed of sulphate of calcium, admirable for night fishing; Coxon's Simplex wheel, which is run on such fine bearings that one small shot will take out 30yds. of line if necessary; Green's Spiral bait; their duplex salmon reel, the advantage of which is that the reel will revolve when the salmon is running without the handle-plate moving, and by a slight turn of the collar round the handle any amount of break power can be applied; their patent twisted wire gimp for salmon and sea fishing, which is rust-proof, and will bear a dead weight of 60lbs. The firm has also the patent for the famous Finland tackle, and the Celluloid bait invented by Baron Paul Tcherkasoff, head of the Russian Fisheries. At his last visit to the British section, King Leopold spent a considerable time at Mr Allcock's stand, and took great interest in their various exhibits.—*Adv.*

A New Repeating Shotgun.

A NEW Winchester repeating shotgun, to be known as the Model of 1897, is ready for the market. This gun is built upon lines similar to the popular and efficient model of 1893, having the old form of sliding fore-end, breech block, carrier block, etc.; but in other respects important modifications have been made, in both action and the length and drop of the stock. The frame is closed at the top and provision made for the side ejection of shells, a feature which adds greatly to the strength of the frame and also permits, without danger of jamming, the use of either 2⅝ or 2¾in. shells New cartridge guides, double extractors, firing pin lock and action slide lock release are features of the new gun. The latter permits opening the gun with the hammer at full cock and using as single loader if desired. The stock of this gun is ¾in. longer than the model of 1893, and has ¼in. less drop at the heel.—*Adv.*

Ball Bearing Rowlocks.

FOR smoothness and ease of working, no pivot is to be compared to that provided with ball bearings. Friction is reduced to a minimum and noise is obviated. The ball bearing principle has recently been successfully applied to rowlocks by J. R. Edwards, P. O. Box 308, Buffalo, N. Y., who is now prepared to supply owners of the better grade of pleasure boats.—*Adv.*

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Sir Henry Wotton—a man with whom I have often fished and conversed, a man whose foreign employments in the service of this nation, and whose experience, learning, wit, and cheerfulness, made his company to be esteemed one of the delights of mankind: this man, whose very approbation of angling were sufficient to convince any modest censurer of it, this man was also a most dear lover and a frequent practiser of the art of angling; of which he would say: "'Twas an employment for his idle time, which was then not idly spent; for angling was, after tedious study, a rest to his mind, a cheerer of his spirits, a diverter of sadness, a calmer of unquiet thoughts, a moderator of passions, a procurer of contentedness"; and "that it begat habits of peace and patience in those that professed and practised it." Indeed, my friend, you will find angling to be like the virtue of humility, which has a calmness of spirit, and a world of other blessings attending upon it. Sir, this was the saying of that learned man.

Walton.

AUDUBON BIRD PLATES.

IN our present issue is given the sixth of the series of half-tone reproductions of Audubon's famous bird portraits, from the rare first edition. It is of the Redhead Duck. The list of plates already printed and to come includes:

THE BLACK DUCK, Sept. 25, 1896.
THE PRAIRIE CHICKEN, Oct. 24.
THE CANVASBACK DUCK, Nov. 21.
THE WILLOW PTARMIGAN, Dec. 19.
THE AMERICAN GOLDEN PLOVER, Feb. 27, 1897.
THE REDHEAD DUCK, July 10.
THE SHOVELLER DUCK.
THE PURPLE SANDPIPER.

GOVERNMENT GAME RESTORATION.

CONGRESSMAN JOHN F. LACEY, of Iowa, has introduced in the House of Representatives a bill, H. R. 3589, to extend the powers and duties of the United States Commission of Fish and Fisheries to include game birds and other wild birds useful to man. The text of the measure is as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States Commission of Fish and Fisheries shall hereafter be known and designated as the United States Commission of Fish, Fisheries and Birds. The duties and powers of said Commission are hereby enlarged so as to include the propagation, distribution, transportation, introduction and restoration of game birds and other wild birds useful to man. For such purposes they may purchase, or cause to be captured, such game birds and other wild birds as they may require therefor, subject, however, to the laws of the various States and Territories in which they may conduct such operations.

The object and purpose of this act is to aid in the restoration of such birds in those parts of the United States adapted thereto, where the same have become scarce or extinct, and also to aid in the introduction of new and valuable varieties or species of American or foreign birds in localities where they have not heretofore existed.

Said Commission shall from time to time collect and publish useful information as to the propagation, uses and preservation of such birds.

And the said Commission shall make and publish all needful rules and regulations for carrying out the purposes of this act, and shall expend for said purposes such sums as Congress may appropriate therefor.

This proposition submitted to the National Government is in line with the development of game protection and game restoration in this country as conducted by the several States, and it is only one more step in advance. A long time was required for the individual States, one after another, to learn that game protection was one of the public interests with which the official machinery of administration might concern itself. First came the enactment of laws for the protection of game, but when these had been given a place on the statute books, the State folded its arms in complacent consciousness of having done its whole duty. Then followed an awakening to the realization of the hard facts of the matter, that there is nothing automatic in the nature of working of a game law, that it will not enforce itself, but to be of any account must be enforced by those whose business it is to put it into action; and that there must be wardens. The second step was the provision of a State game protective force. This system, which is now so common, was an altogether novel idea within the last quarter of a century. With its adoption came the enlargement of the scope of responsibility of State fish commissioners. They were now entrusted with the duty of protecting game, as well as of breeding fish; and finally in some States appropriations have been made to supply the fish and game commissions with means to import and propagate game birds, just as they have introduced and bred fish. Thus in Ohio, Massachusetts, Maine, New Hampshire and elsewhere, the commissions have imported Mongolian pheasants, capercalzie and other species. As to the State commissions, it may now be said that the propriety and public advantage of their activity in the field of game replenishment has fixed recognition.

The individual States having thus come to devoting their funds to the propagation of game, it was to be expected that the National Government should be called upon for a like enlargement of the duties of the National Fish Commission. If it is expedient for that Commission to concern itself with the distribution of trout and black bass and other fish to the public waters of the several States, logic would seem to show that no less is it expedient for the Government to distribute to the depleted game covers of the country the new or old species of game with which these may restocked. If it is desirable to introduce into this country foreign game birds, experiments in this direction would be more likely to succeed, if undertaken on a scale within the means of the Government than if they were left to the puny efforts of individuals or associations.

Those who have followed the very interesting plan developed by Mr. W. G. Van Name for the establishment of Government game preserves in the several States, will recognize that the measure of Mr. Lacey is directly in keeping with the proposed reserve system; for if the Government is to propagate game and restock game covers, it will be necessary for it to establish game breeding stations similar to the fish breeding stations which it has acquired in various localities. To secure possession of desirable tracts of territory, and to preserve them rigorously as breeding grounds, would be carrying out in effect the provisions of this measure; and if the work of the Commission should go no further than this, even then, for the considerations which have been so well pointed out by Mr. Van Name, its game breeding work would be of untold value and profit to the country at large.

SNAP SHOTS.

IN many of the States of the South there is a well-defined prejudice against camping parties of hunters from abroad. In numerous sections where no other general restrictions are enforced relative to the taking of game, stringent laws forbid camp-hunting by non-residents. These regulations have an extremely ungracious air, and appear sadly to belie that all pervading Southern hospitality so characteristic of this country. They are abundantly justified, however, by the circumstances which have driven the residents to such recourse. The discrimination is not aimed against sportsmen, but against the market-hunters, who have so generally and so disastrously invaded the game districts of the South and the Southwest. They camp in a favorable locality, hunt assiduously, shipping their game to St. Louis and other great markets, and remain on the land so long as sufficient game is left to make their stay worth while. The county non-resident laws have been adopted as supplying the only system of relief for sections so imposed upon. In Arkansas a law was enacted at the last session, relative to Lafayette, Miller and Desha counties, which forbids camp hunting under heavy penalties, and makes the mere art of camping in the woods with dogs and guns sufficient evidence to convict.

In spirit and intent such regulations are designed only to prevent market hunting; they have their origin in no antipathy to outsiders. The non-resident sportsman, going individually or in a party, will find perfect freedom to camp as long as he pleases and to hunt to his heart's content, provided only that he will take the precaution to introduce himself to some responsible citizen of the country and assure him of his purpose of hunting for sport only. Under these circumstances he will be looked upon as that citizen's guest, and so the guest of the country so far as hunting privileges are concerned; and thus he will make renewed proof of Arkansas hospitality, where hospitality is deserved and not abused.

Our reference last week to the farmers of Long Island and Vermont, who complain of the depredations of deer upon their crops, may be supplemented with wails of like tenor from West Virginia. John Crook, of Middle Bridge, has made complaint to the authorities of that county about the deer and wild turkeys destroying his crops. He says that if the authorities will not take steps to prevent them from trespassing on his property he will have to kill them in self-defense, in spite of the law to the contrary. Other farmers have declared their intention to make similar complaints. They say the ravages of the deer and turkeys are as bad as the army worm. The correspondent who sends us this note says that he has known Mr. Crook from boyhood, and he can vouch for his truthfulness and trustworthiness. The good things of life are unequally distributed when amid all the cries of game scarcity are voiced the woes of those who are thus over. supplied. Deer hunters who would like to combine philanthropy and fun should make a note of Mr Crook's plight, and go to the succor when the open season races around.

ON BOSTON STREETS.

A LARGE opportunity presents itself to the patriot of Boston who has the pluck and spunk so improve it; and there is a monument in store for him on the Common along with those of other public benefactors, if only he shall perform the service of the hour. The Great and General Court of the Commonwealth has decreed that whoever has in his possession the body or feathers of any protected bird, or wears such feathers for the purpose of dress or ornament, shall be punished by a fine of $10. That means that woman must stop wearing birds' feathers on her hat; and the public-spirited ornithologist who shall take up his station on Washington street of an afternoon to note the bird-bedecked headgear as it passes in review, and to halt, detain, arrest and mulct the bearers of tabooed bedizenment is the citizen for whom his fellows are to erect the monument.

That the harvest is ripe for the sickle, or that the game supply is abundant, may be deduced from the list of native birds observed in a similar situation by a New York ornithologist. Some time ago Mr. Frank M. Chapman, of the American Museum of Natural History, sent to the FOREST AND STREAM a list of native birds which he had seen on the heads of ladies in New York streets during two late afternoon walks:

Robins, 4.
Brown thrush, 1.
Bluebirds, 3.
Blackburnian warbler, 1.
Blackpoll warblers, 3.
Wilson's black-capped flycatchers, 3.
Scarlet tanagers, 3.
White-bellied swallow, 1.
Bohemian waxwing, 1.
Waxwings, 23.
Great northern shrike, 1.
Pine grosbeak, 1.
Snow buntings, 15.
Tree sparrows, 2.
White-throated sparrow, 1.
Bobolink, 1.
Meadow-larks, 2.
Baltimore orioles, 9.
Purple grackles, 5.
Bluejays, 5.
Swallow-tailed flycatcher, 1.
Kingbird, 1.
Kingfisher, 1.
Pileated woodpecker, 1.
Red-headed woodpeckers, 2.
Golden-winged woodpeckers, 21.
Acadian owl, 1.
Carolina dove, 1.
Ruffed grouse, 2.
Pinnated grouse, 1.
Quail, 16.
Helmet quail, 2.
Sanderlings, 5.
Big yellowlegs, 1.
Green heron, 1.
Virginia rail, 1.
Laughing gull, 1.
Common terns, 21.
Black tern, 1.
Grebes, 7.

Not all of these come under the Massachusetts law, but most of them are included. We shall watch with much genuine interest to note the actual working of the new statute; and to determine whether this placing of songbird-feather hat adornments under the ban of the law will effect what appeals to sentiment and sense have failed to accomplish.

A bill similar in provision was passed by the late session of the New York Legislature, but failed of the Governor's signature, for the reason, as given out by his private secretary, that the measure was not approved by the Commissioners of Fisheries, Game and Forest.

The Sportsman Tourist.

SHEEP AND SNOWSHOES.—III.

A Winter Hunt on the Summit of the Rockies.

Al-so-pom-stan.

ON the morning of our first day in camp, while the others of us were still curled up in their frost-rimmed blankets, O-to-kò-mi crawled out of his bed and poked his head out of the door. O-to-kò-mi had promised Joe Kipp that he would do his best on this hunt. He would go through snow "up to here," signifying up to his waist. He was, as he publicly declared, very "skoòn-a-taps" (strong), and he was going to get sheep or get reasons, or words to that effect. It is very likely that he was as anxious for good hunting as any of the rest of us, as this early prospecting on his part would seem to betoken. But when O-to-kò-mi poked his head out through the lodge flap he withdrew it again with a single exclamation which covered the case very fully. "Ai-so-pom-stan!" said O-to-kò-mi. By which he signified that, to his disgust, the big cow moose was again at her regular task of waving her ears and making the wind blow.

When we turned out of the lodge that morning the prospect was alike a brilliant and a gloomy one. Back of us the sharp sun was shining and all was a blinding sea of white. Ahead of us, up in the mountains where we wanted to hunt, there were black masses of storm clouds running, alternated with great flying wreaths of driven white mist. From Rising Wolf Mountain to his mate across the valley there reached, in the glinting, glittering, unspeakably brilliant snow mist, a vast, magnificent bow of all the colors, as rare and strangely beautiful sight as may come into many lives. Through the sheets of blinding light upon the one hand, and through the mist and clouds and flying scud of the storm upon the other hand, there appeared, standing or looming or peering out here and there, peaks and pinnacles and cut-faced cliffs, all capped with bare rocks, with ice or with glittering snow. We were in a very trap of the mountains. Our road had led us into the lower end of this vast basin, out of which the Two Medicine Creek flows; and now, having come down off the high bare ridge which had made it possible for us to get so far with our team, we were at the head of navigation, on foot in the Rockies. And the Rockies were here, playing a wild game of their own, as they have a way of doing in the winter, and caring no whit for us or our intentions. Ah! what a spectacle it was—how grand the spectacle, how very small the ones who witnessed it! Never was amphitheater more imposing than this curved-in valley, with its walls of black-covered and ice-capped mountains.

The prospect for a hunt did not seem very favorable, for it must be remembered that on days when the wind blows thus the wise hunter does not care to go into the mountains. The cold is very intense, and moreover the blinding snow prevents him from seeing his game, though it may not prevent it from scenting him if by chance he comes ignorantly too close upon it in the storm. Knowing that he is apt to scare more game than he sees, the hunter who sees Ai-so-pom-stan wagging her ears will hide in camp. He knows that the mountain ram, even though not approached very closely, may take fright and start to traveling clear out of the country, perhaps managing to get ten or fifteen miles away, even over the deep snow of winter; a distance which would mean entire loss to the hunter, who cannot hunt so far as that from camp on snowshoes in the mountains.

We were all tired from the long day's work of yesterday, and there was something of a disposition to rest in camp. Boak was obliged to start out for home with the team, to return later for us, as he had not feed enough to last very long, and as there was no shelter for the horses nor chance for them to range. The snow was belly-deep to them in the valley where we were camped. Our lodge, when we got down to bed rock, was buried so far in the snow that a man standing at the door would show only about half the length of his body above the snow to one looking on from a little distance. The horses had been brought around to a place of partial shelter the night before, wallowing through the snow as best they could to a point a few yards away from the lake shore and out of the cutting wind. They were tired almost to death by the wearying pull of the preceding day, but Boak thought that as the load would now be light, he could manage to get back to the settlement without trouble. Hunter Powell, O-to-kò-mi and myself concluded to go with Boak a part of the way, leaving him at the crown of the bare ridge and swinging back in a search for our supposititous bear den, in which I had a lively interest, as I thought maybe my long-lost grizzly was in there. McChesney also concluded to get out and stretch his legs; so we all four went down with Boak as far as John Monroe's camp at the lower end of the lake. Here we put on our snowshoes for the long, steep climb up to the top of the ridge, which we found to be very much worse than it had appeared in coming down. We learned also what had been the cause of Boak's delay the evening previous, when we had lost him for a couple of hours. Half way up the hill was a soft snowdrift about 10ft. deep, and in this the team promptly got stalled again going up with the empty sled. They fell down in the snow, after plunging till they were exhausted, and so they lay, with only a part of their backs visible, and their legs doubled under them in we knew not what sort of shape. They threw their heads out on the snow to rest as best they could, as they lay wearily moaning as though they were heartily sick of the whole business, and considered it all come to a final end so far as they themselves were concerned.

Not so Boak. Here rose to the occasion all the resources, all the skill, all the genius of the real Western teamster. Not for a minute did he worry about the result, though a tenderfoot might have been disposed to think the team lost and only to be abandoned. Boak ordered us to hold the sled from running back down hill. He cut down a few projecting little trees that bothered him. He fished out a long log chain, and going on up the hill many yards, over the steep pitch at which the team was stalled, he trailed this out in the snow. Then he had us ease back the sled a bit, and unhooking the horses after long effort, he appealed to their sense of Western honor in terms of such force and effectiveness that, miracle to say, they scrambled and plunged and climbed indomitably forward until they topped the rise, and so at length lay panting again in the snow, but beyond the worst of it. Then Boak patiently hitched them to the end of his long chain, and swearing very impartially alike at us and the horses, he heaved the whole outfit over the drift and on to the rise, where all was safe—as safety might so be charitably expressed; though still a pretty coil lay ahead for any teamster.

"Oh, I told you, all you want is plenty of faith," said Boak, as he gathered his reins after this little episode. So saying, he began to converse again in competent profanity. I think I never knew a man to swear so constantly, so unconsciously, and yet with such uniform accuracy as Boak did. No matter what the surroundings, Boak swore just the same; and he must have been a very finical sort of person who could have taken the least offense at it. For my part, I liked it; it sounded so cheerful and so like the old times. The East is a most doleful place to live in.

After we had reached the top of the bare ridge, over which we had come into our valley, we found above us still another higher ridge, which made off up to a sort of junction with a high bare mountain. Hunter Powell, who was with us, said that our bear den was somewhere just near the timber line, along this upper ridge some two miles toward the mountain. We therefore began the long and difficult climb up to the top of this second ridge. McChesney was now getting his first hard experience with the shoes, and, like all beginners, was "fighting his shoes," as the saying goes, and stopping often to arrange his straps. We were all of us yet a little soft and untrained, so the work seemed hard. Two weeks later we would have taken the same work without a thought of it. We were well tired when we got up to the spot where Hunter Powell began to look out for his bear den. We were then almost directly above our camp on Two Medicine Lake, and looked down on the lake, on whose surface the figures of our friends below seemed very small.

We had a sample of mountain snowshoeing that morning. The snow was deep and very soft, and the country over which Powell took us was chopped across by dozens of sharp coulees, each 100ft. or more in depth, with sides so sharp that the snow would barely hang on the banks. Once we cut a trail along such a bank for 50yds., the shoes sinking in so that we were waist deep in the snow, only to find ourselves at the foot of a second rise, with a pitch as steep as a house roof. It took us nearly an hour of hard work to get up out of that hole and on top of the hill above it, and when we had done so we were all about exhausted with the scrambling climb up the sides. In this work it was not snowshoeing so much as wallowing and crawling through the snow. The ascent was too steep to walk up, the shoes slipping back when the angle got beyond a certain point, and of course the snow was far too deep and soft to hold one up without the shoes. We pulled ourselves along as best we could by means of boughs and tree trunks, this being in the heavy forest. In this work I was surprised to see how well the old, worthless-looking, fall-down pair of snowshoes worn by Powell did their work. These shoes he had picked up at old John Monroe's camp as we passed. They were a Cree-model shoe, made with a spliced bow of willow (since a decent piece of hardwood for bows was not to be obtained) and the webbing was of the most spasmodic and unpremeditated pattern ever was. These shoes were longish and narrow, with a sharp, upturned toe, and the webbing spaces were of an average over an inch across. Yet they seemed to hold up a man well enough for the purposes of travel, not sinking down so very far, and when it came to the recover, the pulling of the foot out of the snow for the forward step, the chief virtue of their make was apparent. The wide meshes let the snow slip readily through, and the foot raised no weight with it, the shoe coming free and riding easily over the snow at the forward step. These shoes were made, of course, by Mme. Monroe, and the conclusion was forced on one that the lady knew her business. These snowshoes I coveted for my private collection of such gear, and old John Monroe promised to send me on that pair and also a pair of "squaw shoes" made by the same hand, as soon as his season's trapping was over, though as yet they have not arrived. Mme. Monroe complained that she could get no wood for making snowshoe bows. In making these shoes she worked with no tool but a big knife, and the cross-pieces were lashed on with rawhide, each cross-piece being split and turned back at the end, so that a piece was offered as a sort of leg for the lashings to bind against the side of the bow, no mortise being possible with such tools as were at hand. This readiness to meet the difficulties of the case gave these shoes their chief value in my eyes, showing as it did the manner in which the native peoples overcame the environment that beset them, using only such means as lay immediately about them.

We plunged and wallowed about on top of the ends of the many coulees that ran back into the mountains from the lake, growing pretty tired from our struggles with the snow, which was of course far worse in the sheltered forest grounds than upon the high and open ridges, and finally Powell concluded that he could not find the place where he expected to discover his bear den. He said he had never come upon that bit of country from that direction, and moreover, had not been there in the winter time, the snow making an entire change in the appearance of the country. While Powell, McChesney and myself were plunging about in the deep coulees, O-to-kò-mi was shrewdly faring ahead somewhat above us, on the high ground and hard snow. He said he was following a track, but I have a notion that he was sharp enough not to want to get down into those gullies. At any rate, he overtook us after a while, and told Powell he didn't think there was any game up in that country, and thought we might as well go home. He pointed to the high, bare mountain which seemed to arise at the further end of our bare ridge, above the edge of the timber line, and intimated that the sheep were over on that mountain, and that he had found them there in earlier hunts.

When O-to-kò-mi pointed down the hill to the camp and started across lots in that direction, McChesney and I concluded to follow him in, as it was now well on in the afternoon, and we did not think Powell was going to find his bear den. Powell, however, remained behind, and prosecuted further his search for the locality in question.

It was an awful country, that over which O-to-kò-mi laid out his air line to camp, and the Indian hit the trail with a speed and determination which made McChesney and me sweat copiously, though it was nearly all down-hill going. It had looked only a mile at the outside to camp from the top of the ridge at timber line, but when we had gone a mile and a half or two miles, and asked O to-kò-mi if it was still a mile to camp, he answered indifferently, "Don' know, mebbe so." His English was not very extensive, and his countenance was no index whatever to his thoughts. As a pace-maker he had qualities to recommend him to athletic managers, one of which was his mercilessness on those who followed. He carried us into camp fairly on a gallop. I made signs to ask him if he was tired, but he shook his head vigorously and grinned pleasantly. I figured that if I did that sort of mountain work every day for a couple of weeks, I would either be dead or in mighty fine condition. Yet Schultz was so discouraging as to say to us that in our day's work, covering perhaps eight miles in all, we had done no sort of climbing at all compared to what we would have to do if we got any sheep. This was true, too, as we learned later; but at the time it sounded very heartless.

We saw no game sign that day, except one deer track and the old trail of a lynx. Powell came down the hill to camp about an hour after we did, and said he had not found the exact place he was looking for, but had found a place something like it. This was a round hole in the snow, with frost spears around the edge, as though the breath of some animal had congealed there. There was apparently a brush heap or tree top covered up by the snow at that point, and it had all the ear marks of a bear den. At least so said Billy and Schultz, and all those who should have known. I did not yet relinquish hope that we had found my grizzly, and we made plans how we should get him out of there without any unnecessary sacrifice of valuable human life. Schultz thought we could build a fire and drag it with a rope over the opening of the hole, thus being far enough away to get a chance at the bear before it got a chance at us. Billy said it would be a good plan to take a pole and stir up the bear, but it was not decided who was going to be the pole-bearer in such a case. It was commonly agreed that at this time of year the bear would be pretty lively, and wouldn't need much coaxing to come out and show himself. Powell agreed to go up the hill next day and show us the place, if any of us wanted to try for the bear.

This day closed windy and stormy, and as the air was very keen and we were all pretty tired, at least those who had been traveling, we were not sorry to gather around the lodge fire that night and rest and talk. This to me was one of the pleasantest and most unique features of the trip, the nightly symposium about the lodge fire. Always the tales turned to the old West, the old times on the front, the days and ways that are now gone. And we had talent of unusual excellence in this matter, too. There is no better posted man on Indian lore and Indian ways than Schultz, who has lived among the tribes on the wildest frontier for some twenty years, while as for Billy Jackson, he could make a hit in many an audience at story-telling, if he should preserve his style of the lodge fire talks. Billy has been an army scout ever since he was sixteen years of age, and has served under the best and the most of the leading generals who have done the Indian fighting in the West. He has been in the Northwest mounted police, in all branches of the scouting work in the U. S. army, and has besides traded and hunted and projected around on his own hook all over the border when not engaged in regular warfare. Billy has retained all through his checkered life a good apprehension of the salient points of things, and is moreover blessed with a strong sense of humor, and a remarkable faculty of imitation, so that he makes a story-teller of more than ordinary interest for an evening about the fire, when the snow is whistling over the lodge top and the coyotes are singing on the hill sides near by. It was worth a farm to hear Billy tell of the bloody British officer of commissary who audited the mess accounts of the Northwest police up in Alberta, or some other country of her Majesty the Queen. Billy, it seems, was mess steward, and he had a notion that nothing was too good for his outfit, in which he differed from the officer in charge. "Oh, I s'y," the latter said one day (according to Billy), "I s'y, ye know, w'at in the bloody blazes do ye mean by hordering twenty pounds of buns? Buns! buns fer the men, w'y, ye know, w'at hall this means, Hi really cawn't comprehend, I cawn't really, ye know, now." Billy explained to him after a time that the 20lbs. of "buns" was intended to be 20lbs. of beans, which latter have always been held legitimate food for mounted scouts in Indian service. This left the commissary man somewhat mollified, and no longer anxious lest the squad was living on food a touch too high for it.

We asked O-to-kò-mi to tell us a story in his fashion, one of the stories of his people, and this he did at some length, Schultz interpreting while he washed the dishes. O-to-kò-mi told a strange and fabulous tale of a poor old man and poor old woman who were oppressed by their son-in-law, but who one day were saved in a singular way. The old man hid in a quiver a clot of blood from a buffalo the son-in-law had killed, and this clot of blood grew into a child, when it was boiled in the kettle. The child told the old man to tie him in turn to each lodge pole, all the way around the lodge, and by the time this was done the child had grown to be a full-sized man. This man turned out to be a hero, who righted the wrongs of the old people, and killed off oppressors of all sorts, and behaved himself very admirably indeed all around. He killed all the bad bears, but left a few bears for the future ("So you men can dig them out of the holes," interpolated O-to-kò-mi, with a touch of native humor), and he killed all the big, bad snakes, but left a few good little snakes so there should not be an entire dearth of snakes on the earth. Moreover, he killed the spirit of a big, wicked hill, "that was a sort of person," and which poisoned the air with its breath, and which swallowed up the people in great numbers. This hero was named Clot-of-Blood, from his origin, and after this evil spirit had swallowed him, he cut out the heart of the wicked being and so destroyed it. It took O-to-kò-mi three-quarters of an hour to tell this story, which reached us through the interpreter, and he related it with a great deal of gravity and a good many flourishes. Schultz told us that this was one of the oldest of the folk stories of the Blackfeet. It is told at length in the "Blackfoot Lodge Tales" by Mr. Grinnell, more graphically than one would be apt to tell it from remembrance, but it was a pleasure to hear it again, actually told in the smoke of a Blackfoot lodge and by one of the people who have devised it and handed it down. This story of O-to-kò-mi's began entertainingly. "Once, in the Sweet Grass Hills," said he, when he began the story. And lo! the Sweet Grass Hills, full of all their hero stories, all their mysticism, all their

records of the days gone by, lay within a few days' journey from where we then encamped, and fully visible from our prairies, lying high and bold upon the further boundary of that high cup of the mountains which is now the home of the Blackfeet people.

O-to-kò-mi, as I have said, told his story in Piegan, and held his usual discourse in that tongue; but he had a sort of understanding of English as well as Blackfoot, which was perhaps as well, considering the polyglot medium of communication in vogue in the camp. Schultz would be talking Blackfoot to O-to-kò-mi with one hand and English to Billy with the other. Billy speaks English, French, Piegan, Cree, Sioux and, I think he said, also the Crow language. At times, when busy talking with O-to-kò-mi and myself at the same time, he would get his linguistic wires crossed, somewhat after the fashion of old John Monroe, though more intelligibly. Once, I remember, he said something to O-to-kò-mi which sounded like "*Ex-sin-u-sak, na cook it*—to grease the pan with." In response to this, O-to-kò-mi handed him a bit of bacon rind which was lying near by on his side of the fire. By this I inferred that Billy had asked for this piece of bacon rind, though I do not know how near I have come to the Blackfoot phonetics of it.

Another story, I remember, Billy told us that first night around the lodge fire, a story of war and heroism whose scene was laid not far away, and whose time was within the memory of the narrator.

"There is a high rocky hill," said Billy, "a sort of fortress, on the top of a big rise of land some sixty miles northwest of Fort Keogh, and this place is called to-day the Crow Rock. One time I was riding by this place with two Sioux Indians [I think he said their names were Round Wooden Shield and Lone Standing Bull], and these Indians told me the story of the Crow Rock.

"They said that some years ago there were some Crows camped not far from the place where a good big body of Sioux were hunting, and some of the Crows lay in wait and shot two Sioux boys who came by them in the grass. Others of the Sioux gave the alarm, and it was easy to see that there would be a movement for revenge at once. As the old men of the Crows knew they were very much outnumbered, and as there was no place on that flat prairie country where a fight could be made with any chance of success, the chiefs of the Crow party hurriedly called their people together and ordered a swift retreat. There was only one place, as they said, where there was any hope that they would be able to make a fight, and that was many miles away, at this natural fort which now is called the Crow Rock. The chiefs ordered every member to mount at once and make for that rock as fast as they could ride, not stopping on the way, but using every effort to reach the place before the Sioux, who were sure to follow in full force as soon as their men could be notified. I think one or two persons of the party did not obey orders, but rode on across the country and so escaped, but the bulk of the party kept together, and by riding late into the night made the cover of this stronghold. Here they felt tolerably safe for the time.

"The next day the Sioux, who had followed hot on the trail, came into sight of their enemy, rounded up in this stone fort. The Sioux made efforts to drive the Crows out but failed. The Crows only laughed at them and taunted them, telling them to come on up and try to take them out. They also fired down at the Sioux and shot a few of their warriors. Yet the Sioux could inflict no loss on the Crows, for they could not see a face at the cracks in the rocks, while the Crows could peer out in safety and shoot at them.

"There was with that party of Sioux a young warrior by the name of The Little Assinaboine, a good fighter, and a man who was not afraid. This man said: 'It is all useless for us to stand down here around the foot of this rock, for we will never drive the Crows out in that way. The way to do is to charge up the hill and get right in under the walls, then we will be close to the Crows, and we can get over the walls and kill them in a hurry.'"

"This sounded all very well, but there were few of the Sioux who cared to risk a run up the long face of the hill, exposed to the rifles of the Crows. The Little Assinaboine, however, started up the hill on ahead, crawling from one rock to another, keeping under cover the best he could, and soon he was followed in this way by other young men, who crawled with him as high up the hill as they could go under cover. Then The Little Assinaboine ran out from cover and started for the next rock which would shield him, this being still a little higher up the hill; and the others did this also. At last there was no more possibility of cover from where they lay, clear up to the edge of the rock walls behind which the Crows were lying. Then The Little Assinaboine called out to the men to follow him, and he started out in the open and ran as hard as he could up the long, bare front of the hill, till at length he was directly under the shelter of the walls, and, luckily, unhit by any of the shots fired at him. Others of the party seeing that he was not killed, after awhile began to run up to him also. Meantime he was calling to the Crows inside and putting his rifle up to the cracks in the rocks and firing through at the Crows. When a number of the Sioux had joined him at last, he said: 'Now let us go over the wall, and when we are inside we can kill them all the more easily.' So they scaled the walls and jumped down in among the Crows and began to shoot and fight with clubs and knives. It was not long until every one of the Crows was killed—thirty-one in all. Thus the place got its name of the Crow Rock.

"The Sioux always remembered the bravery of this young man, The Little Assinaboine, and in order to show their appreciation of his courage, and to point out plainly what a feat he had done in leading the party that stormed the hill, they got long, flat stones—white stones—and they laid them up the hill, in the footprints of The Little Assinaboine, where he ran up the hill. I have seen these stones, and it may be that they are there even yet."

Natural History.

NOTES ON THE COTTON-TEAL OF INDIA.

MR. F. FINN, B. A., F. Z. S. of the Asiatic Society of Bengal, India, has very recently sent me a copy of his paper, published in the proceedings of that Society, on the gait of the cotton-teal duck of that country, and its subject matter is so interesting that I felt a few comments upon it would not altogether be out of place in the columns of FOREST AND STREAM.

Naturalists for a long time past have regarded the cotton-teal or goose-teal (*Nettopus coromandelianus*) as a very remarkable bird, as it was generally believed upon the very best of authority that it could not stand or walk like other wild ducks. Now a wild duck that could neither stand nor walk was certainly a novelty among wildfowl in any avifauna It seems that as early as 1844 the eminent naturalist G. R. Gray, said in his "Genera of Birds," that this species was "totally incapable of standing or walking upon the ground, but invariably flutters along it in a strange scuffling manner, like a wounded bird."

Mr. Gould, however, in his famous "Birds of Australia," figured this fowl as standing up, and for this he was criticised by Blyth, in his catalogue of the birds in the Museum of the Asiatic Society (1849). Dr. Jerdon followed suit with a contrary opinion, and stated in his "Birds of India" that the cotton teal always squat after walking a short distance. Blyth also attacked Jerdon, saying he was in error, and that the teals in question could only squat, creep and shuffle when on the ground. Even as late as 1881 the distinguished Mr. Hume, in his "Game Birds and Wildfowl of India," said the birds could not walk at all, and when they scrambled about on land their legs were never visible below their bodies.

In other words, it has long been believed among naturalists that they had a teal duck in India possessing little or no powers of terrestrial locomotion, and in this important feature differed from all other known ducks in the world. Now, Mr. Finn in his observations has completely upset this theory for us, and that in the most conclusive manner possible. He has kept many cotton-teal ducks in confinement for the very purpose of studying their gait, and has, moreover, exhibited before the Asiatic Society living specimens of this bird taken in the wild state. A fine male bird walked for several yards as soon as it was let out of its cage. Mr. Finn attributes the error of Blyth and others to the fact that their observations were made upon market-purchased specimens, and these from cruel treatment were so frightened and crippled that they could not walk. They have never been noticed by any naturalist to stand upon one leg as other teals do; but they are fine swimmers and divers, and moreover, have a remarkable power of climbing up wire netting. When they normally leave the water in nature they often perch upon trees and buildings.

It may be said in conclusion, however, that nevertheless, this teal does exhibit a certain weakness in its legs when on land, and this limitation of power is due to inheritance, as doubtless for a long time the circumstances of its life have been of such a nature as not to demand any exercise of it.

DR. R. W. SHUFELDT.

WASHINGTON, D. C., July 1.

THE RED-HEADED DUCK.*

(*Fuligula ferina*, STEPHENS.)

AT New Orleans, this bird is commonly known by the name of "Dos Gris." It arrives there in great flocks, about November 1, and departs late in April, or in the beginning of May. On the lakes Borgne, St. John, and Ponchartrain, it is very abundant, keeping in large flocks, separate from the other species. In that part of the country its food consists of small fishes, in pursuit of which it is seen constantly diving. It is caught in different sorts of nets, and easily kept in confinement, feeding greedily on Indian corn, whether entire or crushed by the millstone. In 1816, many thousands of these ducks, as well as others of different species, were caught in nets by a Frenchman, who usually sent them alive to market in cages from the narrows of the Lakes, especially from those called "La pointe aux herbes," and the "Isle aux pins." So many of them, however, were procured by this man, that he after a while gave up sending them alive, on account of the great difficulty he encountered in procuring a sufficient number of cages for their accommodation.

Although Dr. Richardson informs us that this species breeds "in all parts of the fur-countries, from the fiftieth parallel to their most northern limits," I saw none of these birds during the spring and summer months which I spent on the coast of Labrador. I was equally unsuccessful in my search for it in Newfoundland. Indeed, I have never observed it eastward of the State of Massachusetts, although from thence it is more and more abundant the farther south you proceed, until you reach the tributaries of the Mississippi. Beyond the mouths of that river these birds are rarely seen; and when I was there in April, 1837, none were observed by my party or myself after we had left the southwest Pass on our way westward. In the Texas none were even heard of. From these circumstances I have inferred that, along with several other species, the red-headed duck reaches the Middle and Southern States by passing overland or following our great streams, such as the Ohio, Missouri, and Mississippi, westward, and the North River and others, eastward, both in its vernal and autumnal migrations. This I am the more inclined to believe, on account of the great numbers which on such occasions I have seen in ponds in the States of Illinois, Indiana, Ohio, and Kentucky.

I found it abundant in the marshes near St. Augustine, in East Florida, on November 8, 1831, when the young males of that year had the breast and lower neck mottled with brown and blackish feathers; and yet whilst at General Hernandez's in that district, on December 20, they were in almost perfect plumage. At this latter period they were shy, and kept in company with mallards, American widgeons, scaup ducks, and spoonbills, generally in shallow freshwater ponds, at some distance from the seashore. In South Carolina these ducks are now much more abundant than they were twenty years ago, especially on the Santee River, where my friend Dr. Samuel Wilson has shot many of them, as well as of the canvas-back species.

The red-headed duck may be said to be equally fond of salt and fresh water, and is found in abundance, during its stay with us, on the Chesapeake Bay, especially in the month of March, when it associates with the canvas-back and other ducks, and is offered for sale in the Baltimore markets in great numbers. There I have seen them sold at 75 cents the pair, which was lower by 25 cents than their price at New Orleans in April, 1837.

Although they dive much and to a great depth, while in our bays and estuaries, yet when in the shallow ponds of the interior, they are seen dabbling in the mud along the shores, much in the manner of the mallard; and on occasionally shooting them there, I have found their stomachs crammed with young tadpoles and small water-lizards, as well as blades of the grasses growing around the banks. Nay, on several occasions I have found pretty large acorns and beech-nuts in their throats, as well as snails, entire or broken, and fragments of the shells of various small unios, together with much gravel.

In confinement they do not exhibit that degree of awkwardness attributed to them when on land. It is true that the habitual shortening of the neck detracts from their beauty, so that in this state they cannot be said to present a graceful appearance; yet their aspect has always been pleasing to my sight. Their notes are rough and coarse, and bear less resemblance to the cries of those species which are peculiar to fresh water than those of any other of their tribe. Their flight is performed in a hurried manner, and they start from the water pell-mell; yet they can continue very long on wing, and the motion of their pinions, especially at night, produces a clear whistling sound.

The fine pair from which I made the two figures in the plate were given me by my friend Daniel Webster, Esq., of Boston, Mass., whose talents and accomplishments are too well known to require any eulogium from me.

The flesh of this bird is generally esteemed, insomuch that many persons know no difference between it and that of the canvas-back duck, for which it is not unfrequently sold; but I look upon it as far inferior to that of many other ducks. Individuals of both sexes vary much in size. On comparing American with European skins, I am unable to perceive any difference of color or proportions indicative of specific distinction.

* From Audubon's "Ornithological Biography," being the text to accompany the plates.

Ravages by Collectors.

THE immense destruction of birds for millinery purposes, if continued, will have the effect of depleting the North American continent of insectivorous birds in a few years, and the consequent increase of noxious insects detrimental to fruit growing and agriculture. The question is, what is the remedy, and how to apply it? What, with lazy, loafing bird-catchers, the schoolboys and their toy guns, and many of the so-called scientific collectors, the constantly decreasing numbers of our beautiful feathered songsters is a matter of public importance. Copies of the insectivorous bird act should be displayed in every class and schoolroom, and teachers instructed to impress upon their pupils the reasons why bird nests should not be robbed or molested. The destruction caused by collectors can be illustrated by the conduct of a well-known newspaper man of Buffalo, who, with his friends on a Sunday recently, while on an egg-collecting tour, was arrested by the Ontario game warden and his collection of eggs confiscated. In the collection there were fifty-four eggs of one species. Many of these eggs were in a state of incubation, and worthless for scientific purposes. Ladies have it in their power to a great extent to make the traffic in bird skins unprofitable, by refusing to wear or purchase millinery having birds or feathers for trimming.

RANGER.

Camp-Fire Flickerings.

"That reminds me."

HOW I KILLED MY FIRST BUFFALO.

AWAY back in the year 1872, when I was a sixteen-year-old boy living in northeastern Kansas, and at a time when there were thousands of buffalo roaming over the plains of the western part of the State, two bachelor, homesteader friends invited me to accompany them buffalo hunting. The invitation was gladly accepted, and we started in mid-September. We had a good strong wagon, well provisioned, also all the necessaries of a complete camping outfit. Our team, however, was sure but very slow, for our wagon was drawn by a large yoke of oxen, the property of one of the settlers with us. We led two small horses, to be used in the chase, under the saddle, when we should come to the buffalo.

How well I remember the days we jogged slowly along over the undulating Kansas prairies. After we had traveled 150 miles we came to the short, curly buffalo grass, which barely covered the ground. This grass was burned to a reddish-brown by the sun shining from a sky with never a cloud. And that sky, which seemed of hammered brass, produced a sun which would melt the heart of any but enthusiastic hunters. And so we journeyed on, making from eighteen to twenty-five miles a day, camping at night beside one of the numerous timberless creeks that flow into the Republican River.

We met several hunters coming back, all loaded with buffalo meat and hides. This kept our courage up, and increased our anxiety to reach the range among the buffalo. We saw plenty of small game; also numerous bands of antelope, to which we paid little attention. We were after the great American bison, and bison we would have.

How slow Pete and Jerry—our oxen—wagged along, I need hardly tell you. It seemed as though the nearer we got to the buffalo the slower they became. Every known means of increasing their speed was tried, without avail.

We had traveled two days without road or trail, and thought it about time to see something of the game we were after. We were approaching the headwaters of the Sappa Creek. For nearly a half a day we had seen hoof prints and the fresh droppings of buffalo. After making a three-mile turn and getting back to the creek we met a hunter who told us that the buffalo were all around us, and that it was very strange we had seen none in the last ten miles we had traveled. We pitched our camp at dark in a sheltered bend of the creek, turned our oxen loose to graze, picketed the horses near, and, tired hunters that we were, cooked and ate our supper and lay down to dream of the next day's hunt, which should result in tons of meat and piles of hides. Before we slept it was decided that each one should strike out with his rifle as early as he pleased, to try to get some of the strays from the main herd, now only a few miles away.

During the night we were awakened by the thunder of thousands of hoofs upon the hard ground, as the buffalo were startled by wolves or hunters. With anxiety we waited for the first gray streak of coming dawn; and at last as I saw the darkness begin to roll back, I arose, took my rifle and loaded with enough cartridges to ammunition a Spanish regiment, started due south from camp, following up the bed of a wide ravine, in which the blue stem grass was thick and high. I argued that the buffalo were looking for good feed, and there I should find them. After advancing slowly up the ravine 300 or 400yds., I saw not over 75yds. away, in the uncertain light before day, the dusky forms of two of the giant game I was after. I crouched down, advanced a few feet to a slight hummock, across which I rested my rifle, waited until the nearest buffalo turned his broadside to me, then took deliberate aim behind the foreshoulder and fired. He fell to his knees, his nose struck the ground, then he rolled on his side. His mate ran away, snorting and blowing.

I had frequently been cautioned by old hunters never to approach a wounded buffalo, so while I waited what a crowd of thoughts came to me; the joy and pride with which I would return to camp and report to my comrades the killing of this big fellow; this I thought of in less time than it takes to tell it.

And so I advanced toward my prize, now quite still in death. As I came near I observed a white spot on the upper side. As I walked around to the head I saw a white stripe in the face, and there was a recognition. It came to me as a bolt from a clear sky—I saw and felt it all—I had shot and killed Jerry, our nigh ox.

This was my first buffalo but not the last.

W. J. RAYNOR.

COLORADO.

Game Bag and Gun.

THE CRUISE OF THE SINDA.

LAST year the writer told a brief tale, under the caption of "Ducks on the Gulf Coast," of his little adventures on a winter hunt in the South, and intimated that he would like a companion for a similar trip, to be made the winter of 96-97. The result was indeed gratifying, for replies came addressed in care of FOREST AND STREAM from nearly every State and the maritime provinces. Evidently all were from practical gunners, but some had queer notions. One New Brunswick man—no doubt a good hunter in his own country—wanted to bring his birch, "the finest hunting craft in the world." I think I see a birch in a norther! One man wanted me to pay his expenses as well as my own, and some considered it as a mercantile venture only. One man possessed a great number of the best hollow decoys, and disdained all other; him I imagined a Crœsus. Some were blessed with wives, and wives must be reckoned with when one proposes to make a cruise, with the probability of being out of reach of post-office for weeks at a time. We poor bachelors have one privilege—there is less on our conscience if we see fit to go off and drown ourselves. I answered most of the letters (no small task), and many of these replies called forth a second series of letters, and finally I had the list sifted down to three that seemed most eligible. This choosing a chum for a voyage "sightless and unseen," as the boys say when they swap jack-knives, is about as risky a thing as, say marriage, for instance. However, I had great confidence in my ability to judge character by a letter, and to make a long story short, I finally arranged with a gentleman in Hastings, Neb., to meet me in the South after I had prospected around a little and seen how the ground lay.

Accordingly, about Thanksgiving time I collected all my old clothes, my blankets and my two guns, a Fox and a Winchester, slide action, and took ship for the Gulf port where I had had such an enjoyable winter before. Almost the first sight that met my eyes upon landing was my former chum, the market-hunter, riding through town perched on one of the two-wheeled carts of the country, the box of which was literally heaping full of fat sprigs, 100 pairs of them nearly, that he and his brother had killed in about a day at a water hole. This looked as though there was still game on the old stamping grounds, and I decided to fit out a boat, and at any rate get a lunch while the others were having a meal. The first thing was a boat to live in. There were very few boats idle just then, as the oystering and hunting season was at its height; either the owners of the few boats to be had doubted my seamanship and the safety of their crafts, or they imagined I was fitting out a filibustering expedition to Cuba. Any way, not a boat could I hire, until finally I met a native whom I knew slightly, who said his old uncle had a boat that could be had if the old man were properly approached. He said that negotiations should properly be opened by means of a bottle, and that his uncle lived across the bay, a good day's sail from the city. We found a market boat going that way, and took passage, as this seemed the only chance to get hold of a boat.

The first sight of the sloop Sinda was not encouraging, as she was a flat-bottomed boat, with a square "knuckle;" her sails were old, rigging poor, and anchor chain nearly rusted in two. Also, having a worm eaten plank or two in her bottom, she leaked like a sieve—a pleasant prospect, truly! I foresaw lots of work, but didn't see my way clear to do better just then; so decided to take the old craft, rerig her, and put her into seaworthy condition, charging my expenditure against her rental. A good skiff we got with her, after some persuasion, and back we started with a fair wind, hoisting the skiff on deck. Our wind lasted about half way across the bay and then died out, and it was evident that we were in for a night of it out there in a boat absolutely bare of bedding, food or fuel. I had a light overcoat and slept half the night under that, when I was awakened by the poor native, who said he was freezing, and proposed tearing up the boat's ceiling to make a fire. I gave him the coat, and for the balance of the night I played freeze-out, catching a wretched cold. At daylight we had wind again and went on to town.

This native was not a model companion, but he could sail a boat and be of some use, so I kept him around me quite a while and endured his shortcomings, giving him a gun, ammunition and grub for what I could get out of him. He would sit and steer all day, constantly smoking cigarettes, and never get tired of it, but other work he would not do if he could help it; he was over-fond of whisky, and the truth was not in him. We lay several days at the dock, where, with the assistance of an old deep-water sailor, we renewed and set up our rigging, patched the sails, and made all as snug as we could. I got a spare anchor and a new cable and moved the bulkhead between the cabin and hold some 2ft. forward, as the cabin was so short a tall man couldn't straighten out in the bunks. We set up a little stove and wired it in place, and had a bonnet made for the funnel, so that we could cook while under way or when the wind was strong.

Before I left Boston I had ordered some six dozen decoys, a tent, grass suit some provisions and other things, and they now made their appearance, and I got to work nailing lead strips on the decoys for ballast and fitting them out with anchors and strings. I wished to make one hunt and get everything running smoothly before I wrote my correspondent to join me.

The other hunters eyed my brand new outfit with envy—all but the boat, her they called a "box"—and were not at all pleased to see a Yankee getting ready to share their hunting grounds, but that cut no ice.

My cough, the result of my night's exposure, still hung on to me and was very annoying, but I had faith in my ability to shake it off, once I got to burning powder, so when all things seemed ready we cast off our lines and bore away up the bay. Seven miles from town four long bridges stretch across an arm of the bay, and the four draws are swung open for every craft, large or small, that wishes to pass. We felt quite grand as we swept through and answered the draw-tender's hail. My companion had never been in this portion of the bay, but I could recollect the channel well enough from my visits of two years before to navigate it fairly well, and as we sailed along we began to see numerous bunches of sprigs and bald-pates (widgeon) in the air, but no great "body of game," as the hunters say. I was pretty sick, but still, the sight of the game did me good, and I went aloft on the mast-hoops to find some lakes that lay near the bay shore, where I expected to find the game resorting. Just after nightfall we came abreast of the lakes and anchored. In the morning we went ashore with half a dozen canvas decoys apiece, and as it was too warm for high rubber boots, I just tied my trousers at the bottom and wallowed through mud and water, in spite of my cough, as I knew the salt water wouldn't hurt me, and so it proved, for a few days of this cured the cough entirely.

We put out our decoys at the mouth of a little bayou and squatted in the rushes, putting other tufts of rushes around to form a blind. The ducks were there all right, but were evidently educated, for they didn't decoy well; the wind was right, but not heavy enough, and we only got about a dozen birds apiece, green-winged teal and sprigs. Then the wind died out altogether and nothing would decoy. Still, I was happy. It was enough to have left the frozen North and to bask in this sunny land, my own boss, with nothing more urgent to do than to keep enough stuff cooked up to eat and to see that we lay in safe anchoring ground for the night. I only wished that others whom I had left toiling away at home might join me and help me loaf.

It wasn't all beer and skittles, though, for we found our boat leaked so fast that we had to pump pretty often to keep afloat, and it was evident that we had got to pull her out and repair her bottom. So we cut short our hunt and returned to town. Here I found the man from Nebraska in the hotel rotunda looking as if he had just stepped out of a bandbox. He probably thought I was a tramp when I spoke to him. However, I soon had him looking nearly as disreputable as myself, and with a beautiful coat of tan on.

As there were only two bunks in the cabin, the newcomer, whom I dubbed Bert, set to work building one in the hold, a place where there wasn't much headroom, and which must have been chilly certain nights I can remember, but Bert always insisted that it was the finest place aboard to sleep. We got his things aboard, including a lot more decoys, and set sail once more. It was evident that our first duty was to pull out the boat and repair her bottom. This we did on some ship ways across the bay, and we found the removal of the worm-eaten planks anything but easy or agreeable. These ship worms (*Teredo navalis*) are most vile-smelling things, and to chop into their dwellings was a nasty job. We found holes, hundreds of them, some ¼in. in diameter, perfectly round, and entirely honey-combing the affected planks. With the help of a shipwright, we replaced these with two 1¼in.×12 yellow pine planks, and caulked all the seams carefully. When we slid her off the ways we were delighted to find that she was tight at last.

This time we had a fine, strong N.E. breeze, a fair wind for certain islands where I used to hunt, and thither we turned the Sinda's bowsprit and let her plow with a reef in. On the way we knocked down a few bluebills which rose before us; but it was such a job to pick them up after we killed them that we always said we would shoot no more—until the next flock appeared. A long-handled dip-net is the only way to do this right, if a man wanted bluebills. They are not highly prized in those waters, but are apt to be extremely poor.

It was thirty miles, nearly, to the islands, but with that wind we made it in a short half day, and as we drew near I commenced getting dinner. Just as we anchored I had the meal ready, but we had such a sight before us we could hardly eat. Thousands of ducks and hundreds of geese were in sight, resting on the water when we approached; but as we drew near the ducks moved further off and settled again, while the knowing old Canadas simply stretched up their necks a little, and sat there eyeing us some 250yds. away. It did look encouraging, and we were soon passing decoys up from the hold and into the skiff. We still had but one skiff, and all three managed to go ashore in it and rig out. Bert and the native rigged out together, I by myself. The wind still kept up, and we had fair shooting, but all of us burned a good many shells needlessly. For my part, I seemed to have lost the knack of killing ducks. I had made a record of fifty birds with sixty-eight shells on these islands two winters before, but now I managed to use three and four shells to the bird, and never better than two, probably from shooting at birds too far off. One day, marveling much at the amount of powder I was wasting, I stepped off the distance at which a bird fell, and found I was shooting at 70 and 75yds. right along, as that was the nearest the wary old sprigs would come. We didn't decrease the visible supply much that afternoon, but as the wind shifted to the south we knew a big tide would come in, and conditions would be all the better on the morrow. A high tide drives the birds off their feeding grounds elsewhere, and they seek these islands. These were all "paddle ducks" which do not dive, but must seek their food from the surface. In the night we had a sharp squall, but swung to our anchors safely. We found the cabin roof leaked in a few places, which was not pleasant, but we put cups under the leaks. We had congratulated ourselves that we had this place all to ourselves, but in the morning another hunting sloop lay near us with her headgear missing, having carried it away in the blow. The newcomers waited until we got rigged out in the morning, and then chose position intended to spoil our shooting. Two of them did spoil mine, for they built a blind about 150yds. from mine on a point that nearly all the ducks were passing, but I had gathered in twenty-eight birds before they disturbed me. It turned out that they had been hunting there all winter, and naturally regarded us as intruders.

We got sixty pairs of fine, heavy ducks here in about a day and a half, and then the weather got too calm for good shooting and we returned to town with the ducks in our ice box. The next day being New Year's Day, and ours being the only hunting boat in town, our game went like hot cakes.

This proved to be the best hunt we made, though nothing very big, for, though we had lots of fun sailing, and made many fair little hunts during the succeeding two months, we never struck the weather conditions so favorable again. The next trip we took along some lumber and built another skiff on a still day after we reached the hunting grounds. The other boys built her while I was ashore, and they got her somewhat lop-sided, still you might call it a skiff, and you could take decoys ashore in it, but a man had to have his hair parted in the middle not to capsize her if there was any sea on.

One of the great attractions of a sojourn in these waters is the abundance of excellent oysters. We always took along plenty of lemons; and those oysters, right out of their native mud, eaten with a squeeze of lemon juice, were certainly great. We could buy them at $1 per barrel from the oystermen, but the ones we picked up ourselves were far better. My friend from Nebraska took kindly to the shell fish. Oysters grow in tin cans up there, I understand, and are not so good as these. I found I had sized Bert up all right by his letters, for he was a model chum, and no matter how rocky things looked, there was never a kick from him. One day when a gale was blowing and the rain coming in level sheets and we had just escaped dragging ashore by the merest chance, and everything looked dismal, I tried to make him say he was sorry he had come, but he said no, he liked it!

We finally got very tired of our native and were not sorry to part company with him, and got in his place a vastly superior man, thoroughly trustworthy and an excellent guide to the best ducking grounds Him we paid wages, and it was a good investment, for he was well worth them. If we ever repeat the trip another winter, as we hope to, we shall certainly endeavor to get hold of Will again.

Now I must tell how I was punished for theft. One hunter told me he used a piece of railroad iron for a skiff anchor, and that it worked first rate, so I must needs try it, and accordingly "swiped" a nice heavy coupling link off a car near the dock, and bent it on to my boat painter It worked so well that I came to put great confidence in it, and so came to grief at last. It happened the coldest day we had during the winter. A northeast gale was blowing with rain which froze as it fell, and since we lay under the land and the wind was off shore, it was useless to put out our block decoys to leeward of the land, and so we went ashore and left the decoys in the skiff, anchoring her and starting for the marshes with a few canvas decoys. I rigged out in a little pool where the ducks seemed to come for the shelter of the weeds, and Bert said he would tramp around and jump them up, as his boots leaked, and sitting still in freezing weather was uncomfortable Only six birds came to me, while Bert wandered far and wide in pursuit of jacksnipe, whereof he captured five or six. The game seemed not worth the light, and we thought of our warm cabin and grub supply and started for it. The boat lay far out in the channel where she belonged, but the skiff was gone. We could hardly believe our eyes but she was certainly missing and somebody was in for a job of wading. I started for the boat, hoping that I could make it without getting over my boots, but soon found that I hadn't figured on the tide, which had risen several feet, and presently I felt a chill stream enter my boots, and knew I was in for it. Bert started to wade out with me, but I told him there was no need of more than one getting wet, and that I would get the other boat, which was on deck, and come after him. As I proceeded the water got deeper, until I was wading up to my armpits, and when I reached the boat, with my bunch of ice-coated ducks over one shoulder and my gun over the other, and overcoat saturated with water, it was no easy job to climb aboard. However, I threw my burden on deck and managed to climb up the fore chain and launch the other skiff and fetch my chum aboard, although a slender pole was my only means of navigating.

The oars and thirty-two decoys had floated off in the skiff, and we never saw them again. The high wind and tide had enabled her to gradually work out into deep water, and finally float off. It was a chilly bath, but after putting on dry clothes I felt none the worse for it. Next morning we had a glass ship, apparently, for there was 2in. of ice on everything, and we had to break the running rigging and sails loose with clubs before we could make sail. Our birds, which hung from the boom, were also thickly encased, and we hoped to be able to send them North in that shape, but the ice fell away from them after they had been in the ice-box a while.

If I go South again I shall try to strike it about the first week of November, as then the shooting is said to be much better. Although birds were not so plenty this time as they were two years before, I had lots more fun. There is a great difference between having some of your own kind of people to share your fortunes—good or ill—and chumming with a lot of sordid natives, as I did the first time.

We found some nice quail shooting on shore sometimes, but, having no dog, made but sorry work of it generally. Yellowlegs, willets, beetleheads and curlews winter there, but few people shoot them.

IPSARRAKA.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

ADIRONDACK JUNE DEER SLAUGHTER.

NEW YORK, June 1.—*Editor Forest and Stream:* In a letter just received by me from the president of a Western railroad—an excellent sportsman—occur the two following paragraphs, which will, I think, interest the readers of FOREST AND STREAM.

"I spent three weeks on Saranac Lake, St. Regis (Paul Smiths), Big and Little Tupper Lake, etc., and caught less fish all told than I can catch in Michigan in a day. One and one-fourth pounds was the largest trout, and that on a trolling line with a gob of worms."

"I was surprised at the little attention paid the game law. Deer were being killed right and left and no signs of any game warden. People were surprised that I did not have a gun and wondered I took no interest in shooting deer in June. It is a shame! Guides and hotel men are all at it, night and day. How any one can kill does in June is a mystery to me."

It is tolerably well known that the administration of the law in Franklin and Hamilton counties is weak and uncertain. On two different trips in July through Hamilton county, I have had ocular evidence of deer killing. It is stated to be a fact that there is not a single lawyer in Hamilton county. It is an illustrative fact that within a few years a school district in this county issued bonds for building a new schoolhouse and sold them in New York. The interest was not paid, and it was discovered that no school-house was ever built but that the money was used for building a summer hotel. Nevertheless, although it is plain that civilization is backward in Franklin and Hamilton counties, it would not seem to an ordinary sportsman any excuse whatever for a failure by the game protectors appointed and paid by the Fish, Game and Forestry Commission, to enforce the game code, even in such a community. It is well known that Justices of the Peace will not, in those counties, ordinarily convict, and that a jury cannot be found to convict. Nevertheless, the code provides for a Supreme Court trial of these violations of the game laws, and these violations are and long have been notorious.

My object in writing this note to you is to say that it seems to me to be the duty of every good sportsman who visits that or similar regions, to report directly to the Fish and Game Commission such violations as he knows of, or such information as might lead to a conviction, and to follow up his report by letters of inquiry. The game protectors can be forced to do their duity if just complaints are made frequently and repeatedly. W. H. B.

DETROIT, Mich., June 28.—*Editor Forest and Stream:* I have just returned from a three weeks' fishing trip in the Adirondacks. I did not ge much fishing, and black flies were very plentiful. I did not expect a great deal in the way of fly-fishing, and so was not disappointed.

I dld expect, however, to see some attention paid to the game law, but so far as I could judge by results, you have no close season for deer. I heard of assistant game wardens, but saw none. I was told there were ten of these gentlemen in Saranac Lake village, but not one of them seemed to take interest enough in saving deer to get out of the village. I presume there were more deer killed in the dark of the moon in June by jacking than will be killed in an equal number of days in the open season. FONTINALIS.

AN ARKANSAS GAME COUNTRY.

FIVE miles south of Mena, Polk county, Ark., the midway division town of the K. C. P. & G. R. R., and sixty miles south of Fort Smith, bounding the Dallas basin, on the south, rise the Potter Mountains, 800ft. above the level of the basin, thence, to the south, rise in succession mountains by the name of Blowed Out, Church, Mill Creek, Bee, Dalton and Boar's Tusk, which are not located on any of the maps of the State, except that of the Government Survey, where they are all included under the general term of the Ouachita Mountains.

Except for a few homesteaders' openings along the valley of the Two-Mile Creek, one mile south of the Potter Mountains, there is an unbroken wilderness of virgin forest, covering a tract thirty-five miles in length south of Potter Mountains, by eight miles in width. The surface of this is broken by mountain, ridge and valleys, and it is all a home for bear, deer, wolves, quail, bob-cats, wild turkeys and such small deer as cotton-tail rabbits, gray and fox squirrels. Owing to a drouth, from May to November of 1896, there was no mast in the forest, and reports were given out that the game had all left that region, hence all the hunting parties were directed to the lands of the Choctaw Nation, fifteen miles west of Mena, and the native hunters alone hunted over this territory. During the open season game was so abundant in the Mena market that the choice venison cuts were retailed from butcher shops at 3lbs. for a quarter, quail at 75 cents per dozen and large wild turkeys at 50 cents each.

Our mining camp was located early in January, and thence for two weeks our party was busy locating and surveying mining claims, and not a day passed but we would meet one or more deer and one or two flocks of wild turkeys, and several times on our way to work we met deer on the trail, one day three, and on three other days four, and seven ne day.

Having plenty of rainfall this year, there has been an enormous crop of blackberries and blue or whortleberries, and from some place deer, bear and wild turkeys have come to this region, until it is now fairly alive with them, and as the trees are loaded with mast, the coming winter promises to be one of the best for game that Polk county has ever known.

I inclose you the beard of a wild, bronze gobbler, the largest turkey I ever saw, which was estimated (having no scales) to weigh from 35 to 40lbs., and we saw several close mates for him, what are still gobbling on the mountains in the region above described. WINCHESTER.

The Ohio Pheasantry.

A STATE hatchery for Mongolian pheasants has been established at Van Wert, under the charge of E. H. Shorb, one of the State Fish and Game Commissioners. This farm consists of seventeen acres and has been very carefully managed by Mr. Shorb. About 3,000 young chicks have been hatched there this year, and there are also about 600 old birds on hand at the present time. A number were sent to different parts of the State last year, and all reports indicate that they are doing well. Some were liberated in the vicinity of Van Wert, and there are now a number of coveys there, numbering from twelve to fourteen each. The law protects these birds till November, 1900, and it is hoped that by that time they will become well established.

J. H. Sturgeon was at Van Wert this week, and brought home to Bucyrus some of the eggs, which were given to some of our bird fanciers, who will endeavor to hatch them and raise the young birds. In the event of making a success of this, the birds will be liberated at some favorable localities in the fall, and given a chance for themselves. An earnest effort will also be made to secure for them the protection which the law affords, and anyone found molesting them will be severely dealt with.—*Crawford County News.*

Henry Braithwaite.

I HAD the pleasure, the other day, of meeting at Stanley, the famous guide and trapper, Henry Braithwaite, who had just emerged from his trapping grounds after an absence of five months from civilization. He had about $500 worth of furs, including seven bearskins. He built a bark canoe in order to bring out his fur, and had a thrilling experience coming down the north branch of the Clearwater. As there was not sufficient water to float the canoe in the rapids, he closed the dam for a day and a half and then pulled out all the stops and "let her go" full diapason, with the result that the canoe was whirled along with lightning speed for several miles, and he came within an ace of being carried over a roller dam 12ft. in height. Henry was in the best of health and spirits, and exhibited over seventy-five applications which he had received to go moose-hunting next fall. Of course only a few of the many could be accommodated.

Henry stated that he had discovered a fact which he had never heard of before, namely, that some moose will respond to the "call" at any season of the year. We had a good many things to talk about, and I forgot to ask him for particulars, but will take an early opportunity of submitting the evidence to FOREST AND STREAM.

On July 7, Henry is to take charge of a fishing expedition down the sou'west Miramichi, the party consisting of Dr. Heber Bishop, Mr. and Mrs. E. D. Wiggen and Charles Williams, of Boston, together with the undersigned and his much better-half. FRANK H. RISTEEN.

FREDERICTON, June 28, 1897.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

MEN I HAVE FISHED WITH.

XLVIII.—Charles F. Murphy.

MR. MURPHY was slightly referred to in the last article as the maker of the first split-bamboo rod. Like the late William Mitchell he was one of the old-time rod makers who did all the work by hand. They sawed the ash, hickory or lancewood into strips, hung it by one end to prevent warping while seasoning, and then with plane, rasp and sandpaper would turn out the best rods that could be had in those years, which lie almost half a century behind us. These men had great reputations for excellent rods and their customers extolled them as masters of cunning work. These were the days when a split-bamboo rod could not be bought for a dollar and then prove to be far inferior to an alder pole cut on the bank.

I remember first meeting Murphy in 1865, in Conroy's on Fulton street, then a place where anglers most did congregate, and then for the first time hearing that there was a better material for rods than ash and lancewood. I listened with wonder to the talk of angles, tapers, glueing and other details, until I thought that the building up of a split-bamboo rod required more careful attention than the grinding of a lens for a great telescope, and I looked with admiration on a man who could make one with a good, even action. A wooden rod is worked down from the outside, tested, sandpapered here and there to get the proper curve under a strain, and that ends it. But the split-bamboo, which our trans-Atlantic friends call a "built cane rod," must be so worked from the inside of each of its strips that it will be perfect after they are joined, for there can be no taking down of the outside enamel, where the strength and resiliency lie. In factories the tips and second joints can be culled over until a perfect rod is found, but as to a single hand-made rod I can't understand how one can be made perfect unless with elaborate tests of each strip in each joint, which seems nearly impossible.

One September day, while I was snipe-shooting on the Hackensack meadows with George Gelson, who was an old man then, we came across Murphy with a good bag, for birds were plenty in those days, but he was in distress, having stepped into a hole, and in falling he caught the spring of his shot pouch and lost all his shot. From my knowledge of him afterward he seemed to be unfortunate in usually meeting with an accident of some kind, but we helped him a little from our pouches and he turned toward home, getting an occasional shot as long as we could see him. Before he left us he asked me to fish for striped bass with him next day at Bergen Point, above Staten Island—a thing I had long wanted to do. "Never mind bringing bait or tackle, I'll have plenty."

"You'll have a good time with Murphy," said Gelson, "he is one of the few men that I would divide shot with when out for a day, but Murphy would do the same for a friend. You'll find him good company and well informed not only about field sports, but other sports. He knows all the prominent volunteer firemen in New York, and used to run with the machine himself until the new system came in. He's a good fisherman and a fair shot, a little given to brag of his exploits and to think that no man can equal them. If this kind of talk does not weary you, a day with him will be well spent."

This was a fair sketch of Murphy, as I afterward learned, and one always likes to know something of the man who is going to be his companion for a day or more. This talk was held at our nooning, which was a long one, for our dogs were very tired from working in the long, coarse grass, and we were in the same condition; but shooting later in the day was not as good as in the morning, and we had a little shot left when we reached the ferry, so that our playing the Good Samaritan had not put us to any inconvenience.

In the morning we met to fish the mouth of Newark Bay and the Kills, where they enter New York Bay. It was a new kind of fishing to me, and I looked over the baits and tackle with much interest. He had the salt-water sand worms and white worms, clams and shedder crab, short rods, reels, and sinkers to suit the strength of the tide at different times. The tide was right, he had looked out for that, and was at half ebb. We anchored the boat at both ends across the channel, and fished. The tide was strong, and we used sinkers of 3oz at first, with about 2ft. of line and a 2-0 sprout hook below it. We started in with white worms, and I took a sea bass of about a pound weight, but as I was unaccustomed to reeling up a heavy sinker the fish seemed to be a monster until brought to boat. Murphy took several white perch, and some came to my hook, and so we fished for over an hour, when he said: "The striped bass don't seem to be running on this tide, let's try shedders and see if weakfish will take hold." And we did, with great success.

Within a month an angler living in Wisconsin wrote me, asking where he could get shedder crab, as he had heard they were a good bait, and I will leave Murphy in the boat for a while to say: The crab of salt water is very unlike the crawfish of fresh water, although where Germans have settled the latter are called "crabs," German krebs. Both are edible, and, like all crustaceans, must shed their shells in order to grow. Then they are soft, but harden in a few days, and in this state the salt-water crabs bring a high price as a table delicacy, being fried and eaten paper shell and all except the "sand bag," or stomach, and the gills. But a few days before the shell is cast the animal shrinks, and there is a space between it and the shell which can be detected by tapping it; this is a "shedder," and the outer shell can be peeled off, leaving a very tempting bait for most fishes. No doubt the crawfish would be as tempting to fresh-water fishes if it could be found in that state. After this bit of crabology we will rejoin Murphy in the boat off Bergen Point.

Said he: "We usually get striped bass here on the last of the ebb tide, but they don't seem to come our way this morning. The weakfish are biting well, but I don't care for them."

"They're gamy fighters," I remarked, as I boated a yellow fin of about 6lbs. "I don't know anything about big striped bass, although in boyhood fishing we used to get them about Albany up to 1lb; but this weakfish fights well and I'm enjoying taking them."

"Yes," said he, "that is their redeeming quality. They are a fair fish for the table when just out of the water, but after being caught six hours are only fit to feed to the hogs. Tons of them are sold in the markets to people who don't know one fish from another, and they are good enough for them. The tide is slackening and we will change to lighter sinkers, sand worms and clams, and take what comes until after low-water slack and the tide sets up the Bay, when we may strike better luck." As I was only a student, I accepted the suggestion of my teacher without question, and for an hour we took perch, porgies and flounders as fast as we could attend to their surgical needs in the way of extracting hooks from lips, cheeks, jawbones and stomachs. Then came the time when the fishermen felt the need of the bait that Murphy had in the basket, and it was both good and generous. "While we eat," said my companion, "let's take in our lines and not leave them out for any fool fish to hook himself while we're not fishing."

That remark has been embalmed in my memory like a fly in amber. It comes up whenever I read of "fish hogs" and of those who would not like to be placed in that class, but who never cease killing as long as there is anything to kill. Please remember that this was thirty years ago, or more, and there was little or no sentiment toward the preservation of game or the restriction of the number of fish a man might kill, especially in salt water, where the supply was supposed to be inexhaustible. Yet, Charley Murphy was one of that class which composed the old Volunteer Fire Department that in those days "would rather fight than eat." He was a small, wiry man, and I have already related his pugilistic exploit in "cleaning up" a fistic terror.

As low-water slack passed and the faint flood appeared we changed our positions to the upper side, and before the half-flood had passed we had six striped bass which aggregated 35lbs., the largest weighing 9lbs., besides all the other fish, which Murphy took along to give away, and I voted the striped bass to be the gamiest salt water fish which had ever tackled my tackle. Murphy wanted to divide the fish, and I had hard work to make him understand that I could not use them in New York city.

At this time I think Murphy must have been about forty-five years old, while I was about a dozen years younger. He was small and thin, one of those tough, wiry men who can often stand more physical strain than a muscular one, and that day as we sat in the boat he chatted in a reminiscent way about old times in New York and the old fire laddies.

"Ever hear of Bill Poole?" he asked.

"Yes, Lew Baker killed him ten years ago on Broadway, corner of Prince street. I was in the West then, but I read all about the affair, and how George Law loaned his clipper Grapeshot and captured Baker off the coast of Africa."

"You're right," said he, "it was in 1855, and few things have ever stirred the city like that. It was in the good old 'Native American' days, and Poole was killed because he belonged to that party and John Morrisey couldn't whip him. I was in the room when he was shot in the Stanwix Hall, opposite Niblo's Garden, and when I saw Morrisey, Jim Turner, McLaughlin and Baker come in and find Poole alone I knew there would be trouble, but I didn't get out quick enough. I escaped being called at the trial, but it made no difference, for Baker was acquitted and appointed to a good office in the Street Department, while Morrisey went to Congress. But it would have done any American good to see the funeral that Bill Poole had. The City Hall flag was half-masted, and 10,000 men marched to his funeral. That was the last of the Order of United Americans; the foreign element became too strong and has been so ever since. The new paid Fire Department may turn out all right, but they will never have the pride and spirit in their work that the volunteers did."

There was much more of this, but the above will serve to

show Murphy's trend of thought and give a mental as well as a physical picture of the man. I met him in New York about as often as I visited the city, but fished no more with him until the day when Frank Satterthwaite and I found him at Greenwood Lake, curled up in agony in the road from an over-indulgence in buttermilk, as has been related. Notwithstanding all Frank's attempts to switch off Murph, as he called him, I got the story of the building of the first complete split-bamboo rod and took notes of it. The man who made the first one should be credited with it, especially as he did not patent this great improvement. Young anglers of to-day may never have thought how recent this invention is, nor what an improvement on rod making Dame Juliana Berners would have thought it; but let Murphy tell the story.

"Ever since I can remember, the Southern cane poles have been shipped up here for fishing purposes, and they are light, cheap and far ahead of anything that can be cut in Northern woods when a man starts without a rod. They seldom exceed a foot between the leaf joints and are of no use to a rod maker, but often one can get quite a good one with an even curve and fair action, but unless kept in a cellar, or other damp place, it is no good the next season, becoming brittle and losing its elasticity.

"In 1848 Sam Phillippi, a gunsmith at Easton, Pa., got hold of some Calcutta bamboo, used and sold some for fishing rods in the natural state. This cane was long, slim and tapered, with greater distance between the leaf joints, which, you know, show elevated rings on the outside and have a diaphragm across the hollow. Haven't you cut into them and seen this?"

"Yes, and made fifes from the joints in boyhood days, leaving one end with its natural stop."

"Well, Sam Phillippi wanted a jointed rod, so he fitted ferrules and made his tip and second joint of the Calcutta bamboo and the butt of some other wood, but he never split the cane as we do now. I saw one of his rods which had an ash butt, and I tested the spring of the rod and liked it. I showed the rod to Mr. E. A. Green, of Newark, and he got some Calcutta bamboo and made a rod of three pieces for his own use, of carefully selected material, and it was an extra good rod for its day. Then we talked the matter over. Says I, 'There is a lot of waste material in that rod, and the joints in the cane are no good,' and so it came about that I split the cane, only into four parts at first, shaved down the pulpy inside and glued the pieces together, and had a rod that was springy enough to cast a fly and had the backbone to fight a salmon."

"When was this?"

"It was in 1863. I soon found that four strips left too much pulp on the inside, for the strength is all in the enamel, and I made rods of six and eight strips. The latter are too small to work accurately, but the six-strip was received with favor by such anglers as Frank Endicott, Genio C. Scott, Robert B. Roosevelt, and others. Two years later I made a salmon rod and Mr. Andrew Clerk took it to Scotland, where it attracted much attention. Mr. Clerk gave this rod to Genio C. Scott, who took it up to the St. Lawrence River and killed some big pike and mascalonge with it, and wrote it up in the sportsmen's papers of the day, which gave the new make of rod great popularity. Then, in 1866, I made a split-bamboo bait-rod for black bass and arranged with the firm of Andrew Clerk & Co. to sell my rods, which they did for some years, and then they began to make them on a larger scale."

That is the history of this now famous rod as I heard it from the man who first devised it. I am not aware that it has ever been published before, although I have seen references to the work of Messrs. Green and Murphy. In the early days the rods were known as "rent and glued bamboo."

"Murphy," said I, "what price did these rods bring in that early day?"

"Well, the trout rods sold for $40, and for an 18ft. salmon rod I got as high as $125, but it was all hand work, careful measurements and tests from start to finish, with much labor and material that was rejected. And please remember that every rod was made to order. There was no making up a lot, and fitting tips to second joints. If there was a fault in a joint a new one had to be made. Though prices were high, we earned every dollar we got; but there were a few men in those days who wanted the best that could be had, and would pay for it; if that had not been the case, the split-bamboo rod would never have been invented."

Greenwood Lake contains both species of black bass, and at the time we were there, some sixteen or more years ago, and perhaps now, the big-mouth was known by the absurd name of "Oswego" bass, and only the small-mouth was called black bass; and it seems to me that the time has come to take the obnoxious name of Oswego bass from the statute books of the State of New York. If any other State uses this name in its laws, I am not aware of it. For years I have contended against the fashion of deprecating the game qualities of the big-mouth, and as Murphy and Satterthwaite sat fishing with me the question came up concerning the respective fighting qualities of the two black basses.

Satterthwaite said: "Bill, our landlord, and the boatmen on this lake say that the small-mouth is the gamest of the two, and, by the way, you must have noticed how they have corrupted Oswego into 'swago,' and talk about 'black bass and swagos,' and they say that the 'swagos' don't fight like the black bass. I don't fish a great deal, and have taken their words for it, and you are the first man that I have heard deny that the big-mouth was an inferior fish."

"Frank," said I, "years ago when American anglers began to think for themselves, and to study their own fishes and break away from English angling books, which treated only of English fishes, they found they had some fighting fish which were unknown across the water, but were plagued with a confusion of names. De Kay, in 1842, made many species and several genera of the black basses, but later Gill reduced them all to two, and then came some anglers' distinctions. Seth Green, then a newspaper authority on fishes, gave to our laws such names as Oswego bass, California trout, mountain trout and German trout, according to the locality in which he caught the fish or from which it happened to come, and it has taken years to undo this work. My old friend, Alexander Mosely, editor of the Richmond *Whig*, gave to the big-mouth the epithet of 'vulgarian,' and it was thought necessary to denounce one good game fish in order to boost another into place."

"Well, now," said Murphy, "I never gave this matter much thought, but I've had good sport with the big-mouth bass, and I'll tell you one thing: if they are not quite as full of fight—mind me, I don't say they ain't—I've found them more reliable as risers to the fly. The big-mouth will usually take a fly of some kind if presented properly, and if the wind, sun and water are not in conspiracy against the fisherman, but the small-mouth will often refuse the fly when his brother will rise to it."

This talk was at about 4 P. M., and we were casting with different flies in order to see what the bass might prefer in the way of tinsel, wool, fur, chenille and feather, when Murphy got a rise, and as he struck there was a lively fight on. Satterthwaite got excited, and not being an expert angler gave Murphy a running lot of advice, to which no attention was paid by the man who was fighting the fish. Murphy kept the bass out of some weeds, but could not prevent its rush under the boat. Fortunately, there was no anchor line to foul, and he shifted his rod to the other side, reeled in and gave line as he thought best, without regard to Frank's suggestions, and finally reeled the fish up to the side of the boat, which was well down, because three men were on one side of the keelson; and just as I put the landing-net into the water to lift the game it gave a final leap and landed itself in the boat. It was a big-mouth black bass of less than 3lbs.

"I thought it was a 10-pounder," said Murphy. "I took a 7lb. bass in this lake once that did not put up half the fight that this one did."

"That carries out my theory," said I, "that the fighting weight of a black bass, no matter what the size of its mouth may be, is about 2lbs. Murphy, you know, as an all-round 'sport,' that no human pugilist would think of entering the ring if he weighed over 190lbs., and, therefore, dead weight is not an indication of staying power. It's only an indication of good living and an accumulation of fat."

"There seems to be some sense in that, Frank," said Murphy, "but I never thought of comparing the physical condition of men with that of fish, as Fred has done, but the point is a good one. Yankee Sullivan said thirty years ago that a man of 160lbs. was fit to fight anything on two legs, and perhaps a black bass of 2lbs. is in his best fighting condition; that's a new proposition; what do you think Frank?"

"I think that you have got it about right. Sometimes a small bass will make you think he's a big one before he comes to the boat, and that 5-pounder of mine didn't fight very hard; in fact, I didn't think it was a big one until I saw it."

And so we passed the time in pleasant discourse on the merits of the basses until time to reel up and row to Bill's hotel. When we parted with Bill we did not weep, but Murphy said on the train: "Every time I stop with Bill I declare that it will never occur again, but somehow I forget his meanness or I forgive it, I don't know which."

Charles F. Murphy was one of a class of the old-time all-round sportsmen, interested in almost everything that is included in that comprehensive and elastic term sport. With no outward polish, brought up among the old fire laddies, where the only qualities recognized in a man were honesty, pluck and muscle, he was an entertaining companion. He died at his home in Newark, N. J., in 1883, at the age of sixty-five.

FRED MATHER.

NEW MUSCALLONGE WATERS.

CHICAGO, Ill., June 25.—*Editor Forest and Stream:* This is to narrate the experiences and detail the fortunes of a fishing party in search of new waters, hitherto unshadowed by the rod of an angler. Jason's quest of the Golden Fleece would seem a bagatelle compared to the task of finding waters which the great world of American fishermen are unfamiliar with, yet our little party was successful in that particular. At least, we got into a country where the famous muscallonge is plentiful, and yet none had ever been taken with rod and reel. In fact, the name of the fish was unfamiliar and its habits and appearance unknown to all the natives with whom we talked prior to our first catch. And yet we found superb muscallonge water, and, with suitable weather, would doubtless have enjoyed sport grand enough to sate the most greedy hunter of the voracious 'lunge.

This land of delight is located in northern Minnesota and not far from the head waters of the Mississippi River. It lies just south of the Leech Lake Indian reservation, and its lakes, of which there is an incredible number, empty northward into the Father of Waters. Until this year the region was practically inaccessible in the summer, and, as no one dreamed that muscallonge were to be found, no one attempted to surmount the difficulties of reaching these lakes, when other waters, in easy distance, contained such myriads of pike, bass and pickerel. Therefore, the lakes contiguous to Woman Lake were neglected, and our party was the first to prove the existence of the muscallonge in that section.

In answer to Grumbler, from whom a communication appeared in your columns some weeks ago, I may say that in the Woman Lake country, about fifty miles north of Brainerd, there is plenty of water unsurpassed in Wisconsin or Minnesota for muscallonge, bass, pike, pickerel and other game fish; and that there are large numbers of deer, partridges (ruffed grouse) and ducks to be had for the hunting, and that moose are reported fairly numerous. It must be a sportsman's paradise in the fall months when all sport is at its best, and surely neither rod nor gun need get rusty for lack of use.

But to our experiences. Originally our entire party had intended leaving Chicago June 3, but matters intervened that caused six of us to postpone departure until the 6th. Messrs. Joseph Downey and L. L. Leach, however, would not be restrained, and went up on the original date. They are both enthusiastic anglers, and would not balk at trifles, but as it turned out, they would have done better to wait. The remainder, consisting of Messrs. J. W. C. Haskill, C. B. Dick, S. M. Sutherland, C. S. Wilcox, J. F. Sanders and the writer left on Sunday night, June 6. At St. Paul, next morning, we had breakfast and changed cars for the Northern Pacific R. R. to Brainerd. Arriving there at 1:20 o'clock that afternoon, we had dinner, and at 3:30 started on the Brainerd & Northern Minnesota R. R. for Pine River Station. A logging train off the track ahead of us delayed us somewhat, and we did not reach Pine River until about 7 o'clock, too late to depart for Kabekona Camp that night. We found Pine River a typical backwoods railroad station. There are two houses in the town: one a log cabin, the other a hotel, saloon and general store combined. Barclay, the owner of the hotel, does quite an extensive teaming business for the logging camps in the surrounding country, and, being a down East Yankee, seems quite prosperous. Around the saloon door was gathered a miscellaneous crowd of about a dozen lumber cruisers, loggers, Indians and teamsters, nearly all drunk or willing to become so. After attending to our luggage, and making arrangements for an early morning start for Kabekona, we retired to our beds, which we found clean and comfortable enough.

Tuesday morning dawned cloudy, wet and cold, but we determined to start anyway, as we had little affection for the crowd around Pine River. Six of us got into the spring wagon, and, with Mr. Sanders as driver, followed the baggage wagon. We found the road for about eighteen miles an excellent one, having been an old "tote road" for the lumber camps, and had it not been for the cold rain would have enjoyed the ride. We passed Lake Ponto, a superb bass water of considerable size, about 10 o'clock, and then began to get the bad road. We were constantly in sight of new lakes, and our fingers itched to grasp a rod. Just after reaching Black Water, a large and "muskie-looking" lake, we met our first misfortune. The rear spring of our wagon broke, and from then on most of us perambulated. By dint of tinkering with a piece of wire, the wagon was finally mended well enough to get it into camp. A little later, however, in crossing a marshy bit of ground, the baggage wagon got mired, and that cost more delay. We tramped on philosophically, however, and, there being no mosquitoes, were comparatively happy. We had to make nearly a complete circuit of Black Water, and got no glimpse of Woman Lake until we came upon Kabekona Camp, at about 1 o'clock.

We found the makings of an ideal camp, but necessarily somewhat in embryo yet. The camp is to consist of a main building with office, dining-room and kitchen, and ten cottages, each 12×14, for sleeping purposes. The main building and three cottages were completed and the other cottages were in process of erection. There were five completed before our departure, and the entire camp is doubtless now in first-class condition to receive guests. The main building is excellently adapted for its purpose, the office or lounging room being large, light, well ventilated and having a great stone fireplace for cold weather. The dining-room is large and light, and the kitchen well equipped. The cottages are alike, and each contains two double iron beds with good mattresses and plenty of clean, warm clothing. Washstands, mirrors and plenty of drawer room are also conveniences not often found at fishing camps. The buildings face due east and command an excellent view of Woman Lake, which is quite a large body of water, with fifty miles of shore line. The shore at this point is about 15ft. above the lake, and therefore dry and cool.

As soon as possible after our arrival dinner was prepared, and we all were a bit hungry. We found that Messrs. Downey and Leach, in spite of their early arrival, had only been able to go fishing that day, as the boats had only arrived the day previous, owing to delays in transportation, so we could find nothing definite about muscallonge, and no one who absolutely knew of their existence in those waters. We all were somewhat blue at this lack of definite information regarding the game we were after, but hastened to get out on the water and give it a trial. Charley Wilcox and I secured a boat and a venerable-looking boatman, who cherished a belief that muscallonge were just overgrown pickerel. That belief by no means tended to allay our suspicions that our long journey had been for naught. We put in no time on Woman Lake that afternoon, as Stone, our oarsman, wanted us to try a couple of smaller lakes in easy rowing distance. This we did, and our success in catching pickerel and pike was great enough to suit any one who was not longing for the savage "muskie." I was kept as busy shucking pickerel from my spoon as a man husking corn; and Charley was the recipient of like attentions from numerous misguided pike—but no 'lunge rewarded our efforts, and as night drew on we made our way back to Woman Lake through the thoroughfare that connects the chain of lakes, much disheartened. At the end of the thoroughfare and near the shore of Woman Lake we found an Indian camp, and as we stopped for a few moments, a chorus of howls from a lot of wolfish-looking curs heralded the approach of a son of the forest. He peered out of the bushes at us and made a queer figure, clad in an elaborate head-dress and a blanket. By this time the boat containing Haskell and Dicks had joined us, and as Haskell is conversant with the Chippewa tongue, he addressed the Indian in a flirtatious tone, under the impression that it was a squaw. Stone informed us, however, that it was a man, old Smiley, and that he was about seventy years old. At that Haskell's cordial expression changed to disgust.

At this juncture a boat appeared coming down the thoroughfare, and we soon found it contained Messrs. Downey and Leach. They informed us that they had three muscallonge, one weighing 23lbs., and nothing could have been more welcome news, as we had at last made certain that the "lunge" was an inhabitant of those waters. We went back to camp with them and inspected their catch. They had three muscallonge, one of 23, one 18 and one 14-pounder, besides some fine pike and numberless pickerel. They told us they had released a number of smaller muscallonge.

At this we were eager for the start next day, and put in but little time sleeping. Wednesday dawned in discouraging fashion, very cloudy and cold, and directly after breakfast rain began to fall. Charlie Wilcox and I were eager, however, and started to cross Woman Lake to reach Little Girl. The rain, however, came down so heavily and there was such a sea on the lake that we put back to camp, after going about three miles. The rain did not let up all morning, so we put in the time writing and smoking. After dinner the rain stopped briefly, and I determined to give a trial to Baby Lake, where Downey and Leach had captured their fish the day previous. Charley would not brave the weather, so I went alone with Stone, the oarsman. We ran through the thoroughfare into Heron, and thence to Child Lake, then by a rapid and crooked creek into McCune Lake, a portage of a few yards being necessary on account of rapids. From McCune we got into Man Lake, and thence into Baby. These lakes are all large and beautiful and, excepting McCune, are ideal places for muscallonge.

On Baby Lake I came across Downey and Leach, who had been there all day. They reported three more 'lunge, and told me they had taken them in the south end of the lake. A little island, covered with tamarack and surrounded by rush-covered bars running out into the lake, looked inviting, and I barely began to skirt it when I felt that vicious but welcome rush of a muscallonge on the spoon, and as I tautened up on the line I saw him leap wildly from the water 60ft. away, a vision of silver and green that made my heart bound. A quick command to "Get into deep water, quick!" was obeyed, and then began a pretty little fight, which ended in about half an hour in the capture of a handsome 17-pounder.

We trolled the rest of the island without strikes except from the ever annoying pickerel, and as it was growing late we left Baby Lake and crossed Man Lake on our way home. As a mere matter of form I let out my spoon on Man Lake, though with no hopes of fish, as we were crossing the middle of the lake and going fast. But we crossed a hitherto unsuspected bar, and once more I felt that savage rush and

knew I was fastened to a big one now. Stone would not believe I had a fish until it broke water with a tremendous splash, and then we knew that it was a sure enough "muskie." I hurried the fish as much as possible, but for a long time he would not again show himself. Finally, though, he came slowly and sulkily to the surface, and I gave Stone the Winchester .22 with instruction to hit him between the eyes. He shot him about an inch forward, and did no especial damage except to make that fish wild. He was off like a flash and put in another quarter hour in mad rushes that made my wrist ache in keeping control. Once more he came to the top, and this time Stone's aim was better and we secured the prize. He was a fine fish, weighing 27lbs. and measuring 47½in. Time taken to land him about forty-five minutes. He turned out the heaviest fish captured on the trip.

On getting to camp I found that Haskell and Dick had gone to Little Girl Lake and Dick had taken a fine 20-pounder. Sanders had captured a 14 pounder on Baby Lake.

On Thursday, in spite of threatening weather, all four boats went to Man and Baby lakes. I bent on a No. 9 spoon and hooked on it a particularly lively and willing frog. But a few moments elapsed until over the same bar where I had taken the big one the night previous, I fastened to a beauty that gave me a hard fight for three-quarters of an hour. He weighed 23lbs., and was my second largest fish.

About noon, a very heavy rain came on, with plenty of thunder and lightning, and our entire party in the four boats gathered at the dam between Baby and Man lakes for shelter and subsequently dinner. We made a wet and dismal looking crowd, but every boat had 'lunge, so we were not ill natured. After the rain let up a trifle, we managed to cook dinner, and then took to the boats again. I caught no more 'lunge that day, but my boat companion, Charley Wilcox, succeeded in landing two, one 10 and one 12-pounder, and took both of them while the rain was falling in torrents, and the thunder and lightning were terrific. We remained on the lake during all the storm, as we were as wet as we could get anyhow, and we did not care to risk the trees, as several were struck by lightning in our vicinity. John Haskell took his first 'lunge that day, a small one of not quite 10lbs., and he didn't take another for nearly five days. But he became so eminently successful in snaking out pickerel that we dubbed him Pickerel John, and he did not lose the title until nearly the end of our stay.

Friday, Messrs. Downey and Leach returned to Chicago, but the loss was more than made good that night by the arrival of Maj. J. B. Sanborn, and M. Starr, and on Saturday morning Robert R. Street, of Chicago, and Messrs. Flack and Lewis, of Sioux City, Ia. Sanborn and Starr came in at dead of night with a wild chorus of yells that awakened me from peaceful slumber with dire thoughts of Indian massacres. The other three would not brave a night ride to Kabekona in spite of a lovely moon, but chose to remain at Pine River overnight.

Saturday, Sunday and Monday were three days of oppressive heat, and flies, bugs, beetles, mosquitoes and "sich like varmint" began to appear in great numbers. With the heat the "bloom" appeared in the waters of all the lakes, and the fish stopped biting. We took but few 'lunge meantime.

Tuesday we went to Little Girl Lake, and while camped for dinner John Haskell, smarting under the charge of being only a pickerel killer, skirmished around and found the left hindfoot of a rabbit, partly eaten and somewhat odorous, but still retaining the marvelous virtues ascribed to it by the Southern negroes. John performed some mysterious rites with that foot and cheerfully announced that the hoodoo was busted. Busted it was, for in the next three hours he landed three heavy muscallonge, while his boat companion, Ben Dicks, assumed the rôle of pickerel catcher.

John and Ben had been betting on their fish and had a scale of values. Pike were good for a quarter, bass a half, and muscallonge a dollar each. Pickerel had no value, though John had vainly begged Ben to let three pickerel count for one pike. Ben declared John would "eat him up" if they let pickerel in at any price. Up to the finding of the rabbit foot Ben had taken five 'lunge and John only one measly little one; but the foot did wonders.

Next day four boats of us went to Little Girl, and I promptly secured the rabbit foot, which John had left. I had not taken a 'lunge since Saturday; but, as if to prove the virtues of the foot, I had not left the landing ten minutes when I fastened to a small one, and an hour later killed a fine 18 pounder after a pretty fight. That was a pretty good foot, for the next day, on Man Lake, Haskell landed two and Dicks one, all heavy fish, in little over two hours.

A rather unusual occurrence was noted with Dick's 'lunge. Haskell had just landed a 20-pounder, and the boat was barely under way again when Dick saw a big 'lunge swimming leisurely alongside the boat. He had but a few feet of line out when the fish struck, and had a fine fight, ending with the capture of a 23 pounder.

That afternoon, on Baby Lake, Prof. A. Bournique, of Chicago, who had arrived the day previous with Messrs. L. W. Pitcher and Henry S. Fitch, took a 'lunge that measured 51½in., although, being a female that had just spawned, she weighed but 25lbs. In good condition, she would probably have gone nearly 35lbs He was much delighted and is to have the fish mounted and preserved.

It had been our original intention to make a trip to Wabedo and Little Boy lakes, which are drained by the Little Boy River, a direct tributary of the Mississippi, and are not affected by any dams. We had heard from the Indians of extremely large fish in those lakes, and have every reason to believe them unsurpassed muscallonge water. We were, however, obliged to abandon the trip, much to our regret, on account of the uncertain weather and the fact that we should have to camp out two nights. The latter would not have deterred us had we any facilities for keeping fish caught and getting them back to camp It is a trip I shall certainly make next time.

I should mention that the outlet to Little Girl Lake is at present obstructed by a dam that maintains the water in Little Girl and Woman lakes about 6ft. above normal. As it is well known that fish go up with rising and down with failing water, we had good reason to think that Wabedo and Little Boy lakes, below this dam, would contain many fish that had been unable to get over the dam.

On Monday, the 14th, Dicks, Haskell and I, in row-boats, accompanied by Wilcox in a birch bark, portaged from Woman Lake to Black Water, about a half-mile carry, and fished that lake. We struck no 'lunge, but ascribe that to the presence of the "bloom," as it was certainly an ideal lake for the big fellows. We caught a myriad pickerel and pike of good size.

We saw many bald eagles during our trip. One pair had a nest with a couple of eaglets not far from camp, and I had a great desire to secure the family for taxidermal purposes, but refrained, not knowing if a penalty were attached to the killing of eagles.

We came across many ducks, evidently nesting, and giving promise of good fall sport. There were mallards, teal, wood-duck, blue-bill and widgeon principally. Many of the lakes contain wild rice, and we were assured that duck shooting in the fall is excellent. Ruffed grouse were very plentiful and the fall sport is pronounced fine by the guides.

We put in one day on Kid and Lost lakes, which last is the head of the Woman Lake chain. We found them literally full of pike and bass, but struck no 'lunge in them. However, our experiences was hardly a fair test of any of the lakes, as during our entire stay we were most seriously handicapped by the weather. Rain eight days, and intense heat three days, was enough to ruin any fishing. We were all, however, satisfied that these lakes contain large numbers of big muscallonge, and hope to give them a trial under better conditions this fall. Our party captured about sixty muscallonge, averaging in weight 16lbs. Not bad sport under the circumstances.

We cut our trip a little short on account of the villainous weather. Messrs. Sutherland, Street, Sanborn and Starr left for Chicago on Thursday, and the next day, Dicks, Haskell, Wilcox and I started for home. With the exception of a little excitement at Pine River, caused by a couple of drunken Indians and a party of ditto "lumber jacks," our return was pleasant and uneventful, reaching Chicago Sunday morning.

To sum up briefly, and to paraphrase one of *Puck's* recent jokes, we didn't catch as many fish as we expected, but then we never thought we would. It is sufficient to say that we found new muscallonge waters and that there are plenty of the big beauties there. I have never visited a fishing resort that impressed me so favorably with its possibilities for fine sport as Kabekona Camp, and I think Grumbler will become a convert if he will only go there this fall. Maybe I will meet him there, as we are already organizing a party for an October trip.

W. P. MUSSEY

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the test by Monday, and as much earlier as practicable.*

NOONING AT WOMAN LAKE

The muscallonge weighed 16lbs. Its position in the foreground makes it loom up like a 65-pounder.

ANGLING NOTES.

Canadian Duties on Sporting Gear.

EVERY one who has visited Canada for fishing or shooting is aware that there is a duty on fishing tackle and guns of 30 per cent. of the appraised value, and that the duty is supposed to be collected as the sportsman enters the Dominion, and returned to him when he leaves. See *Game Laws in Brief*, p. 55, for memorandum of instructions to customs collectors on this subject

I say supposed to be collected, for my personal experience shows that the law has not been enforced as to fishing tackle for at least a number of years; but it is now, and the refunding clause has a tail to it. Here is an extract from the memorandum which I obtained in Canada, when I found what the new regulations were: "The following regulation is substituted for Memorandum No. 881 B, dated March 12, 1897.—Memorandum No. 492 B, of July 14, 1891, is amended so that the duty on guns, fishing rods and other equipments of parties visiting Canada for sporting purposes will be subject to a refund of 90 per cent. only of the amount paid, provided the articles are exported within three months from the time of entry."

The duty of 30 per cent. is collected, and it is collected instead of being a dead-letter, and 90 per cent. of the duty is returned to the sportsman when he leaves the Dominion. I asked the Customs officer in Canada why the new rule was in force, and he said it was because, he believed, of the bicycle rule being violated. Bicycles were permitted free entry by leaving a ticket of memorandum upon entering, to be taken up when the bicycle owner returned with his bicycle. After a while the Customs authorities found they had on hand a lot of tickets, with no bicycles to show for them, the inference being that the bicycles had been sold in Canada. The Customs officer told me that he never knew of a case of this sort among anglers, who were most desirable visitors; and even with the new instructions, sportsmen should have every consideration possible shown to them to prevent delay and annoyance. One instance was reported to me of an angler failing to get his refund upon his return, but the customs officers told me there was no trouble whatever about this.

Restigouche Salmon.

In June I was fishing the Restigouche River in Canada, the guest of Mr. Archibald Mitchell, on his water, about six miles above the Restigouche Salmon Club. Bright fish were slow to come into the river, but the mended kelts were in evidence, and being well mended they gave some excellent sport, while waiting for fresh-run fish. One day I was fishing the Mucklar Island water above Deeside, and rose a big fish just above the rapids, down which he went as soon as he felt the hook. The man in the stern pronounced it a bright fish, and when twice he fought up against the strong current at the foot of the rapids, I thought so too, but he did not jump to show what he was. The fish I had killed before him was a bright fish of 28lbs., and he did not once jump, and I had hopes that this might be a bright anti-jumping fish also. Mr. Alexander Mowat was in the canoe with me, and he thought first it was bright and then it was black. Anyway, I fought the fish for forty-five minutes with all the power of a 15ft. rod, and then beached a big black salmon, foul-hooked, with the Jock Scott under his jaw instead of in his mouth. It gave as good sport as any man could ask for, and no one could tell whether it was bright or black until the fish was beached. In fact, one fish I hooked was so well mended that one of the men gaffed it, believing it was a bright fish.

Mr. Mitchell had brought with him a trout rod of 4⅛oz in weight, on which he said he would kill a bright fish, at least he was very confident that he could, and was ready to make the trial when the time came. One afternoon he mounted the little rod, as there seemed to be no bright fish in the river, to try it first on a kelt. I timed him after he hooked his fish, and he beached the first, an 8lbs. fish, in two and a half minutes, and the second, a 15lbs. fish, in nine and a half minutes. It is a rod of wonderful power, and the feat shows what a finished angler can do with so light a tool.

The next day Mr. J. W. Burdick, who also was a guest of Mr. Mitchell's, disabled his rod when we were three miles from the house, and Mr. Mitchell insisted upon it that the time had come to kill his bright salmon on the small rod, and forced Mr. Burdick to take the salmon rod while he mounted the little rod and dropped his canoe down below where I was fishing. It was the lower end of the water leased by Mr. Mitchell and Mr. F. W. Ayer, of Bangor, Me. The current was very strong, and from where I was casting it looked as though the surface had an incline down hill.

Twenty-three-and-one-half-pound Salmon on Four-and-one-eighth-ounce Rod.

It seemed as though Mr. Mitchell had selected the most difficult part of the river to try his rod, but I got a fish of my own to attend to and I gave him no further attention, until I heard him yell and saw him swing his hat and I knew the battle was on. As his canoe disappeared down the river I remarked that he would arrive at the Restigouche Salmon Club house in good time for supper, for both of his men were paddling for a record. His canoe went around a bend in the river without his once making an effort to land and make the fight from the shore; and when I had disposed of my fish I lighted a pipe and seated myself on a log on the bank to await results. It was nearly dark, too dark to fish more, and there was nothing to do but wait patiently for Mr. Mitchell's return, with or without his fish. I had a bright fish, as I thought, without weighing, of 30lbs., and I concluded if his fish was the same size we might be late for supper, three miles up stream, but we would be in good time for breakfast.

Before I had finished my pipe, and while Mr. Burdick was still casting on the river in the gloom above me like a spectre, I heard the iron-shod setling poles of a canoe coming below the bend, and when it proved to be Mr. Mitchell, and he swung his hat as he came in sight, I knew that he and his little rod had won. That night at the house his salmon weighed 23½lbs., over ninety times as much as the rod on which it was killed. The rod was as straight as a die after the fight. The fly was a Mitchell, and the reel an ordinary multiplier, such as is commonly used for black bass.

Salmon Rising like Black Bass.

While casting at the head of the Grog Island water a salmon rose short as I was lifting my fly from the water. The line was but little longer than my rod the first cast after a new drop. I saw the head and shoulders of the fish come out of the water fully a foot behind the fly after the fly had left the surface of the water. I rested the fish and again cast over him, but he did not come, and I fished out the drop,

took off the click from the reel, so that the men would not move the canoe, and reeled in the line, and began again to cast over the drop. At the first cast the fish came, but short as before, both times coming from the cast to the right of the canoe, but nearly astern. I again rested the fish and considered the advisability of changing the fly, but the head and shoulders I had twice seen above the water made me suspect it was a mended kelt, and I cast the same fly over him without raising him. Then I allowed the fly to float down with the current and sink well below the surface of the water, where I judged the fish to be, and pulled it toward me as rapidly as possible with one quick, upward motion, as I have sometimes tempted a less lordly fish than the salmon.

The shoulder of the man in the stern of the canoe, whose back was toward me, had a motion as if he were laughing. Perhaps he was, but about the third time that I made that fly slide up stream as if it were greased, the salmon took it for good and all. I saw the boil in time, so that I did not pull the fly from his mouth, as I feared I would do if he rose to the lightning express. It was a kelt, and he had the hook in his tongue and was duly beached.

Changing Salmon Flies.

A Jock-Scott I was using had become well worn. The yellow part of the body was chewed to apparent pulp, toppings were missing,, and about an inch of silver tinsel was hanging from where the tag had been. About the third or fourth lengthening of my cast a fish rose viciously with a boil and splash, seeming to turn almost in a circle at the surface of the water, but below the fly. He came so savagely that I felt sure of the fish after resting him, particularly as he came to the surface while I was resting him with a lunge that caused one of the men to say, "He's mad." I rested that fish again and again. Changed to a smaller Jock-Scott, to a silver-doctor, to a Mitchell, to a dusty-miller, and finally went back to the worn Jock-Scott and got the fish, or another from the same place, on the first cast. It proved to be a big mended kelt, and at the fourth clean jump he made another fish of equal size jumped with him. This fish was so well mended that, though he jumped clear of the water five times, he was thought to be a bright fish until he was gaffed; for the men decided he was bright after I had brought him to the shore, and it was only when he was lifted from the water that the cold truth was revealed

There is an unanswered letter now on my desk from Mr. George M. Kelsoe, who is perhaps the greatest expert in Great Britain upon the niceties of colors and shades of color in a salmon fly, and where each particular fibre of feather should be placed to make it deadly in all sorts of water, under all kinds of sky, and until that letter is answered, perhaps it would be as well for me not to air my views on the subject of changing flies to induce a rising salmon to take a fly and keep it. Particularly, as his letter is written from a salmon river in Scotland where his score at time of writing was forty-one fish to twelve for five other men. But I will say that up to date *Land and Water* has produced in colors twenty-eight salmon flies, with descriptions by Mr. Kelsoe (and the list is not nearly completed), and if I had the chance to go salmon fishing to-morrow I would not whimper if I could have not to exceed six patterns of salmon flies with which to do my fishing, and if I did not get fish with one or another of the six patterns I would firmly believe it was because there were no fish in the river that I fished. Rather than not go fishing, I would cut the number of patterns in two, and go with Jock-Scott, silver-doctor and dusty-miller, and be perfectly content.

A Veteran Fly-Dresser.

Mr. J. W. Burdick, Dr. Wm. H. Drummond, Mr. J. Stevenson Brown and the writer were together in Montreal, and the subject of our conversation was fish and fishing and fishing tackle. Mr. Brown spoke of some flies with which he had success on a trip from which he had just returned, and incidentally mentioned that for years he had had his flies dressed by one man, and never had a fly failed him through any fault of the maker, who was S. Maltby. The name reminded me that somewhere I had heard of the man, and from what Mr. Brown said I concluded that I wished to see him. We all got into a carriage and were driven to the lair of the old fly-dresser, a man eighty-one years old. When we entered the shop it was like stepping back travel 100 years, and the proprietor seemed to have escaped from one of Dickens's novels and taken root in a side street in Montreal, and while the rest of the world rolled on he and his shop stood still. He is a Yorkshireman, and once he spoke of Englishmen, Yorkshiremen, Americans and Canadians as though Yorkshire was a nation by itself. With his gray side whiskers, silk hat of the vintage of fifty years ago, big-bowed spectacles, kindly wrinkled face and laughing eyes, he talked in broad Yorkshire until it seemed as though we were transported to a country far from Canada in the Jubilee year. The old man's enthusiasm was most interesting as he showed his work—good, honest work, and good, honest materials, but many an angler would pass it by even if he found the little shop, because it lacked finish. Perhaps years and years ago the old man did more finished work, but it was good work yet, and the price of a few dozens of flies is cheap for the pleasure of talking with him for an hour.

Before our visit, Mr. Brown told of an angler who thought the body of a certain fly was properly made only when wound with a hair from a Scotchman's beard, and he was always on the lookout for a Scotchman with a long beard. Mr. Maltby had a few hair and silk lines, in his opinion the only line to fish with, and he said it was wrong to think the best silk and hair lines were made from horse-hair, for women's hair made the best lines, as it made the best dressing for some flies; and he told how as a young man in the business he obtained women's hair from medical students. This was but one of his quaint conceits. He is a loyal old soul, for his cards read "God Bless the Queen and all Jolly Anglers." May he live to the century mark, and his hands not lose their cunning to dress flies for Yorkshiremen, Englishmen, Americans and Canadians.

Mascalonge, Pike and Pickerel.

The *Fishing Gazette*, London, reviewed the Report of the Fisheries, Game and Forest Commission, of New York, under the headline, "A Grand American Work on Fish and Game," and mentioned various parts of the report in detail. "The third special article, 'Mascalonge, Pike, Pickerel and Pike-perch.' This most interesting and admirably illustrated article is by Mr. Cheney. Without, I confess, absolute grounds for it, I have always had an idea that the fish called pickerel, pike and mascalonge in America were simply small, large and larger specimens of one and the same fish, but Mr. Cheney gives a colored plate of each, showing different markings and coloring, though he admits that coloring and marking are no sure guide to identification. But he gives three illustrations, by means of which each of the fishes named may be identified from the peculiarity of scale formation shown. * * * Since writing these lines I have examined the heads of a very fine 37lbs. Irish pike, a female, with a remarkably small head, and an English pike of over 26lbs, a male fish, with a larger head than that of the 37lbs. fish. There are strongly marked rows of scales behind the eye and down to a level with its lower edge on the cheeks of both fish; below that you have to look closely to discover them, and at a little distance the cheeks appear to be as smooth and scaleless as the gill covers are. If Mr. Cheney will some day send me a preserved head and shoulders of the largest mascalonge he can get, I will do the same for him with the largest pike I can get. I have seen so many variations in coloring and marking and in general shape of pike I have caught in this country, that I am not inclined to attach too much importance to the presence or absence of scabs on the cheek and gill covers, except, perhaps, as an evidence of age. Mr. Alfred Jardine will be interested in this question, and having the finest collection of large pike in the world, I shall be glad to hear from him whether the older the pike the balder he gets from scabs on his cheek or not."

Mr. Jardine, who is, perhaps, the great pike authority and pike fisherman of England, responds in a subsequent issue of the *Gazette*, and I quote him only in part:

"I quite agree with you that the different appellations Mr. Cheney gives to *Esox lucius* relate only to the same fish from infancy upwards, according to their size and growth, whether 2 to 5 pounders, *i. e.*, pickerel; 7 to 12 pounders, pike, or the heavier mascalonge, maybe giants of 30lbs. * * *. I have to-day examined my old, *i. e.* large pike of 37, 36 and 31lbs, and also some of my smaller fish, 25 and 20lbs., and others in our anglers' club room of 10lbs. As to scales, they are well developed on their cheeks and gill covers. The younger and smaller pike were cheeky enough to have them as pronounced as their older and much larger relatives." That was the very point I wished to make in the illustrations referred to in the State report; the scales on cheek, etc., would identify the several fishes whether they were 4in. long or 4ft., as they are characteristics which are constant.

In England there is one species of pike (*Esox lucius*), the same as our pike, formerly *Esox lucius*, but now classified as *Lucius lucius;* but we have five species, and Mr. Jardine is in error if he thinks I applied different names to the same fish at different periods of growth. I described three distinct species: the mascalonge, which grows to 100lbs.; pike, which grows to 50lbs., and pickerel, which grows to 5lbs I used the check and gill cover scales as an illustration, as it is something any one can understand, to separate the three species; but the scales on median line are not the same, fin ray formula is different, and branchiostegals also. In fact, all characteristics which determine species go to separate the three fish. For instance, the mascalonge has branchiostegals, 17 to 19; dorsal fin rays, 17; anal, 15; scales on median line, 150. The pike, *Esox lucius* in England, *Lucius lucius* in America, has B., 14 to 16; D., 16 or 17; A., 13 or 14; scales, 123. There are other differences not necessary to mention here.

I have arranged to send Mr. Marston the mounted head of a mascalonge from the St. Lawrence, and one from Chautauqua Lake also, if necessary, and when he has the head before him he will be quick to see that the fish does not exist on the other side, and that it is not the *Esox lucius*. The St. Lawrence River mascalonge are spotted with brown on a light ground, and in this they differ from the Chautauqua Lake fish; but they are structurally the same.

Last week I was in Ogdensburgh, and Senator Malby told me there were five mascalonge in the market, but when he drove me there to see them but one was left, a fish of 20lbs.; but I will send Mr. Marston a larger one. One of 60lbs. was taken in Chautauqua Lake last spring, when the State was taking spawn for artificial propagation of the young. The pike is not propagated artificially in this country, nor is the pickerel.

A. N. CHENEY.

PUBLIC FISH IN PRIVATE WATERS.

Editor Forest and Stream:

In your editorial in the issue of FOREST AND STREAM of June 19, you refer to the act of the Legislature of the State of Connecticut, forbidding the stocking of private waters with fish provided out of the public funds, and making public any waters supplied with fish by the commission, as the first successful expedient to get the better of those individuals who procure fish under the pretense that they are to be used in stocking public waters, and then place them in private waters.

The claim in your article that persons who pursue this course are guilty of dishonesty, has the right ring, and so far as these persons are concerned, their dishonesty in many cases is not confined to false representations made to the Fish Commissioners, but also in placing the fish obtained by them in waters which are essentially private, in which they have no interest and over which they have no control, and then claiming that these waters thereby became public waters in which all persons have the right to fish. Such conduct is nothing less than a deliberate trespass upon private rights and should be made a misdemeanor, and the guilty persons could probably be held personally liable for all damages which might result from the introduction of fish in waters where they did not already abound.

It is not necessary to discuss what powers the Legislature of the State of Connecticut may have to pass or enforce the law in question, but so far as the State of New York is concerned, such an act if passed by our Legislature would be nugatory on the ground that it would interfere with vested rights.

Our present very efficient Board of Commissioners of Fisheries has continued the rule adopted by its predecessors in office, to the effect that fish will be furnished by the State for public waters only; but it has not stated what is meant by public waters, and herein lies a difficulty.

The damage resulting from stocking our waters generally with fish not indigenous to them was practically, if not entirely, done before our present Commissioners came into office, and we all recognize their earnest efforts to confine themselves to restocking our present waters with the kind of fish which now abound in them, and at the same time prevent the introduction of foreign fish, and if the same course had been pursued by their predecessors the waters of this State would not have been so generally injured or destroyed as to their value in furnishing fish for restocking generally, without proper restrictions as to the waters in which they were to be placed.

There are three kinds of waters in this State.

First—Waters which are absolutely public, as, for instance, the Hudson River and the Great Lakes, the title to which has never passed from the State to its citizens, and in which everybody has the right to fish subject only to the general laws of the State for the protection of fish.

Second—Private waters, which, strictly speaking, are waters lying wholly upon the property of an individual or club, surrounded by their own property, and without inlet or outlet.

The fish in such waters are the private property of the owners, for the reason that they are kept in a state of captivity, and the taking of them is subject only to the general fish and game laws of the State. Whoever comes upon the premises of the owners of such waters is guilty of trespass, and if he takes any fish from these waters he is liable to the owners for the actual value of the fish taken by him.

If the owner of such waters should apply for and receive fish from the State for the purpose of stocking them under an application to the effect that he desired fish for the purpose of stocking public waters, while it would be a fraud upon the State, it is very doubtful whether the courts would ever decide that by reason of such fraud such waters would become absolutely public, so that every citizen of the State would have a right to fish in them; and even if the court should so decide, no persons could approach such waters for the purpose of fishing without being guilty of trespass by reason of their approach over the adjacent lands, which would be a full protection to the owner.

Assuming that a number of individuals whose lands join a lake or pond, without either inlet or outlet, should agree to hold such pond as private waters belonging to them as tenants in common, the same rule would apply; and it is absurd to suppose that one of such tenants in common could, without the knowledge or consent of the others, obtain fish from the State for the purpose of stocking such waters on the statement that such waters were public, and so open such lake or pond for the purpose of fishing to the public at large.

Third—The remaining waters of this State are not in any sense public nor are they strictly private waters.

They consist of ponds, small lakes and streams, which either by grant or by implication of law are owned to the center by the riparian owners, and all such persons possess certain rights or interests which pass as incidents to the land.

It is one of the vested rights of every such owner that the water which lies upon or flows over his land shall always be and remain in its state of original purity, and no one has the right to use or taint these common waters in such manner as to interfere with the natural rights of the other riparian owners.

It is within the province of the Legislature to pass such general laws in regard to such waters as may be necessary to regulate and specify the manner in which the persons who have equal and vested rights and interests in these common waters shall enjoy them, and it will be conceded that such laws must be uniform in their character and affect equally all those who have a common interest in such waters, whether lake, pond or stream, as otherwise the privileges of some of the riparian owners would be enlarged by diminishing or interfering with the vested rights of the remaining owners. It will hardly be contended that the Legislature would have the right to grant to some company which might be located on the banks of the upper part of a stream the right to discharge refuse containing acids into the stream when such discharge would destroy all the fish in it for many miles below, and it is equally difficult to see how the Legislature would have the right to permit one or more riparian owners to place in the waters opposite their lands fish foreign to the stream, when stocking with such fish would result in a prompt destruction of those natural to these waters.

A case somewhat in point occurred in this county many years ago. A paper mill was located on the shore of a stream filled with natural fish, including a large number of trout, and the refuse, consisting largely of acids, was thrown into the stream and destroyed or drove out the fish for several miles below. This mill was burned down many years ago, and the waters again became pure; but about the same time a person living near the mouth of the stream procured from the State some twenty-four black bass, on the ground that the waters of this stream were public, with the result that in four or five years almost all the fish natural to the stream had been absolutely destroyed by the bass for a distance of about fifteen miles, and the farm of every riparian owner on that stream is, on account of the introduction of the bass, less valuable to-day than it would be if the bass had never been introduced into the stream, and the claim is now frequently made that the introduction of these bass on the terms imposed by the State, has made the waters of this stream public, in which every one has the right to fish.

I do not propose in this article to discuss the question as to how far the stocking of the waters of this State with fishes not natural to them has been beneficial or otherwise, but may have something to say on this point in a future article.

If I am correct in the above views, then it follows that those who have been guilty of placing foreign fish in the waters of this State which are not absolutely public, under the claim that they are public, have been guilty of trespass upon the rights of the riparian owners, which in many cases has resulted in great injury, and the claim in their application to the Fish Commissioners for fish to the effect that they were to be used for the purpose of stocking public waters has been nothing less than a fraud upon the State.

How the evil, for it is an evil, is to be remedied is a very grave question.

Our present Fish Commissioners are well aware of it, and have been and are doing all that lies in their power to prevent further injury to waters in which the riparian owners have a common and vested interest.

They have no power, nor have they claimed to have the power, to declare that the entire waters of a stream or lake or pond become public by the act of one or more individuals who have procured fish to stock the waters on the ground that they were public, but the evil might be checked somewhat if the commissioners would define what they mean by public waters.

It is doubtful whether an act of the Legislature providing that, where persons owning waters strictly private obtain fish from the State upon the claim that they are to be used for the purpose of stocking public waters, the placing of them in such private waters would result in making such waters public, in which every person would have the right to fish, would be upheld by the courts. To make such waters public would in many cases result in the practical confiscation of property, and the punishment or penalty would be entirely out of proportion to the offense.

It is very certain, however, that the Legislature has no power to declare that a riparian owner has lost or forfeited any of his vested rights in the lands owned by him and the waters lying upon or flowing over them, because some one riparian owner whose lands happen to join the same waters has been guilty of trespass upon his neighbors, and has committed a fraud upon the State by getting fish for the purpose of stocking waters under false pretenses.

Such an act would result in a confiscation or condemnation of private property or vested interests therein for the use of the public without compensation to the owner, which is a power that the Legislature does not possess.

How to deal with this question is a serious problem. It is one thing to suggest a wrong, but quite another to suggest a remedy. The Legislature of this State has no power to enact what are public and what are private waters. That is a matter entirely for the courts, based upon the vested rights of the owners of real estate. The Legislature has the power, however, to define what it means by public and private waters under the provisions for stocking or restocking them under the fish and game law.

The frauds which are now constantly practiced upon the State and the damage done to waters in which a limited number of persons have a common interest, could very easily be stopped in the future by the enactment of a law which would make an application for fish for the purpose of stocking waters, containing a false statement as to the waters to be stocked, and the placing of such fish in waters which are not public and in which others than the applicant have a common or vested interest a misdemeanor, punishable by a severe fine or imprisonment, or both, and also making such person liable in damages for the injury done to waters which are not wholly under his control. J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., June 23.

CHICAGO AND THE WEST.

Game and Fish Law Matters in Illinois.

CHICAGO, Ill., June 26.—Our new State game warden, Harry W. Loveday, has thus far been busily engaged in the work of appointing deputies all over the State to aid him in his campaign. In the end he expects to have a good deputy for each county, in some cases two for each county, there being 101 counties in the State. In this work of choosing deputies he has been guided largely by the local recommendations of the candidates, relying especially upon the statements of gun and fishing clubs He wishes it to be understood among the sportsmen of the State that the matter of securing good deputies rests very largely with themselves, as he asks the aid and counsel of the sportsmen's clubs in the duty of choosing his assistants. He thinks the sportsmen should take interest in this matter, and send in their recommendations for their men, all of which will be received thankfully and which will have immediate investigation. Mr. Loveday states that he wishes to make a thorough effort, in his official capacity, to stop the law-breaking in each and every part of the State to as great an extent as possible. He has thus far appointed the following deputy wardens: For depot work among the express companies in Chicago, F. J. Beecher; for Blue Island, A. Link; for Antioch, Wm. Burke; for Calumet Lake region, George Kleinman; for upper end of Cook county, Matthew Harms; for Dixon, Jas. Stultz; for Grundy county, Jos. Babcock; for Batavia, Harry A. Tuttle; for McHenry, Clement Lentz; for Vermilion county, J. D. Miller and W. H. Moon; for Urbana, J. P. Hall; for Bureau county, E. W. Smith; for Alvan, John Kelly; for Homer, A. Silas; for Waukegan, J. F. Powell; for Streator, Edward St. Clair; for Freeport, W. Bott; for Alton, Eugene Levinne; for Arcola, W. P. Dawson; for Springfield, John R. Page; for Ripley, Harry Hardy; for Noble, W. L. Taylor; for Paris, Dow B. O'Hara; for Newton, John Gill; for Clay City, J. Henry Waesp. The work of further appointments proceeds daily. Mr. Loveday reports South Water street as shut up tight, and not moving any game. Deputy Beecher says he gets no traces of any illegal shipments coming in at the depots at present. The express companies have treated Mr. Loveday very openly and fairly so far, and have told him to freely search any suspected packages. It lies within the power of the new warden to do a lot of good to the game interests of the West, and in this work he should be joined by all the sportsmen of the State, by none more readily and unanimously than those of the city of Chicago. The office of warden is no sinecure, and it is easier to criticise a warden for what he does not do, than it is to help him do what we all think he ought to do. Let us see what can actually be accomplished under the new regime, and to that end all help as we can.

Mr. Loveday said on Tuesday that he expected to hear of arrests by Deputy Kleinman in the Calumet region before the close of the week. A considerable industry in illegal fishing has for some time been going on in the Calumet River, many tons of fish being netted there and brought by wagons to the city markets. George Kleinman will find a little to do there for a time, and it is hoped that he will break up this flourishing market arrangement.

The New Illinois Fish Law.

As stated earlier, there were no changes made in the Illinois game law at the last session of the Legislature, but it now appears that at 3 o'clock in the morning of the last night of the Legislature, a new fish law was rushed through. The new law is a good one, and should be productive of results. It forbids netting except in navigable streams, forbids fishing on private lands without consent of owner, forbids fishing through the ice, requires fish ladders in dams, and sets a legal limit for marketable fish, said limit being as follows: black bass 11in., white or striped bass 8in., rock bass 8in., black or river croppie 8in., white croppie 9in., yellow or ring perch 8in., wall-eyed pike or pike-perch 15in., pike-pickerel 18in., buffalo 15in., German carp 13in., native carp 12in., sunfish 6in., red-eyed perch 6in., catfish 13in., white perch 10in.

The possession of fish of less length than above indicated shall be *prima facie* evidence of violation and subject the person having them in possession to a fine.

Illinois has always been luckier in her fish laws than in her game laws, and the new law at first glance appears to be in line with the record of the past. Under it the new and efficient Fish Commission can do yeoman service to the people. By provision of the new statute the Governor shall appoint wardens on request of the Fish Commission. Sheriffs, deputy sheriffs, constables, fish commissioners and fish wardens may make arrests.

Planting Trout in Wisconsin.

The State fish car Badger, of Wisconsin, made a trip to Crivitz (Ellis Junction) this week, and planted 225,000 rainbow trout in different streams of that vicinity. There have been 1,000,000 trout fry planted in Marinette county, Wis., thus far this spring. Among the streams near Ellis Junction are the Middle Inlet to Lake Noquebay, the Thunder River and branches, the Peshtigo, the Pembina, etc.

Violated the Law.

At Sapinero, Gunnison county, Colo., H. M. McVean was arrested June 18 and fined $50 and costs for having in possession illegal trout and deer. He has been in the habit of serving both these items on his hotel table regularly. Gunnison county is becoming irritated at the illegal destruction of her fish and game, and further arrests are expected.

A Tip to Agent Fullerton.

If Executive Agent J. F. Fullerton, of St. Paul, will go to Magee's restaurant, on Roberts street (it is said), he may find something to his interest. A few Chicago men were returning from a fishing trip in Minnesota last week, and when in St. Paul they stopped at the above restaurant. They found prairie chicken on the bill of fare, and Mr. Haskell asked for one. He was told that they had none but old birds at the time, which were not choice, but was offered quail or plover or snipe.

Plenty of Muscallonge.

Mr. W. P. Mussey has told in another article what good success the Chicago men had in their fishing at Woman Lake, Minn., where they were at Habbekona Camp, and reports received this week from other localities lead one to believe that the season is good for muscallonge at many places. Mr. Ben Bingham and wife were up at State Line, Wis., for ten days, and have just returned. They had fine sport, taking six 'lunge in one day and twenty-one 'lunge in ten days. Mrs. Bingham caught one fish 54½in. long, weighing 35lbs., and also had another weighing 33lbs. This is certainly good enough.

Messrs. H. L. Stanton and Frank Willard were also among the favored ones. In their ten days' stay at Squirrel Lake, near Minocqua, they took over fifty muscallonge, returning the small ones to the water and only keeping those weighing over 6 or 8lbs. They sent or brought to Chicago twenty fish, the largest of which ran up to 21¼lbs. when weighed in Chicago three days after being caught. They report the best sort of a time, though they did not enjoy the cold weather. The ice froze in their boat at night, and during the day they were obliged to dress heavily and at times to go ashore to build a fire and get warm.

Taking Fish out of Minnesota.

Having heard that some of the Chicago men had trouble in getting their fish out of Minnesota, I looked up the matter. The State law permits the taking along a number of fish not to exceed fifty. The local agent at Brainerd is the only source of difficulty for the Leech Lake country, and some anglers report that they had to fee him to get their fish set right on the train. This is not necessary, as the law does not forbid sportsmen from taking a reasonable amount of fish out of the State. It was said that others of the Habbekona Camp party had trouble with their fish at Milwaukee, their boxes being detained there by the authorities, but I can find no foundation for this except that the boxes were for the time lost through not being tagged or addressed properly. C. B. Dicks and John Haskell were the only ones coming home via Milwaukee. I do not know whether or not they had over the 20lbs. allowed to be taken out of Wisconsin, but I learn that their fish were delayed in transit for the cause above assigned. A mistake is easily made nowadays in the matter of taking and carrying fish or game, and I find about the only safe way to do is to carry a copy of the *Game Laws in Brief* when one goes away from his own dooryard.

Good Catches in Divers Places.

Mr. E. V. Church is back from a trip to the Manitowish waters of Wisconsin, and reports good luck. In Spider Lake he killed a 'lunge that weighed 33lbs. He says the 'lunge fishing is better in the Manitowish chain than it has been for years.

Mr. John Church was also at the Manitowish range and had good luck enough, taking four fish which scaled 16lbs. each, besides others not so large.

All the lakes of the Manitowish waters, Rest Lake, Rice Lake, etc., beside Big Lake, Presque Isle Lake and many others of the upper Wisconsin country, are alive with bass and wall-eyes this season, and it would be burdensome to report the big catches of bass and pike which have seemed desirable to many anglers who go into that region. Thus I learn of one catch, by Mr. A. S. Laflin, of Chicago, who took, or is reported to have taken, 104 bass in four hours' fishing in Bass Lake and Big Lake. There is, of course, no sport in such fishing.

In Lake Sylvia, near Annandale, Minn., in two days last week, Drs. Beecher and Swartz and Mr. Chas. Robinson took 137 bass, 27 cropies and 13 pickerel.

An item from an Escanaba, Mich., paper states that three men of the town, Peter Duranceau, Joseph Delorier and Joseph Barron, last week fished the Escanaba some fifty-five miles above the town of that name, and had the good luck of taking in all 243 good trout.

On the Cloquet River, not far from Duluth, Minn., in two days' fishing this week, Messrs. George Lucore, A. E. Chantler and Wm. Carlson, with Sheriff John Meining, took 210lbs. of bass, pike and pickerel.

In Spring Lake, Ill., last week a party of Bloomington, Ill., men, consisting of Messrs. J. Funk, Chas. Burke and Howard Humphreys, had good success, taking 170 fish, bass and other varieties, weighing in all 150lbs.

Gov. Tanner Gone Fishing.

Gov. John R. Tanner, of Illinois, is an angler of diligence and determination upon occasion. He has this week gone to the famous waters of the Miltona Angling Club, of Minnesota, where he is expected to give account of himself in due gubernatorial style. Governors, presidents and others high in authority have much asked of them when they go sporting, but by the kind assistance of the daily press reporter they usually get through all right.

Carp and Fishways.

There is still no report of a proper fishway at the Kankakee dam this summer, though there was at one time a good fishway there, as I personally know. At the dam at Waldron, above Kankakee, the German carp are reported to be on hand in great numbers.

Rainbow Trout in Chicago Stock Yards.

Out at the Chicago Stock Yards there is a large pond formed by the overflow of an artesian well. The water is cold and pure, and the bottom of the pond is of hard clay. In the fall of 1893, at the close of the World's Fair, Mr. R. B. Organ, of this city, secured a number of the fish which had been shown at the fair. Of these, he planted about 1,000 yearling rainbow trout in the stock yards pond, where he has had them carefully guarded ever since. Yesterday, four years after the fish were put in the pond, two of the rainbows were taken and one was preserved, so that I saw it today. It was 13½in. in length and weighed 15oz. In color it was good and bright, and it seemed as fine a specimen as a wild fish, though as yet one cannot say how good it would be on the table. The fish in this pond are fed at times with liver and refuse. The water is fairly alive with large goldfish, and there are a number of large bass also in the pond, one having been taken weighing nearly 4lbs. Mr. Organ thinks the rainbows have done well, and have more than taken care of themselves in their unique surroundings. The pond is in the center of the dirty and busy stock yards, renowned over the world as a peculiar Chicago institution. I wonder if many people know that there are rainbow trout to be had (by a few favored ones) in the Chicago Stock Yards?

Painting the Ink.

The packing companies at Hammond, Indiana, have for some time been in the habit of allowing the refuse from their establishments to flow into the Calumet River. Now comes the United States Fish Commission and declares that it will estop such defilement of the limpid Calumet, for that such defilement is injurious to the fish of said Calumet and against the peace and dignity of the commonwealth.

The Carp Nuisance in Arizona.

In the Casa Grande Valley of Arizona, near Florence, the German carp was introduced into the best of the local society some years ago, and forthwith proceeded to make itself at home. To-day the ranchmen are praying for relief. The carp run out into the irrigating *acequias*, and thus become stranded and defunct on the fields watered by the ditches. The crows eat a few and the coyotes eat a few, but no one else in that country cares for carp. It is the consensus of opinion in dry Arizona—as it is in Illinois and about everywhere else—that the carp is an A1 nuisance and ought to be abolished without recourse.

A Railroad Plants Trout.

Not long ago I had occasion to remark that it has been but rarely that a railroad has ever concerned itself with the renewal of the fish supply which it does so much to diminish by its advertising methods as connected with good fishing localities. This remark now appears to need some qualification. The San Francisco & North Pacific R. R., of California, has this year established a hatchery in the Gibson Cañon, near Ukiah. For four years this road has been stocking the 300 streams, or some of them, which are to be found in Mendocino, Lake and Sonoma counties. It has now resolved to see that the trout supply is kept up along its road, as it realizes the important part that the trout plays with its passenger traffic. This is commendable, but after all it is only pure business common sense, in which railroads all over the country ought to join. A general passenger agent of a railroad can afford no sentiment. He must show results in tickets sold. But why should he look forward to holding his job only for a few years, or until he can no longer show results on fishing or hunting country which has been exhausted? Why not look ahead to holding this job, and to showing results, for a long time to come? So shall general passenger agents build brown-stone fronts with marble halls for their children.

An Invasion of Minnesota.

A dispatch from Bemidji, Minn., says that that locality has been invaded by large numbers of "fishers, choppers and plowmen, from all over Minnesota and the Dakotas, and, unless the State Fish Commission gets a move on itself, the lakes will suffer almost a depopulation within the next two or three years. The fishermen bring in wagon boxes full of barrels and boxes, and go out loaded with all they can haul."

Fishing on the Illinois.

Fishing on the Illinois River at the Copperas Creek lock is better just now than it has been for years, and almost every party that has gone there recently has had large takes of black and white bass and other varieties. Last week over 400 persons were fishing at the lock on one day, and all had good luck.

Minnesota Muscallonge.

Reports received this week from the party of Chicago gentlemen who went to Habbekona Camp, Minn., are of a most flattering character. So nearly as can be learned, there had been but two or three days fishing done by the party when the report was sent to Chicago. At that time they had taken seventeen muscallonge, whose weights were as follows in pounds: 23, 13, 11, 12, 12, 25, 14, 19, 22, 13, 8½, 20, 9½, 16¼, 16½, 17, 13. The two largest fish, 25 and 23lbs., were taken by Billy Mussey, who writes most enthusiastically that he has found the place he has been looking for. I do not know what the total catch at Habbekona Camp will be for June, but the above brief record is better than any I have known in Wisconsin in the past four years. Mr. S. M. Sutherland, of the Chicago party, has wired to Chicago for several of his friends to come on at once. I have sent one party from Chicago, one from Kansas City and one from Milwaukee to this same place. I am told that there are a great many lakes in the neighborhood of Woman Lake, which are very little known and very little fished, no trail being cut to them at all. This is in the great Leech Lake country, which promises to offer for some time good muscallonge fishing to the lovers of trolling. There are many lakes in that neighborhood which fairly swarm with bass. I am promised a complete story of the country by a member of the party, as soon as they return to Chicago. Just at present I do not know of any fishing country which promises so well, at least for muscallonge.

Heavy Fishing at Oshkosh.

It is estimated that over 5,000lbs. of fish have been caught in the Fox River near Winnebago Lake in three days of the past week. Some 4,500lbs. were sold at the fish houses in a day and a half. No such catch has been known at any time, and sportsmen on the river and on Lake Winnebago have met with unprecedented success. It would appear that protection protects at Oshkosh.

Heavy Fishing at Biloxi.

Dr. Robert Mitchell, of Memphis, Tenn., has just returned

from a trip at Biloxi, Miss. In two days' fishing he is reported to have made the following score: Mackerel 33, trout 120, hogfish 60, bluefish 14, sheephead 19, pompano 6, jackfish 10, grouper 35, spadefish 373.

A Woman Warden.

Mrs. Warren Neal, of Neal, Mich., has just been appointed deputy game warden for Grand Traverse county by State Warden Osborne. Mrs. Neal is forty-two years of age and of medium stature. She says she took her office because she wanted to see the fish and game in Grand Traverse county protected, and that the men do not seem to be able to enforce the laws. These are stirring times.

The Invasion of Minnesota.

June 19.—I read with much interest the comment of Grumbler in last week's FOREST AND STREAM upon the invasion of Minnesota by non-resident sportsmen. Of course, there is entire justice, from one standpoint, in the assertion that there can be no invasion of Minnesota as a new sporting country, since it has already been invaded and overrun with shooters and anglers from other regions. The remark should be understood, naturally, as one made only in a relative sense. Relatively speaking, Minnesota, depleted as she is in many respects, has more fish and game than those parts of Wisconsin and the upper peninsula of Michigan which have been the chief resorting grounds of a large sporting contingent from this city and this portion of the West. Into this once magnificent shooting and fishing country there run three great and more than one small railroad, and each of these has done its best to encourage sportsmen's travel into that region. It is impossible to say how many thousand anglers for muscallonge, how many thousands of deer hunters have at one time or another been taken into the upper pine woods country by the advertisements and the solicitations of these railroads. The result has been that the resources of the region have been much curtailed. It is no longer so easy to get a good specimen of the muscallonge, nor quite so safe and easy to kill a deer as it once was, though abundance still remains for those disposed to be satisfied with the half loaf. The railroads have had to do only with the destruction of the fish and game, it not being their concern to replace it, though in some instances railroads have aided in the planting of game fish. It is the business of the railroad always to discover new country a little further on into which to carry the sportsman tourist. Thus far, the wonderful domain of the great West has always offered this new country or this country relatively new, a little further on. The railroads which took the sportsmen into Wisconsin will just as gladly carry them on into Minnesota. I should call it easier now to get a good muscallonge in Minnesota than in Wisconsin, and I should rather go into Minnesota for a deer than to chance it in Wisconsin, though one could be had in the latter State with absolute certainty. For a moose I should have to go into Minnesota, not into Wisconsin, and for trout fishing I am disposed to think that there are streams in upper Minnesota of which we shall in time come to hear as intimately as we now do of those in Wisconsin and Michigan.

Disgruntled Rocky Mountain Guides.

There are guides and guides, and there is competition in guiding, too, even away out in the Rocky Mountains. The guide's season is short, and there seems a general impression among the craft of good guides that a man needs good pay for his short season. I have in the course of trade this week come in possession of letters from two different guides out in Montana. J. W. Schultz, of Kipp, Blackfoot reservation, says that Wabash, who wrote lately in FOREST AND STREAM, is making the regular guides out in his country feel rather sore at the sort of lay-out he offers, and they do not like the idea of an Eastern man coming out into their country and "trying to knock them out of their living." He allows as how Wabash is a pilgrim and plenty recent in the mountains. A second Rocky Mountain man, G. H. Haywood, of Red Lodge, writes still more explicitly concerning Wabash. He allows that Wabash is new in the hills, and does not love his methods of trade in the guiding business. Mr. Haywood says he can't compete when it comes to working for nothing, and he goes on to add that he has a good deal of correspondence from parties wanting to go into the mountains, but they all want to know about the price the first thing. He does not think the outlook very good, and remarks with comfort that he is glad he has other ways of making a living, though he has a fine outfit and knows the country. He says, "I won't bother much with this sort of thing, and the folks can take it or leave it, as they like." Both the above guides inveigh against pilgrimism in general, but more especially and particularly against pilgrimism in guides. And thus endeth the first chapter. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Ontario Fish and Game Notes.

BELLEVILLE, Ont., June 28.—Recently a doe gave birth to a fawn in a barnyard in the township of Cashel, one of the northern townships of this county. The mother stayed each night with her offspring, which could not get out of the fenced enclosure, and the farmer kept the fawn, which is now thriving. A very large bear, which had been helping himself to live pork in the same locality, was trapped and killed a short time ago.

Bass fishing has been but poor in the Bay of Quinte up to date, owing to the immense number of shad in the bay.

Thomas McDonald, a fisherman who lives a few miles east of this city, has made a bass pond out of a disused stone quarry in which is a never-failing spring. The pond is about 100ft. by 75ft., and its depth is from 8ft. to 11ft. Last spring Mr. McDonald put fourteen bass from the bay into this pond and now there are hundreds of thousands of fry in the pond. R. S. B.

The Nepigon.

PORT ARTHUR, Can., June 26.—Mr. S. H. Kerfoot, of Chicago, and Mr. J. B. Kerfoot, of New York, have returned from a two weeks' trip up the Nepigon. They report very good fishing, even better than they expected for the early season, as they were the first tourists to go up the Nepigon. They got several large fish, the largest 5¼lbs. and 5½lbs. each. They were delighted with their catch of Nepigon trout, and intend to come again next season.

Caribou are getting quite plentiful (since the closed season) on the North Shore of Lake Superior. The east bound Canadian Pacific Railway express killed a large buck, which ran on the track ahead of the engine, on Monday last near Nepigon station. Caribou are often seen by the engineers along the railroad. JOHN E. NEWSOME.

Where New Brunswick Trout Abound.

EDMUNDSTON, New Brunswick.—*Editor Forest and Stream:* Noticing your request to persons knowing of good hunting and fishing localities, I will say a few words relative to the merits of this way down east section of the country in regard to the chances here for these two sports. We have many lakes, rivers, streams and brooks near by, all well filled with brook trout, and the large waters have large fish. Our woods contain moose, caribou, deer and bear, which any one can secure some of in the proper season if they are good on the hunt. As for trout fishing, a gentleman with me last year took thirty-two fish (all above 2lbs., the biggest 6lbs.) in an evening and morning, about seven hours fishing.

We have had a few of your people here who stumbled on us by chance, and those have come back again like the birds year after year. They tell no tales out of school. Years ago—it must be eighteen—one of the celebrated lawyers of Philadelphia got me to pilot him, his wife and son for thirty days. The old man—he must have been sixty then—told me that that was his thirty-eighth annual fishing trip, and that he had fished in nearly all the available waters of the Northern States; but that even in their young and best days, the Rangeleys and Adirondacks could not begin to yield trout like the Temiscouata and its branches. I saw him take three trout at one cast, the whole weighing 10½lbs. They remained the thirty days; their boy gained 1lb. in weight for each day's stay. Seven years this man came, until old age stopped him. I once said to him: "You will likely tell some of your friends about your fine sport, when you get back?" With a smile on his grand old face, he answered: "Oh, no; let them find out for themselves."

I have been guide here for twenty years, and am getting too old to follow the business any longer; and, as I have dearly loved the sport, and do yet, it also pleases me to point out to others where and how such sport may be attained. This is no railroad, steamboat, hotel or any other kind of an advertisement, but is just for those who desire and mean to go to the place where fish and game are plenty.

S. J. RAYMOND.

New Jersey Coast Fishing.

ASBURY PARK, N. J., July 2.—I have just returned from a trip to Barnegat Bay and find the conditions there most promising. Weakfish are abundant and are taking the hook freely. Night fishing gives the best results, as then the waters are not disturbed by the passing of boats, and general quiet is the order of affairs.

Bluefish are in the bay in prodigious numbers; perhaps never before has the condition of things been more favorable to the angler. Although they are not taking the squid as freely as may be desired, still chumming for them with menhaden is productive of the best results. I saw one party who returned yesterday with a catch of sixty-one fine fish, weights 3½ to 6lbs. each. The bluefishing has inspired netting for menhaden, which is unlawful at this season of the year, and complaint was made to me yesterday that great quantities of weakfish were taken in the drift-nets used for menhaden. If this is a truth, the matter should be at once inquired into, as the angling interests of Barnegat Bay are of too pronounced a type to tolerate any netting interference. I have arranged for a trip during the ensuing week, taking in Tom's River, Cedar Creak, Forked River and Sedge Island, and will report my luck to FOREST AND STREAM. LEONARD HULIT.

The Rangeleys.

ANGLERS' RETREAT, Middle Dam, Me., Juno 27.—*Editor Forest and Stream:* I am once again with "mine host" Coburn of this famous resort, and though the weather conditions have been most decidedly against fly-fishing we have had good sport, and obtained all the trout we wished to eat, and our ambition ceases when we reach that point in angling. My only companion on this trip is Dr. L. T. Foss, of Boston, and it is our purpose now to camp from B Pond through the most interesting parts of this beautiful country. Our trip will extend through nearly six weeks, and I shall have a fairly good chance to study recent guide legislation and its workings, so far as we see it. Thursday last, with Steve Morse for guide, we dropped down to head of pond in the river, where I succeeded in placing a 4 and a 2½-pounder to my credit. I believe that when we have some warm weather we shall have some fine fly-fishing here at the dam and at pond in the river. Shall be pleased to send you all interesting facts. J. W. B.

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

SCHOOLING THE DOG.—VI.

As the puppy's mind is immature and undisciplined, it is better to begin with the simplest parts of his education, both for the purpose of developing his mind and the establishing of mental discipline. It is extremely difficult at first for the puppy to understand the simplest teachings, and also it is impossible at first for him to concentrate his mind intently on any one subject, therefore the trainer, when he commences the training, will find great difficulty in holding the puppy's attention, and in particular if he makes the lesson at all uninteresting. He may not note this fact, and therefore may make the mistake of condemning the puppy as being stupid under such circumstances.

From play, wherein the puppy joins and romps as he pleases, hardly any fatigue follows; but when he is held down closely to the study of one idea for a continued length of time, he suffers a great deal of nervous loss, becomes more or less overheated, confused, and painfully wearied. Being so extremely fatiguing, the first lessons should be short and simple. After a time the mental training will produce mental strength and stamina, and long lessons can then be given without distress to the pupil. The powers of the mind are then so well in play that the most difficult parts of the training are learned with greater ease than were the simple beginnings. In these traits of the puppy, as they relate to the matter of learning, they are not unlike those displayed by the child in its first similar attempts. Study is foreign to every instinct of the young, child or puppy, and, if study it must, the result is weariness, confusion of ideas to a greater or less degree and a pronounced dislike to studying at all. And yet, the studies of the child are for his own personal gain and advantage in life, while the puppy is required to learn things which will be applied solely to the advantage of his master

When a lesson of any difficulty is ended, all further attempts at it should also be ended till such a time as the next lesson begins. If the trainer commands the dog to do something under circumstances wherein he cannot enforce obedience, and the dog then escapes or succeeds in disobeying, a troublesome factor is thereby introduced; for it being to his own profit he learns the advantange of disobedience to himself and generally refuses afterward whenever he can do so, sometimes permanently, but at least until such time as discipline has become habitual. Some of the lessons, therefore, need to be given in a room or other inclosure from which the dog cannot escape, as will be fully described in proper place.

During the months of the pupil's puppyhood, before formal training begins, a few of the more simple orders may be taught, such as "Come in" and "Go on." The latter is taught easily by associating it with the act of freeing the puppy from his kennel, or by taking him on a chain into the fields, then unchaining him and at the same time giving him the order, "Go on." He would "go on" then whether the order was given or not, and this is the reason why the order is so easy to teach and why it may be taught when the pupil is still a tender puppy. By associating it with the act of going on, the puppy soon learns its meaning, and if he is good for anything he takes unbounded pleasure in a command which denotes that he is at liberty to romp at his own free will.

"Come in" is not so easy to teach as is "Go on." The will of the teacher as made known by this order comes in conflict with the will of the dog. The latter is rarely inclined to give up the pleasure of free romping or taking his pleasure in his own way, so concerning the command "Come in!" force is sometimes necessary to secure the required obedience. Still, force should not be applied till the formal training begins. It doesn't matter whether the puppy obeys perfectly or not before that time. However, it is necessary to teach thorough obedience to the order when the proper time has come for it. No slovenly or reluctant response to the command should be tolerated. The dog should be required to come in promptly and directly, and a pat on the head and a kind word when he does so will result in his coming in cheerfully if he has any amiability in his nature. And yet, easy as it is to teach a dog to come in promptly to command by voice or whistle, there are few orders so commonly disobeyed. At field trials where one would expect to see the greatest perfection in the matter of obedience, but where one doesn't see anything of the kind, it often is a most laborious task for a handler to get control of his dog in a heat or at the end of it, and many find it necessary to keep their dogs on chain constantly to prevent them from breaking away at such times as they desire them to cease work. All this shows rank neglect of the necessary discipline. The handlers of such dogs have been satisfied to get them to come in after such fashion as it could be done each time in any sort of slip-shod way, and neglected the more troublesome but efficient method of teaching the command specially till it was thoroughly established.

If the dog is self-willed or sulky or over-eager in his enthusiasm, he may require some punishment to make him come in promptly. Most trainers punish the dog in the field with the whip for disobeying this order, and thereby increase instead of lessen the trouble; for, if, when the dog comes in to order he receives a whipping, he will come in still more reluctantly the next time, when he fancies that to obey is an act which ends in pain. It is quite a stupid expectation on the part of a trainer that, after whipping a dog for not coming in with the desired degree of obedience, he will come in with greater promptness the next time, with a possible whipping in store as a reward for coming in at all. With some amateurs the whip is the first and last appeal. How dogs perform even so well as they do under such stupid treatment is a source of wonder, yet they, in time, seem to learn what is desired and what is the proper act to adopt to avoid punishment, if the trainer is not too severe or too muddled or too inconsistent to permit of any fixed method.

If force is necessary, nothing is better for the purpose than a spike-collar. The punishment, when the collar is used, is applied to the dog when he is in the act of disobedience and away from his handler. He associates it then with the act of disobedience. When he comes in and is whipped, he associates such punishment with the act of obedience. When he comes in from the punishment of the collar the trainer can pet and praise him, and thus distinctly indicate that he has done right. With the whip, this is impossible. The collar, thus, is distinctly associated with the act of disobedience; the whip, with the act of obedience. As may be readily anticipated, the one is promptly effective, establishes intelligent obedience, and is lasting in its effects; the other is confusing, inflicts pain with no intelligent cause for it, and never accomplishes what is desired in the finished manner necessary for good performance.

If the dog will not come in with the promptness necessary, put the collar on his neck. Tie 20 or 30yds. of rope to it. The dog may attempt to run away. Let him have his flurry at the end of the rope till he becomes convinced that he cannot escape. Make no attempt to teach anything till he has become quite reconciled to the collar being on his neck and till he has given up struggling. This may require two or three different lessons more or less in itself. At length when the collar has ceased to alarm him, give the order, "Come in," and pull him in with the rope at the same time. Bring him quite up to within reach of the hand and pat and praise him as if he had done a fine thing of his own motion, and wait till he has recovered his composure. A proper calmness and deliberation adds much to the efficacy of the lesson. Hurry and unnecessary violence do much to retard the purpose of the trainer in this and all other branches; the trainer then should walk away to the length of the rope and repeat the order, and the act of pulling the dog in. In a short time the latter will observe that he is punished when away from his trainer and he will follow him closely so that he cannot walk away from him. This should not be permitted. The

trainer can correct it by driving a short peg in the ground and tying the dog to it, 2 or 3ft. of the rope nearest the collar being used for the purpose. When the trainer orders the dog to come in, he pulls on the rope thereby pulling the pin from the ground, and if the dog obeys he thus is not punished; for the pin being pulled out he cannot be punished by pulling on a taut rope, and if he disobeys the trainer pulls him in as before. This is continued till the dog will obey promptly and till obedience has become habitual.

When the collar is taken off, a number of lessons should be given in a room or inclosure where the dog cannot escape. So long as he shows the slightest hesitation to obey or inclination to escape, so long should the lessons be persisted in.

At length obedience will become a habit, and the dog will not have the slightest inclination to disobey. Next, the lessons should be given in the open field. If there should be any disinclination at first to obey promptly in the field, the collar should be applied in the same manner. Once this training is thoroughly done, it is permanent, and amply compensates for the little extra trouble required to do it right.

The reluctant and imperfect obedience given to noisy orders to come in are in painful contrast to the prompt, quiet obedience given to the lightest notes of the whistle or lowest tones of the voice which the dog can hear, when he is thoroughly trained to come in with the aid of the collar.

Modern Dogs.

A NEW edition of "Modern Dogs of Great Britain and Ireland," by Mr. Rawdon B. Lee, is recently from the press. Sporting dogs have two volumes devoted to them, a total of 751 pages. The different breeds are illustrated by the masterly art of Mr. Arthur Wardle. The work contains a vast fund of valuable information concerning the past and present of each breed. There is not a line which is not either interesting or instructive, and oftenest it is both. The author's aim is to tell about dogs, and not to fill a certain space. Besides the description of the physical characteristics of each breed, and the scale of points so formidable in appearance and yet so little in worth, much interesting historical information is given concerning each breed, and the doings of the most distinguished performers in the competitions of bench and field.

POINTS AND FLUSHES.

The date of closing the Derby entries of the Manitoba Field Trials Club has been extended to July 12.

Joseph D. Shotwell, paying teller of the Bowery Savings Bank, New York, died on Sunday last at Orange, N J. The immediate cause of death was apoplexy, though he had been ill a long while. He was an officer of the Collie Club many years. George Laick died recently at Tarrytown, N. Y. He was famous as a beagle man, and he did much to advance the general recognition of the beagle as a sterling and pleasing worker afield.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

WHEELING NOTES.

IN New England and the older parts of the country abandoned railroads are sometimes found. The road-beds of these railroads are constructed with gradients that would furnish luxuriant riding for cyclists used to the ordinary carriage road, and, in many cases, a good surface can be applied at a very slight expense, thus making model cycle paths. The abandoned railroad of the Reading Iron Company, leading from Danville, Pa., to Cherry Valley, will be so utilized, and when finished will prove a model path in every respect.

In Paterson, N. J., the street sprinklers are notified that they will lose their jobs if they do not leave well enough alone and go on sprinkling and re-sprinkling till the streets are muddy. Street sprinklers have long been in the habit of sprinkling not wisely but too well, but it has remained for the present cycling era to put a stop to the waste of city water and a condition of the streets which is only in degree less undesirable than dust. The Paterson authorities also show their level heads by ruling that streets must not be sprinkled on damp days or other days when there is no wind and dust, and by making provision for unsprinkled strips at the sides for the use of wheelmen and wheelwomen.

The cycle path between Port Jefferson and Patchogue, Long Island, has been completed. The path is fifteen miles in length, and crosses the island at about the center from the Sound to the sea. Port Jefferson is opposite Bridgeport, Conn., and the path will be the means of introducing Connecticut riders to the good roads and other attractions of the south side of Long Island.

Cold baths are good in moderation, but they should never be taken immediately after a fatiguing ride. The greater the exertion the greater the waste of tissue which must be gotten rid of by the pores of the skin. A cold bath closes the pores and puts a check upon this relief, whereas a warm bath would have had a beneficial effect in freeing the system of the collected impurities. After a cold bath the heart is depended upon to bring about a reaction. When the heart is tired by the effects of a long ride it may not be strong enough to bring about this reaction, and the blood and waste material may not be brought to the surface. Internal congestion follows, with various unpleasant complications which in some cases have been known to culminate fatally.

If the wheelman has any doubts as to the propriety of taking a cold bath after exhausting exercise he may decide by testing the rate of his pulse. If this is normal cold water may be used, but otherwise it would be very injudicious to risk the shock. As a rule, cold baths are advisable only when the cyclist's vitality is at the maximum, while at other times tepid or warm baths are to be advised, with perhaps a cold sponge or shower bath at the end as a stimulant and preventive of cold.

The League of American Wheelmen was organized at Newport, R. I, Memorial Day, 1880, and is therefore something over seventeen years old. It has now more than 80,000 members, well organized and capably officered, and is a power in the land for the good of the sport which it represents. Wheelmen in general owe much to the L. A. W., and they can most fittingly acknowledge the obligation by sending in their applications for membership and subscribing to its principles.

To meet the demand of angling wheelmen, Messrs. Abbey & Imbrie, New York, have put upon the market a special bicycle fishing rod. The rod is made to fit within the diamond of the bicycle, and is provided with an extremely neat and well adapted carrying case, which is strapped to the frame at three points. The case contains a roomy pocket, which will hold a 100yd. multiplying reel or bait box or any small articles an angler may wish to carry. Bait and fly-rods are made in five pieces, of lancewood or split-bamboo.

Many bicycle riders with Spartan-like fortitude deny themselves a drink when parched with thirst. They argue that when one once begins to drink on a hot day he must keep it up, for the more he drinks, the thirstier he becomes, his last state is worse than his first. But it is possible to have too much of a good thing even in abstinence. Thirst, when the wheelman rides with his mouth closed, is an indication of a demand on the part of nature to replenish an exhausted supply, and when the demand is sufficiently pressing, headaches and other indications of impaired vitality are likely to follow the refusal to heed it.

Dr. Lucas Championière, of Paris, an eminent authority, recommends, during exercise, as much drink as the cyclist can comfortably swallow, but no solid food. During violent exercise the stomach is generally not in fit condition to receive food, and the rider should always rest before eating. But with drinking it is different. Here the waste in hot weather is enormous, and it is very essential that the supply be frequently replenished Of course, sweet drinks and stimulants are not recommended, and it is advisable to sip rather than hastily swallow the liquid.

A good many years ago some popular proverb compiler devised the couplet beginning, "If wishes were horses beggars would ride." It was very well known that wishes were not horses and that beggars did not ride, and the truth of the couplet being so apparent, it had a remarkable run.

All this was before the days of selling bicycles on the installment plan. Nowadays if wishes are not horses, they may be bicyles, and the beggars ride as well as the best of us. Cases where people are too poor to pay rent and put their landlord off because "Pa has to pay for his new bicycle," are common enough, and it is well known that such people will submit to being evicted rather than give up their highly-prized wheels.

The ease with which a bicycle may be secured is illustrated by the story of a Hartford man who hadn't even enough ready money to pay the first instalment. He had, however, credit at his grocer's; so he went there and bought a barrel of flour, some sugar and other standard articles "on tick," sold them for spot cash to the first purchaser, and thus raised money for the initial payment on his wheel.

The poor man rides while his creditor walks.

Reverse the wisdom of one age and you have made a prophecy that will see its fulfillment in the next.

Users of a certain style of spring seat-post complain that the nut which holds the spring in position has a tendency to work down and fall into the tubing of the bicycle. This can be remedied by fitting a hollowed cork tightly into the post below the nut.

A fortune of comfortable proportions awaits the man who invents a practical and economical nut lock. There is a vast field for such an invention among the railroads, bicycle builders and manufacturers of all kinds of vehicles and rolling stock. Although numerous patents have been taken out for self-locking nuts, nothing practical seems to have been perfected that will stand the vibration and jarring incident to travel

To be successful the mechanism must be simplicity itself, and at the same time compact and neat.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

THE YACHT RACING UNION OF LONG ISLAND SOUND.

Racing Circuit.

June 26 to July 7.

Stamford Y. C. Annual Regatta.

STAMFORD, CONN.—LONG ISLAND SOUND.

Monday, June 28.

The second race of the circuit was that of the Stamford Y. C., its annual regatta, on Monday. The course was a 10-mile triangle on the Sound, starting off Stamford Harbor, the flagship Halcyon, steam yacht, Com. Howard C. Smith, carrying the regatta committee and marking the weather end of the line. There was plenty of wind, a good thimble-header breeze from S.W., making a beat over the first leg, with a reach over each of the other two, with sheets slackened and balloon jibtopsails set on the second leg, and sheets in on the third. None of the schooners were present, the largest yachts being Wasp and Syce, in the same class, Wasp allowing 3m. 50s. over the 20 miles, two rounds of the triangle. Surprise sailed alone, there being little life in the 36ft. class this year, though it is one in which the older boats have not yet been outbuilt. Surprise is only a good deep centerboard boat, with large cabin house and comparatively heavy construction; nothing of the freak or machine order to scare off the ordinary good all-round boat; but thus far she has found no one to meet her.

The thirties mustered a new recruit, Carolina, this being her first race this season; but Musme and Veda were absent, the former having sprung her mast on Saturday. Only two twenties were present, Shark and Asthore, Mr. Howard, owner of Arauca, sailing as crew of the former.

The smallest starter in the race was a decided novelty, even in this era of freaks. She was apparently an ordinary lap-strake rowboat, quite open, but rigged with one sail, a big jib, after which she was christened—Jib. Her mast was quite long and stepped against the transom, stayed to a bumpkin over the stern and a couple of outriggers on each quarter. She carried a bowsprit about 3ft. outboard, from the end of which to the masthead was a wire stay. On this stay a single triangular sail was set, with a boom on its foot. The rig was in form a lateen, but of course set in a very different manner. If it has any merit at all, this race failed to disclose it, but then the boat was so small and so much outclassed by a 20ft. cat, the winner, that no comparison was possible

As in Saturday's race, three of the thirties each carried a lady, Mrs. Duryea sailing on Vaquero III. and Miss Helen Benedict on Hera.

The start was made at noon, with the Y. R. U. intervals, so that the larger yachts started on the third gun, there being no schooners, at 12:10. Wasp cut the line first, after some preliminary dodging, but Syce had her weather, however, the smaller boat soon dropped astern and then went on starboard tack, out into the Sound, Wasp tacking to windward of her. The thirties made a good start at 12:15, Hera getting to windward of Vaquero as they both luffed sharp around the flagship. Quantuck started alone in her class, but after she had been gone some time the launch Levanter steamed up and stopped on the line with Vaquero I. in tow. They ran on out of the way of the smaller boats, just crossing, and finally sail was made on Vaquero and she started in chase of Quantuck.

All started on port tack, and, the tide being half ebb, worked the Connecticut shore. Wasp gained on Syce from the start. After rounding the first mark sheets were eased to port and balloon jibtopsails set for the run to the second mark, off Lloyd's Neck, where they jibed and stood in on port tack to the line. The larger boats, sailing twenty miles, were timed on the first round:

Wasp	1 30 55	Wa Wa	1 54 26
Syce	1 37 29	Carolina	1 57 11
Vaquero III	1 52 34	Surprise	1 58 34
Hera	1 53 59		

Wasp sailed the same course as on the first round, up shore, but Syce tried a cast for luck, standing across the Sound until off Center Island, and then tacking for the mark. She gained or lost little, being beaten about 6m. on each round. The finish of the fleet was timed:

Volsung	2 09 59	Win or Lose	2 43 40
Dosoris II	2 12 21	P K Pigeon	2 52 13
Madrine	2 15 35	Wasp	2 53 41
Shark	2 18 15	Syce	3 06 46
Pyxie	2 18 33	Jib	3 16 49
Ninita	2 18 52	Vaquero III	3 24 46
Quantuck	2 19 40	Hera	3 26 44
Penelope	2 21 05	Wa Wa	3 32 45
Asthore	2 26 44	Carolina	3 35 20
Ethel	2 35 08	Surprise	3 39 21
Vaquero I	2 40 07		

The instructions were not entirely clear as to the direction of crossing the finish line, and quite a number of the yachts crossed it wrongly, but the results were not affected. The official times were:

CUTTERS—60FT. CLASS.

Start, 12:10:	Length.	Elapsed.	Corrected.
Wasp, H. F. Lippitt	54.97	2 43 51	2 43 51

The regatta committee included Messrs. E. Bruggerhoff, S. W. Smith and A. H. Scofield.

Indian Harbor Y. C.—Special Race.

GREENWICH CONN.—INDIAN HARBOR.

Tuesday, June 29.

THE Indian Harbor Y. C., which on Saturday opened its new club house, at Greenwich, sailed a special race on June 29 for the 30ft. special class, the 25 and 20ft. open sloop classes, the 51ft. yawl class and the 30ft. and 25ft. cabin cat classes. The courses were:

For Special 30ft. L.W.L. Class, Cabin Sloops and Yawl Class.—A. Across the starting line indicated by the committee boat and a stake boat anchored in the harbor off the club house, to the red spar buoy on Carmel Reef, S.W. ¼ W. 1 mile; to the red spar buoy off the western end of Great Captain's Island, S. by W. ¾ of a mile; to a white spar buoy with the letter L painted thereon, S.S.E. ¼ E. 2½ miles; to the gas buoy off the eastern end of Little Captain's Island, N ¾ E. 2¾ miles; to and around the stake boat at the starting line, N.W. ¼ N. 1 mile. Course to be sailed over twice. Distance, 16 nautical miles.

For 30ft. Class of Cabin Catboats and 25ft. Class of Open Sloops.—B. Across the same starting line, to the red spar buoy on Carmel Reef, S.W. ¼ W. 1 mile; to the red spar buoy off the western end of Great Captain's Island, S. by W. ¾ of a mile; to the gas buoy off the eastern end of Little Captain's Island, E.N.E. 1¾ miles; to and around the stake-boat at the starting line, N.W. ¼ N. 1 mile. Course to be sailed over three times. Distance, 13½ nautical miles.

For 25ft. Class of Cabin Catboats and 20ft. Class of Open Sloops.—B. Course to be sailed over twice. Distance, 9 nautical miles. All buoys and marks are to be left to port, except the gas can buoy on Jones's Rocks, which is to be left to starboard. The line is to be crossed from east to west, both at the start and at the finish.

The start was made at 1 o'clock, in a moderate E.S.E. wind. The only new yacht entered was Kit, a Hanley catboat of extreme type, this being her first race; she sprung her mast but finished. The cabin cat Lizzie V., of New York Bay, also started. The fleet reached broad off to the first mark, beat across to the second, and reached home. The times were:

SLOOPS—30FT. CLASS, SPECIAL.

Start, 1:05:	Length.	Elapsed.	Corrected.

Corinthian Fleet—Annual Regatta.

NEW ROCHELLE—HARRISON'S ISLAND

Wednesday, June 30.

THE annual regatta of the Corinthian Fleet of New Rochelle was sailed on June 30 in a reefing breeze from N.W., the yachts carrying from one to three reefs. As on the preceding days of the circuit, the weather was all that could be asked—clear and bright, with a warm summer sun and enough wind to temper the atmosphere. The course was a triangle of 14 miles, for all classes, from off Echo Bay around the West Buoy on Execution Reef and then around Matinnicock and home. The start was made at 2:07, the capsize of the lee markboat on the line causing delay after the committee launch was all ready. Some of the yachts were reefing at the time, and the start was slow and the yachts well strung out. At the same time it was a most picturesque sight, every boat crossing under full headway with sheets well off to port. There was wind and to spare, and spinakers were set with Irish reefs in.

The new 20ft. class showed four starters; the two Huntington boats Skate and Kenue, Shark, and the Crane boat Al Anka. The latter sailed over in the morning from Oyster Bay with a crew of three Boston yachtsmen aboard. She left behind her younger sister Momo, with Mr. Crane himself, the bowsprit of Momo having been broken in shipping her. Al Anka is about as ugly as anything in the class, her bow being a semicircle on deck, and the upper strake being vertical and about 6in. deep, like the end of a ferryboat or the stern of an ordinary steam launch or tug. She is something like El Heirie, but by no means so good-looking. Her stern is cut off square, as in El Heirie. The workmanship is very good, and she shows handsome mahogany sides and bright pine decks. Her mainsail is cross-cut. She steers with a double-ended tiller like a letter Y. She was badly handicapped at the start, but won very easily.

The fleet ran across the three-mile leg to Execution Buoy with spinakers to starboard, then jibed and ran for the Matinnicock mark. At the jibe Norota struck the little Keneu squarely amidships on the port side, cutting her down to the waterline and dismasting her, so that she was towed in a wreck by the steam yacht Emmeline, Norota also giving up.

After rounding Matinnicock the 30-footers laid a straight course for the finish, but the twenties fetched to leeward and were obliged to tack. Al Anka was in the lead, with Shark second, Skate had more wind than she wanted and stopped under the end of Huckleberry Island to tie in a third reef, finally beating home without a jib. The official times were:

SCHOONERS.

Horseshoe Harbor Club.—Annual Regatta.

LARCHMONT—LONG ISLAND SOUND.

Thursday, July 1.

THE Horseshoe Harbor Club, located in the snug little bight to the westward of Pagoda Point, Larchmont, held its annual sailing regatta on July 1. The course was a 5-mile triangle from off Horseshoe Harbor to the striped buoy off Whortleberry Island, then to the striped buoy on the east end of Execution Reef and home, sailed three times by the larger and twice by the smaller yachts. The wind was S.S.W., a moderate breeze over most of the course, but falling light at the finish. The official times were:

SPECIAL 30FT. CLASS.

	Elapsed.	Corrected.
Vaquero III., H. B. Duryea	2 30 40	. .. ..

Caprice, F. F. Proctor, Jr.	Did not finish.		
Don't Think, H. C. Pryor	Did not finish.		

The winners were Vaquero III., Quantuck, Shark, Volsung, Ethel, Punch and Sora.

The regatta committee included Messrs. L. S. Knevals; F. S. Towell and W. Haight.

New Rochelle Y. C. Annual Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, July 3.

THE New Rochelle Y. C. finished up the racing week with its annual regatta, turning out a fleet of fifty yachts, from 51ft. down to 15ft. racing length. Out of the fifteen classes represented, six had five or more starters, a very good showing; in the special 30ft. class and the open and cabin cat classes there were some very interesting contests. The 20ft. class had but three starters, Shark and the two Crane boats, Al Anka and Momo, the latter sailing her first race. Neither Skate, Keneu, Asthore, Montauk, Arauca were present. Volsung had a new rival in the Hanley catboat Kit, a craft of more extreme type, with fuller body and higher freeboard. Minnetonka, the Dyer 21-footer of 1895, sailed as a cat, as she has done in previous races this year.

The courses were two triangles, the longer from off the mouth of Echo Bay to the Gangway Buoy, thence to the Old Hen Buoy and home, 7⅛ miles; the shorter from the same line to the red buoy off Hen and Chickens, thence to the striped buoy off Execution Reef and home, 4¼ miles. The wind was light from the East, giving a beat on the first leg to the little fellows, while the larger ones had a long and short tack on the second leg of their course, along the shore by Sands Point. The start was made at 12:32, but as there were no schooners the second division crossed at 12:42, Syce and Banshee, the others following.

Third Division, 12:47—Hera, Surprise, Wa Wa, Acushla Musme, Pontiac, Carolina, Wahneta, Twilight and Veda,

Fourth Division, 12:52—Houri, Vaquero, Volsung, Kit. Quantuck, Agawam, Onaway, Dorothy, Dosoris II., Jester (yawl), Ola, Celia, Sparrow.

Fifth Division, 12:57—Ethel, Presto, Momo, Shark, Ida K., Al Anka, Melita, Emma S., Ondawa, Grace, Uno, Punch, Edwina, Sequel, Colleen, Stranger.

Sixth Division, 1:02—Sora, Starling, Minnetonka, Addie, Dorothy, Laura Lee.

The yachts of the fifth division, Ethel, Presto, Momo, Shark and Al Anka, were tangled up on the line, the wind being very light at the moment. There was enough breeze outside the harbor to move the yachts at a fair speed and to make a picturesque, if only mildly exciting race. The day was as clear and bright as one could wish, with perfectly smooth water over the Sound. The first round was timed:

Kit	2 09 00	Ethel	2 29 42
Volsung	2 09 20	Sequel	2 30 00
Dosoris II.	2 10 05	Musme	2 30 45
Dorothy	2 10 30	Shark	2 31 15
Al Anka	2 15 30	Caprice	2 32 58
Jester	2 16 50	Surprise	2 33 00
Onaway	2 17 20	Acushla	2 34 25
Momo	2 17 45	Emma S.	2 37 54
Houri	2 19 50	Punch	2 38 15
Vaquero	2 20 40	Ondawa	2 38 28
Syce	2 21 35	Starling	2 39 30
Hera	2 22 30	Sparrow	2 39 30
Wa Wa	2 25 15	Dorothy	2 40 05
Pontiac	2 27 20	Banshee	2 41 00
Quantuck	2 27 35	Dora	2 41 34
Presto	2 27 45	Melita	2 42 25
Colleen	2 27 50	Agawam	2 44 10
Celia	2 29 40	Grace	2 44 45

On the first leg of the second round Kit, after turning almost even with Volsung, stood off shore, while Volsung, Dorothy and Dosoris II. held the other tack close in by Premium Point. These three lost the wind while Kit caught a light breeze and made a lead of some seven minutes on Volsung; the latter, however, finally caught and passed her. Al Anka had led her class from the start, finishing the round with a good lead on Momo, Shark being hopelessly astern. On the windward leg Momo crept up and passed Al Anka, finally beating her. The second round was timed:

Syce	3 46 29	Houri	4 18 10
Pontiac	3 58 17	Shark	4 19 29
Hera	3 52 48	Addie	4 23 50
Minnetonka	4 01 45	Colleen	4 25 35
Wa Wa	4 04 30	Banshee	4 26 18
Musme	4 05 03	Waneta	4 27 51
Momo	4 07 54	Presto	4 28 03
Surprise	4 03 26	Jester	4 37 03
Carolina	4 08 40	Sequel	4 39 06
Alanka	4 09 15	Quantuck	4 43 52
Ida K.	4 11 58	Edwina	4 51 53
Acushla	4 12 15	Sparrow	4 52 55
Volsung	4 12 20	Punch	4 53 14
Ethel	4 12 40	Grace	4 53 29
Kit	4 12 50	Agawam	4 53 38
Onawa	4 15 01	Ondawa	4 55 24
Dorothy	4 15 16	Melita	4 55 56
Vaquero I.	4 15 32	Twilight	4 58 38
Dosoris II.	4 16 41		

The wind being light, the third round, provided for in the 51ft., 25ft. and 20ft. cutter and sloop classes, and the 30ft. and 25ft. cat classes, was omitted. The official times were:

CUTTERS—51FT. CLASS.

	Length.	Elapsed.	Corrected.

SPECIAL KNOCKABOUT CLASS.

Agawam, Dunbar Wright	22.74	3 56 38	3 56 38

The winners were: 51ft. class, Syce; 43ft. class, Pontiac; 36ft. class, Surprise; special 30-footers, Hera first, Wa Wa second; 30ft. class, Twilight; 25ft. class, Jester; 25ft. class, Vaquero I.; cabin cats, 30ft. class, Onaway first, Volsung second; 20ft. class, Momo; cabin cats, 25ft. class, Ethel; cabin cats, 20ft. class, Addie; open cats, 25ft. class, Colleen first, Punch second; open cats, 20ft. class, Starling first, Dorothy second.

The race was managed by the regatta committee, Messrs. Chas. P. Tower, P. A. Meyrowitz, J. R. Thomas, J. C. Lippencott and A. P. Weston. The steamer Isabel starting from New York carried a number of club members and guests over the course.

Hobe Sound Y. C.

HOBE SOUND, Fla., June 28.—The Queen had a jubilee last week, so we took advantage of the excuse for a holiday and had a yacht race. The start was made in a gale from N.E., which lulled soon after the first buoy was rounded, and, shifting to the east, made it a free reach to the second buoy and a luff back to the line. It was anybody's race among the four that lived through the gale, there being only 5ft. between the first two to cross the line, and less than two minutes between the first and last in the five miles. The times were as follows:

Start, 3:30	1st buoy.	2d buoy.	Finish.	Corrected.
Gull	3 50 40	4 10 45	4 23 26	0 43 05
Sorogie	3 52 40	4 10 55	4 23 26½	0 43 05½
Wanda	3 51 20	4 11 05	4 24 47	0 46 28
Wenonah	3 48 30	4 10 40	4 25 15	0 47 07
Francis	Ran aground.			
Lorraine	Disabled.			
Mary B.	Capsized.			
Fairweather	Disabled.			
Juanita	Withdrawn.			

The Hobe Sound Y. C. is a new organization, and is officered as follows: Com., R. E. Sergeantson; Vice-Com., C. R. Sergeantson; Purser, H. D. McVean; Meas., C. S. Smith.

We sailed our second race yesterday in a fair sailing breeze and managed to get all the boats around the course without an accident and in pretty fair time. The course is straight away and return, as the Indian River, at Hobe Sound, is only three-fourths of a mile wide. We have the southeast trade wind at this season and our course is laid so we get a beat for one and one-half miles, a run for two and one-half miles and a beat back to the line, one mile. In all five miles. The result of yesterday's race is as follows:

FIRST CLASS.

Start 2:35 P. M.	Elapsed.	Corrected.
Wanda	0 53 20	0 51 08
Gull	0 54 37	0 53 44
Sprogie	0 53 58	0 53 58
Francis	0 56 02	0 54 25
Wenonah	1 02 05	0 59 42

SECOND CLASS.

Start 2:33 P. M.		
Lorraine	0 59 25	0 59 25
Juanita	1 13 40	1 13 01

The next race will be sailed on July 10.

H. D. MCVEAN, Purser.

Winthrop Y. C.—First Sweepstakes.

WINTHROP—BOSTON HARBOR.

Saturday, June 26.

THE Winthrop Y. C. sailed two races on June 26, one in the afternoon, the first club sweepstakes, and one in the evening for the 15-footers. The afternoon race was sailed in a fresh N.W. breeze, the yachts being reefed. The times were:

	Length.	Elapsed.	Corrected.
Whisper, W. H. Stimpson	20.02	1 04 39	0 37 56
Alma, C. A. Henry	23.08	1 07 13	0 43 34
Erycina, E. A. Cook	23.06	1 09 45	0 46 66
Alert, J. R. Hodder	23.06	Disabled.	

The 15-footers also had to reef to the same breeze, their times being:

	Length.	Elapsed.
Floyd, Mr. Gardner	15.00	0 31 58
Black Cat, L. P. Harrington	15.00	0 35 05
Della, Jr., Mr. Kelley		0 41 01

The judges were: Samuel McConnell, Harry Dangel, John McConnell, Jr., Edward S. Sears.

The club has arranged a series of sweepstakes races in the second class, as follows: To be sailed according to the regulations of the club, over the regular courses. Nos. 1 and 2: Saturday, July 3, 3 P. M.; Saturday, July 10, 3 P. M.; Saturday, July 24, 3 P. M.; Saturday, July 31, 3 P. M. Additional dates may be announced later.

An entry fee of $1 will be charged, to be paid to the chairman of the regatta committee on Friday preceding each race. The winner is to have one-half of the total money, second and third prizes in proportion of three-fifths and two-fifths of the remainder. The regatta committee will add a sufficient sum to the entry fees to guarantee the cash prizes to be at least $5 for first, $3 for second and $2 for third.

Vice-Com. A. W. Chesterton has offered a prize cup for the winner of the highest percentage in these races.

Gravesend Bay Y. C. Handicap Race.

BATH BEACH—GRAVESEND BAY.

Sunday, June 27.

THE Gravesend Bay Y. C. sailed a handicap race as a part of its cruise to Atlantic Highlands. The handicaps were made up on the basis of the known performances of the yachts, by the regatta committee. The race was sailed from Ulmer Park to Atlantic Highlands in a strong N.W. wind, the times being:

	Finish.	Corrected.
Halcyon	12 23 00	12 23 00
Kelpie	12 44 00	12 28 00
Gael	12 59 30	12 36 00
Sea Gull	1 03 00	12 34 30
Leila	Disqualified.	
Louise	12 57 30	12 27 30
Acorn	12 59 00	12 21 00
Hector	Did not finish.	
Rosalie	1 10 00	12 30 00
Martha M.	12 59 20	12 14 20
Priscilla	1 02 40	12 17 40
Isabel	Did not finish.	
Ariel	1 02 10	12 17 10

Hamilton Yachting.

THE Royal Hamilton Y. C. sailed a race on June 26 for the 27ft. class, Kestrel defeating Hiawatha, and winning the Marguerite cup. In the race for the Greening cup, Koko won from Rosemary and Scallawag.

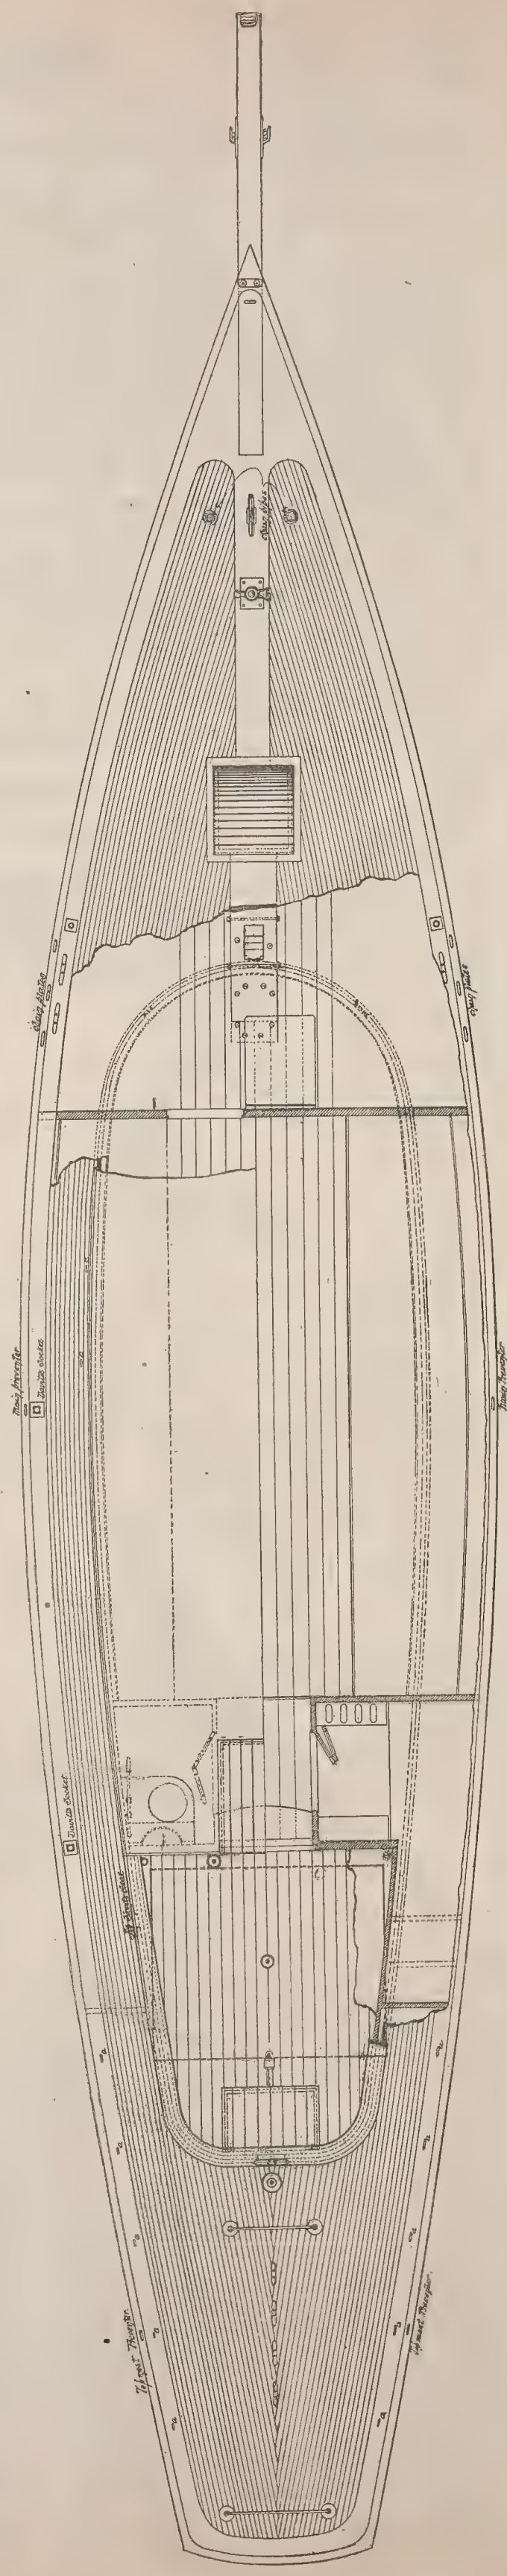
The Bridgeport Y. C., a new organization, opened its club house on June 19. The club's station is on Black Rock Harbor.

Akista.

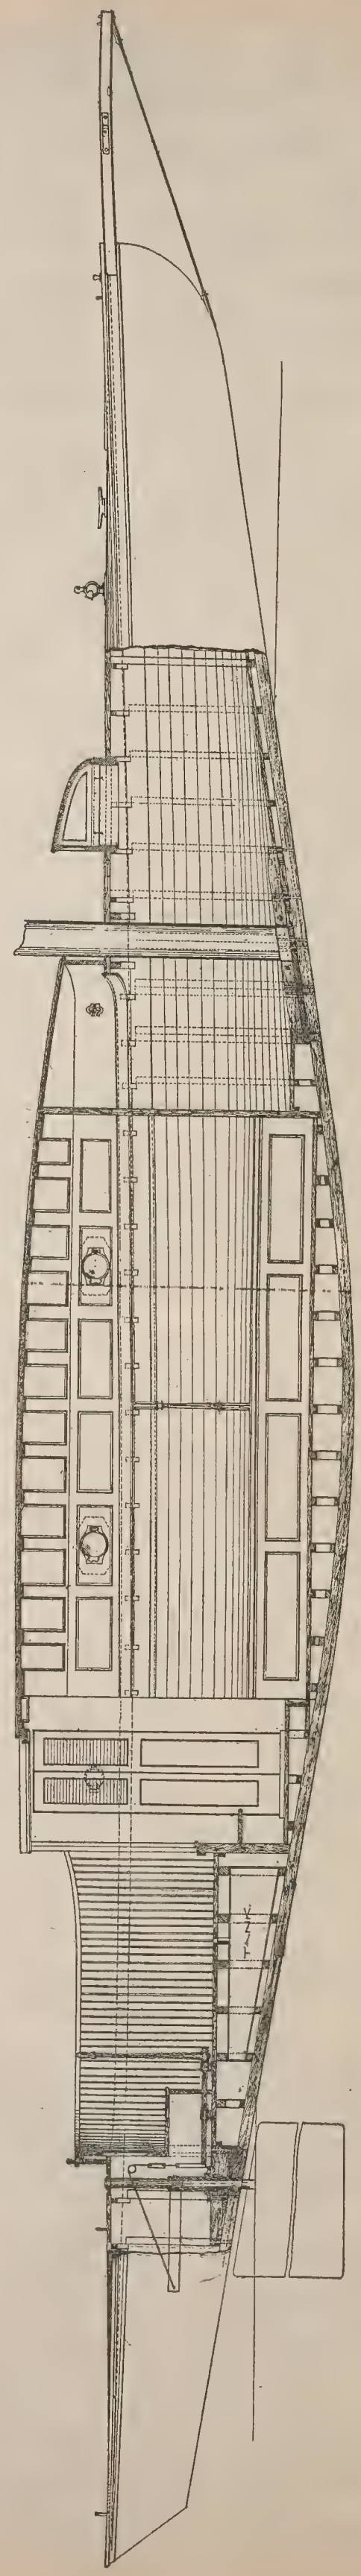
FIN-KEEL 36-FOOTER.

WE are indebted to the designer and owner, Mr. George Hill, measurer of the Atlantic Y. C., for the accompanying plans of the new sloop Akista, built during the past winter by the Crosby Catboat & Yacht Building Co., of South Brooklyn. Though now sailing in all of the races of her class about New York, the yacht was designed primarily for cruising, and is the result of an attempt to obtain large accommodation in a yacht of moderate waterline, small and easily handled rig, reasonable speed and moderate cost. The first thing determined upon was the main cabin, around which the hull was designed according to the following principles: Minimum wetted surface in proportion to displacement; absolutely no angles in any of the lines along which water passes; improved form in the way of increased length and fineness and decreased beam with the increase of heel; practical symmetry of entrance and run, both carried out so as to preserve the form under all conditions. The original idea of such a yacht may be said to have come from an appreciation of what the fin-keel 30-footers have missed being. The form resulting from these principles gives a hull of strong and simple construction, great internal capacity, and with a material increase of useful length when heeled to her ordinary sailing angle. The floor is perfectly flat, making the level lines square across the keel at both ends, the topsides are straight and vertical, the two flat surfaces, topsides and floor, being joined by a curve of circular sweep. The resulting form is easily and strongly built. The lines of the yacht, when heeled to a moderate angle, are very long, fair and easy, and it is expected that she will do her best work when thus heeled. The dimensions are:

Length over all	50ft.	
L.W.L.	30ft.	
Overhang, bow	10ft.	
stern	10ft.	
Beam, extreme	10ft.	3in.
L.W.L.	9ft.	10in.
Draft, hull only	2ft.	
with fin	6ft.	6in.
Least freeboard	2ft.	9in.
Sheer, bow	1ft.	
stern		4in.
Displacement	17,000lbs.	
Ballast, all in fin and bulb	6,300	
Ratio, ballast to displacement	37 per cent.	
Area, midship section	16.25sq.	ft.
lateral plane, hull	35.52sq.	ft.
fin	56.32sq.	ft.
rudder	8.16sq.	ft.
Total	100.00sq.	ft.
Fore side of stem at L.W.L. to		
C.L.R.	150.00ft.	
C.E.	150.00ft.	
Mainsail, area	1,000.00sq.	ft.
jib	250.00sq.	ft.
Total	1,250.00sq.	ft.
Sail area as measured	1,560.00sq.	ft.
Racing length	34.75ft.	
Mast, from stem at L.W.L.	5ft.	
deck to truck	53ft.	7in.
Bowsprit, beyond stem at L.W.L.	15ft.	
Boom	40ft.	6in.



The fin, flanges and bulb are of iron, in one casting, the details being very fully shown in the drawings. The bulb weighs 2,250lbs., the fin 2,900lbs., the flanges 950lbs., and the fillets 200lbs. The keel is of yellow pine, 3×12in. amidships, in one length from scarf of stem to transom, with oak stem sided 5in. The transom, of yellow pine, is 1 3-14in. thick, secured to the keel by two 2in. knees. The frames are of oak, steamed and bent, sided 2in. and moulded 1½in., spaced 12in. and dove-tailed into the keel. At the partners are three frames sided 4in.



The garboards are of yellow pine, in single lengths, 1⅛in. thick, and the planking is of 1⅛in. cedar, with oak sheerstrake and plank sheer. A deep floor timber is carried on every frame in the middle of the vessel. The clamps are 1¼in. × 6in. yellow pine, in single lengths.

The flat floor and straight sides of the design give a large amount of internal space, and practically all of it in a useful form, the floor of the cabin is of course worked as close as possible to the keel and bottom, leaving no stowage space below, but this floor is very wide and the cabin has 6ft. 3in. headroom. The forecastle has plenty of space, and though this is due to length rather than height, there is headroom under the fore end of the trunk, which extends over the forecastle. The main cabin is 12ft. 6in. long, divisible by portieres into four rooms. Abaft it is a toilet room and W. C. to port, and a small room to starboard, each having a berth partly extending aft alongside the cockpit. The cockpit is very deep, although the floor is well above the waterline. Under the floor is a copper tank of 125 gallons capacity.

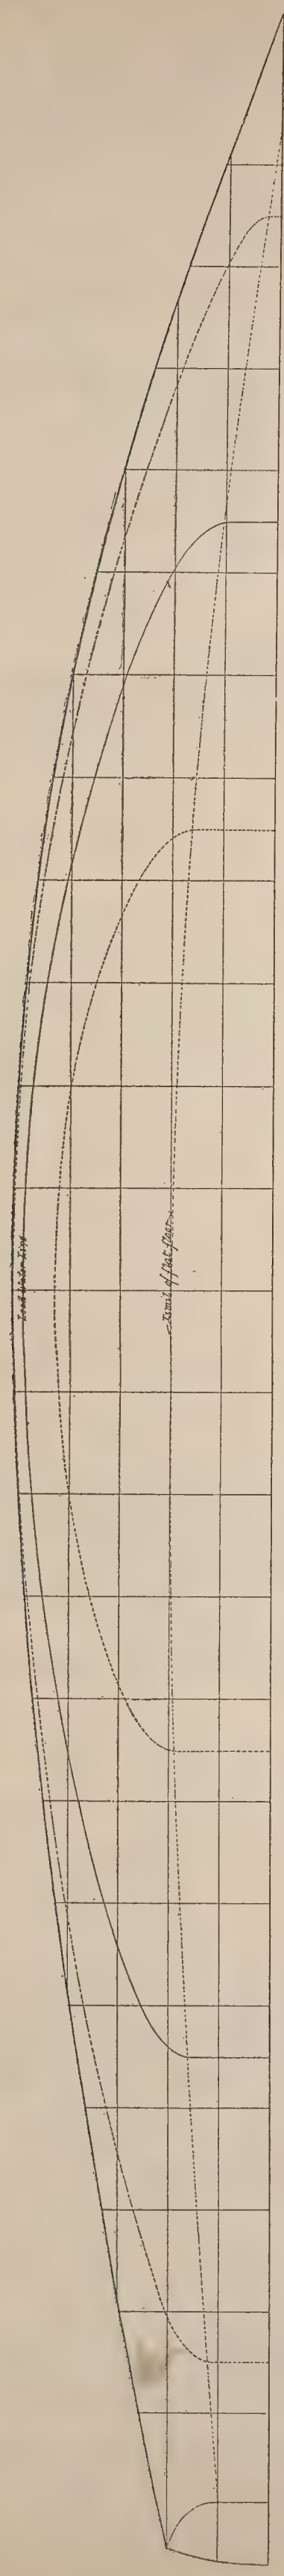
The steering gear is peculiar for a sailing yacht; a vertical thwartship tiller, keyed to a horizontal shaft, with an arm on the after end of the shaft. This arm operates the tiller lines, led over sheaves to the tiller arm on the rudder.

The rig is peculiar both in form and detail, with a leg-o'-mutton mainsail and single jib, supplemented with a reaching jib-topsail. The mast is of rectangular section, 5×9in. in the partners, and tapering to the head. The cap is a bronze casting carrying four sheaves, for main halyard, two spinaker halyards and topsail halyard. These are all of flexible wire rope. The other details of the metalwork are plainly shown in the drawings. The boom is rectangular, 3in. × 6in. at the largest part. The rail plan and details of ironwork will follow next week.

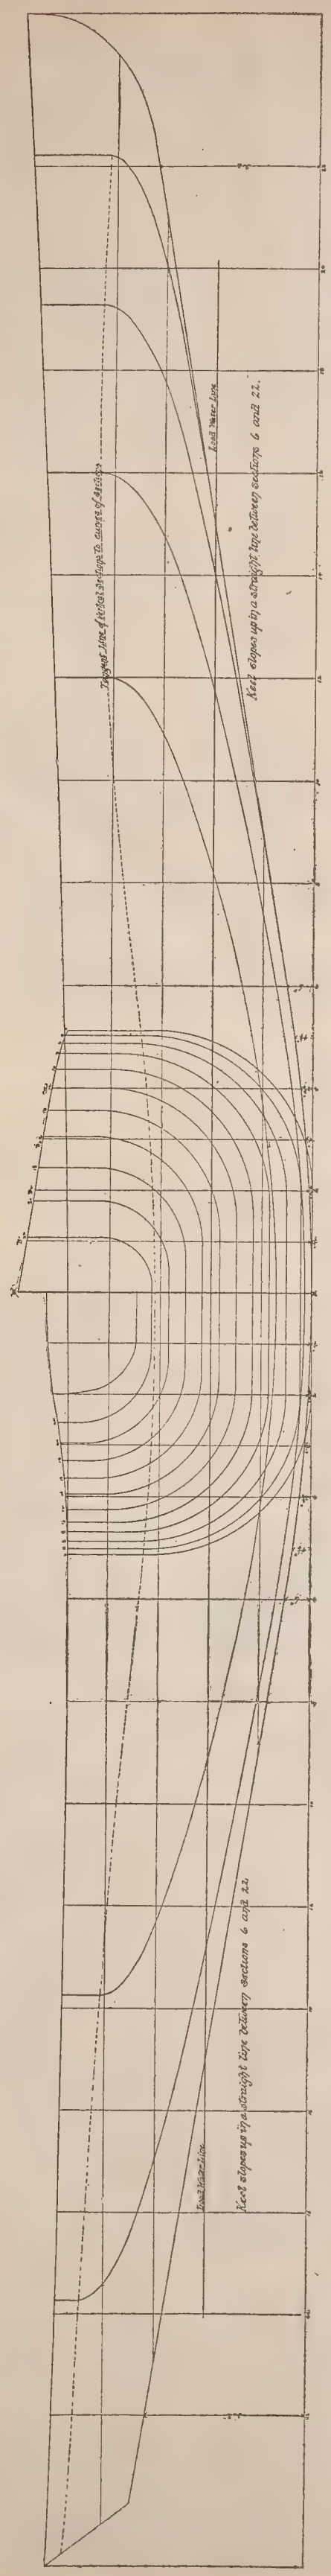
AKISTA—CABIN PLANS.

Minnetonka Y. C.

LAKE MINNETONKA.



Saturday, June 19.



THE race of the Minnetonka Y. C. on June 19 was sailed in a very light breeze from the West, the times being:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS SLOOPS.				
Wizard	3 10 36	5 43 38	2 33 02	2 32 00
Breeze	3 11 05	5 46 02	2 34 57	2 33 11
Cossack	3 15 00	5 50 11	2 35 11	2 35 11
Tartar	3 14 21	5 51 03	2 36 42	2 34 26
Marie II	3 14 38	5 53 34	2 38 56	2 37 25
Charlotte	3 15 00	5 53 41	2 38 41	2 37 02
SECOND CLASS SLOOPS.				
Tomahawk	3 00 26	6 23 43	3 23 07	3 21 21
Beatrice	3 00 35	6 20 18	3 19 42	3 19 42
Sallie	3 05 00	6 20 32	3 15 32	3 11 39
SMALL SLOOPS—ONE-RATERS.				
Gladrene	2 55 00	5 49 05	2 54 05	2 54 05
Pyxie	2 55 00	5 52 35	2 57 35	2 57 35
Answer	2 55 00	6 03 46	3 08 46	3 08 46
Doris	2 55 00	. . . .	. . . .	. . . .
FIRST CLASS CATBOATS.				
Varuna	3 00 04	5 55 36	2 55 22	2 55 22
Pinafore	3 01 39	. . . .	. . . .	. . . .
Katrina	3 05 00	. . . .	. . . .	. . . .

Answer failed to cross the line at the finish, having been struck by a squall near the line and narrowly missing a capsize.

Varuna, the winner in the cat class, is ten years old, while Katrina is a new Petersen boat and Pinafore is also a new craft.

Cruising Fin-Keel designed by George Hill, Esq., and built by the Crosby Catboat and Yacht Building Co., 1897.

AKISTA.

Larchmont Y. C. Annual Regatta.

[LARCHMONT—LONG ISLAND SOUND.

Monday, July 5.

THE Larchmont Y. C. was this year successful in every detail of its annual regatta, which proved to be the most interesting event of the season. The club succeeded in securing as a special attraction both Vigilant and Navahoe, while the owner of Emerald again started her against Colonia. Nearly all of the many smaller classes were well filled. The day was perfect for such a function as a big annual regatta, there was wind enough to make a lively race, and the beat ashore made the club steamer a pleasant refuge for the ladies. Many steam and sailing yachts were under way to add to the spectacle.

The race was started at 11:30, the divisions being timed:

Cutters, Class G., 11:30—Vigilant, 11:30:35; Navahoe, 11:31:44.

Schooners, 11:35—Amorita, 11:35:20; Colonia, 11:35:27; Emerald, 11:36:04.

Schooners, Special Class in Cruising Trim, 11:40—Sachem.

Cutters, 60ft. Class, 11:45—Eclipse, Sayonara.

Cutters, 51ft. Class, 11:50—Syce, Awa and Sistae.

Cutters, 43ft. Class, 11:55—Norota.

Cutters, Sloops and Yawls, 36ft. Class, 12:00—Surprise, Acushla, Sakana, Fidelio, Jester, Pawnee.

Special 30-Footers and 30ft. Sloops, 12:05—Hera, Musme, Wa Wa, Vaquero III., Carolina, Veda, Skimmaug.

Sloops, 25ft. Class, 12:10—Quantuck, Houri, Vaquero I., Celia, Agawam.

Sloops, 20ft. Class, 12:15—Skate, Shark, Al Anka, Momo and Montauk.

Cabin Cats, 30ft. Class, 12:20—Volsung, Dorothy, Kit, Onaway, Dosoris II.

Cabin Cats, 25ft. Class, 12:25—Willada, Punch, Colleen, Harrietta III., Edwina, Ethel, Presto, Grace, Ada, Yankee Girl.

Cabin Cats, 20ft. Class, 12:30—Ione, Sterling, Dorothy and Minnetonka.

The wind was S.W., moderate, with smooth water. The usual club triangles were sailed, to the eastward marks first, a reach on starboard tack. The first round was timed:

Vaquero I.	1 18 27	Sistae	1 44 46
Houri	1 19 05	Edwina	1 46 32
Quantuck	1 19 11	Punch	1 46 30
Skate	1 21 53	Willada	1 47 36
Momo	1 22 14	Surprise	1 48 18
Shark	1 22 20	Frace	1 49 17
Kit	1 22 43	Yankee Girl	1 49 44
Dorothy	1 23 09	Acushla	1 50 44
Al Anka	1 23 10	Vaquero III.	1 50 44
Syce	1 24 08	Hera	1 51 04
Celia	1 24 27	Minnetonka	1 51 23
Volsung	1 25 22	Veda	1 52 03
Dosoris	1 25 55	Starling	1 52 19
Montauk	1 27 35	Musme	1 54 08
Onaway	1 28 02	Pawnee	1 54 25
Agawam	1 31 13	Ione	1 55 41
Colonia	1 34 11	Carolina	1 56 48
Vigilant	1 34 44	Wa Wa	1 57 01
Navahoe	1 36 58	Sakana	1 58 06
Emerald	1 37 33	Dorothy	1 59 17
Norota	1 37 45	Fidelio	2 01 38
Adrienne	1 39 05	Ada	2 10 01
Awa	1 42 02	Skimmang	2 13 31
Ethel	1 42 23	Caprice	2 14 42
Amorita	1 43 05	Jester	2 19 47
Colleen	1 43 16	Sayonora.	2 21 08
Presto	1 44 11	Eclipse	2 32 13
Harrietta III.	1 44 46		

The second round and finish was timed:

Skate	2 20 56	Yankee Girl	3 08 16
Houri	2 22 18	Starling	3 12 23
Quantuck	2 22 29	Ione	3 20 15
Kit	2 23 36	Norota	3 20 45
Dorothy	2 23 44	Dorothy	3 23 49
Vaquero I.	2 40 06	Colonia	3 26 35
Momo	2 24 37	Vigilant	3 28 40
Volsung	2 25 26	Awa	3 30 09
Al Anka	3 26 06	Emerald	3 30 21
Shark	2 37 16	Sistae	3 32 02
Dosoris II.	2 28 39	Navahoe	3 32 42
Montauk	2 31 55	Vaquero III.	3 34 58
Celia	2 39 33	Surprise	3 37 50
Onaway	2 39 37	Hera	3 38 00
Ethel	2 54 34	Veda	3 39 25
Colleen	2 55 21	Acushla	3 40 27
Presto	2 56 43	Musme	3 41 44
Syce	2 57 17	Wa Wa	3 42 39
Harrietta III.	2 58 13	Amorita	3 43 53
Agawam	2 58 45	Carolina	3 43 48
Willada	3 00 55	Pawnee	3 45 00
Punch	3 01 50	Ada	3 47 54
Edwina	3 03 13	Sakana	3 57 07
Caprice	3 06 48	Fidelio	4 01 47
Grace	3 07 59	Skimmang	4 20 11

The final times were:

	Length.	Elapsed.	Corrected.

OPEN CATS—20FT. CLASS.			
Minnetonka, A. B. Alley	19.75	2 36 48	2 36 48
Dorothy, J. E. Sanborn	19.57	. .. ..	. .. ..
Ione, C. Bird	19.68	2 50 15	2 50 05
Starling, F. F. Delevante	19.60	2 42 23	2 42 03

The winners are Vigilant, Colonia, Sachem, Sayonara, Syce, Norota, Acushla, Sakana, Vaquero III., Skimmang, Houri, Skate, Kit or Dorothy, Ethel and Minnetonka.

The racing of Vigilant and Navahoe under reduced rigs and without clubtopsails, was not wildly exciting to those who have seen the big yachts in the Cup and trial races, nor was it in any way conclusive. At the same time they added much to the race as a whole. Colonia defeated Emerald very fairly. Acushla sailed a good race with Surprise, winning by 1m. Vaquero III. again took first place, with Hera second. Houri paid off Vaquero I. for Saturday's race by a win of nearly 2m. Skate won easily in the 20ft. class, but both Momo and Montauk were badly handicapped at the start. The other Crane boat, Al Anka, was third.

There was a hot fight in Volsung's class, Dorothy winning, but subject to a protest from Kit for fouling her at a mark. The race was handled by Messrs. Lovejoy, Wintringham and Coates. The usual festivities, ashore and afloat, attracted a very large number of the club.

Royal St. Lawrence Y. C.—Ross Cup.

DORVAL—LAKE ST. LOUIS.

Saturday, June 26.

THE fifth race for the Ross series for 20-footers was sailed on June 26 over the usual course.

There was a hard, squally N.W. wind and all the boats carried from two to three reefs. The sea was particularly heavy and the fleet got a blowing such as it had not had this season.

Millie got away with a lead, followed by Islander, Maida, Avoca, Glenowen and Rogue, in the order named. Avoca began to go to the front from the start, and was clear of the fleet on the second tack. Millie broke her steering gear, ran back to the club pier and repaired the damages and then went on. Glenowen went up into second place, Islander took third, with Rogue fifth on the windward work. After passing the first buoy of the first triangle no one set light canvas, as the boats had all they wanted under one or two reefs. Maida broke her boom and withdrew before the completion of the first round. The first buoy was rounded as follows:

	Place.	Time.
Avoca	1	4 19 45
Glenowen	2	4 21 15
Islander	3	4 24 25
Rogue	4	4 28 50
Millie	5	4 35 40

On the second round Rogue passed Islander, and this was about the only change in the position of the fleet. Millie was standing up somewhat better than the last time she was tried in a good blow, but was not footing it with the others; in fact, she was not holding her own with the 15-footers of last year, which started five minutes afterward. She withdrew after the second round. The second round was completed as follows:

	Place.	Time
Avoca	1	5 00 25
Glenowen	2	5 01 15
Rogue	3	5 08 20
Islander	4	5 10 35
Millie	5	5 30 40

On the third round it blew even harder than it had before, and there were some particularly heavy puffs, in one of which Rogue lost her spar and her place. Counting by points the result was as follows:

	Place.	Time.	Points.	Total Points.
Avoca	1	5 38 05	24	101
Glenowen	2	5 41 50	21	77
Islander	3	5 55 20	17	68
Rogue	..	. .. ..	11	73
Millie	..	. .. ..	8	36
Maida	..	. .. ..	..	44
Viola	..	. .. ..	..	9

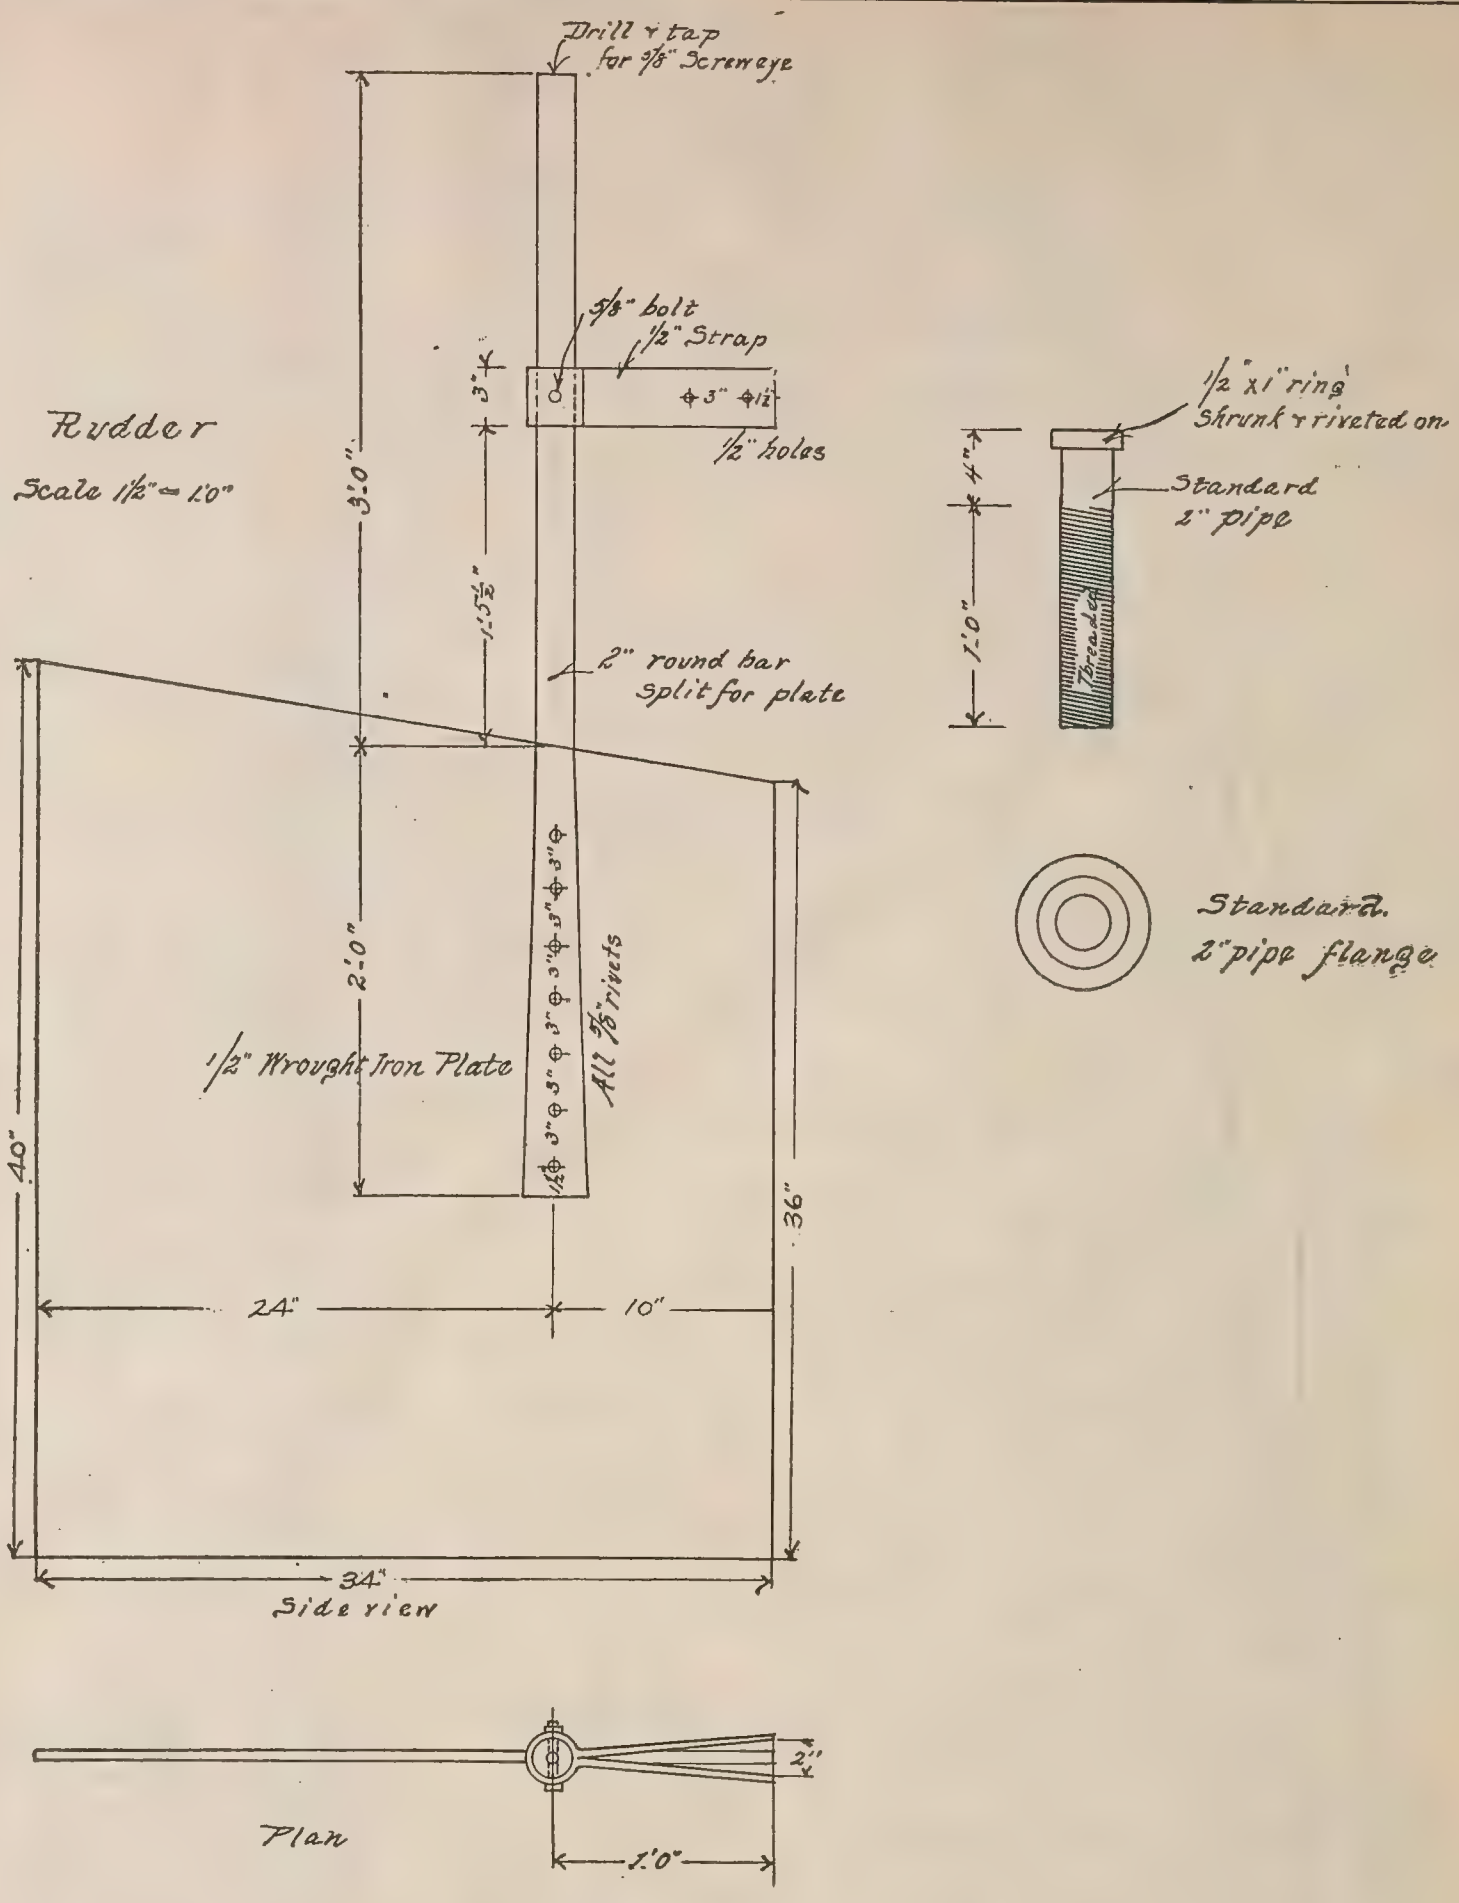
SIR DONALD SMITH'S CHALLENGE CUP.

Thursday, July 1.

THE Royal St. Lawrence Y. C. celebrated Dominion Day by annual races for the magnificent cup presented to the club some years ago by Sir Donald A. Smith, and although Sir Donald is now Lord Glencoe, it is still, and probably always will be, the "Sir Donald Smith Challenge Cup." The cup can be sailed for by boats of the A 35ft. and 25ft. classes, and some of the most exciting and interesting races in the history of the club have been those for it. The cup, by the way, is now a part of the Canadian exhibition of the exhibition of naval architecture, etc., now going on in London.

When the boats were started at 10:57 there was a light but fairly steady breeze from the westward. The lake was smooth, the sky cloudless and it was an ideal day. Unfortunately the 20-footers have monopolized the interests of the racing men of the club to such an extent that some of the best of the larger boats were not entered. Zania, the holder of the cup for two years in succession, was not in the race, and Chaperone, last year's winner, was not started, as a crew could not be obtained for her, the sailing men preferring to reserve their energies for the 20ft. and 15ft. race in the afternoon. The starting boats were;

	Racing length.
Rita, C. O. Clark	28.75
Valda, Robert Lindsay	24.10
Goodluck, —, Hersey	29.40
Waterwitch, J. Paton	....
Butternut, W. D. M. Marler	22.00



All the boats carried all the sail they could get on them. Rita and Goodluck drew away together, Rita in advance, and Valda and Waterwitch fought it out with each other all around the course. The finish was as follows:

	Finish.	Elapsed.
Rita	1 06 35	2 24 35
Goodluck	1 10 11	2 28 11
Valda	1 24 33	2 44 33
Waterwitch	1 25 28	1 25 28

There has been no corrected time declared for the race, the first and second boats not having been measured this year, but the cup has been undoubtedly won by Rita.

The 20ft. and 15ft. class races were started at 3 o'clock in the afternoon. The breeze was still light and true, but it was falling. The first round was a most capital race. Glenowen went away with a lead over Avoca, and they sailed a neck to neck race around the course. Avoca got to windward just before the finish buoy was reached, blanketed Glenowen and took the buoy from her, thus finishing the first round in the lead.

On the second round the wind began to fall steadily and Avoca gradually began to open out a big lead on Glenowen and the fleet. On the reach from the Valois buoy to the outer buoy the wind fell so light that first Avoca and then Glenowen and then the rest of the boats in turn had to go about and stem the current to avoid being carried far below the buoy. The race was stopped after the completion of the second round, there being practically no wind for the latter part of the course.

AKISTA– DETAILS OF RUDDER.

The boats finished in the following order:

	Place.	Points.
Avoca	1	15
Glenowen	2	14
Millie	3	12
Rogue	4	10
Islander	5	8

Three of the 15-footers were started ten minutes after the others. The three boats were Anita, Titania and Viva, and a good race was won by Viva, with a 4m. lead on Anita.

Royal Canadian Y. C.

TORONTO—LAKE ONTARIO.

Saturday, June 26.

LAKE Y. R A RULES

THE Royal Canadian Y. C. sailed a race on June 26 for the 27ft., 22ft. and skiff classes in a strong N.W. wind. The times were:

SKIFF CLASS.

Start 2:50:	Elapsed.	Corrected.
C Archbald	. .. ..	1 11 45
Hayter & Co	. .. ..	1 44 25
E. Wedd	. .. ..	1 20 00
Francis & Co	. .. ..	1 22 45
Morse & Co	. .. ..	1 26 35
E. Apted	. .. ..	1 30 00

W. H Parson's boat capsized.

27-FOOTERS.

Start, 3:00:		
Mirage	1 32 10	1 32 08
Silvie	1 37 05	1 36 44
Wona	1 39 10	1 39 10
Wa Wa	1 42 25	1 40 38

22-FOOTERS.

Start, 3:10:		
Frou-Frou	1 35 39	1 35 39
Kittilou	1 37 38	1 36 37

Lady Adeline carried away mast at start. Waif capsized.

Cohassett Y. C. Third Championship Race.

COHASSETT, MASS., COHASSETT HARBOR.

Saturday, June 26.

THE Cohassett 15ft. class sailed a good race on June 26, the wind being fresh N.W. The times were:

Start 3:20:00.	Finish.	Elapsed.
Delta, R. B. Williams	5 02 31	1 42 31

Mermaid, W. R. Sears	5 12 02	1 52 02
Sea Gull, F. Higginson	5 13 42	1 53 42

The Seawanhaka Trial Races.

THE trial races of the Seawanhaka Corinthian Y. C. for the selection of a yacht to represent the club in the races for the possession of its international cup, now held by the Royal St. Lawrence Y. C., of Montreal, will be held next week, beginning on July 12 and continuing on succeeding days until such a test has been made as will enable the race committee to select the best boat. Among the competitors will be a 20-footer from Lake Wawasee, designed by her owner, Dr. H. S. Hicks, of the Indiana Yachting and Boating Club. Mary, as she is named, arrived this week at the Gas Engine and Power Co.'s works, by rail, her owner and one of his crew, Dr. G. E. Hunt, preceding her. She is a centerboard boat, about 29ft. over all and 8ft. beam, with gaff mainsail.

Burgess Y. C. First Championship Race.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, June 26

THE first championship regatta of the Burgess Y. C. was sailed off Marblehead on June 26 in a fresh N.W. wind, the times being:

CLASS A	Start.	Elapsed.	Corrected.

YACHTING NEWS NOTES.

HELVETIA, steam yacht, C. O'D. Iselin, was struck by the tug Theresa Verdon in the East River on the afternoon of July 3. The yacht was bound up the East River, carrying her owner and some friends from business to his home at New Rochelle. The tug was bound down, the two being in close neighborhood to two carfloats and other passing craft. It is claimed that the tug left her course and sheered across the yacht's bows, the latter striking her head-on. The tug was uninjured, but the entire bow of Helvetia was stove in. Her collision bulkhead was uninjured and she was able to run to Bay Ridge. The responsibility for the disaster will be determined by the official inquiry.

Vergana, steam yacht, F. H. Benedict, designed by Gardner & Cox, was launched at Marvel's yard, Newburgh, on July 3. Her owner was present, on his old yacht Vision, and his father, E. C. Benedict, also came up on the Oneida with a party. The yacht was christened by Mrs. Benedict.

A protest has been made against the winner in the Michigan City race of the Columbia Y. C., of Chicago, by Vice-Com. Ramsdell, sloop Blade. While Blade was under sail prior to the preparatory gun, Vananna and other yachts towed to the line and cast off just before the start, as it is claimed, going over with the headway derived from the tow. The protest is made for the sake of enforcing the universal rule on this point.

Llewellyn, steam yacht, Alfred Carr, ran aground off Davenport's Neck, New Rochelle, on the evening of July 1, and was badly damaged. She was bound from New York to Oyster Bay, with Mr. Carr and friends onboard, and ran too close inshore. Mr. Adrian Iselin's launch was near by and took off the owner and guests. The yacht was lifted by a wrecking derrick and taken to the Seabury Works at Morris Dock. She was running near her top speed at the time.

On June 29 Miss Helen Woodruff Smith, daughter of James D. Smith, New York Y. C., was married on board of the schooner yacht Viking, the groom being Homer S. Cummings. The yacht left Stamford, the home of Mr. Smith, early in the morning, convoyed by the steam yacht Halcyon, Com. Howard C. Smith, Stamford Y. C. both anchoring off Larchmont, where the groom and his party came aboard. The ceremony, performed by the Rev. Dr. R. H. P. Vail, of Stamford, took place on the quarterdeck of the Viking, under a bower of roses. The Halcyon then took the schooner in tow, and they returned to Stamford. where a reception was held at Mr. Smith's country place, Linden Lodge. Mr. and Mrs. Cummings sailed on the Normannia for Europe on July 1.

Theresa, steam yacht, G. Sidenberg, has been chartered to R. A. C. Smith, of New York, through the Gas Engine & Power Co.'s agency.

Franklin Bassford, the marine artist of New York, committed suicide on June 28 by shooting himself on board of Lariva, an experimental launch on which he had been working for some time. Mr. Bassford was best known as a painter of yachts and vessels, but he was also deeply interested in designing, having many theories of his own. He gave much attention to model yachts, and for some time contributed articles on this subject to *Outing*. The launch on which he met his death was designed by him, being 45ft. over all, 30ft. l.w.l., and 11ft. 9in. beam, with an Alco-Vapor motor. Through some ideas of his own, Mr. Bassford expected to realize a high speed, and to demonstrate some important discoveries applicable to larger vessels. He had met with those disappointments incident to experimental work of this kind, and was unable to raise the money necessary to the carrying out of his plans.

Mr. R. B. Burchard, yachting editor of *Outing*, was married on June 26 to Miss Edith Russell Church.

Yampa, schr., R. S. Palmer, was at Kiel, Prussia, on July 2, from Southampton. Mr. Palmer and his guests witnessed the naval pageant on the Solent from the yacht.

The fin-keel Vencedor was under way at Larchmont on Monday, but did not start in the race. It is proposed to give her a new rig before trying her speed on salt water.

Rifle Range and Gallery.

San Francisco Riflemen.

COLUMBIA PISTOL AND RIFLE CLUB

SAN FRANCISCO, June 14.—Shell Mound range was crowded with marksmen yesterday. Notwithstanding a strong, gusty wind across the range, some good scoring was done, notably C. M. Daiss' score of 32 in ten shots with pistol at 50yds. on Columbia target; and E. Jacobsen's score of 49, Creedmoor, with military rifle:

Rifle, class medals, for members only, 10-shot scores, champion class: Dr. L. O. Rodgers 60, F. O. Young 69, F. E. Mason 78.

First class: A. B. Dorrell 65, E. Jacobsen 71, C. M. Daiss 80, O. A. Bremer 105, H. Hellberg 106, A. Gebret 131.

Second class; J. E. Gorman 93, M. J. White 121.

Third class: C. F. Waltham 110, A. Hinterman 117, Mrs. C. F. Waltham 140, Mrs. M. J. White 145, G. Manuel 143, W. J. Shreve 160

Rifle, re-entry matches, open to all comers, 200yds., F. H. Bushnell rifle medal and cash prizes, 3-shot scores: F. O. Young 12, 12; Dr L. O. Rodgers 12, 13; A. H. Pape 13.

Wm. Glindemann military medal and cash prizes, 10 shoots (Creedmoor count): E. Jacobsen 49, 44, E. Hovey 47, 48, F. O. Young 46, 45, C. F. Waltham 45, J. E. Gorman 45.

F. O. Young rifle record medal and cash prizes, 10-shot scores: A. H. Pape 49, E. Jacobsen 58, F. E. Mason 66

Pistol, 50yds., class medals, for members only, 10 shot score:

Champion class: J. E. Gorman 48, C. M. Daiss 52, Dr. L. O. Rodgers 56, A. B. Dorrell 57, Ed. Hovey 60, F. O. Young 69.

First class: M. J. White 43, F. E. Mason 50, E. Jacobsen 75.

Second class: Mrs. M. J. White 67, G. M. Barley 96

Third class: Mrs. C. F. Waltham 101, A. Hintermann 109, R. W. Forrest 124, W. J. Shreve 195.

Pistol, re-entry matches, open to all-comers, 50yds., Gordon Blanding pistol medal and cash prizes, 3-shot scores: F. O. Young, 11, 12, 12.

Diamond pistol record medal and cash prizes, 10-shot scores: C. M. Dais, 32, 39; F. O. Young, 54, 58; J. E. Gorman, 44.

Howard Carr any revolver medal and cash prizes, 6 shot scores: J. E. Gorman, 25, 26, 29; F. O. Young, 29, 34, 35, 35.

Achille Roos .22 rifle medal, ladies' trophies and cash prizes, 5 shot scores: Mrs. C. F. Waltham, 11, 16, 17; Mrs. O. M. Peck, 15, 15; A. B. Dorrell, 13, 15.

GERMANIA SCHUETZ N CLUB

The members of the Germania Schue zen Club were out in full force, for, in addition to their regular contests for class medals, they held their 3 shot re-entry matches, open to all comers. The scores (German ring target) were as follows:

Class medals, for members only:

Champion class: First, Dr. L. O. Rodgers, 4-5 rings; second, D. B. Faktor, 417.

First class: First, H. Hellberg 401; second, J. Peters 374.

No second class

Third class: H. J. Wicker 428.

Fourth class: W. Morken 359.

Best first shot, H. Hellberg 23.

Best last shot, W. Morken 23

Re-entry matches, 3-shot scores: D. B. Faktor 72, Dr. L. O. Rodgers 69, Burfeind 69, N. Ahrens 69, Schuster 68, H. Huber 67, Alpers 67, J. Young 67.

SAN FRANCISCO SCHUETZEN CLUB.

In the regular monthly medal shoot of the San Francisco Schue'zen Club, J. D. Heise won the fourth class medal "for keeps." The scores—20 shots (German ring target) were as follows:

Champion Class: A. H. Pape, 432 rings.
First Class: H. J. Wicker 424.
Second Class: C. F. Rust, 380.
Third Class: O. Lemcke, 395
Fourth Class: J. D. Heise, 369 (for good).
Best First Shot: C. Thierbach, 23.
Best Last Shot: A. H. Pape, 23.

ROEEL.

Calumet Heights Riflemen.

CHICAGO, June 27.—The Class A and Class B rifle contests at the Calumet Heights Gun Club's ranges to day we e shot in clear atmosphere with a light wind across the range. The following scores were made:

Class A, 200yds., any caliber rifle, standard target, off hand:

	No. 1.											No 2.									
						Harlan.

Mrs Chamberlain...2533344332—33

PATTY.

Scheutzen Bund of North America.

CHICAGO, Ill., June 25.—At Joliet, Ill., on June 24, began the four days' tournament of the Central Scheutzen Bund of North America, the following cities represented: Milwaukee, Chicago, Detroit Cincinnati, Cleveland, Peru, Peoria, St. Louis, Davenport, Dubuque, Winona, Lyons, La Crosse and Washington, Minn.

The shooting on the first day was for the Kehr prize, a souvenir badge to all scoring 200 points, distance 200yds. J. E. Schmidt, of Milwaukee, captured the first prize; Alderman Joseph Braun, Jr., of Joliet, second, and Fritz Roth, of Chicago, third.

Among those present are: A. J. Vandusen, of Winona; Val Sank, of Peru; William Ott, of La Crosse; M. Gindele, of Cincinnati; George Zugenfuss, of Winona; M. Gray, of Chicago; E. Berg, of Davenport; Dave Hertein, of Worthington, Minn.; Ed Burger, of Davenport; George Schmeidt, of Chicago; L. Schweighofer, of St. Louis; Ed Richter and John and Stephen Meunier, of Milwaukee.

E. H.

1206 BOYCE BUILDING, Chicago.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 20-23.—CLEAR LAKE, Ia.—First annual Indian Wolf shoot. Three days targets; one day live birds. $500 added. For programmes and particulars write to C. M. Grimm, Clear Lake, Ia.

July 21-22.—CRAWFORDSVILLE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Crawfordsville Gun Club. Chas. E. Lacey, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

July (last week).—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Company.

July 27-28.—BAY CITY, Mich.—Tournament of the Michigan Trap-Shooters' League. W. H. Brady, Sec'y, Detroit, Mich.

July 28-29.—DULUTH, Minn.—Annual tournament of the Central Gun Club. G. C. Maxfield, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O. Bush, Manager.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 14-16.—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Co. Merchandise and amateurs.

Sept. 14-16.—DES MOINES, Ia.—Tournament of the Capital Gun Club. S. C. Quimby, Sec'y.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The New Jersey State Sportsmen's Association, or more correctly speaking, The New Jersey State Association for the Protection of Fish and Game, will hold its annual meeting at Taylor's hotel, Jersey City, 2 P. M., July 13. The committee appointed to disentangle the muddle of reorganizing this old New Jersey body of trap shooters has done a lot of work, and will report at the meeting of July 13 with a brand-new constitution and by-laws, and a brand new set of up-to-date trap-shooting rules. It is also practically certain that a State shoot will be held the latter part of September of this year, and that the same shoot will be held not many miles from Elizabeth. The choice of Elizabeth for such a rendezvous would be a capital move on the part of the association, as the railroad and trolley car facilities of that city can scarcely be beaten. Clubs desirous of joining the association should lose no time in sending in their names to the secretary of the association, Mr. Colin R. Wise, of Passaic, N. J. The annual dues will be merely a nominal sum, and the benefits to the trap-shooters of the State to be derived from a real live organization are very large in comparison to the fees for either clubs or individual members. And the association will not, we learn, start absolutely penniless, as old outstanding accounts to the credit of the association are, we understand, to be paid in full.

Mr. E. C. Maxfield, secretary of the Central Gun Club, of Duluth, Minn., writes us under date of June 29, as follows: "The Central Gun Club, of Duluth, will hold its fifth annual tournament on July 28 and 29, 1897, at Duluth, Minn. This will be a strictly amateur tournament and professionals and manufacturers' agents will be barred from shooting for any of the money or prizes, though if they wish to show off their guns and ammunition they will be allowed to do so by simply paying for their birds. The Rose system, four moneys will be used, and there will be a large and valuable list of average prizes given. Programmes will be ready about July 12 and will be mailed upon application. This shoot will be one of the largest ever given in the Northwest and will be well worth attending."

The secretary of the Stevens House Gun Club, of Lake Placid, N.Y., Mr. A. H. Kallies, writes us that "the Stevens House Gun Club opened its season of 1897 on Tuesday last, June 29. Ten members of the club gathered on the grounds to inaugurate the season, which lasts until Oct. 15. Some fine scores were made, C. A. Stevens and A. H. Kallies running straight in a 25 target event. The club, which was organized expressly for the benefit of the sportsmen visiting the Adirondacks, will be pleased to entertain all shooters on its grounds. The grounds are located on beautiful Lake Placid, only three minutes' walk from the 'Big' Stevens House. The club would be pleased to arrange a few team matches with other hotel clubs or nearby gun clubs."

Louis Schortemeier has been striking his gait of late on live birds. In four contests recently at the club shoots of the Jeannette Gun Club, of New York, a club that holds its shoots at Guttenburg race track, he scored three wins for the Class A badge, winning it outright. His distance was 28yds., and in his three wins he scored, including shoot-offs, 31 out of 32 shot at. Schorty shoots a 12-gauge Smith, with Whitworth steel barrels. His load is 50grs. of American E. C. No 1 in a 3in. U. M. C. Trap shell, wadded as follows: one V. L. & D. Field wad, one ⅜ V. L. & D. 11¾ felt wad, ¼in. U. M. C. felt wad, ¼in. pink edge, and one thin black edge; he uses 1¼oz. of Tatham's No. 7½ chilled shot in the right barrel, the same amount of Tatham's No. 7 chilled in the left barrel.

Tom Keller is home again after a successful trip in the West. Tom has disguised himself by removing the hairs from his upper lip, and gives as his reason for doing so, the fact that Bourke Cockrane having attained a certain amount of notoriety by shaving off his mustache, and that he and Bourke, etc., etc. But Tee Kay had much of other matters to talk about; chiefly, and perhaps naturally, the success that has attended the efforts of those who are using his firm's powder—King's Smokeless—in so many of the big shoots of recent date. "And look what I did at Sioux City!" says Tom; and thereat his bosom swelled until he measured full 58in.

The Brooklyn (N. Y.) Gun Club will hold another handicap shoot for a gold watch, 50 targets, handicap allowance of extra targets, $1.50 entrance (including targets). The date chosen for the shoot is July 21, a Wednesday, one of the best days of the week to get a good crowd together. The Brooklyn club's grounds are conveniently located at the terminus of the King's County Elevated R. R., in Brooklyn, access to the grounds being thus very easy indeed.

L. C. Parker, "the brother of W. F. Parker," and W. F. Parker, "the brother of L. C. Parker," both members of the firm of Parker Bros., were present at the third tournament of the Connecticut Trap-Shooters' League, held at Bridgeport, June 30. Like all the others who were present at that shoot, they did not find the targets easy, although Will Parker ran straight in the 15 target extra shot after the programme had been completed. And his was the only straight, too.

We learn from Mr. Geo. F. Day, secretary of the Uxbridge, Mass., Gun Club, that: "The Uxbridge Gun Club's challenge to the Worcester Sportsmen's Club, the Rhode Island Trap Shooting Association, and the Woonsocket Gun Club for a team race of eight men each has been accepted. The shoot will be held at Uxbridge on July 17. We propose to hold quite a tournament on that date, one of the principal features being a merchandise event."

Trap-shooters are accustomed to hear much about the skill of Mrs. Frank Butler (Annie Oakley), Mrs. M. F. Lindsley (Wanda), Mrs. Day and Mrs. Shattuck, in the use of the shotgun at the traps; and without question all these ladies are capable of doing some excellent work in this line, putting to shame the efforts of many a great, big, strong man. But very few ever hear anything about one of the best lady shooters in the country—Misskay—that is, Miss Kirkwood, of Boston, one of the members of the Boston Gun Club. Any one who has kept an eye on the scores made by this club will have noticed that the scores of Misskay are away up all the time.

Jim Elliott's wide-open challenge has caused a lot of talk among trap-shooters in general, particularly among the rank and file, and our Cincinnati correspondent, Both Eyes, voices what seems to us the popular sentiment in regard to Elliott's letter. While we don't believe in using strong language to belittle one trophy or another, we feel like patting Jim on the back for his challenge to any shooter who has championship aspirations, or who thinks himself a champion. Money talks, and Jim's $100 is up. Who is going to be the first to cover it? Don't all speak at once, but—we know you won't do that.

The fourth contest of the Pennsylvania and Ohio Border Gun Club League will be held at Meadville, Pa., July 22-23. The Meadville Gun Club has arranged a two days' programme for the occasion, all events being at targets. These gatherings of the P. & O. B. G. C. League are always well attended, and with two sets of traps in position, there should be plenty of shooting for all. The purses will be divided under the old system, 40, 30, 20 and 10. Shells should be sent in care of F. G. Prenatt, secretary of the club.

All arrangements for the Interstate Association's tournament at Lewiston, Me., Aug. 4-5, under the auspices of the Androscoggin Gun Club, will be completed in a few days, and the programme will shortly be in the hands of the printer. The Interstate shoot at Portland last August was one of the best on the circuit, and the one at Lewiston this year promises to be its equal in every respect.

S. A. Tucker's new corduroy shooting coat is causing him some anxiety. It is beginning to show some signs of having been worn, and has forced a sigh from Tucker as he said: "I'm afraid it won't last as long as my other coat." When asked how long the "other coat" had lasted, he said, "Twenty-seven years!" Then we agreed that Tucker was probably correct in his surmise.

The Pekin, Ill., Gun Club will hold its sixth annual tournament, July 13-14. The annual tournaments of this club, which is one of the best equipped clubs in the State of Illinois outside of Chicago, have always been popular gatherings, and this year, with an increased amount of added money and prizes on the list, the Pekin tournament promises to be a rattling good shoot.

Hollywood and Elkwood Park, both prominent shooting grounds in the immediate vicinity of Long Branch, N. J., have issued programmes for the summer season. The Hollywood Futurity, on July 10, is about the most important sweepstake event of the summer season, and will surely attract a large number of entries.

The team race between the Bergen County Gun Club, of Hackensack, N. J., and the Endeavor Gun Club, of Jersey City, shot on Saturday, June 26, on the grounds of the Hackensack Club, was won by the Endeavors with a score of 192 to 186.

The list of tournaments for Eastern shooters is fast dwindling down to the elimination points, but July 14-15, at New Haven, Conn.; Aug. 4-5, at Lewiston, Me., and Aug. 26-27 at Montpelier, Vt., still remain to make the trap-shooters' hearts glad.

Owing to Monday of this week being a national holiday, FOREST AND STREAM's trap columns are rather handicapped, as no work will be done on that day, and the paper will go to press on Tuesday afternoon the same as usual

The next shoot of the Michigan Trap-Shooters' League will be held at Bay City, July 27-28. The August tournament will be held under the auspices of the Kalamazoo Trap-Shooting Club

JULY 6. EDWARD BANKS.

Mountain State Gun Club.

PARKERSBURG, W. Va., June 26.—I beg to herewith hand you scores made to-day at Parkersburg, W. Va., at bluerocks and live birds. The Mountain State Gun Club, of the above place, gave an all-day shoot which was a success from start to finish. Among those who participated from out of town were: E. O. Bower, L. M. Gorham and Curt I. Hall, Sistersville, W. Va.; C. E. Verges, Lowell, O., and George Alford, Marietta, O. Everything passed off nicely, and all expressed themselves as having a grand good time. As will be seen from scores inclosed, E. O. Bower captured high average at targets, breaking 48 out of his last 50, while C. E. Verges carried off the honors at live birds by killing the 25 straight.

There is a movement on foot to organize a State sportsmen's association at an early date and hold a State shoot early in September. Ed. O. Bower, secretary Sistersville Rod and Gun Club, of Sistersville, is in correspondence with the several clubs throughout the State, and something definite may be looked for in the near future. "The West Virginia State Sportsmen's Association" will sound "kinder" good, thank you.

SECRETARY.

Calumet Heights Gun Club.

CHICAGO, Ill., June 26. The regular weekly contest of the Calumet Heights Gun Club was held to-day. The weather, though warm, was most perfect, and while some sought pleasure in gathering bouquets of wild flowers in the woods, there being a great variety of the same in bloom, others enjoyed themselves by bathing in the lake. The scores made at the traps were as below:

Paterson (A).....11101111101111111111111—23
Booth (A).....11111111101110111111111—23
Turtle (A).....10101011111011101111110101—18
Metcalfe (A).....11111010010110101011110110—16
Norcom (B).....11111010010110010011010101—14
Gruby (B).....11101010110111111111111101—20
Harlan (C).....11101111001011111110110l—19
Chamberlain (C).....10100110111110110011010l—15
Morgan (C).....1101(1111(001111110000011—15
Wilde (C).....01011110110101000)1001011—13

Paterson won in class A, Gruby in class B, and Harlan in class C. Sweeps were shot as follows:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	15	10	100	25	Targets:	15	15	10	100	25
Paterson	12	8	4	73	..	Chamberlin	9	8	6	..	13
Booth	11	11	6	..	..	Wilde	7	..	..	..	..
Harlan	9	1	3	73	..	Turtle	..	12	3	..	..
Metcalfe	10	13	4	55	..	Gruby	..	7	4	..	..
Morgan	6	..	..	..	..	Guy Chamberlin	..	..	..	..	3
Norcom	9	12	6	72	..	Jake	..	..	..	..	15

No. 1 was at 15 targets, unknown angles for practice; No. 2 was 15 targets, snipe shooting; No. 3, 5 pairs, unknown traps and angles; No. 4, 100 targets, unknown angles, Harlan, of class C, shooting at 120 targets; No. 5 was 25 targets, unknown angles.

PATTI.

Iroquois Rifle and Gun Club.

PITTSBURG, Pa., July 1. The fourth monthly shoot of the Iroquois Rifle and Gun Club, of this city, was not very largely attended, only eight shooters taking part in the nine events on the programme. The scores made were as below:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	15	15	15	15	20	15	15

J. MOTZ.

Connecticut Trap-Shooters' League.

THE BRIDGEPORT SHOOT.

IF fine weather, good fellowship, plenty of shooting, and plenty of free lunch and free liquidating materials go to make a shoot a success, then the Bridgeport shoot of the Connecticut Trap-Shooters' League, on June 30 was a dandy. For the weather was fine after a wet night, and the shade of the large tent, loaned by the U. M. C. Co. for the occasion, was most uncommonly grateful and comforting; so also were the ice-cold bottles of ginger ale, "sass," lemon soda, etc., not to mention the comestibles. In short the club left nothing to be desired in that direction, and if fewer straights were broken than usual, nobody seemed to mind much; the shoot was really one of those old-time, good-natured shoots when a man wasn't all the time hunting up the cashier to see how much he had coming to him.

Straights were scarce, that's a fact; but then the targets were thrown far and fast, all five traps being screwed up to throw the targets a full 55yds., and low at that. Sometimes the targets looked to be going a mile in ten seconds, and maybe some did, for ciphers were no strangers to even the best of them there. Bluerock traps and empire targets were used, and the combination seemed to agree well. The pull was the only weak point in the whole thing, and that was something that could be forgotten and forgiven in the general excellence of everything else.

A THREATENING MORNING KEPT AWAY SHOOTERS.

The heavy rain on the previous night, and the threatening condition of the weather in the early hours of June 30, kept away many who would otherwise have been on the grounds. Friend Bristol and his New Haven brigade, minus their president, M. H. Clark, were all on hand at the opening of the shoot. The same can be said of the Meriden division, which included Messrs. W. F. and L. C. Parker, S. A. Tucker, L. J. Gaines, J. R. Hull and Holcomb. O. R. Dickey was also on hand from Boston to assist the Meriden Club to whip the crack team from New Haven. Bridgeport turned out well, too, and supported the home club in great shape. There was V. A. Blakeslee, the secretary, and U. M. C. Thomas, both of them with their hands full of work, and their heads full of schemes to make their guests feel at home. J. D. Kingsbury as cashier, and George Thorpe as assistant cashier, were both eminently the right men in the right place. Whit Rennison and I. J. Tuck, as pullers, did their duty, but found the pulling apparatus all they could attend to. (The puller, too, was located in one end of the club house, and was considerably at a disadvantage owing to the amount of talking that took place in his vicinity.)

WHERE WERE WINDSOR LOCKS AND HARTFORD?

A very frequent query was: "Where are Windsor Locks and Hartford?" It was quite a disappointment to the home club that these two clubs did not show up at all. Not a member of either club, so far as we are aware, was on the grounds during the day. We had thought that you couldn't keep Messrs. Videon and Cutler, both of Windsor Locks, away from a shoot with an Avenue A police officer's night stick, but we found out our error on June 30. They were missed sorely; and they, likewise, missed a most pleasant day's sport.

Still there were plenty of shooters, as the scores given below will tell. New Haven put in two teams and Bridgeport entered two teams, while Meriden had a crackerjack sort of a squad to put up against the others. This squad lost the teamrace on the first 20 targets shot at, by losing 31 out of 120 shot at; on the unknown angles they lost only 17; but then the wind was not blowing so strongly as when they shot at the known angles. And the wind did make some difference, it came down across the traps from right to left, and took rightquarterers under its wing, carrying them over the slight rise to the left of the traps at a pace that almost baffled the best of them to get the "proper lead" on such swift targets. Goose eggs were "a plenty," as some people we wot of can testify to.

NEW YORK WAS REPRESENTED.

Ed Taylor, of the Laflin & Rand W-A Powder Company; Capt. A. W. Money, of the American E. C. and Schultze Powder Company, Limited; Ferd Van Dyke, of the Winchester Repeating Arms Company, and the representative of the best department in this paper (?) were all on hand from New York city to take in and to be taken in. J. A. H. Dressel, Esq., of the U. M. C. Company, took time enough to steal away from business and come down to watch the work done by No 3 primers in the Smokeless shell.

Of course there was lots of fun outside that of making goose eggs; and really the last item got beyond a joke, that of making ciphers; it became painful; and when Will Parker made a straight 15 in an extra shot after the programme had been finished, there was quite a sigh of relief. And talking about fun at a shooting match: How much better it is to have a few well matured trap-shooters acting like a parcel of schoolboys just out of school, than to have them sitting around, silent as mutes, "chewing the championship rag over again," or cussing the Rose system.

THE SCORES TELL THE TALE.

How everybody shot must be left for the scores to tell, but in looking over these same scores be merciful, and remember that it was awfully hot, that the targets were thrown far, fast and low, and that there was quite a wind blowing during a part of the day at least. The individual totals made in the team race will be found in the table of scores given below, the team race being event No. 5 on the programme 20 known angles and 20 unknown angles). The team totals were:

New Haven No. 1, 197; Parker Gun Club, of Meriden, 192; Bridgeport No. 1, 174; Bridgeport No. 2 and New Haven No. 2, 145 each.

The table of scores referred to above runs as follows:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	15	15	40	15	15	10	15	10

EDWARD BANKS.

Trap at Chicago.

GARDEN CITY GUN CLUB.

June 26.—There was a fair attendance to-day at the grounds of the Garden City Gun Club, West Forty-eighth street and Harrison. The scores in the main events were:

Merchandise prize shoot, 20 targets: Hellman 17, Burgess 16, Ludlow 15, A. Kleinman 15, Adams 15, Ruble 15, Halligan 13, McHie 12, Goldsmith 12, Parker 10, Southard 8, Levi 6, Murphy 3, Finsted 2.

Donnelly prize shoot, 25 targets per man, handicap rise:

A Kleinman (18)	1111011001110101111101111—19
J Ruble (18)	1011101111111111111110111—22
Adams (18)	0111111101001111001101011—17
Parker (14)	1110110110001111111011010—17
Halligan (15)	1110101110110111111111111—21
W McHie (15)	1101010000100100001101000— 9

SEC'Y.

EUREKA GUN CLUB.

June 26.—The Eureka Gun Club's weekly shoot was well attended to-day. The scores in the medal race (25 targets per man) were as follows:

Class A: Ed Steck 23, Glover 23, Stannard 22, Lord 22, Miller 22, Goodrich 20, H. F. Carson 19, Dr. Carver 18, J. Rehm 16.

Class B: Houston 23, Cornwell 21, Lewis 21, Keller 21, J. L. Jones 19, Spreyne 17, G. Murrow 15, Dr. Liddy 12.

Class C: Robbins 23, A. G. Walters 21, Bisbee 19, Meart 16, Morgan 15, R. B. Carson 15, Neta 12.

GARFIELD GUN CLUB.

June 26.—The Garfield Gun Club's weekly shoot was held this afternoon. There was a good attendance of members, and some capital scores were made. Comley, comparatively a new man at the traps, won the trophy shoot with 24 out of 25, as below:

Stickle	1110111101101011111001110—18
Slocum	1000011010100010010101111—12

Michigan Trap-Shooters' League.

DETROIT, Mich., June 30.—The two days' tournament of the Michigan Trap-Shooters' League, which was held at the Rusch House grounds, Jefferson avenue, yesterday and to-day, was very well attended, and some good scores were made, despite the stiff wind that blew on the first day.

First Day, June 29.

Among those who took part in the shoot were: J. L. Head, Peru, Ind.; C. W. Walton, Grand Rapids; A. G. North, W. H. Osmun, A. Webb, H. Matthews, W. Gould, Pontiac; R. Merrill, C. W. Boursfield, Bay City; B. O. Bush, H. Waruf, Kalamazoo; George Scheiffler, J. W. Cowell, F. Pixley, G. Scott, W. M. Thompson, Jackson; Geo. Spross, Toledo; F. A. Snow, Cleveland; Thos. H. Graham, Sault Ste. Marie; Frank Stotts, Windsor.

F. A. Snow, of Cleveland, with a total of 112 out of 120 birds, led the day's shooting with an average of .993 per cent. Thos. H. Graham, of Sault Ste. Marie, was second with 179 out of 195 targets, an average of .917 per cent.

The team race, open to Michigan teams of three men, each man shooting at 50 birds, was won by the River Rouge Gun Club. This is the second time the River Rouge men have won the team race, and one more winning will entitle each man of the team to a diamond button.

In the E. C. Handicap, for a silver trophy, W. M. Thompson, of Jackson, with an allowance of 3 birds, made a score of 48, and won the event. It must be won twice, however, to entitle the winner to ownership of the trophy. Thomas H. Graham, of Sault Ste. Marie, and Wood, of Detroit, both scratch men, scored 47 each, and Parker, also scratch man, killed 45 birds.

SCORES OF JUNE 29.

Second Day, June 30.

The weather to-day was much more favorable, and as a consequence scores ruled higher. It was very hot indeed, and although rain threatened once or twice, the threats amounted to nothing. The main events to-day were the championship medal contest and the shoot for the King's Smokeless trophy.

Thomas H. Graham, of Sault Ste. Marie, captured the championship medal for experts, the highest average for the two days' shooting, his average being .913, and narrowly escaped winning the King trophy. In the latter event he was beaten out by an amateur, Klein, of Detroit, whose previous record for the day did not indicate championship form. However, he killed 25 birds straight and won the shoot-off for the tie, Mr. Graham also having killed 25. It will be necessary for Mr. Klein to win the trophy again before he can own it. In the shoot-off Mr. Klein had a handicap of 5 points, while Mr. Graham shot from scratch.

Parker, of Detroit, won the second prize for average shooting with a percentage of .875, and Waruf, of Kalamazoo, third, with a percentage of .853. The winners of the other medals in the championship contest were as follows: Marks, Detroit, semi-expert; Brady, Detroit, amateur.

SCORES OF JUNE 30.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

W. H. BRADY, Sec'y.

Monday of this week, July 5, was a day on which nearly every club in the vicinity of this city held a shoot. This plan of holding shoots on every holiday prevents large attendances at any one grounds, and it would seem better if three or more gun clubs got together and drew lots for the different holidays at the beginning of each season. The club that drew Washington's Birthday would entertain the members of the other clubs on that date, and the club that drew Decoration Day would take its turn at entertaining visitors on that date, and so on. This would insure each club having at least one good re-union on its grounds during the season.

Echoes from Deep Hollow.

Sim Glover is now satisfied that he can kill live birds, and states openly that he will win the *Star* cup at the Missouri State shoot in 1898 without the slightest shadow of a doubt. As Sim puts it: "There isn't anybody down there can beat my combination: Parker gun, Schultze powder *and* myself." And Deep Hollow sends back an echo that sounds like "Quite right, quite right!"

The list of champions at the Oil City shoot was quite imposing: John L. Brewer, champion of the world, etc., etc.; Simon Glover, Kansas City *Star* champion; Charlie Grimm, cast iron champion; Charlie Budd, Du Pont champion; Rolla O. Heikes, champion of the world at targets; Fred Gilbert, ex-champion at targets and ex-Du Pont champion; E. D. Fulford, whose work in the past has made him worthy of championship honors, and who can still make them all hustle to beat him; O. R. Dickey, Grand American Handicap champion of 1896; John L. 147 Winston, the expert rules champion; Ferd Van Dyke, ⅛ reversed order champion (he, Heikes and Charlie Young tied for the Schmelzer trophy at San Antonio in January last); Harvey McMurchy, who *is* a champion although he doesn't claim to be one; Elmer Shaner, champion tournament manager; Brother Bill McCrickart, champion squad hustler, referee, etc.; Gold Dust Fanning, champion seal shot of the Pacific Slope; Col. A. G. Courtney, champion *raconteur* of the circuit, and hosts of other.

Of the four 25s in the Oil City Special, one shot a Parker and the other three L. C. Smith guns. The fortunate quartette were: Sim Glover, Parker, 3¼drs. Schultze and 1¼oz. 7 in a Trap shell; Harvey McMurchey, L. C. Smith and ——— powder (Harvey won't tell his powder); Charlie Grimm, L. C. Smith, 3¼drs. Du Pont and 1¼oz. 7 in a Smokeless shell; Jack Fanning, L. C. Smith gun, 50grs. Gold Dust, 1⅛oz. 7 in Acme and Leader shells. There were five 24s, and two of these shot Parker guns, the other three shooting L. C. Smiths. Two of the five used Du Pont, two Schultze, and one (Wheeler) King's Smokeless.

John A. Wilson, of Franklin, Pa., was very proud of his new Cashmore. Mr. Wilson has certainly gotten a very fine gun; it looks well, is superbly finished, and when held right does the business. Wilson says his main trouble is the "holding right."

President Graham and Secretary Harry Reeser very wisely gave up trying to do two things at the same time—entertain the visitors and shoot. There was a certain amount of self-denial in their putting away their guns, for both of them love to shoot, and can do good work when attending to that business alone.

Harry Thurman, better known as "Father Time" or "Shooting-Blouse Thurman," won the individual championship of the State at targets with King's Smokeless. Harry Shoop (Brewster) won the live-bird championship of the State with 2¼drs. of Du Pont in a Trap shell.

Minge is the name under which J. A. Flick, of Ravenna, O., now comes to the score. We don't know a keener shot than Mr. Flick, and the way he plumps his second barrel into a fast bird is almost more than we can understand, seeing that he has but one arm. Business interests kept him at Ravenna until too late for the targets, but he turned up in time to try his luck in the Oil City Special.

The strain of shooting every week and shooting hard all the time showed itself very plainly in some of the crackerjacks. Gilbert and Heikes in particular looked very weary, and many a round 0 may be traced to "that tired feeling." Everybody who has shot all day and tried hard all the time (and you must try hard all the time if you want to make good scores) knows just how tired they felt when the day is over; multiply that one day by four, and add in two days for traveling, and imagine how you'd feel after a week of it; then proceed and figure out how you'd feel after about ten such weeks. Chief Moon-in-the-face and Dago Chief don't seem to feel it much, but then they're just bundles of knots, at least Moon-in-the-face is. If you don't believe this, utter an Indian war cry in his hearing and then say "good-bye" to your scalp, for he'll have it sure.

Captain Money shot very well indeed at live birds, and we doubt whether he ever shot any better in his life than he did at Oil City. He shot at 53 birds during the two days, and scored 52 of them. He used a Smith gun and 49grs. of Schultze in a Trap shell. The tough part of the whole thing was that his single lost bird was dropped in the Oil City Special when straights were what counted.

One of the most pleasing features of the whole shoot was the way in which the residents of Oil City rose to the occasion and graced the shoot with their presence. And we understand that these same residents were also well pleased on their part with the shoot and the quality of the men who came to the tournament. It seems to have been a popular idea in that section of the country that gentlemen were scarce at tournaments. When they came to Deep Hollow they found that the reverse was the order, and that a nicer lot of men couldn't be gotten together anywhere in this or any other country. They also found that it was not all business by any means. In fact, the State shoot at Oil City has done a great deal to boom trap shooting in that section of the country.

Judging from the setters and pointers we saw in Oil City there must be some good ruffed grouse shooting in the mountains near the city. Deep Hollow and the woods that lined the street car tracks to Smithman's Park looked very "birdy," and it is a fact that some young grouse had a narrow escape of being run over by one of the cars on its trip to the grounds early on the second day of the shoot.

Talking of dogs, Elmer Shaner was presented at this shoot with a handsome Gordon setter dog by the president of the State Association, J. O'H. Denny. The dog was a beauty, and Elmer was tickled mightily with the present, but was much worried at having forgotten the dog's name. One evening, after falling asleep while copying scores, he blurted out: "It's Rupert!" "What's Rupert?" said we innocently. "Why, my dog's name, of course." And he actually looked hurt to think that we'd forgotten he owned a dog.

EDWARD BANKS.

Lake City Gun Club.

MADISON, Wis., June 23.—The two days' tournament of the Lake City Gun Club closed to-day. A total of 24 shooters took part in the programme events on the first day, but only 15 were present on the second day. Below will be found tables giving the records made on both of the days mentioned above:

First Day, June 22.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

No. 4 was at 5 pairs; No. 9 at 6 pairs.

C. A. MAYER.

Mr. S. C. Quimby, secretary of the Capital Gun Club, of Des Moines, Ia., writes us that his club will hold a tournament Sept. 14-16, the week of the Iowa State fair, the shoot taking place on the fair grounds. Mr. Quimby adds: "The club will add large moneys and merchandise prizes. Programmes will be sent out about Sept. 1."

South Dakota State Sportsmen's Association.

FARGO, S. D., June 20.—The third annual tournament of the South Dakota State Sportsmen's Association, held here June 16-17, was fully as successful as that of 1896, which was a record breaker among the Northwestern shoots last season. Quite a number of familiar faces were missed this year, but many new ones took their places and were stayers until the last gun was fired. There were forty-five entries the first day and forty-two the second day in the regular events.

Among those in attendance were T. H. Keller, representing King's Smokeless and the Peters cartridges; Dr. D. H. Day, of the *Western Field and Stream*. Both these gentlemen assisted the management in various ways, and made many friends among the shooters. The only shooter from the Twin Cities was Hirschy (Robin Hood), who never fails to attend a Fargo tournament. There were Boenig, McKay, McQuat and Strutton from Minto; Irysh; Mares, Harrold Sturgeon from Wheatland; Dr. Spratley, Flynn, Hill and the Thielmans—father and son—from St. Cloud; Corry and Grassick, from Buxton; Shaffer and Kirlin, from Montevideo; McAndrews, Ellsworth, Wis.; Jones, Atwater, Nelson, and Warren, Duluth—the Minnesota State champions for '95 and '96; Trent, of Wadena, and Taber, of Pork Rapids; Main, of Canada; the Dowey Bros. and Agern, from Fergus Falls; Gakey and Coulter, Dawson, N. D.; Ducke, Larrabee, N. D.; O'Shaughnessey and Baldwin, Bismarck; Blewett and Dr. Rankin, Jamestown, N. D.; Wells, Grand Forks.

The high wind that the shooters faced the first day kept the scores down. The Fargo team were handicapped by having hard work previous to and during the tournament, and their shooting was more uneven than usual. Much interest was manifested in the State event, and the contest was close and exciting. The winner was congratulated by the shooters, and T. K. was especially pleased that the event was won with King's Smokeless.

At the annual meeting of the Association for the election of officers the following gentlemen were chosen: President, J. W. Boenig, Minto; First Vice-President, J. J. Gokey, Dawson; Second Vice-President, S. N. Corry, Buxton; Secretary, W. W. Smith, Fargo; Treasurer, H. E. Magill, Fargo. The retiring president, C. E. Robbins, the founder of the Association, during the meeting urged the members to select officers from new localities, and by so doing arouse interest to adopt new methods and secure an increased membership. The officers elected are well and favorably known to the sportsmen of the entire State, and the Association's interests will be well cared for during their term of office.

SCORES OF JUNE 16.

Below will be found a table of the open events shot to-day, the programme calling for just 100 targets. The totals of those who shot in all events are carried out, thus giving their average per cent.:

Events:	1	2	3	4	6	7		Events:	1	2	3	4	6	7	
Targets:	*15*	*20*	*15*	*20*	*15*	*15*	Av.	Targets:	*15*	*20*	*15*	*20*	*15*	*15*	Av.

Grassick	9	12	6	7	6	3	43	Sturgeon	11	13	10	17	10	10	71
Robbins	11	19	11	17	13	13	84	Main	9	14	11	16	8	9	67
Smith	8	9	9	14	12	13	65	Wells	12	12	11	14	11	..	..
Carpenter	10	15	13	17	9	10	74	Keller	12	15	9	11	14	13	74
Guptill	11	19	9	17	13	15	84	Robin Hood	12	16	14	18	13	15	88
Hill	13	18	11	17	12	14	85	Roberts	10	12	..	..	8	7	..
Morrissey	10	12	7	13	..	..	..	Coulter	7	16	11	10	12	6	62
Agern	9	12	10	14	12	13	70	Gokey	12	14	8	18	8	9	69
Osgood	8	17	12	16	13	15	81								

The $40 given to all guns making the eight highest averages was divided by Robin Hood 88, Hill 85, Robbins, Guptill and Trent 84 each, Shell 83, Theilman 82, Osgood 81, Rainser and Phillips 78 each, Taber 77. Shaffer and Grassick each received $5 for the two lowest averages.

No. 5 on the programme was a team race—four-men teams, 25 targets per man, $6 per team, $100 guaranteed. The conditions specified "four men from any regularly organized gun club to constitute a team." The St. Cloud team won with Fargo close up.

St. Cloud: W. Thielman 20, Hill 23, Osgood 18, Spratley 18—79.
Wheatland: Irysh 16, Sturgeon 15, Harrold 15, Mares 10—56.
Fargo: Robbins 22, Smith 19, Carpenter 18, Guptill 19—78.
Minto: Boeing 16, McQuat 18, McKay 21, Stratton 21—76.

The Fargo Gun Club won the team shoot in 1895 and won again in 1896, when eleven teams contested. This year some of the team did not shoot up to their usual average.

SCORES OF JUNE 17.

The programme for the second day contained five events, the four given below and the State championship. The totals of those who shot at the 75 targets in events 8, 9, 10 and 12 are given below:

Events:	8	9	10	12		Events.	8	9	10	12	
Targets:	*15*	*15*	*20*	*25*	T'l	Targets:	*15*	*15*	*20*	*25*	T'l

J W D	10	10	17	19	56	Baldwin	..	..	17	..	..

The $40 given to all guns making the eight highest averages was divided by Trent 68, Guptill 64, Phillips, O'Shaughnessy, Robin Hood and Hill 63, Thielman and Gokey 62, Osgood 61, Thorne, Taber and Robbins 60, Day, Shell and Boeing 58, Duck, J. W. D., Carpenter, Smith and McKay 56. Grassick with 26 and Cory with 22 were each paid $5 for two low averages.

THE STATE CHAMPIONSHIP.

Event No. 11, the State championship event, was open only to members of the Association. The member winning first place receives the State gold badge, to hold until the next annual tournament, when he shall receive 50 per cent. of the entrance money in the championship event; 50 bluerocks per man, no handicap:

Roberts 34, Carpenter 37, Smith 38, Robbins 42, Guptill 41, Main 30, McKay 42, O'Shaughnessy 40, Gokey 41, McQuat 28, Corey 27, Grassie 21. Wells 34, Boeing 35, Duck 31.

Robbins and McKay were high men with 42 each, and shot off the tie at 50 targets, with the following result: Robbins 44, McKay 42. Robbins won by two birds, and is the State champion for 1897.

FARGO.

Pine Bluff Gun Club.

PINE BLUFF, Ark., June 17.—Below you will find score made by our local shooters this afternoon. The grounds and traps have been undergoing repairs, and the targets (for the first time) were thrown from traps arranged on the Sergeant system. This was something new to most of our shooters and accounts for the scores being below the average:

E. A. HOWELL, Sec'y.

Ogden Gun Club.

OGDEN, Ill., June 22.—The shoot given to-day by the Ogden Gun Club was a decided success, there being present about forty shooters. Some exceedingly fine scores were made, as the wind, especially in the morning, made the targets jump around at a lively rate. There were shooters present from the following Illinois towns: Leverett, Thomasboro, Mayview, Sidney, Urbana, Champaign, Savoy, Tolono, Danville, Soloman, DeWitt, St. Joe, Mansfield and Penfield; also J. H. Mackie, representing the Peters' Cartridge Co. and the King Powder Co., of Cincinnati, O.; he shot in fine form, losing only 10 birds out of 165; and there was not a question of doubt as to the ones he hit being broken.

A feature which added to the enjoyment of the shoot was the dinner given by the ladies of the Christian church, of Ogden. J. R. Watkins, the genial editor of the Ogden *Courier*, was squad hustler, and seemed to be able to take care of that part, although he did not get a chance to show his shooting ability. Tyson and Miller, visiting shooters, both shot in good form after the first two rounds. Mr. Gere, of Urbana, was the lucky man to draw the bicycle in that event. The King Powder Co. and the Peters' Cartridge Co.'s event had the most entries, there being thirty-one entries. The success of the shoot was due to the efforts of Mr. McKinley, as he worked hard all day during the shoot. I am sure the club will have a much larger crowd next year, owing to the royal manner in which the shooters were treated by all the members of the Ogden club. Below find the scores of the shoot.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

HENRY.

Boston Gun Club.

WELLINGTON, Mass., June 23.—The Boston Gun Club's day arrived, as usual, and the customary complement of shooters were at Wellington this afternoon, together with a very impressive wind. The latter had considerable effect on the scores, the best in the match being 18, while not a solitary straight put in its appearance during the afternoon. Otherwise the breeze was a most welcome visitor, for the general temperature was of a heated character; so much so that the different events were partaken of in a leisurely fashion quite in keeping with the rapidly rising thermometer.

Summary as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	*10*	*10*	*6*	*10*	*15*	*10*	*10*	*10*		*10*	*10*
Brown	7	7	4	8	7	7	..	..	..	..	..
Woodruff	7	7	2	5	10	7	5	5	1	9	8

BOSTON.

Pawtuxet Gun Club

PAWTUXET, R. I., June 26.—As a contrast to last Saturday, to-day was decidedly windy and not at all favorable for high scores, but still three men beat their records all the same. W. H. Sheldon, in addition to breaking 25 straight in the club shoot, also ran 25 straight in practice. Messrs. Armstrong and Bain were the others who broke their previous bests on record. In shooting at and breaking his 50 straight, Sheldon used a Smith gun and Walsrode powder. Scores were:

W H Sheldon (0)	1111111111111111111111111 —25
R C Root (3)	1100110010111011100111101111 —19

Team Race at Newburgh, N. Y.

NEWBURGH, N. Y., June 26.—Five-men teams, representing the Glenwood, the Marlboro, the West Newburgh and the Peekskill Gun clubs, took part to day in a race, 25 targets per man, on the grounds of the Glenwood Gun Club, of this place. All targets were thrown from a magautrap, and a high wind that blew all the time made good scores hard to make. The result of the race was: Glenwood 96, West Newburgh 93, Marlboro 90, and Peekskill 87. Detailed scores follow:

Glenwood Gun Club.

Dickson	0111111111111111111111110—23

W. M. STANBROUGH.

Cook County Trap-Shooters' League.

CHICAGO, Ill., June 19.—The second monthly shoot of the Cook County Trap Shooters' League was held Saturday, June 19, on the grounds of the Calumet Heights Club, at Calumet Heights, Ind.

Only two clubs had enough members out to enter teams for the trophies. These two were the Garfields and the home team, each having fourteen men present. Of the remaining six competitors, four were from the Eureka, one from Garden City and one from Cicero. The threatening weather during the forenoon no doubt kept a larger number away, who otherwise would have been present.

SCORE OF LEAGUE SHOOT.

Garfield, Class A: Shaw 23, Kuss 24, Richards 21, Paterson 22, Graham 21, Neal 23; 134.

Calumet Heights, Class B: Booth 21, Young 21, Houston 22, Lamphere 24, Turtle 16, Marshall 16; 120.

Calumet Heights, Class C: Norcom 22, Harlan 15, Chamberlain 13, Bordker 14, Greely 20, Schmidt 18; 102.

The others who shot were as follows:

Garden City: Ruble (A) 25.

Eureka: Steck (A) 23, Glover (A) 23, Ferguson (B) 21, Morgan (C) 18.

Garfield: Edgar (A) 21, Von Lengerke (A) 16, Fehrman (A) 18, Hicks (A) 17, Bowers (B) 24, Palmer (B) 14, Russell (C) 9, Eaton (C) 9.

Cicero: Barnard (C) 12.

Calumet Heights: Metcalfe (B) 13, Whitman (B) 11.

At Watson's Park.

CHICAGO, Ill., June 24.—A number of Milwaukee shooters had a shoot at live birds this afternoon at Watson's Park, Burnside Crossing. O. von Lengerke, L. Goodrich and A. C. Paterson, three Chicago shooters, took part in the shoot also. Scores were:

*Von Lengerke	2222222222•222202222211•2 —22

RAVELRIGG.

Portsmouth Gun Club.

PORTSMOUTH, N. H., June 19.—The first of a series of medal shoots was held on the Portsmouth Gun Club's ground this afternoon. The series will be continued weekly until Sept. 25. The shooters are divided into three classes, each man shooting at 15 targets in his respective class. Three medals, one for each class, will be awarded to the shooter making the largest number of wins in the series. Below are the scores of to-day's contest, Noone winning in class A, H. Philbrick in class B, and Menim in class C.

Class A: Noone 13, Frizzell 11, Nenick 11, J. Weston 10.

Class B: H. Philbrick 12, W. Philbrick 11, Brown 9, Lewis 8, Weston 7.

Class C: Menim 8, Dow 7, Charlsen 6, Roper 5, Dennett 1, Hussey 1.

W. J. PHILBRICK, Sec'y.

Cameron Gun Club.

CAMERON, Texas, June 26.—The Cameron Gun Club was organized on June 23 with the following list of charter members: G. C. Averitt, F. A. Black, John Cammer, E. Palm, C. F. Baker, S. G. Boyles, F. L. Evans and M. L. Worcester. The club held its first target shoot on Friday afternoon, June 25, the club event being at 16 targets per man. Below are the scores:

Cammer 14, Boyles 12, Black 11, Averitt 11, Worcester 11, Baker 8, Palm 7, Evans 4. Three visitors were present and shot along: McCord 10, Gillespie 9, Johnson 3.

After the shoot the following officers were elected for the ensuing twelve months: President, G. C. Averitt; Vice-President, C. F. Baker; Secretary-Treasurer, S. G. Boyles.

S. G. BOYLES, Sec'y.

Worcester vs. Uxbridge.

WORCESTER, Mass., June 26.—The second team race between the Worcester Sportsmen's Club and the Uxbridge Gun Club was decided to day on the grounds at North Worcester. The home team won easily with a score of 275 to 246. A strong wind interfered materially with the making of good scores. The scores in the team race were:

Worcester Sportsmen's Club: Snell 38, Forehand 37, Kenerson 37, Link 36, Smith 33, Walls 32, Rugg 31, Roach 31—275.

Uxbridge Gun Club: Day 35, Noyes 34, Forde 32, Johnson 32, Burbank 31, Whiting 29, Rawson 29, Mansfield 24—246.

Several other events were shot during the afternoon, the attendance of shooters being very good. In the L. C. Smith trophy event Forehand was the winner.

V. D. KENERSON, Sec'y.

IN NEW JERSEY.

THE ENDEAVORS WIN AT HACKENSACK.

June 26.—The second team race of a series of three arranged between the Endeavor Gun Club, of Jersey City, and the Bergen County Gun Club, of Hackensack, was decided this afternoon on the grounds of the latter club near the depot of the N. Y., Sus. & Western R. R. at Hackensack Both teams were fairly representative of the club, but each was minus one or two men who would have made a good showing. As it was, the race was a very close one, and when Carl von Lengerke the captain of the Endeavors, went to the score with Hildreth as his opponent, both being the last men on the respective teams, the Bergen County men were 4 in the lead, Carl, however, was in form and broke 24 out of his 25, while Hildreth fell off his shooting and dropped 11 out of his 25. The Endeavors thus won by 6 breaks. The detailed scores of the race were as below:

Endeavor Gun Club.

C von Lengerke	1111111111011111111111111—24
E Collins	1111111110111111111111111—24

THE E. C. CUP.

This same afternoon the E. C. cup monthly contest was shot off, Dr. De Wolfe scoring his second for the cup, Herrington chasing him to the finish. This race is a handicap affair, an allowance of extra targets to shoot at being awarded by a handicapping committee of the club. The allowances were shot off in the team race to save time, both Herrington and De Wolfe making highest possibles of 50 each. Wood, who was not on a team, had to break 9 out of his allowance of 10 to give him a highest possible. As he dropped his 1st and 3d targets of his allowance, he withdrew, having no chance to tie for the cup, On the shoot-off at 25 targets each, De Wolfe won with 24 out of 25, losing his 2d target; while Herrington lost his 2d, 11th and 19th targets, going out with 22 out of 25. The full scores in the cup race were:

De Wolfe (5) 51, Herrington (5) 52, Raymond (12) 49, C. von Lengerke (4) 48, H. P. Fessenden (9) 48, Banks (0) 43, Collins (4) 43, McPeek (8) 43, Snyder (11) 42, Taylor (5) 41, Wood (10) 41, Sinnock (0) 40, Dustin (3) 40, Thomas (3) 40, L. Piercy (5) 40, Coles (8) 39, Warner (14) 39, G. H. Piercy (4) 38, Hildreth (8) 38, H. Blauvelt (12) 36, Stern (15) 36, Strader (8) 34, Everett (14) 26, Crawford (14) 26.

Coles, Warner, H. Blauvelt, Stern, Everett and Crawford did not shoot out their allowances.

AT ELKWOOD PARK.

June 26.—There was plenty of shooting to-day at Elkwood Park, but the attendance was only light. The main event, No. 5, the Jubilee Handicap, 20 birds, $20, had only five entries. Of this number Phil Daly, Jr., was high with 19. The list of events shot were as below: Nos. 1 and 2, $5 miss-and-outs; Nos. 3, 4, 6, 8 and 9 were 10 birds, $10 The detailed scores, together with each man's handicap in yards, follow:

	No 1.	No. 2.	No. 3.	No. 4.	No 6.
Dolan (29)	2	0	02001221	212022221202	(29) 02220
Ballard (29)	0	2222	112 22112	0010	(30) 221211222
Toland (28)	0	210	00220212	0212211100	(27) 2000
Daly (29)	0	1211	22001111	222200222110	(29) 2022202
Clancy					(26) 2011110

	No. 5: Jubilee Handicap.	No. 7.	No. 8.
Ballard (29)	0122222101112102122	(31) 222200	00022212220
Toland (28)	2211122220222102222	(27) 222212210	0220210120
Daly (29)	1112221122201121122	(29) 1121211212	2102212210
Clancy (27)	0002020100102001 00	(26) 1120000	
Dolan (29)	2101202101120	(30) 2122211120	00112100
Marryatt		(26) 1120011110	1111121212

No. 9 was another 10-bird race. It resulted thus: Ballard (31) 10, Daly (31) 9, Dolan (29) 3 out of 5, Toland (26½) 2 out of 4.

CLIMAX GUN CLUB.

June 13.—The Climax Gun Club, of Plainfield, held its monthly shoot this afternoon. The attendance was quite small, only four members taking part in the club event. Scores in this event were:

Manning (1)	1111101111101110111111111011 —22
Brantingham (1)	1011110101111101111111111 —21
Lister (10)	0100111100011111110100110001001l011—20
Darby (5)	1011111100101110001110011111001 —19

D. DARBY, Sec'y.

Oneida County Sportsmen's Association.

UTICA, N. Y., June 19.—The prize this week was won by J. W. Fulford, who scored 24 out of 25 in the club shoot at 15 singles, expert rules, and 5 pairs. The prize was a silver cup, donated by C. R. Mizner. The detailed scores of to-day's events were as below:

J W Pulford (0)	111111111111111	11 11 11 10 11 —24
J Pfeiffer (3)	101101111111111	10 10 11 11 11—20+3—23
Brunner (4)	101111111110111	10 10 11 11 00—19+4—23
J G Kilbourne (1)	111101110111111	10 10 11 11 11—21+1—22

C. R. MIZNER, Sec'y.

Lockport Gun Club.

LOCKPORT, N. Y., June 18.—At the last regular meeting of the Lockport Gun Club, it was decided to purchase a Winchester repeating shotgun and offer it as a prize to the shooters of our club, same to be a handicap event of 25 targets, each man except Ward and Covert, the scratch men, to shoot at the number of birds that they may miss in the 25, and the man who wins it five times to become the owner. This event to-day was won by Mr, Moody with a score of 25 and no ties. Event No. 4 was for the badge representing the championship of the club. Ward has now won it three times, Covert twice, and Forest once; this badge is to be the property of the shooter who wins it five times. Below find scores of the whole shoot. Most of the members of the club expect to attend the Dusky Park shoot at Olcott, July 3, and the Audubon shoot July 5:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	15	25	25	10	10	10	10
Moody	5	8	11	22	20+5	7	9	7	7

No. 9 was at 5 pairs. GOLD DUST.

ON LONG ISLAND.

HELL GATE GUN CLUB.

June 22.—There was an excellent turnout of the members of the Hell Gate Gun Club this afternoon at Dexter Park. The occasion was the regular monthly shoot of the club at 10 live birds per man. Four straight scores were made: Eugene Doeinck, John H. Voss, Fred Frostel and Henry Forster The club handicaps its members in these shoots for yearly prizes under a double system of yards and points. Below are the scores made:

Thirty yards rise, 7 points:

Eugene Doeinck	2212221221—10

Twenty-eight yards, 7 points:

John H Voss	2211122111—10	Wm Sands	2222022222— 9
Fred Frostel	1111111221—10	E Payntar	2221022121— 9
Peter Garms	1101221122— 9	Phil Woelfel	0221100021— 6

Twenty-eight yards, 6½ points:

Emil Steffens	1122111101— 9	L T Muench	1112002222— 8

Twenty-eight, 6 points:

Henry Forster	2112122121—10	Ernest Metz	1121102•20— 7
John Schlicht	2212111102— 9	J P Dannefelser	0002122102— 6
L H Smith	01211211•1— 8	John Kreeb	0002100122— 5
Conrad Weber	0211•20212— 7	Jac Himmelsbach	0202101010— 5

Twenty-eight yards, 5½ points:

C Schaefer	1221012?•1—8	R Regan	0110112200—6
E Peterson	•112222012—8		

Twenty-eight yards, 5 points:

C Lang	1002111210—7	C Rabenstein	210•100001—4
A Knodel	220201220•—6		

Twenty-six yards, 4½ points:

J Newman	1220201221—8	J Link	12000021•0—4
L Stelzel	1010010292—6	E Marquardt	2000120002—4

Twenty-six yards, 4 points:

J Kessler	2021012210—7	F Guy	0010000101—3
F W Richter	1•20021222—7	G K Breit	0102000000—2
M Stern	0200120010—4		

FALCON GUN CLUB.

June 24.—Five members of the Falcon Gun Club took part this afternoon in the club's monthly live-bird shoot at Dexter Park. C. M. Meyer scored all his birds, but, the shoot being under "Falcon Gun Club Rules," which provide that a second-barrel kill only scores half a point, his total of points was only 8. Moller made 6 points, Bohling 5½, and J. N. Meyer and Von Staden 5 points each. Scores were:

C M Meyer	2111111112—10	J N Meyer	111020•210— 6
J Moller	0011001111— 6	H Von Staden	1101000221— 6
J Bohling	1210010110— 6		

NEW UTRECHT GUN CLUB

June 26.—The semi-monthly target shoot of the New Utrecht Gun Club was held this afternoon at the Dyker Meadow grounds. W. H. Thompson won the club shoot in Class A, C. C. Fleet winning in Class B. Scores:

Class A: W. H. Thompson 23, J. Gaughen 22, D. Deacon 20, F. A. Thompson 19, D. C. Bennett 16.

Class B: C. C. Fleet (shot at 27) 18, D O'Brien (shot at 25) 15

In the Bennett cup shoot Gaughen won with 22 out of 25. Scores in this event were: Gaughen (A) 22, W. H Thompson (A) 21, F. A. Thompson (A) 20, D. Deacon (A) 18, Dr. O'Brien (B, 27 targets) 18, C. C. Fleet (B, 27 targets) 14, G. Osterhout (guest) 18.

Four sweeps were shot, all at 10 targets, and all at unknown angles, with the results given below:

Events:	1	2	3	4	Events:	1	2	3	4
W H Thompson	8	7	4	6	D C Bennett	8	6	8	..
F A Thompson	6	7	7	8	Dr O'Brien	..	6	9	4
C C Fleet	5	2	5	5	Deacon	8	8	9	..
J Gaughen	7	5	6	..	Osterhout	..	..	..	8

G. E. POOL, Sec'y.

Mr. Gates and the Rose System.

PEEKSKILL, N. Y.—*Editor Forest and Stream:* I have read with interest in a late issue of FOREST AND STREAM the letter of Mr. Gates, of Utica, on the Rose system, and I venture to say that if all those who, like Mr. Gates, feeling that they can "shoot some," should get into a class tournament where there were no *contributing members*, that shoot would be short-lived. Witness the late State shoot. The "Wolves" were not satisfied with devouring each other, but must also feast upon the "Lambs." Why? Because "there was more money in it," as quoted in your report last week. That is, notwithstanding the entry fee for events was one-half of the former, the list was larger and the number of 75 per cent. men who were willing to be shorn was greater. Hence the descent of the "Wolves."

The change in the manner of dividing the purses in favor of these same "Wolves," and no doubt, at their request, was not right to say the least. The Rose system, as published in the programme, should have been adhered to; or if entries were fewer than expected, the moneys could have been made five and four.

The argument of Mr. Gates appears to be based entirely upon a plan for the element of luck to drop into a convenient place "all alone" and thereby "make expenses." It is true that we are a gambling nation. We gamble whether we shall draw the next breath; gamble on the prospects of another meal; we take chances of life, prosperity in business, health and many other things necessarily. The Rose system does away, to a certain extent, with this eternal gamble, and to my mind, therefore, is one of its best features.

There are many professional men who, like myself, shoot at the trap for the relaxation from business, and the recreation the diversion brings.

In no sense of the word do we go into it for profit financially. Naturally, therefore, we cannot and do not ever expect to classify ourselves as experts. We should like to attend a few tournaments a day at a time. It brings us into many new and pleasing acquaintances and makes sometimes strong friendships. Incidentally we shoot a little, never getting our money back and satisfied if we draw down even a little. Under the Rose plan we can occasionally help to pay expenses and are content financially and feel that the outlay has not been too great to prohibit a repetition and a subsequent meeting of old faces in new places.

If the Rose system handicaps the expert and favors the weaker shot it is no more than all handicaps do in all other sports. Bicycling, billiards, yachting, etc., all have their handicap races, why not trapshooting.

In event No. 6 of the "Lambs" on the third day, in which I had the pleasure to participate, there were twelve entries at $1 each. Purse of $12, divided 40, 30, 20, 10, resulted as follows: One man broke straight and received $4 80, six broke 14 and divided $3.60, 60 cents each; two scored 13 and divided $2.40, each getting twice as much as the 14s; two with 12 each received same as those who scored 14.

There is certainly no one who will be frank enough to claim that this was a fair division of the purse.

In the absence of anything better than the Rose system, and until some wise man can invent an improvement in the matter, we are certainly bound to accept it as the best we have to date.

P. H. MASON.

Androscoggin Gun Club.

LEWISTON, Me., June 24.—The following scores were made to-day by members of the Androscoggin Gun Club:

Merchandise shoot, 25 targets per man, handicap allowance: Joslyn, 20+5—25; Strickland, 15+10—25; Haskell, 14+10—24; Eastman, 13+10—23; O. P. Keyes, 12+10—22; Cain, Doten, Murrow and Bean, 21; L. Keyes, 15+5—20; Godfrey 19, Taylor 14.

The scores for the Doten challenge cup were as below:

Doten	0111101110011111111011111—20
Merrow	0111000011101111111111101—18
Cain	1111111011010001011111011—18
Nason	0111101110101110101001011—16

O P Keyes	1010110110010100101110101—14
Godfrey	1100101111111010111100011—17
Haskell	0110101100011100110001011—13
Taylor	0000011011101111101011111—17
Eastman	1010111101101100110001101—15
Alley	0100010000111000111111101—13
Joslyn	1111101110011100010110011O—15

Sandwich Gun Club.

SANDWICH, Mass., June 26.—The Sandwich, Mass., Gun Club held their regular weekly shoot this afternoon. As only four members put in an appearance, by dividing shells we had thirty-eight apiece, so we shot at 38 bluerocks per man, unknown angles:

G Haines	1001111111111101111111111101111111111111—34
E Haines	0011110110111001111111110011110111111110—28
S Jones	1000111110110110011110011111111111010—27
W Procter	0100111100101110010901001001010110101001—18

G. H HAINES, Sec'y.

Bland Ballard, of Louisville, Ky., has returned to the Jersey coast for the summer months, and is just as busily engaged as ever bowling over live birds from the Elkwood Park traps. Ballard is shooting very well (as he always does), and will render a good account of himself at both Hollywood and Elkwood Park before he goes into winter quarters at Louisville

Fort Smith Gun Club.

FORT SMITH, Ark., June 24.—The following scores were made by the Fort Smith Gun Club at a practice shoot to-day. The targets were thrown from three bluerock traps arranged on the "Sergeant system." Some of the targets were crackajacks, sailing gaily along for 75 or 80yds. They were a little too swift for some of the boys, but they will get on to them after awhile. Scores:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
W R Duley	75	61	81	F Baptiste	75	45	60
W A Leach	100	79	79	J S Miller	50	25	50
W J Echols	75	59	78	E E Payne	50	24	48
J Matthews	100	76	76	W A Martin	50	17	34
J Edlin	75	51	68	C Boyd	50	16	32

NOTES.

Duley was suffering from a sick headache, but managed to lead the gang. The boys suggested that he had better stay sick all the time.

Will Echols said, "Oo-e, see 'em go," when the first bird left th trap and darted over into a cornfield.

"Ain't she a daisy? Best system I ever shot under," said little Joe.

Leach missed his first bird and then ran 16 straight—the largest run of the day.

Messrs. Martin and Boyd shot on a wager of something less than a hundred. They both expressed themselves as determined to break 'em all next time.

Baptist says he is going to get him a new $500 gun and then, oh then! look out for buck rabbits.

Eldin says something way down under his breath when he misses a target. The boys have been wondering what it is. Perhaps he is calling on his mascot. Then again perhaps he isn't.

The club shoots every Thursday evening. SECRETARY.

Soo Gun Club.

SIOUX CITY, Ia., June 17.—Below are the scores made by the members of the Soo Gun Club this afternoon, the occasion being t fourth of the series of handicap medal shoots. The event was shot over the magautrap, and some of the boys showed a marked improvement since the hard practice during the Soo Gun Club's bi tournament last week. With the assistance of a handicap, Otte made a possible 100 per cent, and will wear the medal until the next shoot, July 8:

		Broke.	Handicap.	Tota
Brott	1110111110111110110111010	19	0	1

BLUE BIRD.

Missoula Rod and Gun Club.

MISSOULA, Mont., June 20.—Below are the scores of members of the Missoula Rod and Gun Club, made at their regular shoot to-day. The attendance was smaller than usual, owing to the fact that a few of our members were in attendance at the tournament of the Northwest Sportsman's Association:

H W Thompson	1011111010000000110000110—
R E Rodgers	1101110111111100111000011—
J Forbes	1101111001001010010101111—1
M R Rutherford	0111100110111101110000010—1

R. E Rodgers wins gold medal, and J. Forbes wins silver medal.

June 27.—Below are the scores made to-day by members of th Missoula Rod and Gun Club. Eddy won the gold medal, and Menard the silver medal:

R A Eddy	1111111111111011101111110—22
C E Flowers	1011111111110001100101111—17
J A Forbes	1010100110101111000101110—14
W E Graham	1101000001010110000010011—10
J P Menard	1110110011101110101111010—1
M R Rutherford	1110111000001111011101100—
T T McLeod	1000110101010000001101000— 9

W. E. GRAHAM, Sec'y.

Omaha Gun Club.

OMAHA, Neb., June 19.—The following scores were made to-day at the regular weekly shoot of the Omaha Gun Club:

Loomis 19, Whitener 19, Hughes 19, Townsend 19, Dickey 19, Johannis 19, Kenyon 18, Randlette 18, Parmelee 18, Eklab 17, Bates 17, Brucker 16, Squirrel 16, Carmichael 16, Searle 15, Kyote 14.

June 26.—Below are the scores made to-day by members of th Omaha Gun Club:

Squirrel	1110111111111111011—18	Parmelee	1111101011111110111—17
Krug	1111111111010111111—18	Townsend	1011100011101111111—1
Latshaw	0111110111111111111—18	Ca'micha'l	0111101011101111010—14
Loomis	1111101111111011111—18	Whitner	1111111110101011001—15
Brucker	0111111110111111111—18	Elroes	1111101000101110110—13
Kenyon	0111111111111111101—18	Johannis	1100001101100111011—12
Bates	1111111110011111111—18	Kyote	1111010101010111110—14
Ekalb	1111101111111111110—18		

W. D KENYON, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

G. R. V., Indianapolis, Ind.—Please give me the record weight of small-mouth black bass caught in river or brook. Ans. We have no record relative to river fish. The largest small mouth bass taken from a lake of which we have record weighed 10lbs.

C. M. P., Kittery, Me.—1. Can you tell me whether it injures a full-choked gun to use cut shells in it? 2. Also the correct method of cutting the shells. Ans. 1. We think there is risk of injuring the choke and would not advise the practice. 2. Cut the shell between wads so that it just holds together.

PUBLISHERS' DEPARTMENT.

In Southern Mountains.

SPECIAL RATES FROM ALL POINTS ON SOUTHERN RAILWAYS TO CONVENTION OF INTERNATIONAL CHRISTIAN WORKERS BLACK MOUNTAIN, N. C., JULY 18 TO AUG. 5.

FOR the Christian Work and Bible Study Assembly of the International Christian Workers' Association, held on the grounds of the Mountain Retreat, at Black Mountain, N. C., the Southern Railway has granted one fare. These rates are good for all those who desire to attend this assembly, which will be held for ten days, July 20–29, inclusive. Going tickets may be purchased July 18, 19 and 20, with final time limit Aug. 5 This assembly is intended for all who are interested in Bible study and special phases of Christian work, and is under the direction of the International Christian Workers' Association, Rev. Floyd W. Tomkins, Jr., rector of Grace Episcopal Church, Providence, R. I., president, and Rev. John C. Collins, New Haven, Conn, secretary The altitude of the assembly grounds at Black Mountain varies from 2,700ft. to 5,700ft. The Association offers the use of its grounds for a nominal sum to any who desire to pitch their tents and make a camp during the time of the assembly. It is only eight miles from Mount Mitchell, the highest mountain this side of the Rockies. Full particulars concerning rates and otherwise can be obtained from any ticket agent on the Southern Railway, or General Eastern office, 271 Broadway, New York city.—*Adv.*

E. C, and Schultze Agencies.

THE American E. C. and Schultze Powder Co. L'd., announces the names of twenty-six agencies they have appointed for the sale of E C. and Schultze.

The list includes representative names among the leading sporting goods jobbers and dealers all over the United States.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 17, 1897.

VOL. XLVIX.—No. 3. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

There is not a fluttering leaf, a rippling rapid, a silver cascade, a momentary sun-glint, a passing shadow, a bird note, a tiny flower, a feathery fern, or any one of a thousand other things of beauty we see and hear where our pastime draws us, which is not remembered by the appreciative angler equally with the rise and strike and swirl of trout or salmon. George Dawson.

CONCERNING A SUMMER DELUSION.

RABIES and hydrophobia, the former denoting the madness attributed to the dog, the latter a form of the disease conveyed to man by inoculation from a rabid dog's bite, and both diseases of such frightful virulence that their very names inspire mankind with a feeling of horror, hold an exceedingly peculiar position in the realm of medical science, inasmuch as many physicians maintain that both diseases are so rare that they practically have no existence, while others strenuously maintain that they do not exist at all. And yet, institutions devoted specially to the treatment of these diseases have a constantly increasing patronage, and seem to flourish financially. The daily press has its annual run of mad-dog stories. Indeed, the summer season would be shorn of some of its most dreadfully delightful news features, so far as the daily press is concerned, if rabies and hydrophobia were myths. The policeman in search of heroism, the reporter in search of a story, the crowd in search of excitement, and the vulgar craving so common to humanity to see something killed, would lose much in the way of opportunity if mad dogs could be discovered no longer. The common ignorance which prevails in respect to all that pertains to diseases of the dog, and to rabies in particular, added to which is the fear of it which dominates all other emotions, is a condition favorable for the ready acceptance of any story whose subject is a mad dog.

Nearly all physicians hold that most of the cases attributed to the inoculation from the bite of a rabid dog are mimetic or the result of suggestion. The fact of the existence of simulated diseases, caused by dread, imaginary symptoms and expectant attack, is well established.

All authorities on the subject agree that this disease is no more prevalent in summer than in winter. It is strictly infectious, and can be transmitted only by inoculation. The common belief that it develops spontaneously is an error. However, the summer heat does harmfully affect the dog betimes, producing attacks of vertigo, apoplexy, epilepsy and forms of craziness, as it does man under similar circumstances; yet whatever may be the real disease with which a dog is affected, it is almost to a certainty diagnosed as rabies by the first observer, who without fail raises the cry of "Mad dog!" and begins the sensation. Men suffer more from nervous attacks in summer than in winter, yet the dog is subject to greater hardships consequent to the heat than is man; for his body is closer to the earth, and, therefore, is exposed to the full intensity of the reflected heat; and let him need water ever so badly, there is little and often no provision for him to satisfy his thirst in the streets of a great city. Lolling, panting, suffering and faint, he must toil along till he finds water by accident. If he should show any frenzy, his death is certain in the instant.

There is a vulgar belief that the dogdays are so-called with special reference to the predisposition of the dogs to go mad within that period. The name has no reference to the dogs directly or indirectly. It simply denotes the sultry part of the summer, from a part of July to a part of September, and originated in a belief of the ancients that the conjunction of the rising of the dog star with the rising of the sun caused the oppressive heat of summer, and the consequent maladies. Losing its original significance with the lapse of ages, it was an easy matter to transfer as pertaining to the dog the name and all the ill it boded.

It is undoubtedly true that rabies and hydrophobia exist, but so rare is either disease that few physicians have seen a case. The cases of the newspaper sensations are not rabies. Most of the so-called hydrophobia cases in man are simulated—the result of nervous dread. The newspaper mad dog is always highly excited and frothing at the mouth. The really mad dog trots along slowly, oblivious to external objects unless they obstruct his movement, when he snaps at the animal or object and resumes his way. The mad dog does not froth at the mouth; the discharge is thick, ropy, tough, and harassing to the dog, for he endeavors to remove it with his paws or to relieve it by plunging his head in water. The common belief is that the mad dog is afraid of water. On the contrary, he is not afraid. He seeks it and drinks a great deal, unless, as in some cases, the muscles of the throat become paralyzed. He rarely barks, or whines, or yelps. His voice has changed to a tone peculiar to rabies, and he uses it in a hoarse, croupy howl which is easily recognized by anyone who has once heard it. The disease may be weeks in developing, and when it reaches a certain stage the dog seeks relief in wandering far from home. He does not attack maliciously. In a frenzy at being annoyed or interrupted, he snaps and goes on.

President John Haines, of the Society for the Prevention of Cruelty to Animals, has performed a public service by opportunely stating the truth in this matter, through the medium of the public press and through the Society's excellent publication *Our Animal Friends*.

As a result of the recent hydrophobic scare in England, some stringent regulations have been imposed on the importation of dogs from the United States, though such act would seem to be deficient in common sense, as the disease exists and has existed in England from time immemorial. There is no record of any rabid animal ever having been exported from Ameirca to England, hence the precaution is groundless.

Much valuable information will be gathered relative to this subject between this time and the next quarterly meeting of the American Kennel Club, by a committee composed of eminent specialists, and the public may then learn definitely whether the disease is rare or mythical.

THE RETURN TO SAVAGERY.

THIS is a phrase frequently employed about those persons who enjoy going into camp, lounging about in their most ragged clothes, and rejoicing in the independence of entire freedom from the conventions by which most of us are bound amid home surroundings. The form of words is expressive and true. Nothing is more attractive than to throw off for a little while the trammels of our daily life to get rid of the tight clothing that we commonly wear, and to substitute for a white shirt, with its stiff collar, one of flannel that is soft and loose. At such times we like to work hard with our bodies, and to let our heads rest; to make the skin of our knees and hands hard and callous by long contact with saddle or paddle or rope or axe; to do in a month of summer or autumn more hard physical labor than we perform in the remaining eleven months of the year. We enjoy this because in doing these things we measurably return to natural conditions, and because the contrast between these occupations and those of our usual life is sharp. A woods vacation is a true and genuine vacation from conventionalities.

We are likely to imagine that it is only the civilized man who has this feeling, but this is scarcely true. There are in this country a quarter of a million people, many of whom have just emerged from a condition of savagery, and who are making their way with slow and painful steps toward civilization and self-support. Under these changed conditions they live like the white man—wear "store clothes," dwell in frame houses, sit in chairs, sleep in beds and eat at the table with knives and forks. But many of the older Indians recall a time in their lives, when in warm weather clothing was a superfluity seldom thought of, when the small boys in summer were clad in a string about the waist, and a belt with a breechclout constituted the wearing apparel of the men. The people remember those bygone days with pleasure, and even Indians who are well advanced toward civilization, who have comfortable houses, and farm and raise stock, and have begun to accumulate property, sometimes long for a return to the old-time life. So every summer, about the Fourth of July—the white man's great medicine day—they are likely to move away from their houses and to go into camp, just as they used to do.

The horses are turned out to feed on the hills, and the lodges are pitched in a circle, with the larger home of the head chief in the center. As of old, the women go to the creek for water; or, outside the lodge, they ply the axe on some tough log. The children play about the lodges or splash in the stream, and at night the dogs howl at the moon from the hilltops. Again, as of old, one hears the feast shout; the droning voice of the old crier, as he proclaims the order of the camp or exhorts the young men to do what they ought to do; or the tapping of drum by a doctor or a party of dancers.

If the crier is seen in his march about the camp, it will be found that he has cast aside for the time his hat, coat, shoes and trousers, and luxuriates in garments which consist of little besides the human skin. If one goes into a lodge where some old men are gathered, they will be seen to have discarded all modern clothing, and to be sitting cross-legged about the fire, either entirely naked, or wearing the old-time leggings or moccasins, but at all events, stripped of the garb which they always assume when they visit the agency, and which has, in fact, become the dress of ceremony. Even during this luxurious period of camp life the white man's clothing is donned again if a feast or a council is called.

Oddly enough the younger generation—those young men and boys who have been born since the new order of things came about, and since the white man's dress became the usual one—do not revert to the primitive customs of their ancestors in respect to clothing. They still wear, even during this season of relaxation, boots and spurs and trousers and coats, so that in the same home where the father sits naked by the lodge fire, the grown-up son near him is completely clad, and by his side lies his wide-brimmed cowboy hat.

Human nature is everywhere the same, and though the long civilized man is, in time, a little further distant from things purely primitive than is his changing red brother, he still enjoys the return to such conditions, though not with the pure delight felt by the old Indian, who once a year, for a short time, lives again as he really used to live when he was a boy.

SNAP SHOTS.

WAS it Andrew Lang who wrote of a wary old trout, fished for by all the experts for years with every device and lure and stratagem known to the honest angler, and circumventing all their wiles, only to fall victim at last to a tickler or guddler, or some other inhuman fisher dolt? Something like it has just happened in Columbia county, New York, where some years ago a planting of brown trout was made in the Harlemville stream, a brook tributary to the Philmont reservoir. For a long time one of the fish, a monster of such prodigious size as to turn fishermen as green with envy as the banks from which they beheld him, had been known to haunt a certain pool, to which ambitious anglers of two States had resorted, time and again, to drag him forth. For all of them the old fellow proved too wary; or, if it came to a test of strength, too strong for their fancy tackle. He had made a record of many seasons of broken tips and parted leaders; but his time came. A few days ago Benjamin Snyder with stout pole and cable yanked him out. The hero who had so often come out ahead in a fair-play contest with foes worthy of his best dodges, yielded at the end to the unequal odds of catch as catch can with a bean-pole. He measured seventeen inches around, and twenty inches in length, and weighed ten and a-half pounds.

Persons interested in stocking preserves with foreign game birds have encountered an obstacle existing in the present tariff law which forbids the importation of such eggs. This clause was put in the Act of 1894 at the suggestion of Senator Lodge, who represented that the eggs of canvas back ducks were being largely imported into this country. The Senator was led to this view doubtless by the fanciful story then current that millions of duck eggs were being imported from the northern regions of this continent for use in the manufacture of albumen. The purpose of the Act was esteemed a most commendable one and the prohibition eminently wise, until the FOREST AND STREAM demonstrated that no such duck egg industry existed. In the tariff bill now under consideration the clause with respect to the importation of birds' eggs has been changed, so that the eggs of birds which are not edible are put on the free list. This has been done at the suggestion of Senators Hoar and Lodge, who declare it to be their desire to protect the eggs of the singing birds. The provision should be modified further to admit of the free importation of eggs of game birds.

The Sportsman Tourist.

SHEEP AND SNOWSHOES.—IV.

A Winter Hunt on the Summit of the Rockies.

Investigating the Bear Den.

OUR second day in camp proved, for a wonder, to be fair and warm, differing in this respect from almost every other day on the whole trip. Had we known then what we found out later, we would all have gone sheep hunting that day; but we felt that as we were now well into our hunting country, and were practically sure of getting game, we could afford to take our time to it. It was decided to let O-to-kò-mi go out on the mountain where we expected to find our sheep and make a little prospecting trip, Schultz telling him to kill a sheep for meat if he was able to do so. Schultz and McChesney concluded to stay in camp that day, the latter being somewhat tired from his hard work of the day before, they announcing their intention of trying to catch a mess of fish through the ice. That bear den up in the mountains was still troubling me a great deal, so Hunter Powell, Billy Jackson and myself concluded to go up and exterminate the grizzly.

When we three started up the mountain side through the timber we had the benefit of the trail broken by our party the day before, but found it a steep and wearying climb none the less. Along toward noon we came to the country where Powell had located the suspicious-looking hole in the snow, and finally he stopped and pointed out the spot to us. We then stopped talking, and were as quiet as we could be while making our investigations. Billy looked curiously at the hole and announced that, so far as he could see, it was a mighty good prospect for a bear den. The snow all around was 5 to 8ft. deep; yet here was this round hole, some 6in. across, leading down into a black and cavernous interior, from which came a faint mist of steam as of some warm body down below.

Billy told us to loosen the straps of our snowshoes and get ready to shin up a tree if anything sudden happened before we were ready. Then, arrogating to himself the post of danger, he cut a long pole and prepared to poke out his majesty, if he happened to be at home. There was a sharp little depression in the snow which fell off into the head of a deep coulee, and the whole of the supposed den was about half-way up the bank of snow which lined this depression. Across the hollow, a distance of some 6 or 8yds., there rose a high drift of snow. Powell and I stood on this drift, with our rifles ready for action, and Billy stuck his rifle in the snow, where he could grasp it at once, in case there should be need. Our plan of campaign was that as soon as anything was heard from inside the den, Billy was to grab his rifle and throw himself down the snow-bank into the hollow, rolling clear of the bear if it came out. Hunter and I were to open fire on sight, and it certainly seemed as though with two .45-70s we could blow the head off of any bear before it could much more than get out of the snow. If we did not succeed in doing this, and if the bear charged us, Billy was to open on the flank of the bear as soon as he could get up out of the snow far enough to shoot. I don't think there was a great deal of danger in this plan, unless it might have been for Billy, who might have been caught before he could get away from in front of the hole, in case the bear had charged very rapidly out of the den.

What actually happened, however, was that the bear did not charge rapidly, and, in fact, did not charge at all. And indeed I shall have to admit that there was no bear at all. Billy prodded in the snow for a time with his long pole, and finally stuck his face down to the hole in the snow and called, "Come out of here, you hibernating son-of-a-gun!" There was no response. Then he proceeded to dig down the sides of the big cave which we found existed under the whole of the snowdrift at that point. We found that the snow was melted clear to the ground over a space some feet in extent, and when we cut down the front of this cavern we could see a black hole running in under a fallen treetop. It was a most likely looking place for a bear, but we were finally forced to conclude that the snow must have been melted by warm steam or gases coming up from a piece of hot ground on the mountain side. No one has ever heard of any geysers or hot ground formation in this part of the mountains so far as I know, but we certainly discovered some such thing in our hunt for our grizzly. I was keenly disappointed at this, for we had all felt pretty certain that a genuine bear den had been discovered. Had there been a grizzly actually sleeping there in the snow, there might have been a good story for some one or other to tell.

When we started down from the mountain side we could see Schultz and McChesney far out on the lake, looking like little dots. By the time we got down to the camp they also had come in, and we got a bite to eat. The fishermen had succeeded in taking eighteen trout, some of them regular beauties, so we were promised an addition to our bill of fare for the evening. The Two Medicine Lake is simply alive with trout in the summer time, and prettier trout water one never saw than this lake and the stream that runs into it.

Along late in the afternoon Schultz and McChesney concluded to take a walk through the woods beyond the head of the lake, in the direction taken by O-to-kò-mi that morning. Schultz told me that he had seen a marten trail a few hundred yards above the camp, so I decided to put out a deadfall and see what I could do about getting a little fur. I built my trap by cutting a hole in the side of a big pine tree, thus making a little house for the bait, so that the snow would not drift and cover up the bait. Below the bait house I cut a notch in the tree trunk on which I rested my bed log, and adjusted the fall log so that it covered up all the bait house, excepting a hole big enough for a marten to go in. I spent a great deal of time on the architecture of this trap, and was very proud of it, but I may say that nothing ever came near it excepting some big-footed rabbits, who seemed to have looked at it with considerable curiosity.

Prospect for Meat.

While I was working at my marten trap I heard three shots fired over in the direction which had been taken by Schultz and McChesney. I supposed that they were firing at grouse, as the shots did not seem to be more than a mile away. After awhile they came back down the trail and I asked if they had been shooting. "No, sir," said Schultz, "that was Charlie Rose, hammering sheep!" At this we all felt very exultant, for we knew that O-to-kò-mi would not shoot at anything but big game, and we felt morally sure that we would have meat in camp that night. We waited with impatience for his return, meantime all repairing to the lodge and getting ready for a big supper, for which we had acquired very competent appetites.

When O-to-kò-mi came into camp no one said anything to him nor expressed any interest in his success. He came in and sat down by the fire, and after a wait of some minutes, in which due gravity had been shown by all, he at length told in fragments the story of his day.

"*Oo-o-mah*," said he, "there," pointing to the mountains from which he had just descended, "plenty sh'ip."

"How many?" asked Schultz. And Charlie replied that he had seen several bands of sheep, and had counted seventy-three sheep in all! This, provided that he really understood English numerals, was certainly a most extraordinary showing. Such a quantity of mountain sheep as that is rarely seen by all the hunters on the longest hunt in any part of the country. At that moment each of us in his heart felt that he would certainly kill a sheep, and that without any difficulty. It being contrary to etiquette to manifest any curiosity as to the number of sheep O-to-kò-mi himself had killed, it was some time before the fact transpired that he had not killed any at all! This he admitted with a very crestfallen air, and Schultz told us not to guy him about it, as he was feeling very badly over his poor marksmanship. In the morning Billy Jackson had counted him out thirteen cartridges. "Here, Charlie," he said, "I'll give you a lucky number, and I want you to kill thirteen sheep, at least." O-to-kò-mi had to admit that he had fired away all his cartridges, and had only come home because he had nothing more to shoot with.

"*Mat aksi nama!*" said O-to-kò-mi with emphasis, meaning thereby that his gun was no good. Now, it happened that on this hunt I had given O-to-kò-mi my .30-30 Winchester, reserving for myself the .45-70, which I thought would be better for affairs at the bear den in case we found a bear. This .30-30, as I have earlier stated, had a Lyman rear sight on the tang, and this sight was perhaps elevated when the gun was given to Charlie, or else he thought that he would be obliged to use it. At any rate, he seems not to have known how to turn it back so that he could use the open sights which would then be left on the rifle. O-to-kò-mi had never before used a Lyman sight, and from what he said, it is likely that he had got the aperture of the sight full of snow, or else was trying to sight over the top of it. He said that he could not see through that kind of a sight, and expressed his contempt in general for that sort of an outfit. He expressed by signs his convictions that if he had had along "*O muk-sim-nama*" (the big gun), meaning my .45-70, he would have killed "plenty sh'ip." As we all knew him to be a good shot and a good hunter, we understood that the fault had been simply his lack of familiarity with the little rifle, and we did not poke any fun at him, since he felt so sore over the matter. He told us that on the next day he would take us to the sheep, and that we could probably get all we wanted without any trouble. When we asked him how far he had gone, he replied vaguely that he had "been far," and rubbed his legs significantly. We learned afterward that he had traveled clear across the top of the mountain and down on the Cut Bank side. By this he must have gone a distance of fifteen miles or more across country.

Lodge-fire Cookery.

We had no sheep meat for supper that night, but really, we did not need it. Billy Jackson took hold of the position of *chef* for that evening and proceeded to cook a meal big enough for about twice our number, had that number not included trencher talent of so pronounced a type. Billy Jackson would be lost in camp without a Dutch oven, but once provided with one of those comfortable utensils he can do all sorts of wonderful things around a lodge-fire. Billy's theory seems to be that it makes no difference what you put into one of these cast-iron pots, it is bound to be good when it comes out. In the bottom of the pot he laid, this time, a structure of crackers, over which he put two or three layers of fresh trout. Then he built on top of this a superstructure of beans, pork, tomatoes, beef, macaroni, and everything else he could get his hands on, throwing in a little salt, pepper, Worcestershire sauce, etc., for luck, as he went along. Billy was busy talking all the time he was constructing this imposing dish, and he never seemed to give any thought about the amount of salt, pepper or anything else he was throwing into the pot, but there must have been method in his madness, for out of the charmed Dutch oven arose nothing but the most savory odors and proceeded nothing but the most toothsome morsels. While the big stew was simmering the coffee-pot was likewise at work upon another corner of the fire. Presently they both were taken off the fire, and with some curiosity I interviewed Billy's *pot pourri*, more especially as to the trout, which I was confident most be ruined by the summary process which had been served upon them. Yet, to my surprise, the trout were not spoiled at all, but, on the contrary, were excellent. They were not baked, nor boiled, nor fried trout, but steamed trout, and anyone who thinks they were not good must be one who was not there to help dispose of them. They came out of the pot very little disfigured, but cooked thoroughly and ready to fall apart at the touch. We ate them all up, and ate up everything there was in the pot, and drank an unconscionable lot of coffee, as hunters in camp will do, and then lay back happy around the lodge-fire, nearly all the party hunting for pipe and tobacco.

O-to-kò-mi became more communicative after a time and told us of his hunt. Then we began to tell each other about others of our hunts, and so the evening sped away. Billy Jackson was, as usual, called upon to tell a story of his early days, and described to us how he was once entertained at an Arickaree village when he was returning to Lincoln after the disastrous defeat of Custer at the field which bears his name. Schultz gave us still further descriptions of Indian life and Indian lore, and we were well on toward midnight before we realized how late it was. Then there was a hurried scramble into the bags, for we had concluded that we must make an early start on the morrow, which was to be the first day of our general sheep hunt. There was a very comfortable feeling in camp that we were over the worst of our experiences and now upon the point of success in the quest upon which we had come so far.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A TRIP TO EASTPORT AND THE MAINE WOODS.

WE had talked about it, read about it, and dreamed about it, but where to spend our summer vacation we did not know. Maps too numerous to mention were carefully studied and laid aside. Of summer resorts we found many, and the picturesque mountain regions were not overlooked by any means.

Ned ———, who was to be my companion, was an enthusiastic sportsman. He had made many trips to the Maine woods, where so many stories about marvelous catches of fish and prodigious bags of game have originated. It was through his influence that I consented to go East. We had another week before vacation, and during that time we were kept busy getting things in readiness for the trip. Our fishing rods were once more taken from the attic and freed from their dusty coats. The guns, which had been laid away for many months, were disturbed from their quiet resting-place and given a general cleaning up. Two cameras, with several dozen plates, completed our outfit.

On the morning of Aug. 4, two sleepy fellows could have been seen at the railroad station anxiously waiting for the incoming train. We lost no time here, as the train arrived on scheduled time, and less than two hours after leaving Newburyport we arrived in Boston. We made quick time across the city to Commercial wharf, where we boarded the commodious steamer Cumberland.

After waiting patiently for nearly two hours we felt relieved when the captain came to the forward deck and cried out: "All ashore that's going ashore!" Five minutes later the ponderous engines began their fifty-two hours of continuous labor, and the boat moved slowly out of the dock.

The wharves then appeared to twist and turn and move rapidly away. The people who but a moment ago were closely gathered around their friends, appeared now like mere dots as they wended their way homeward. As we moved out to sea, the high buildings of the big city disappeared from view one by one, until nothing could be seen save the gilded dome of the State House as it flashed back the rays of the morning sun.

We were due at Eastport at 12:30 next day, and promptly at that time the lines from our boat were cast ashore at this famous seaport.

As the steamer moves slowly along coming up the bay it gives one an excellent opportunity to view the water front, lined with its fleet of vessels. The first thing that impresses a stranger, via nostrils, is the herring and sardine industries, whose packing houses line the river front for nearly a mile. As we neared the wharf many types of humanity could be seen, which were interesting to look upon, to say the least; and as the gangplank was lowered into position they formed a line on either side and watched the crowd with keen interest as they moved slowly ashore.

Wandering up from the wharf through the main street the evidence of the great fire of 1887 is omnipresent in the new structures bearing that date, the last one erected being the handsome new Government building, built entirely of granite at a cost of $125,000.

Throughout the town many quaint old homesteads remain to keep alive the memory of the past. Brick sidewalks and edgestones are something unknown to the people of Eastport. Go where you wish, you will find nothing but plank-walks, which in many places are elevated high above the street. The street life here resembles that of any other sea port, where the old fishermen, with rounded backs, gather on the street corners and discuss the catches of the past and present.

As one walks around admiring the fine buildings they hardly realize that they are on an island; but if they take the pains to climb to the top of the hill back of the town, they will soon discover that they are surrounded by water, and from this place all the matchless beauties of the quaddy region unfold themselves as at no other point. Looking northward, the St. Croix River and Chamcock Mountains are seen far below. Eastward, the fair bosom of Quoddy Bay set with its hundred isles. Southward across to Campobello and old ocean, and still further to Grand Manan, that lifts its purple walls along the horizon until blended out of view.

Boarding the stanch little steamer that plies between Eastport and Lubec, we were soon on our way across to North Lubec, which lies but three miles away. This quaint and picturesque village is also given up to fish and fishing, and here is situated the summer camp grounds of the New England Y. M. C. A.

After climbing a long flight of slippery stairs, which had been left uncovered by the receding tide, we found ourselves on a high wharf overlooking Chamcock Bay. A few minutes' walk brought us to the top of the hill, and from there all the beauties of the surrounding country could be seen to advantage. In every direction hills and wooded knolls rear their heads above the forest. Miniature lakes and rivers flash back the light of the sun, and stone walls appear like strings of beads in their winding course over the hill tops. If there ever was a place especially designed to enrapture the artist and lovers of nature, it surely must be North Lubec. It is possible that nature, when laying out her domains here below, may have made a more beautiful spot, but it is doubtful. The air, far sweeter than any we had ever breathed before, filled the lungs with a morning brace that makes one wish it could be bottled for future use. Nearly every morning a dense fog bank hangs over the bay which lasts nearly all the forenoon; the air being damp and heavy, it, of course, makes the surroundings look anything but cheerful, but when it clears away the view is very striking. As the sun creeps up, the heavy mist, which hangs like a bridal veil, moves, ghost-like, among the thickly covered banks and islands, rising higher and higher, in obedience to the warm rays, till lost to view in the upper ether.

Time passed very rapidly here in gunning, fishing and boating. Plenty of game birds could be seen at any time in their flight to the numerous islands in the lower bay. Trout were found quite plentiful, but a trifle small. The brooks were very low, and the muddy shores made it almost impossible to get near the edges. For miles around the shores were cut up with deer tracks, and in many places it was evident that they had no little difficulty in freeing themselves from the treacherous mud while trying to quench their thirst. Four days had now passed since our arrival at Lubec, and for a change we decided to go further down stream and visit the Passamaquoddy tribe of Indians and learn something about the larger game. Next morning we were up bright and early and on our way down stream before sunrise.

The tide was flowing at a rapid rate, and it required but little labor at the oars to carry us along by the thickly wooded shores with startling rapidity. We arrived at the

little village before the sun had fairly cleared the distant hilltops. Here we found everything in its quietude. Two or three of the Indians, with guns, were seen hurrying toward the dense forest, but they paid no attention to us. We said nothing, but watched them as they passed over the distant hilltop and wondered what specimen of the fur or feathered tribe would accompany them on their return home. A few minutes later a score or more made their appearance, which made the village present quite an animated scene. They were large muscular fellows, with high cheekbones and distorted faces.

Their costumes differed but very little in ornamentation. A dirty flannel shirt, dilapidated trousers and seal-skin moccasins form the daily apparel of a large proportion of

CAMP ON THE BANKS OF COBSCOOK BAY.

them. While strolling around the village we came across a group of wickerware makers sitting upon the ground busily engaged at their work. This was a subject that I had been wanting for a long time, and not many minutes passed before our cameras were in position and ready for a picture, but they were an inquisitive set, and of course dropped their work quickly and gathered around us. Being unable to speak their language we could not explain what we were about to do. The more that was said to them the more stupid they seemed to grow.

Getting impatient we began packing up our cameras, and this seemed to have the desired effect, as they returned to their places at once. We placed our cameras in position again only to find them crowding around us once more.

After a long time the older ones seemed to understand what we wanted them to do, and after consulting with the others they walked lazily away. But then it was with no little difficulty that they were induced to return to their places again. For the first time we realized that it was no easy task to obtain pictures of picturesque people in the backwoods; they are most apt of all to regard any attempt to photograph them as an attempt on their lives; this is especially so with the younger class who, when a camera is pointed at them, run about with the agility of a squirrel seeking a place of safety.

The few who did consent to have their pictures taken proved so wooden-headed that it was difficult to get them to pose properly. A snap-shot was taken, however, and then the trouble began. Evidently they had never before been visited by the camera fiend, as they are entirely ignorant of the camera and of course knew nothing about the time required to produce a finished picture. Gathering around us they began to clamor in an excited manner and wanted to see the picture which they had now found out something about. They insisted on having a copy at once. Explanations were out of the question, of course, and the predicament became anything but humorous. Promising them a copy at some future day we departed in time to look up some more scenes of Indian life.

The fact that more than three-fourths of the population are full-blooded Indians is enough of itself to account for much of the picturesqueness of customs and costumes. They are expert basket makers, and all sorts of things are skillfully made from the hammered ash, and so gayly colored that it would drive a peacock to suicide to look at them. Canoe building is another occupation which many of them engage in before the hunting season commences. We saw a dozen fine canoes at different places which were receiving the finishing touches. These Indians are fine workmen, and with a few strips of birch bark and a little pitch, both of which are gathered in the forest, they will mold out a canoe of which any one would feel proud to be the owner. An Indian would not be a true red man if he did not care for hunting, while they depend largely on canoe and basket making for a living. Yet they do not by any means let it interfere with their hunting. A close watch is kept on the shores of the river and the borders of the woods around them, where deer, moose and bear make frequent calls. During the hunting season it is seldom that their tables are found without fresh venison. If the number of hides which are seen stretched on the doors of their shanties drying in the sun is anything to go by, then they must have been well rewarded for their long tramps in the forest. The farmers in that vicinity seldom have any trouble from these Indians, in fact they owe a great deal to them for thinning out the skunks and foxes, who have no regard for the prize fowls that wear blue ribbons at the fairs.

Among the treasures of the Passamaquoddy Indians, it is said, is a letter from George Washington, written from his army on the banks of the Delaware, Dec. 24, 1776, in which he expresses his pleasure that the Passamaquoddies had accepted the chain of friendship he sent them the preceding February.

Early in the afternoon the wind suddenly changed to the eastward and blew with great force, the cold, damp wind penetrating our thin clothing until we became almost chilled through. Had it not been for the green branches swaying and twisting above our heads and the fresh meadows below us, we could have almost realized that we were in the Icelandic region.

We tried to gain admittance to several of the shanties, but found out that it was no easy matter to do so. Following the narrow path which led down through the valley to our boat, we came to another path which crossed in an opposite direction. We followed this path, and it brought us to the top of a rocky knoll, and from here we saw away out at the foot of a great hill, where the crows and chickadees call all the year round, a dilapidated shanty, which looked as if it had passed its usefulness many years ago. On going nearer we saw smoke rising from the canted chimney on the opposite side. "Surely, it must be serving as a shelter for some one," said Ned, as he glanced at the coils of black smoke rising high in the air. Whether enemies or friends we were going to find out, and in another minute we were wending our way quietly along the narrow path that led through a little patch of vegetables which seemed to be struggling hard for existence.

"Who is going to rap at the door?" Ned asked, in a whisper, as if all the wildcats and bears around had taken possession of this old house and were lying in wait for their victims. These foolish thoughts soon came to an end, and we had now arrived at the door. In response to a vigorous rap an old Indian half-opened the door and peered out; then the door was opened wide, and we received an invitation to enter. Although the room was filled with musty air, we were glad to gain admittance to this strange dwelling, where kitchen, dining-room and parlor were all one. After finding each of us a comfortable seat, which was nicely covered with deerskins, he introduced himself as Sopahel Selmo, chief of the Passamaquoddy tribe, he having held that position for several years. On looking around, the first sight to meet our eyes was the huge black fireplace on the opposite side of the room, built entirely of turf and clay, forming a very rude affair. From a large birch log coils of bluish-black smoke were constantly rising. Embers were smoldering on the large, flat stone in front, while the old black kettle was steaming away its cheerful notes from the crane above.

SOPAHEL SELMO, CHIEF OF PASSAMAQUODDY TRIBE.

Upon a threadworn mat, which was his household luxury, lay a large black dog, which for days and weeks at a time is his only companion. In the corners and on the shelves many quaint and curious articles were to be seen. Weapons of fearful and wonderful pattern filled the room. A gun of ancient model stood against the wall, and this weapon he values highly for its shooting qualities. Dried apple of a coppery hue hung in graceful festoons from the smoke-colored beams above. A stock of sea-bird wings were drying on pegs over the fire-place, showing that many members of the feathered tribe had fallen a prey to the skill of this lone hunter.

Probably there are cobwebs there to-day which were mansions of cheerful spiders when he took possession a half century ago. From an opening at the back of the fire-place, which Selmo called his oven, a pan of steaming hot biscuits were taken; these, with a dish of black molasses, were placed on a table, and an invitation given us to sit down and enjoy the meal with him. Although extremely hungry, we did not have the courage to accept the invitation to dine in that style. The biscuits had a knotty appearance, and looked as though they might make one feel a trifle heavy-laden if they ate one; and as we were taking no chances in this lonely region, we thought best to hold out till we arrived at Lubec.

In a little room adjacent was his cot, a rude affair which hardly cleared the floor. At the head of his bed stood a roughly made table, covered with cups and dippers, from which came a strong odor of pennyroyal and other herbs. These herbs, with tobacco, he uses freely, and to which he attributes his long life and continued good health.

Time had passed rapidly in this interesting little room, and as we arose to go he grasped our hands and bid us farewell. He stood in his doorway and watched us until we disappeared from view behind the hills, perhaps never to meet again.

The return trip was by no means an easy one, as it required two hours of constant labor at the oars before we saw even the faint glimmer of Lubec light, which was situated at the narrows nearly three miles away.

We reached Lubec, however, at a late hour, but knowing more about Indian life than we ever knew before.

OTIS P. GOULD.

ON THE EDGE OF THE GRAN CHACO.

TOLD BY WILLIAM KINGSBURY TO WILLIAM H. AVIS.

(*Concluded from page 4.*)

WE had been at Juan's for nearly a month, when, one day, Juan, Rubio and I decided to pay a visit to a large tacamar, or artificial lake, a few miles away. The tacamar had been formed by building a rude dam of logs and earth across an arm of the river, to provide drinking water for the cattle when the river was low. It was nearly a mile in length, and half a mile wide. A succulent growth of grass surrounded it. On account of its extreme richness, this grass attracted thousands of head of cattle, whose continuous feeding kept it cropped short, thus making easy traveling through it on horseback.

Upon reaching the edge of the tacamar, we stopped to gaze upon a scene which I can never forget. Directly in front of us, and for about half a mile on either hand, was gathered more game of all varieties than I had ever looked upon before. Hundreds, yes thousands, of geese, ducks and swans literally hid the surface of the lake a short distance from shore, while scurrying here and there near the shore could be seen countless hordes of nutrias (similar to our muskrats, but larger). There were also multitudes of jacares (alligators) which, in all directions, lay on the water and on the shore, basking in the sun. Cranes and storks of all varieties, some of them as tall as men and of all conceivable colors, strutted solemnly about; while huge turtles poked their heads out of the water here and there, or took their lumbering way along the shore near the water's edge. We watched this scene of animation for some little while before we went down to the shore of the tacamar. On our way, we found there was almost as much animal life in the grass as there was on the water.

I shot several nutrias from horseback and Juan killed a couple of jacares; he also caught and turned two large turtles on their backs on the shore. I thought I would get a few geese. Selecting a large bunch that was feeding near the shore some distance from me, I worked my way through the grass in their direction. Although I was not cautious in my approach, the geese appeared not to notice me. Singling out a large, fine bird, not over 30yds. away, I fired and he rolled over. The flock did not rise as I had expected, but simply stopped feeding and began to swim leisurely away. I killed eight, still they did not offer to rise. I now stopped, as it would have been wasteful slaughter to continue shooting them. The water was not over 2 or 3ft. deep; so I waded my horse in and picked up my birds.

While I was shooting geese, Juan and Rubio were not idle. They took the dogs with them, and, setting out through the grass, soon started a gama fawn. After considerable of a chase, the dogs ran the fawn down, but before they could injure it Juan and Rubio dashed among them and captured the animal alive. Rubio decided to take it home for a pet for his little girl.

The afternoon was gloriously beautiful and there was good promise of a fine evening. We decided to camp on the outskirts of a heavy monte. About sundown Rubio introduced us to a bountiful hunter's repast. He proved his ability to roast a goose to perfection.

The evening around the fire was one long to be remembered. A thin, crescent moon, so faint as to cast no light,

floated ghostily in the deep, dark heavens. The nearby monte seemed a shadowy cloud resting on the earth's surface, out of which came mysterious voices, ghoulish croaks and gruntings, or chirps and mirthless whistlings. Insects, dazzled by the blaze, buzzed continuously about our ears and fell spluttering into the flames. Now and then nocturnal, batlike birds flitted with noiseless wing in and out the circle of light. So we lay and spun yarns until late into the night; then each rolled himself in his blanket, determined to get as much sleep as possible, with myriads of mosquitoes singing about us.

How long I had slept I cannot say, but suddenly my eyes opened with a snap, my heart seemed in my throat, and before I was thoroughly awake I realized that I was standing erect, with rifle in hand. A deep roar, so wildly savage as to congeal one's veins and cause a gasping for breath, was filling my ears, and it came from a point out of the darkness not more than 20ft. away. Instinctively I raised my rifle and was pressing the trigger, when a stream of fire flashed almost in my face, and a crashing report, alongside my head it seemed, almost deafened me. Juan's old Winchester had spoken, and its report had hardly done echoing among the stygian arches of the monte, when we heard the rapid thumpity-thumpity thumpity of a retreating animal galloping away in the darkness. It was a close call, for the fire having gone completely out, we had been visited by an immense jaguar, the fiercest and most dreaded of South America's wild beasts. It is needless to say that there was no more sleep in camp that night. The horses were so frightened that we were compelled to build another large fire and tie them near us. With the exception of Coffee, the dogs, too, were scared half out of their wits. Had not Coffee been securely tied, however, he undoubtedly would have been away on the trail of our visitor. He showed not the least sign of fear, but walked back and forth at the end of his chain, uttering the deepest, fiercest growls I had ever heard issue from the throat of a canine.

Morning finally came, and after partaking of a hasty breakfast we mounted and started for the rancho. Rubio carried the little fawn across his horse in front of the saddle. He had bound it securely, and it must have suffered considerably before we reached the end of our journey. Rubio was as careful with it, however, as he possibly could be under the circumstances.

When we reached the rancho we found that H. and Jim hadn't been idle during our absence, for almost the first thing that met our sight was a nice fat doe, and a huge string of fish hanging side by its side near the door of the house. Once more were we so completely stocked with meat that we were compelled to desist from hunting game for awhile.

While we stopped hunting for food, we didn't let up on the monte cats. They were not only a nuisance and afforded us considerable sport, but were a source of profit, as the hides would readily sell in the nearest settlement for a fair price. We were after these animals one day when we heard the dogs kicking up a great fuss off in the heart of the monte. We hurried forward, and were just in time to witness the hottest kind of a fight between all the dogs and a large puma. Over and over they rolled, a living mass of animals, and the monte resounded with barks, growls, howls and snarls. We tried our best to get a shot, but it was some time before we were able to do so. Even then I was compelled to shoot while Coffee was clinging tenaciously to the back of the animal's neck. My shot didn't kill; but the brute was so badly wounded, however, that Coffee soon finished him.

One night, soon after the puma incident, we were visited by a jaguar and a couple of sheep were killed. Juan didn't seem to enjoy such visits, so Rubio voluntecred to build a trap for the jaguar. He and I followed the animal's trail to the edge of the monte where we had had the ostrich hunt, and proceeded to build our traps. A lot of heavy stakes were cut for a circular, roofless pen about 6ft. in height. An opening about large enough to admit the jaguar was made in one side of the pen. Rubio manufactured a complicated trigger, and when everything was arranged to Rubio's satisfaction we tied our lariats to the top of a young tree, which grew alongside the pen; the horses were then started ahead and the tree was bent down until its top hung directly over the enclosure. Rubio then told me to see that the line was kept taut while he entered the enclosure with the axe and lopped off the branches of the tree, leaving only the bare trunk. When he finished his work I allowed the horses to back and the tree assumed an upright position. Then we returned home.

It was within half an hour of sunset when all hands set out on a brisk gallop for the trap. Rubio had a bag slung across his horse, in which there was a young pig. He also had two heavy pieces of rawhide, which were as tough and hard as iron. We reached the trap just as the sun was setting. Rubio first fastened his pig to the trigger of the trap in such a manner that it was impossible for it to do a great deal of struggling. It could squeal, however, and squeal it did with a vengeance. Under Rubio's instructions, I climbed the tree and fastened a couple of lassos to its top; two horses then bent it down, and Rubio fastened one of the heavy pieces of rawhide to the treetop, the other end he made fast to the trigger. He ordered us to slack up carefully on the lassos, and the powerful spring-pole stayed bent, and the trap was nearly ready. Taking the remaining piece of rawhide, Rubio formed it into a slip-noose and fastened it to the top of the spring-pole, allowing it to hang in such a manner that the body of any animal entering the pen would be surrounded by the noose, while its feet would be on the treddle that would spring the trap. Woe to any animal entering here; it would be sure to find itself swaying between the earth and sky, and gradually its breath would be squeezed out of its body by an ever-tightening band as hard as iron. A couple of stakes were now pulled up, and Rubio came out of the pen; the stakes were then replaced, and we returned to the ranch filled with expectations of the morrow.

Daylight was fully an hour away when we were astir and saddling for our visit to the trap. While some of the dogs were yet stiff and sore from their fight with the puma, still, with the exception of the otter hound, we took them all. We set out on a brisk gallop to reach the trap about daylight. The east was beginning to show gray, and we were within half a mile of the trap when we halted and listened intently, but heard no sound. We called in the dogs, and Rubio made Coffee fast to the end of his lasso. We then silently resumed the advance.

We were probably within a quarter of a mile of the spot and were moving along very cautiously, when we were brought to an abrupt standstill by hearing a hoarse, furious yell break out on the morning air; it filled the depths of the monte with a hundred echoes. "We have him, sure enough," said Rubio. "Now we must be very careful and shoot sure. If we don't kill him he'll get away and kill some of us, so take sure aim when we see him and let the guns do good work. Shoot for the head."

The horses had no sooner heard the yell than they commenced to tremble violently. They were so frightened that it was with the greatest difficulty we managed to urge them forward. With the single exception of Coffee, all the dogs were as much frightened as the horses were. Pretty soon we could hear sounds of a terrific struggling and scrambling, and deep growling and fierce snarling. Emerging from a thick copse of underbrush, we came within sight of him. There, fast in the raw-hide noose and suspended in the air by the spring-pole, was a magnificent spotted jaguar. The noose had him fast around the loins and was so tightly drawn that it seemed he must surely be cut in two if he kept up his fierce struggles much longer. When he saw us he made tremendous efforts to get loose. His wild strugglings made the pole spring up and down, so that he could touch the ground with his forepaws. As he clawed wildly at the ground he scattered a shower of dirt in all directions, and the monte echoed and re-echoed with his frightful roars. Before our arrival he had demolished the pen and scattered the stakes in all directions. Whatever became of the little pig we never knew.

The horses were now nearly unmanageable with fright, so we decided to ride a short distance back, tie the horses securely, then to walk back to Mr. Jaguar and give him his quietus. After riding a quarter of a mile we found a good spot, and leaving them, returned to the jaguar and found him as ugly as ever. We approached to within 15yds. of him and the look he bestowed upon us from out his flashing, greenish eyes, as he roared in our faces, was enough to make the blood run cold.

The dogs had now gained a little courage and were jumping around and barking, but they took good care to keep out of reach of the powerful claws. Coffee, however, was kept tied to a tree, or he would have sailed into the jaguar and been killed.

The jaguar was bouncing about at such a lively rate that it was extremely difficult to get a good aim at his head. We watched our chance, however, and when the opportunity offered blazed away at him with three rifles. After a few swings with his paws he hung limp and motionless. Our three bullets had gone clean through his head. We cut him down and measured him, and found him just 8ft. 3in. from the end of nose to the tip of tail. He was a magnificent specimen and his hide was beautifully marked. We skinned him and returned to the ranch.

As H.'s vacation was now drawing to an end, we decided to continue on up the Salado a short distance, then to return to Juan Companion's and spend another week, and, as Juan and Rubio Antonio were anxious to buy, to sell our outfit to them and end the trip for that year.

We went only thirty miles beyond Juan's place, and spent two weeks in a perfect paradise for all sorts of game, and managed to kill six cervo while we were there. Then we packed our belongings on the spare horses and returned to Juan's. Juan and Rubio bought from us everything that we didn't give them. One day Juan drove us to the Santa Fé and Recon Questa Railway, and from here we went to Rosario.

There we separated. H. returned to his business in Los Cardos. Jim accepted a good position on the ranch of an old friend. I was filled with such a strong desire to look upon the faces of relatives and friends once more, that I drifted down to Buenos Ayres, where I accepted a position as second in charge of a load of cattle for Liverpool. From Liverpool I returned to my native land, on whose soil I had not set foot for more than eleven years. Here I found many friends who had looked upon "Bill" Kingsbury as being dead years ago.

BUCK RANCH.

ALL through the bleak winter we "dreamed of an April sunrise, of gentle calls and gallant gobblers," looking forward to the turkey hunt which the captain had promised us, longing for Buck Ranch, with its great silent forests and its holly groves.

The April sunrise came, but on what other scenes fell the lurid light than on the peaceful solitudes of Buck Ranch.

Long days and nights—long, anxious weeks, we had guarded our ramparts against the foe, and now, when we have all but won, he presses to a weak point in our lines—rushes through, sweeping resistance before him!

Is it the resigning of arms and humiliation of defeat that bear us down with heaviness? Look at our sunny land, where the note of the mockingbird rings and the breeze was but now laden with the fragrance of the magnolia and the heliotrope; our homes are a sea of troubled waters. Can you then ask? We had worked tirelessly, but to bridle the waters was more than men could do with the means at hand, and we were overpowered.

Captain Bradford went to the ranch alone, for when the appointed time came I, like Friend Bartlett, had "a weighty matter" that would not be put aside. A week after the crevasse occurred he passed, bound homeward.

"I had poor luck, Tripod. They seemed completely demoralized by the water and to have changed their habits entirely. Oh! there are a world of them, and there will be fine shooting next fall. But they stay in the tall trees and are hard to find. They won't gobble or come to a call. I had very poor luck, Tripod."

* * * * * * *

There were two kinds of "flood-sufferers":

A community of plantation negroes were camped on the levee after their cabins had been flooded. Their camp was passed daily by high water forces, with whom they had a standing offer of remunerative work. But what did they care for work, when the planter was feeding them and the "Gov'ment boat" was expected? And they didn't work until the boat had passed by another way and their landlord forced them to the issue.

Contrasting scenes are these: A covey of quail scattered among the trees and coming to the levee (the only land for several miles) to seek the scant pickings upon which they must now rely. Coahoma picked one up during a hard rain, its feet and wings so clogged with mud that it lay helpless, weary—bewildered—starving.

An inhuman hunter approached a covey of feathered refugees. He was warned of the law and the birds put to wing.

A rabbit floated on a chunk in the river, and a poor, starved turkey, seeking food, would not fly until I had ridden very near.

Reader of FOREST AND STREAM, to which class of sufferers do your sympathies go out?

Man, the refined brute—God's masterpiece—finds a deer on a small mound surrounded by water. With an oar he murders it for its skin. He paddles homeward, gloating of his prowess, and is hailed by a relief boat, "Come, poor flood sufferer! Here is food and raiment sent you by a sympathizing sister State. Eat, and welcome!" And he does, and is prouder that he has prowess to merit for him the compassion of a sister State, while Higgins over yonder has done nothing noble and ought not to have any.

* * * * * * * *

The April morning: You have toiled in combat with the water all night in a pouring rain. All of yesterday you worked under a gloomy sky. The day before, night before, and day before that you worked. The sky was dark and lowering, and occasionally rain came in deluges; but now has come the hour when rain means disaster, for if it rains men will not work, and those that will can accomplish little.

Dawn is coming out of the eastern sky, and with it is a faint, clear streak across the horizon which grows—widens—changes from an uncertain gray to pale blue, and then, as the clouds continue to part and raindrops cease to fall, darts o'er the eastern treetops a bright beam of morning sunlight that brings warmth and hope into the hearts of weary men, who turn their faces heavenward and thank God for that He hath, in the long ago, said: "Let there be light."

MISSISSIPPI.

Natural History.

A NEW FUR SEAL.

IN the Proceedings of the Biological Society of Washington, Vol. XI., Dr. C. Hart Merriam describes a new fur seal, or seal bear (*Arctocephalus townsendi*), from Guadalupe Island, off Lower California.

It has long been known that colonies of fur seals inhabited parts of Guadalupe and the San Benito Islands, off the coast of Lower California, and these have usually been thought to be of the same species that breed in such numbers on the seal islands of the Behring Sea. Dr. Merriam, however, did not believe this to be the case, thinking it very unlikely that a species adapted to the Arctic climate and cold waters of Behring Sea—and even there requiring constant fogs to protect them from the rays of the sun—should be able to breed under the clear skies of the sub-tropical islands, Guadalupe and San Benito. He therefore concluded, and in 1892 expressed the belief, that the fur seals which bred on those islands would prove to be not the Northern species belonging to the genus *Callorhinus*, but a Southern species belonging to the genus *Arctocephalus*.

Specimens were not then accessible, but through the coöperation of the State Department and Fish Commission, it became possible for Dr. Merriam to send a small boat in charge of Mr. C. H. Townsend to Guadalupe Island, in the hope of procuring specimens. The trip was made in May, too early to find seals on shore. Seven were seen in the water and one shot, which sank before it could be recovered. However, four skulls killed a few years previously were obtained and proved to belong to the genus *Arctocephalus*.

In his report on the Guadalupe trip, Mr. Townsend says:

"Guadalupe Island is thoroughly volcanic and there are caves by the dozen along every mile of the shoreline, which were once the retreats of thousands of fur seals. On the afternoon of May 19 we saw four seals swimming some distance off shore. Two of these we believed to be fur seals, but could not get within shooting distance, although we tried for an hour. The other two, seen later, were undoubtedly *Zalophus* (sea lions). No seals whatever were found on the rocks. * * * On May 22 we examined S. W. Point and the three islands or rocks south of it. On the most southerly rock we found a band of *Zalophus*, about thirty in number, hauled out. There were no fur seals among them. Passing the point, we continued, pulling in the dory, the schooner lying-to off shore, up the west side of the island about eight miles, where we anchored. In the evening we visited the spot where Borges and Sisson had killed 200 or 300 fur seals about ten years before. Only a few weather-worn skulls were found, which we gathered for shipment to Washington. The next day, May 23, we hunted along shore, in the boat as usual, as far as the next point south of N. W. Point, about six miles, the schooner keeping well off shore. At 10 A. M., near the outlying rocks off this point, we found what seemed to be a male fur seal, perhaps about four years old, asleep on the water, with his fins held aloft in the manner so characteristic of these animals. I got a pretty fair shot with the rifle, but missed. Half an hour later I shot a female fur seal, killing it instantly. Before we could get the hook on it, it sank below our reach, although only three boat lengths away when shot. The water was perfectly clear, and we could see the animal sinking when we reached the bloody spot on the water. It began to sink immediately when shot. With an extra long hook we might have reached it. We remained in the neighborhood for an hour, but no more seals were seen. While lying-to, with the vessel about two miles off this point, the captain saw two fur seals from the vessel, but was powerless to try getting them. It was on the rocks at this point that Capt. Hunt had killed a pup fur seal the year before (1891)."

The facts given below show how rapidly this species is being exterminated. There are probably but few individuals of it now living, and so far as known no museum in the world has a single specimen. This is the story of the destruction since 1880.

"In 1880 Capt. Geo. W. Chase, of San Diego, made several trips to Guadalupe for fur seals, which he found 'tightly packed in the caves and holes (in the rocks).' He generally fired at their eyes in the darkness of these places, but sometimes used candles. His skins sold for $15 each, from which he made $2,200 in 1880. The same man (Capt. Chase) stated that about a year earlier a Mr. Borges sold his catch of Guadalupe sealskins at San Francisco for over $20,000 (the rate being $10 to $15 per skin).

"In 1883 Capt. Geo. E. Wentworth killed about 2,000 fur seals on Guadalupe. Capt Wentworth states that several other vessels were there at the same time, and that the Guadalupe fur seal was practically (commercially) exterminated that year—1883.

"In 1890 Capt. Nelson told Mr. Townsend that he had killed fur seals with more or less regularity every year on the exposed shingle beach at the northwest end of Guadalupe Island, where he pursued them into the caves and killed them with clubs.

"In 1890 George M Hunt, of San Diego, visited Guadalupe in December for the purpose of sealing, and killed five fur seals—four adults on the east side and one pup on the northwest side. A few others were seen off shore."

Dr. Merriam has compared skulls collected by Mr. Townsend at Guadalupe with a series of skulls of *Arctocephalus, australis* or *phillipi* from the Galapagos Islands, and finds that the two species are very distinct. He has named this new species in honor of Mr. C. H. Townsend, who collected all the known material.

The Mocking Bird in Massachusetts.

SPRINGFIELD Mass., July 7.—*Editor Forest and Stream:* The reports of Von W. and of Awahsoose that birds were plentiful in their respective regions, were read with pleasure by all who are interested in the protection of our song birds.

My observations in this vicinity lead me to the conclusion that some of our birds have increased in numbers within the last few years Bluebirds have gained in numbers since 1895, the year of their greatest scarcity. Bobolinks, orioles, grosbeaks, vireos, song sparrows, indigo buntings and goldfinches are here in full chorus. During the spring migration, juncos, whitethroated sparrows, and the various warblers, were plentiful.

The ornithological event of the season, however, was the appearance of a mocking bird, a genuine *Mimus polyglottus*, within the boundaries of our city.

This species is a rare visitant to Massachusetts. A pair of these birds visited West Springfield three consecutive seasons; 1888, 1889 and 1890, and bred there.

Dr. J. A Allen recorded the breeding of this bird in this vicinity some years since.

The one now visiting us is a fine singer but does not imitate so many different birds as did the one observed in West Springfield. His *repertoire*, however, includes the songs and calls of the bluebird, bluejay, upland plover, whippoorwill, robin, wood pewee, Carolina wren, canary, bob white and the flicker, all of which he imitates perfectly, but appears to take the most pleasure in taking off the bluebird, bluejay and flicker. W. W. COLBURN.

A July Seal in Jamaica Bay.

NEW YORK, July 8.—*Editor Forest and Stream:* While sailing on Jamaica Bay on July 4, I was quite surprised to see a seal, which showed itself close to the boat. It was not 30ft. distant, and its round bullet head was unmistakable. Needless to say it dove immediately, but to see a seal in Jamaica Bay at this time of the year struck me as so unusual I thought I would drop you a line on the subject.

ROBT. B. LAWRENCE.

[To see a seal in Jamaica Bay at this season of the year certainly seems remarkable, yet we believe a few seals commonly or often spend the summer in the waters of Long Island Sound. A few years ago it was not unusual to see one occasionally between Norwalk, Conn , and the Thimble Islands during the summer months. Of course they were very shy, and usually were seen only at a distance, just as they were scrambling from the rocks into the water, and at such a distance that only one who was more or less familiar with the species would recognize it.]

Game Bag and Gun.

A COMMISSION OF FISH AND BIRDS.

HOUSE OF REPRESENTATIVES U. S., Washington, D. C., July 10.—*Editor Forest and Stream:* I am pleased to observe your interest in my bill, H. R. 3589, to enlarge the Fish Commission's duties and powers so as to include birds. The evolution is so natural and proper, that it is surprising that it should not have been thought of before. There is no bureau of our Government that is more generally popular with the people than the Fish Commission. The Fish and Bird Commission would meet even with more favor.

The bill does not merely apply to game birds, but includes all other useful wild birds The able Fish Commissioner has examined the bill, and informs me that "It is believed that this Commission, from the character of its operations, is the proper office to have control of such matters, and with its facilities, the work—with a comparatively small appropriation—can be begun at once"

There are some parts of this country where certain kinds of birds are numerous, in excess of the wants of that locality. The California quail, of the large and small varieties, are both very numerous in certain of the valleys of that State. A large number of them could be captured and turned loose in other parts of the country where they do not now exist, or where they are very scarce. The Oregon grouse and Chinese pheasant would thrive in many localities where they are unknown. Many of the Scotch, English and German birds would live in some parts of the United States.

Like all other schemes, experience would suggest plans now untried, and the scope and purpose of the Bird Commission would be enlarged if successful, just as the duties of the Commission with regard to fish have been increased.

Of course, the Fish and Bird Commission might turn birds loose in the fields and woods, and fish fry into the streams in vain, if every man and boy should diligently ply his vocation as an exterminator; but the various States would at once extend their game and fish laws so far as might be necessary to promote the efficiency of the Commission. Besides this, a healthy public sentiment upon the subject would be created. The man or boy who sees birds introduced at the Government expense in his neighborhood, would feel a partial proprietary interest in them, instead of that hostile feeling which arises under the game laws of countries where birds are protected for the exclusive sport of classes only of the people.

I have no doubt the prairie chicken, now so scarce in Iowa, would thrive and receive protection in the valleys of Shenandoah and Cumberland.

The State laws to protect existing birds from extermination would receive new life in their enforcement if the people could see new varieties appearing. The natural disposition to spare the new varieties would lead to a like feeling in regard to the old ones.

If the experiment should prove successful it could be steadily followed up and great benefits would ensue to the whole country, in my opinion. But should the results fail to meet our expectations, Congress would reduce, or withhold, appropriations for the purpose.

The catching of fish for fertilizers is a crime against nature. The extermination of the buffalo and wild pigeons will stand in history as a blotch upon the glories of the nineteenth century. Many of the highest prized birds will disappear as completely as the great auk and the dodo, unless active interest is awakened in their behalf.

The restoration of fishes, owing to their great fecundity, is a much easier task than the renewal of bird life; but I feel confident that by the enactment of the proposed law the Fish and Bird Commission will enter upon their good work with renewed vigor, and they will receive more general aid and coöperation than ever before among the people.

JOHN F. LACEY.

SNOWSHOE FORMS.

BOSTON, June 28.—*Editor Forest and Stream:* I have been much interested in Mr. Hough's recent remarks regarding snowshoes for different localities. In the main, I agree with the conclusions to which he seems to have arrived, but one phrase he uses leads me to rise and object, where he says, "the shoe is so long that it covers all sorts of holes."

Now, the man that tries to cover all sorts of holes with a long snowshoe will often be tempted to bridge holes he should not, and his bridge will break beneath him. To be caught with a broken snowshoe, with miles of deep and unwadeable snow between you and the longed-for camp, is no joke, as many a woodsman knows to his cost. And I think that most shoes are broken by attempting to bridge such holes, or using the shoe for a similar purpose, by the side of logs, fallen limbs, etc If the snow is fairly heavy or well settled a bunch of spruce or fir boughs may be made to serve as a rough substitute for the snowshoe in getting to camp; but it is better to be rather chary of attempting to use the shoe for a purpose it was not intended to meet.

As to the size of mesh for a snowshoe, I agree with Mr. Hough perfectly. I think the snowshoe of most localities is made with entirely too small a mesh. The reason for it may be its supposed better appearance, or because the higher-priced and therefore presumably better shoe—the racing one—is so filled. But races are not generally run on such snows as the woodsman so often has to contend with in his work, and I have not found that the practical and unimaginative trapper cared to spend the time and labor in filling—for his own use—his shoes with such fine meshes, although willing to do it for the city sportsman, who likes and is willing to pay for it.

For general use in such a locality as the State of Maine, for example, I think that a mesh as large as 1in., or even 1¼in., is preferable to the ½in. or smaller mesh so commonly employed. There is no doubt it is far better when the snow is damp and heavy, or partially settled, and even on a light and newly-fallen snow it sinks but little deeper than the smaller mesh.

But it is in the late winter or a January thaw that its greatest advantages are experienced. Then, when every string is covered with its accumulated load of damp and sticky snow, and large quantities of it rest on the upper surface of the shoe, the lessened amount of string in the large mesh means a lessened weight of snow to be lifted and dragged along, and the larger openings in the filling means that more of the leaden deck load is going to drop through and be left behind. No one who has not dragged his weary limbs for many miles through such stuff, at the close of a hard day's tramp, knows what a relief it is to keep the shoes clear of it.

As to its appearance, we can become used to it. Many of us remember how large and clumsy the first pneumatic tires looked, after having been accustomed to the smaller—and apparently neater—solid rubber ones. Even now we are seeing the small but thick tubing of the earlier bicycles giving way to the larger but thinner ones of to day, are becoming accustomed to its increased size, and gradually altering our ideas of beauty in a bicycle to correspond with scientific or mechanical necessity.

As to the best shape for the shoe, theoretically a circular form will give the largest bearing surface with the least circumscribing dimensions, with its lessened length and weight of bow, and with the least amount, and, therefore, weight, of interior mesh. This being so, the more nearly the snowshoe can be brought to this form, the smaller and lighter will be the load to be lifted and pushed along in order to keep one on the surface of the snow.

But perhaps it is the horse alone that could use such a snowshoe, having the necessary space between his feet, that permits the use of a circular shoe without interference, and I believe that in Scandinavia, small, circular snowshoes are so used on mountain ponies.

In the obstructed woods of northern New England and Canada, the Alaska pattern of snowshoe—which Hough proved so desirable for use in the Rocky Mountains—would be a cause for continual exasperation, vituperation and condemnation in a heap. A man using them would be progressing on his ears oftener than on his feet. It would be impossible with them to twist about in the thick woods or obstructed places, as one continually has to do, and in stepping, or attempting to step, over logs, fallen limbs, stumps and other obstructions perhaps concealed beneath a light snow, they would be continually broken.

The New Brunswick trapper's form, illustrated in the article, and which is, I think, the typical Canadian model as well, pretty nearly approaches what I think is the better form for such work. Slight variations might be made in it to suit particular localities. Where there was little or no undergrowth, its somewhat angular and pointed form of toe could be advantageously rounded, approaching more nearly the theoretically perfect circular form, lessening the length of toe and therefore its liability to catch in the snow and throw the user, and reducing the leverage of the front by which in such a case the after part of the shoe is raised and the toe pushed still deeper into the obstructing snow. But in undergrowth or thickets the rounded form would be more likely to strike and catch on the stems of bushes and saplings, and throw one down, instead of being pushed to one side as the more pointed toe would do.

The same thing could be said of the rear part It could be swelled out at the sides and thereby shortened to advantage, increasing the strength of the shoe and decreasing the risk of breaking it in stepping on or over obstructions. In the case of the trapper, obliged by his calling to operate near streams and ponds, where the thickets of alder, willow and young saplings are most commonly met with, and also obliged to walk the ridges for fur found mainly on them, the compromise between the pointed and the round toe meets fairly well the varying requirements of these two kinds of locality.

It has always seemed to me that for the projecting rear end of the snowshoe there was no necessity. It has no bearing surface worth mentioning, and serves mainly by its weight to keep down that end of the shoe, thereby counterbalancing and lifting the toe, and allowing it the more easily to be pushed forward over the snow. I think this additional length is a great inconvenience, and the weight can be more advantageously supplied in the form of a little triangular piece of lead. It is the weakest part of the shoe at present and the oftenest broken.

The shorter and more compact the shoe can be made the more handily it can be used, and with the least risk of breakage. The racing snowshoe is, of course, made of excessive length; but races are not, as a rule, run in thick woods. As they are run with the object of getting over the greatest distance in the least time, the time wasted in the slightly lateral swing of the body necessitated by the width of the ordinary shoe is removed by decreasing that width, making up for the lessened bearing surface by adding to the length.

But one could run on almost indefinitely on this subject, for there is much that might be said and that I hope will be said. I will only express my own gratification in reading for a long time Mr. Hough's practical articles, in which he has so well described the tents, packs, snowshoes, moccasins, rifles, and the many other articles necessary to the outer in his life in the woods or on the plains. Long may he live and write. And I hope that others of experience will break through their disinclination and tell us what they know—or don't know—about similar things.

CHAS. DYER CHASE.

CHICAGO AND THE WEST.

A Double on Snipe.

Friend Tom Johnson, of Winnipeg, thus happily describes a certain delectable little experience which came to him last fall. It is not every man who has ever done his right and left on snipe:

"Mr. Rider Haggard, in one of his novels," says Mr. Johnson, "caricatures one of those lazy, happy-go-lucky sort of Englishmen, who think it a crime to be in a hurry and uncharacteristic of a gentleman, but whose quaint drollness and laconic adjectives amuse one. He asks his sportsman-hero if he failed to attain his heart's desire, how it would affect him. He said: 'like a double on snipe, and, missing both of 'em.' And if he attained his object, what then? 'Like killing both of 'em.'

"This preamble means that I have shot Wilson snipe for twenty-five years and never, until last fall, had an opportunity to accomplish the ambition of all sportsmen, a double on an extreme right and left. Mr. Thos. Kelly and Mr. Wm. Georgeson, of this city, were with me on a shooting trip. Mr. Georgeson had a new 12-bore gun that did not fit him, and, in consequence, missed a number of birds in succession, the gun getting the blame for the bad fit or marksmanship. The two friends were my shooting guests and I did not carry a gun. Mr. Georgeson got me to try his to find if it was the shooter's fault. We had only proceeded a few yards when 'scape!' 'scape!' I heard, and to the extreme right and left, at about 40yds., were the causes of the sounds. As quick as thought I let go, bang—bang! And at the first opportunity I had ever had in my life 'I killed both of 'em.' I have many times killed a 'straightaway' and quarterer, but I never experienced before how truly and faithfully had the popular novelist depicted the feelings of a sportsman on getting a 'double on snipe.'"

Mongolian Pheasants for Michigan.

The Grand Rapids, Mich., *Herald*, has the following singular information:

"STANTON, Mich., July 1.—E. M. Shelley & Son, of the Emore House, have received a consignment of fifteen Mongolian pheasants direct from central China, 500 miles north of Shanghai. The birds were ninety days en route. They hope to interest the people of Michigan in the propagation of these birds." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

High Compliments to Good Men.

HERE is a story for FOREST AND STREAM, well authenticated, which will go to the heart of every lover of the Yellowstone National Park and its future.

SCENE: The railroad station at Cinnabar, on arrival of train from Livingston.

TIME: 10:30 A M., Sunday, June 20.

DRAMATIS PERSONÆ: Col. S. B. M Young sitting in buggy. Two natives on platform; the auditor close by.

FIRST NATIVE *loq.:* "There is that Col. Young. He has come to take charge of the Park."

SECOND NATIVE *loq.:* "Yes! and Anderson has been takin' him round and he'll be just as dog-goned mean as Anderson was." A. E. B.

Deer in New Hampshire.

THE BALSAMS, DIXVILLE NOTCH, COLEBROOK, N H., July 7.—I will aim at the way game protection is working up this way. I saw one deer this morning in the road *en route* to this place, five miles from Colebrook, and another on the tennis court in front of the hotel at 11 A. M., not over 40yds. from some of the guests in under the shade trees. The deer of various sizes visit there every night to get salt that was used to destroy the grass, and their work is annoying when their digging cannot be witnessed. Some miscreant has destroyed an old doe, two miles from the village, leaving the body unused in a pasture where it was shot.

NED NORTON.

From Generation to Generation.

A SAN FRANCISCO subscriber, renewing his subscription, writes of the FOREST AND STREAM:

"My father, who had been a reader of your paper from its initial number, is no more. I was brought up on the paper, and am bringing up my boy on the same healthful pabulum."

Its Hold Grows With the Years.

I INCLOSE check for my subscription for FOREST AND STREAM. The longer I remain a subscriber the more I realize that I cannot get along without it.

I don't remember the date when I first began, but I should think my name would appear on your books from fifteen to twenty years back. C. A. TAFT.

MASSACHUSETTS.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

MEN I HAVE FISHED WITH.

XLIX.—Rev. Henry L. Ziegenfuss.

THE rector of Christ Church, Poughkeepsie, N. Y., was a jolly companion on a trout stream when I first knew him, and in his later days, when he was the Archdeacon of Dutchess, he retained the same good qualities which have rightfully been attributed to the gentle angler since the days when Izaak Walton wrote that angling classic which will retain a place in English literature as long as that literature shall last.

One May day a score of years ago I was lazily fishing down a stream in Sullivan county, N. Y., tributary to the Neversink River, which empties into the Delaware, when I stopped to repair the damage that an unruly trout had made in my landing net, which had now shown that it was too tender to retain so strong a fish; and as I was engaged in cutting out the bottom of the net preparatory to knitting in a new one with some old fish line, a dark-haired stranger, with a pleasant face and equally pleasant voice, asked: "What has torn your net in that manner; did it catch upon a tree?"

I explained that a trout had broken two or three meshes and escaped, but in order to knit in the bottom of the net in proper shape it required much cutting. He sat down and watched the knitting in of a new bottom with much interest, and admired the completed job so much that, when he found that I was making headquarters at Woodburn, he went there for the night, and cut and tore all sorts of holes in an old seine in order to learn how to cut them out so that they could be knit in without losing or gaining a mesh. This work delighted him, and in after years I saw him show some herring fishermen how to knit up a hole in a net instead of gathering it in a bunch and tying it. This he regarded as a great accomplishment, and in later years often said to me: "We can cast a fly and take a trout with the rest of them, but when it comes to mending a landing net we can beat them."

I have said that on a day in May I was lazily fishing down a stream. Most anglers get into a lazy, discouraged way about noon, when the trout don't want to bite and they do, but I was keeping up the pretense of fishing until a certain cool spring was reached, where there was promised rest and refreshment. The angler who joined me was a stranger on that stream and accompanied me a half-mile further to the spring, where we sat in the shade and ate our luncheon. Afterward we compared the contents of our creels and the pages of our fly-books, rods, lines and reels. One of the pleasures of fly fishing is to meet a brother of the angle, and after a mutual inspection of flies and tackle, to sit down in the shade and discuss the merits of several flies for that particular day and water. We had exchanged cards and found that we had many friends and acquaintances in common.

Mr. Ziegenfuss had eight handsome brook trout to show and I had nine, but as we matched them we decided that our catches would not vary an ounce and that the fish in my creel would run about three to the pound and his a trifle more. The fish were in good flesh but slender, as those in rapid brooks usually are, bright in color, and formed a pretty picture upon the grass where they lay.

"I see that you are fishing with only one fly, and that it is an oak fly; did you take all your fish with that?" asked Mr. Ziegenfuss.

"Yes, the morning opened bright and I chose a dull fly; the brown wings are only lightly relieved by a dull, yellow body, and happening to hit it right, I stuck to it. One fly is plenty, if it is the right one. Sometimes, after changing flies several times, I have put on three flies, when lake fishing, but in fishing a stream, with its eddies taking one fly over a sunken log and another under it, one fly is easier to handle, and, to tell you the truth, I never did care as much for stream fishing as for casting from a boat upon a lake."

My companion looked up and said: "With me it is the reverse; I love the babbling of the brook, which seems to sing the song to which Tennyson has given words, and then the ever changing lights and shadows, the big trout which your fancy installs under the roots of the great tree upon whose domain the brook has encroached, and the keen expectancy with which you present a most killing fly, only to lose it in a mass of roots, and so get a lesson in perseverance as you try it again. Have you anything in lake fishing to compare with this for the poetry of angling?"

Surely my new friend had a keen appreciation of all the finer enjoyments of angling, and to him the capture of a fish was only an incident in a day's sport and not the main object of it. He had challenged me to a comparison of the style of fishing which I preferred, to stream fishing, which he took the most delight in. I began by saying: "Questions of taste are not debatable; *de gustibus*, etc. The two modes of fly-fishing are so different that it is difficult to compare them. If I did not enjoy brook fishing you would not have found me here on this pleasant May morning; that is a self-evident fact. I am somewhere from fifteen to twenty years your senior, and am not only not as ambitious for the athletic exercise of wading a stream or tramping its banks as I once was, and a seat in a boat on a mountain lake, where the scenery is all of nature's handiwork, unmarred by the axe of man, is as pleasing to me as the brook. I see that you have waded the brook in low shoes, woolen stockings and trousers tied down."

"Yes," said he. "Do you prefer rubber wading boots? I notice that your shoes are wet, but that you are not shod for wading. Is that your usual rig for a brook?"

"It is my only rig," I answered, "for I seldom fish brooks now. The fact is that I abominate all kinds of wading boots and trousers, or rubber clothing in any form. If I should require a Turkish bath that would be a thing to go for; but I had a pair of wading trousers with boots attached, which came up under my armpits, and I wore them one day and stewed in them while wading the West Canada Creek in the Adirondacks. I was steamed and almost parboiled, until fortunately I slipped upon a mossy stone, landed on my back in the water, which filled the waders and had a soothing, cooling effect on my exhausted system. I went ashore and emptied the water out of the things, and sat enjoying the air as it blew on my superheated legs and body. Then I tore a leaf out of my note-book and wrote: 'These things cost me $18, lawful currency of the United States. They are yours if you want them. If I have an enemy, I only hope that he may find them and wear them for half a day, and suffer as I have done.' Then I hung them by the roadside and left them."

"That was your experience with waders," said Mr. Ziegenfuss, "but how about getting into the stream in a rig like mine, with low shoes, either with or without hob-nails? I agree that all rubber clothing produces too much perspiration to be comfortable; but what about wading in low shoes when stream fishing?"

"It is the ideal rig for wading," I replied; "especially if you cut slits in the shoes near the soles to let the water out. But then, my dear young man, pardon the reference to your youth, to a man of my years and life of exposure, a day with his feet and legs in water that will sustain trout, while the sun is broiling his brain, is a source of present discomfort and future rheumatism, or sciatica, that takes the edge off fishing. I hope that I have stated my case so that my personal preference for boat fishing on lakes will not appear to detract from your favorite methods, for these questions of sport are not to be answered by hard-and-fast rules; each individual must decide for himself the form which suits his taste, age and other physical peculiarities. In my stream fishing now I do not wade much, but fish from the banks when it is possible. Of course I get my feet and legs wet, but they are not chilled for hours, that's what I don't fancy."

"What are your plans for the day?" Mr. Ziegenfuss asked.

"It was my intention to fish down to this spring, something like three miles from the village, as the crow flies, but about twice that distance by meandering the stream, rest here as we have done until the sun gets half way between meridian and the hilltops and then work back, fishing as long as it is light enough, and then take a straight cut for the hotel. What are your intentions?"

"I have none," he said. "I stopped at a farmhouse last night and thought that I would fish down to the Neversink to-day and then fish that stream to-morrow and get home Friday night, but if you have no objection I will go back with you and we will talk things over at the hotel. I came alone because I had a chance to get off, but none of my fishing companions could leave; I had heard much of this stream, and here I am."

"My case, exactly, and if you will go back with me to-night I will be delighted, for you know how lonesome it is at a country hotel where an angler is entirely out of sympathy with his fellow-man, as he finds him in the hotel barroom. I'm a gregarious fellow in a general way, but I particularly enjoy company in whose talk I can find some interest, and can assure you that your company to-night will be a pleasure the more valued because unexpected."

We rested awhile longer before starting, and we cast our flies over likely water for a mile without a rise, Mr. Ziegenfuss in the stream and I alternately on its banks or in it. "It's no use," said he, "the trout refuse our flies; we must change. What do you propose?"

"Lighter colored flies—coachman, professor, Reuben-Wood, or queen-of-the-water. You have two flies on and I only one; they were good in the morning, and in the noon glare, but the sun is somewhat overcast, and our dark flies do not attract. I think any of the flies named will be good, saving the Reuben-Wood for nearer sundown, when its white chenille body will show up to advantage."

"All right," said my friend, "you take your choice, but I have a royal coachman and a red ibis which I will try first, and a white miller when the sun gets below the hills."

He soon got a strike and I stopped to see the fight. It was impossible to tell whether the fish was on the royal coachman, which was the tail fly, or on the hand fly, but soon he had a trout on each, and the conflict deepened. The fish had already passed below him, and he was putting on all the strain he dared, in order to keep them from reaching the roots of a tree which had been washed out and lay across the stream. Ten feet more and they would reach it. I offered no advice, for a master-hand held the rod; but my heart beat hard when the tip of his rod touched the water and his click reel told that he was yielding line. Then he checked the rush and one fish broke loose. As he reeled the other trout in we saw that the hand fly was gone, and that the tail fly had held a tired-out trout that would weigh nearly 1lb., the largest fish we had taken that day. As we went on I took two trout on the professor, and a good one on the Reuben Wood just at sundown, and my partner took two more.

After supper we found a piazza, and taking our chairs on it felt a grateful relief from a country bar-room, which is usually the only sitting-place for a male guest. Few anglers have escaped an evening of horror in such a place, listening to the village sport who knew how "That ar bay mare o' Jenkins's would win the race 'cause I see her trot in private when Doc Miller held the watch on her, an' she done her mild 'n less 'n 3:30; but look out for that roan colt o' Si Harkins's nex' week; I tell you he's a wonder," etc.; or the rural tough who exultingly relates his exploits in helping to "clean up" a circus.

When I spoke to my friend of these objectionable features of many country inns, he related the following incident:

"Some years ago, while fishing a stream in New York near the Pennsylvania line, I put up at the only hotel in a village of about 1,000 inhabitants which lay some three miles from a larger one, where there had been a circus and a fight the night before. The evening was too cool to sit out, and there was a warm fire in the bar-room. I couldn't go to bed before 10, and had to listen to a gang of village ruffians tell of their exploits, as they started in perfectly sober and became hilariously drunk before I retired. By the way, do you happen to know the significance of the call 'Hey, Rube'?"

"Yes; it is like the white plume of Henry of Navarre—a rallying point for the canvasmen of a circus, to denote either an incipient fight or the thick of it. The bucholic ruffians band together to attack these canvasmen without any other reason than the love of fighting, which is inherent in the Anglo-Saxon and Celtic races. The men who put up and guard the canvas of a traveling circus know all about the rural toughs, and when they hear the slogan 'Hey, Rube!' they rally on the cry."

"That explains what the leading ruffian said. In his tale of the battle he laid out the plan of assault something like this: 'Before we made the attack on the main entrance and the ticket wagons, we had men with clubs posted so that when they called "Hey, Rube!" our men would be between them and the front entrance; but they had men in the rear, and Jo Beal got shot in the leg and a fellow from Lima got a bullet in his arm, and they got the best of us for a while, but lots o' people seen me clean up a circus man when he come up into town.' That," said Mr. Ziegenfuss, "was the sort of talk that I was compelled to listen to, because there was no escape. After that evening I never wondered at Barnum's reply when he was asked why his boss canvasman selected a tough lot to assist him. You remember what he said?"

"No; but I can guess."

"Barnum, who by the way was not only a good citizen but also a Christian gentleman, listened and answered: 'If my canvasmen were all good Christians and turned the other cheek to the smiter, I would never use the same canvas twice. In the large cities my men have little trouble, the gangs of ruffians do not concentrate their efforts on a circus, as those of country towns do, and we get along well.' From what I heard that night I think rowdyism in the cities is under vastly better control than in country places."

"Your position on this point," I answered, "is correct, and when we fish a stream in company and I hear you call 'Hey, Rube,' it will be a sign that you need assistance. But what will we do to-morrow?"

It was decided that we would fish down over the same course in the morning, take our nooning at the same spring, and then fish down the Neversink to the railroad and take cars for our homes. We agreed to make an early start, breakfast at 5:30 and leave at 6, an hour that some people would not call early, but was early enough for us. Ten o'clock struck, and I suggested that if we were to be called at 5 we should retire, but the rector asked me a question which required at least an hour to discuss in a rudimentary way, without attempting to exhaust it. I was always willing to sit up in good company, and without quoting to my companion my favorite statement that "there are two things I hate to do; one is to go to bed and the other to get up," I made him answer in this fashion:

"Angling is a science, at least anglers admit that, because it is 'knowledge set in order,' but it is not an exact science, like mathematics and hair-cutting, because its professors differ, as doctors do, and on no question do fly-fishers differ more than the one on which you ask me to give judgment. If you will make the question a personal one and ask if I prefer to fish up-stream or down, there would be no hesitation about the answer nor the reasons for this individual preference, but this is a moot question, both in England and America, and pages have been written on each side of it. I am somewhat familiar with the literature of the subject, and am sure that trout can be taken by both methods in streams swift or slow; otherwise there would have been no argument."

"That's all very true, and I will amend the question by asking: Do you prefer to fish a stream up or down? A lawyer would demand a categorical answer to this, but I merely ask for your individual preference. That, I think, places the question just as you want it; isn't that right?"

"Yes, that's the only way any angler could answer it," I replied, "and speaking only for myself I will say that I love to fish down stream, and if that is not possible, I like to fish up stream, with strong emphasis on 'love' and 'like'; in fact the strongest kind of emphasis, and all the shades of meaning that can be placed between them."

"Then you do not dislike fishing up stream?" asked the rector—he was not an archdeacon then.

"Oh, no; I don't dislike any form of fishing that is done for sport, and can enjoy bobbing for eels, if that is the best kind of fishing to be had, but the evening is too old to go into such questions. They are like questions of politics and religion, men may argue them for years without profit. You know the opinion of the man who is 'convinced against his will,' and in this case it is largely a question of preference and not of belief."

In the morning we fished down the stream. The day was neither dull nor bright and the wind was south. My friend was to take the lead and I to keep half a mile behind, in order that the pools might recover from the disturbance and the trout regain their confidence in drifting insects. When I reached the pool where the rector lost a fly the day before I took a trout, and yelled "Hey Rube." There was a long bend in the brook here and my partner came across it in a few minutes.

"I presume you are in trouble," he said, "although I see no evidence of it."

"The trouble is that you put your mark on a trout and then leave it for me to catch," and I opened my creel and showed him a beauty with the red ibis which he lost the day before firmly fastened in the lower jaw of the fish. "I would not have called you off the stream if you had not been within a few yards of the spring where we rest and refresh, but allow me to restore your lost fly and present the fish which purloined it. The loss of this fly is one reason why I prefer to fish with only one. I dislike doubles."

After our nooning my companion said: "During our talk last night you did not give a reason for your preference for down stream fishing, I think I prefer it myself because it is easier, but I can't say that it is more successful."

"Easier it is, for certain, and that's reason enough for me; but going down stream one has perfect control of his line, and as the current takes his flies where his rod guides them there is no casting to be done, with its exasperating hanging up of flies on the bushes behind. To me the coming back of flies whose movements the current controls in up stream fishing overbalances the effect of disturbing the water above the trout. It is only slow streams that can be fished up, it is impossible to fish up our swift brooks."

"And then," said my friend, "one is more apt to slip on a mossy stone and feel the water pour down his coat collar when he is wading down stream, and this keeps him much cooler than when wading up the brook. That's my main objection to wading down stream."

When we parted at the railway station, it was with a promise to fish one of his favorite streams, a tributary of the Walkill, a month later; and we had excellent sport for three days, fishing it from New Paltz down to Gardiner and back. The Walkill rises in Ulster county, N. Y., and flows off N.E. to join the Hudson at Rondout. I had agreed to meet him at Zach. Du Bois', where all anglers who fished the Walkill in those days found a welcome; and after depositing my luggage and engaging a room I strolled out to look at the stream, and was startled with the cry of "Hey, Rube!" and there was my friend. He never forgot the rallying cry of the cir-

cus men; on his mind it was not only indelibly fixed, but was associated with me, while I, as a man of the world, had forgotten that I had told him of it. There are men whom I knew as boys half a century ago that memory only retains their names and some idle remark or story, such as Mr. Ziegenfuss retained in this instance. It was a word outside his vocabulary and used entirely outside his life circle, and he never forgot it.

When we organized the National Rod and Reel Association, which held the famous fly-casting tournaments on Harlem Mere, in Central Park, New York city, as secretary of the Association I sent a circular to Mr. Ziegenfuss and he promptly joined, as did Mr. John A. Roosevelt and Judge J. S. Van Cleef, of Poughkeepsie, and others of neigboring towns. Mr. Ziegenfuss never took part in the contests of the Association, but was always ready to act as judge or referee if asked, as he was sure to be. He struck up a great liking for Reuben Wood and his brother Ira at these tournaments, and went fishing on Oneida Lake with one or both of them.

Mr. Ziegenfuss died some five or six years ago. His last letter to me, dated Thursday, May 22, 1890, said, after the formal address: "Hey, Rube! Let me know if you can meet at Zach Du Bois's next Tuesday night. The dam there, which was always low, is now broken. Below the dam, and north of it, is a good quarter of a mile of pools where we can cast the fly. The trout are small and rock bass are abundant, but if you will meet me there we will fight out our differences about fishing up stream or down, and will discuss the colors of flies to be used on dark or light days, and a whole lot of other things which I have in my note-book to fire at you."

Something interfered with this meeting and I never saw him again. FRED MATHER.

CHICAGO AND THE WEST.

The Heated Term.

CHICAGO, Ill., July 3.—One of the singular things about human nature is that mingled joy and misery which the average citizen evinces during a spell of hot weather in his locality. Especially marked is this frame of mind in Chicago, the city of superlatives. This week it is hot, extremely hot, awfully hot in Chicago. Prostrations occur in the streets very frequently, and last night five men shot themselves—driven to insanity by the heat. Yet the average Chicago citizen mops his brow with a smile, pointing out with pride the fact that it is hotter in his town than it is anywhere else on earth. This same feeling of delight in a high thermometer exists all along the track of a hot wave.

One of the immediate results of the heated term here has been a great exodus from the city to the country. All the summer resorts are crowded, and there has been more fishing tackle sold in Chicago this week than in the month or more immediately preceding.

At this time I recall a description given by my friend Mr. Divine of the manner in which they shoot doves in Tennessee, with the assistance of a fan and a bucket of sangaree. With the thermometer high up in the 90s, one may be pardoned for having visions of green fields. Just now it occurs to me that the most delightful situation of life would be to sit on the bank of some icy stream, with one's feet in the water, with a long glass of lemony liquid in one's hand, watching the trout jump under the edge of the alders, and listening betimes to the strains of the "Cavalleria Rusticana." The Chicago River is a fine stream, but it does not purl, and it has no trout. As the hot day comes on, threatening another season of suffering and suicide, I cannot help comparing the sad ending of these city slaves with that noble euthanasia of that Kentucky gentleman whom I mentioned some years ago in these columns. This gentleman, a certain colonel, whose latter name makes no difference, was found dead in one of the ice-cold caverns of his estate. Through this cavern there trickled a little crystal stream, lined with fragrant beds of mint. Hither the Colonel had repaired when he saw that his hour was near, taking with him a jug of Bourbon whisky, some glasses, and some other things needful in the preparation of that delicacy known as a mint julep. Indications pointed out that he had probably constructed several juleps from the material thus comfortably at hand. He had taken off his shoes and allowed his bare feet to dabble in the cooling stream, and when found he was quite dead, with a peaceful smile upon his face, his very toes full of mint, and the remains of a julep in the glass still clasped fondly in his hand. How noble, how inspiring a death like that, compared with the tawdry horror of an end inflicted by a pistol shot in a wretched city garret! And yet there are green fields in Wisconsin, and in Michigan many beds of mint, and if one find the Colonel's jug not convenient or desirable, at least he may the mint and the water. And he may whistle the "Cavalleria Rusticana."

Good Fishing.

For some mysterious reason this seems to be an exceptionally good season for the angler in many parts of the West. Bass fishing has rarely been better in Wisconsin, even in the lower and much fished lakes. Billy Tuohy writes from Eagle Lake, in Waukesha county, that he has not for ten years seen so many or so large bass taken at Eagle Lake. From the lakes of upper Wisconsin, in the pine woods country, continuous reports of large catches of bass and wall-eyed pike come in, as well as reports of an unusual number of mascallonge. In Wisconsin, Mr. G. W. Gillette took eighty-four bass in a day and a half last week. The bass season is now at its height also in the streams south and east of Chicago, such as the Kankakee, the Kalamazoo, the Grand, etc. In every way the anglers are now radiating from Chicago and this vicinity, and there is every reason to believe that they will have a very fortunate season.

Good Work of the Wisconsin Fish Commission.

Superintendent James C. Nevins finished on June 30 his report for the Fish Commission of the State of Wisconsin. It appears that the waters of the State have been well taken care of, and that 62,409,075 young fish have been distributed. Of these 2,225,000 were brook trout. Over 1,000,000 rainbow trout were planted in different streams. A Chicago paper in commenting on this fact, states gravely that rainbow trout were "not indigenous to Wisconsin waters until planted by the Commission." The rainbow trout has done very well in Wisconsin and is now generally distributed in that State. In the past most of the trout hatching has been done at the Madison hatchery, but there is a new hatchery at Bayfield, where there is a wild stream owned by the State, offering some nine miles of trout waters for the hatching operations. This hatchery has as yet not been used to any great extent, although it has hatched some 10,000,000 lake trout fry. It is thought that Bayfield hatchery will be a great success, and that the trout raised in the State stream will be more normal and more vigorous than any raised in the warmer streams thus far available. The Bayfield hatchery received its appropriation four years ago, and the work there is regarded with much interest by the Commission. The superintendent says that when this hatchery is completed it will be the largest and best one in the world.

It is curious to note that in the utilization of this natural wild stream at the Bayfield hatchery the same method is used which I mentioned last week at the Kinne Creek Trout Club, at Wingleton, Mich. In each case the young fry are placed in a nursery stream before distribution. Here, in perfectly natural surroundings, the young trout grow up strong and vigorous, and in far better condition than they would be if confined in artificial pens. There is no doubt that this method is successful, both in the private enterprise and in the public one. So far as is known the idea was arrived at independently in each case.

The Wisconsin Commission reports fish distributed in the following numbers: Wall-eyed pike, 30,250,000; whitefish, 18,500,000; lake trout, 10,275,000; brook trout, 2,225,000; rainbow trout (approximated), 1,050,000.

Mascallonge Hatching.

It is popularly supposed that the mascallonge is not a possible subject for fishculture, and that when the natural supply is exhausted it can never be restored by artificial means. No attempt has been made at hatching mascallonge until very recently, but there appears reason to believe that the problem can be and has been solved. The Wisconsin Commission employed Frank W. Cheeney, of Jamestown, N. Y., a mascallonge expert, who was stationed at Lost Lake, twenty-five miles from Hayward. Here there were obtained 2,200,000 mascallonge eggs, of which from 65 to 95 per cent. were hatched in the lake water, which produced the parent fish.

Over 1,000,000 mascallonge fry have been distributed in Fond du Lac, Green Lake and Sawyer counties. It is yet too early to know what will be the success of this attempt to raise mascallonge.

The work of the Wisconsin Commission is not solely one of fish-hatching. The white bass distributed are usually adult specimens taken in nets just before their spawning season. It is interesting to note, also, the practical method of distributing black bass—the same which has long been in practice in the State of Illinois. The Mississippi River in Wisconsin—as in Illinois—is lined with shallow bayous, into which black bass and other game fish run in the spring, and where they deposit their spawn. The receding waters leave millions of young fish landlocked, and these the workmen of the Fish Commission seine out in great quantities and transport to other and more fortunate waters.

Chicago Fly-Casting Club.

Messrs. Murrell, Peet, Babcock, Johnson and others of the Chicago Fly-Casting Club, are deep in preparation for the tournament of that organization, which, as earlier stated in FOREST AND STREAM, will occur Aug. 13 and 14. The meet will be at Garfield Park, one of the pleasantest places of the city, and quite suitable for the holding of the tournament. The casting will be done on the north lagoon of the park. There will be six events, each provided with proper prizes, as earlier stated, and in the total covering nearly all the features of desirable fly-casting. The roll-casting will be something to be witnessed with interest by Chicagoans and others. It is expected that Mr. Mansfield, of San Francisco, who recently broke the long standing record for distance in fly-casting, will be present, as well as many others from different parts of the country. We look for a pleasaat and successful event.

Fishing in the National Park.

Lieut. Elmer Lindsley, Sixth Cavalry, Ft. Yellowstone, sends the following timely communication on the fishing resources of the National Park, for which I wish to thank him. He seems to show foundation for the mooted title of "angler's paradise," and all who know the Park can appreciate his enthusiasm. He says:

"The Yellowstone National Park furnishes more miles of fresh water fishing to the acre, with better fishing as to quality, quantity and variety, than any other spot on earth.

"Nature seems to have designed it for a 'real angler's paradise,' and her generous gifts have been ably and intelligently supplemented by the U. S. Fish Commission in 'planting,' and the Superintendent in 'watering,' if I may use that expression, and God has given a bountiful increase.

"The Park is the source of three great rivers, the Missouri, the Yellowstone and the Snake; and its numberless cold, clear mountain streams and glacial lakes are admirably adapted to trout of all species. Many of the streams in their lower courses are the natural home of *Salmo mykiss*, the native trout of that region; but where the waters leave the great volcanic plateau the cataracts form an impassable barrier to the ascent of fish, so the upper courses of all the streams were originally devoid of fish life. A notable exception to this is the Yellowstone Lake, and that part of the river above the falls, these waters being abundantly stocked with the *mykiss*. As the falls (365ft. in height) form an absolutely impassable barrier, the explanation is sought and found in the fact that at a comparatively recent date (from a geological standpoint) the waters of Yellowstone Lake drained through Snake River to the Pacific. It was then abundantly stocked with the *mykiss* of the Pacific slope, and when the outlet became dammed up by ice or other natural agency the lake found a new outlet in the opposite direction, and so the *mykiss* crossed the continental divide by natural means. My authority for the above statement is Professor Arnold Hague, of the U. S. Geological Survey, who has probably studied the natural features of the Park more thoroughly, and knows them more accurately, than any man alive. But to return to our fishes. Since 1889 the U. S. Fish Commission has planted about 100,000 yearling trout in the barren streams and lakes of the Park, and these have, with scarce an exception, grown and multiplied almost beyond belief; so the angler can now take his choice of pursuing the native *mykiss*, the whitefish, or the rare and gamy grayling; or he may take the European brown trout (Von Behr), the Eastern brook trout (*fontinalis*), the rainbow (*irideus*) of California, or the ouananiche of Canada.

"The summer climate is delightful, the scenery superb, and, as though the shade of good old Izaak Walton exercised a special guardianship over this region, there is such a combination of cold, snow-fed streams, with others fed by geysers and boiling springs, that the angler cannot only take a fine trout on his fly at any season of the year, but he can, in hundreds of places, drop him into a convenient hot spring and cook him without moving from his stand.

"I have just consulted my map with a view to tabulating, for the readers of FOREST AND STREAM, the streams, with the mileage of each, which furnish good sport with each particular variety; but had to give it up. It would take half a page of FOREST AND STREAM. It will suffice to say, that from any hotel in the Park one can go out and have an excellent day's sport, returning to his hotel for dinner at night. To get real first-class sport with the grayling, however, one should take a wagon and drive about thirty miles from the Fountain Hotel to Dwelle's ranch, on the South Fork of Madison River. This is probably the best grayling stream in the United States now, and Mr. Dwelle will furnish good accommodations to sportsmen at reasonable prices. To catch the ouananiche one has to take a wagon or pack train and camp outfit, and go one day's drive from the hotel and camp on the shore of Shoshone Lake; and this, by the way, is the only fishing proposition in the whole Park that is the least doubtful. This heretofore barren lake was stocked in 1889 with the *naymacush*, and up to last season had never been fished

"Last July I cut a trail to the lake and took a boat there in a wagon. We camped on the lake shore, near the outlet, and saw the fish breaking about 50yds. off shore. The next day we fished for them with a fly and trolled with a spoon, but could not get a strike, though they are surely there. Since then I have studied the ouananiche some, and hope to get after them again with live bait.

"As to the accommodations for anglers in this region. The Park is reached from the East via the N. P. R. R. or the Burlington, and from the West via the N. P. or the U. P., which runs a stage line into the Park from Beaver Cañon, Idaho. Once within the borders of the Park, and the rest is easy and only moderately expensive. The Park Association maintains four first-class hotels, one day's drive apart, and they make reduced rates to anglers, who wish to stay in the Park longer than the necessary time for making the regular trip. The transportation company runs elegant 4-horse covered coaches between the hotels, and at each hotel they keep buckboards and saddle horses for the use of tourists who wish to go fishing, while about the Park are several individuals who will furnish to a party of sportsmen, transportation and camp equipage, and guide them to the best fishing resorts.

"All of these people do business in the Park under the supervision of the Government, enforced by the local superintendent, which guarantees the sportsman or tourist against fraud or exorbitant charges.

"I have been on duty here for more than five years, and I advise every angler to come here for his outing if he can, and every angler who has arranged for the regular sight-seeing tour of the Park, taking five days, should not fail to plan for ten days more, to enjoy the unparalleled sport with rod and reel."

A Good Season.

July 8.—For some unknown reason the present year is proving an exceptionally good one for the anglers in nearly all of this part of the West. Not for a long time have the catch of muscallunge been so numerous or so large as they are this summer, and this seems to apply to all the waters of the upper West to which this fish is native. In Minnesota, as we have been, the 'lunge crop is extraordinarily abundant, and up in Wisconsin, on waters which have for some time appeared to be fished out, the sport has been good for an unusually long time. It is likely that the good fishing is to be explained by the long period of high water over much of the West early last spring. High water means good fishing, generally speaking. The excellence of sport with the rod extends not only to the muscallunge, but also to the bass and pike. Not at any time for a dozen years has bass fishing been so good as it is this summer over the greater part of the entire State of Wisconsin.

At Kabekona camp in Minnesota we continue to hear of good takes of 'lunge, and of course in a 'lunge country nothing else counts, and the hundreds of wall-eyes and pickerel and bass are looked upon only as a tribulation.

At Pelican Lake, Wisconsin, a number of 'lunge have been taken by different anglers the past month. Mr. J. H. Frem, of Antigo, Wis., during the past two weeks caught seventeen 'lunge running from 8 up to 27lbs. Mr. Evans, a guest at one of the hotels, had one 'lunge of 26lbs. Mr. D. Williams, of Club House Point, has during the season had seventeen 'lunge, the heaviest being a grand specimen of 37lbs. weight. Mrs. A. McKenzie, of Eagle River, Wis., took a fine fish weighing 26lbs. at Catfish Lake, near Pelican, and in the same lake Mr. Jos. Flannigan got a still bigger one, a beauty scaling 34lbs. A. Lafave got one at Catfish Lake that weighed 28lbs. Mr. Chas. Whitcomb, of Chicago, took on Pelican Lake a number of small 'lunge running in weights such as 5, 8, 9 or 10lbs. One of these small 'lunge had its lip nearly torn off from an earlier encounter with the spoon. Mr. Chas. Dorman, of Kaukauna, Wis., had two fish, one weighing 12 and the other 15lbs. Mr. Clifford, freight auditor of the Chicago & Northwestern Railroad, with Dr. Moore, of Wheaton, Ill., in one day got seven 'lunge of various weights and seventy-five wall eyde pike. Mr. John Branch, auditor of agents and conductors accounts, the same railway, with Mr. Chas. Jenks, both of Evanston, Ill., caught in one day 150lbs. of pike and pickerel, and bass, having bass up to 4lbs. and pike as heavy as 4½lbs. Messrs. A. C. Paterson and Geo. Sears, of Chicago, in one day, or rather one morning, caught thirty-five wall-eyes and quit because it was too easy. On Twin Lake, above Pelican Lake, Mr. Fred Wood, a guest of Mr. R. D. Peacock, in one day took twenty-eight fine bass and a number of pickerel up to 5lbs. weight. It is rarely that one hears reported the bass and pike catches from this upper country, because there are so many fish of this sort taken, and so easily, that it is not thought worth reporting.

I learn that the catch of bass taken by Mr. C. R. Gillette, mentioned in last week's FOREST AND STREAM, was made at Brown's Lake, just over the line in Wisconsin. Of these fish over seventy out of the eighty-three were small mouths, and the majority of the fish are reported as taken on the fly. Mr. Gillette says he never had such fishing. In short, high water, fish propagation, or something, has given us the finest sort of angling this summer. Almost any way one wants to go, south to Indiana, north to Wisconsin, or east to Michigan, one may expect just now fine sport at bass and other fish. Thus I hear that Black Lake, in Michigan south peninsula, is a splendid water for the bait-caster, though the bigmouth bass are not very good to eat there at this season of the year.

The Leavenworth Fishing Club.

The Leavenworth Fishing Club, of Leavenworth, Kan.

made its annual June fishing trip into Wisconsin, and on the Fourth of July held its sixth annual banquet at its headquarters in the pleasant city by the Missouri, a large number of members and guests being present.

This club was organized by Leavenworth anglers in the wilds of northern Wisconsin in 1892, and one of its principal features is to have a big fishing trip every year and a dinner on the return, that is always attended by over a hundred of the leading business and professional men of the city.

Four kinds of fish were served last night—muscallunge, pickerel, pike and bass.

After dining for an hour and a half, W. C. Hook, the president of the club, introduced O. B. Taylor as toastmaster. Speeches followed by J. R. Garrett, J. W. Hirst, E. W. Snyder and others.

W. C. Hook, who just returned from Wisconsin and brought in the fish for the banquet, made the principal speech. He started out by reading the constitution of the club, which states that its objects are to procure fish by other means than purchase, and to encourage and promote veracity among its members. The constitution makes it a capital offense for a member so impugn the veracity or credibility of another member before a stranger.

Western Trout.

The Denver *Republican* has the following despatch from Laramie, Wyo., date of July 3, from which it would appear that we in this part of the world are not really in a position to say very much about trout fishing:

"A party of Union Pacific officials, guests of Assistant Superintendent Culross of the Union Pacific, mountain division, returned from the headwaters of the Big Laramie yesterday with one of the finest catches of trout ever made in this vicinity. The total catch was 440 trout, the largest being a 7-pounder. Among the party were Superintendent of Motive Power J. H. McConnell, Private Secretary C. A. Coons, Superintendent of the Cheyenne Shops J. E. O. Hearne, Judge C. N. Potter of the Supreme Court, United States Marshall McDermott, R.S. Oberfelder, Nebraska State Fish Commissioner, and R. H. Repath, of Cheyenne."

Minnesota Fish Work.

Superintendent W. H. Morgan, of the Minnesota Fish Commission, reports that some 20,000 fry of the steelhead salmon from California have been planted this season in Lake Superior. No bass fry have been put out, but 725,000 wall-eyed pike have been planted, and 546,000 trout fry. The largest quantity was placed in Winona county. This county is the paradise of the Minnesota trout angler. Fillmore and Olmstead counties rank next to Winona, and in consequence received the next largest amount of young trout. Of the 300,000 that Supt. Morgan still intends to put out, these three counties will receive a large share.

Divers Dynamiters.

Along the lower part of the Kankakee River dynamite has this summer been used to considerable extent, as well as nets and spears. Many game fish have been killed, to say nothing of hundreds of carp.

The *Topeka Journal*, of Kansas, has this despatch from Augusta, Kas., about the way certain persons destroy fish:

"Wichita parties come over to the Walnut to fish. There could be no objection to this if they would obey the law, but they dynamite the streams, and fully 1,000lbs. of fish are shipped by rail or wagon every week from this city. The new Fish Commissioner lives in Wichita, and is said to have been a successful fisher in the Walnut before his appointment."

The *Logan Journal*, of Utah, advises the public that the dynamiter is not a product exclusively of the older parts of the United States. It has this to say about the ravages of the giant powder fiend:

"It is claimed that giant powder is being used by certain fishermen in sequestered places along Paradise Creek. People from Brigham City, who have been up there on a day's outing, have found trout floating down the stream stunned and motionless, exactly as they would have done had they been blown out of their shady watery nooks by some reckless fisherman. All such law-breaking trout annihilators should be tenderly felt after by the loving arm of the law, or in a very few years these streams will be entirely stripped of the delicious trout. Some of the Cache county officers should be inspired to occasionally try their luck at fishing in those infested quarters."

Anderson, Ind., has a young fish and game protective club, and it needs one. Dynamiters have been steadily at work for weeks above the Broadbent dam, and many fish have been destroyed. Amos Coburn has been appointed deputy warden, and will have abundance to occupy his mind for a time.

Some Seiners.

At Kokomo, Ind., this week, G. W. Murray, of Elwood, was fined $35 for seining in the Wild Cat Creek. Deputy Weltner made the arrest, and it is said he will now get after a lot of dynamiters who have been at work on the same stream for some time.

Among the men who have this season been arrested for seining in the Calumet River are F. Lallae, H. Posselt, J. G. Garrett and Wm. Cadman. Each of these got off easy with $10 and costs.

The Crawfordsville, Ind., *Journal* has the following commendable talk to make to a few of its worthless citizens about unlawful fishing:

"The attention of State Fish Commissioner Sweeney is respectfully called to the fact that a 40ft. seine, 12ft. deep, is owned and operated by Crawfordsville parties. The gang owning this illegal instrument went out the other night and by dragging the waters af the creek caught a tubful of fine bass. It was dead easy and great sport, but if punishment is not meted out to them it will not be the fault of the legitimate fishermen, who are now on their trail with a hot stick. Some of the fellows owning an interest in this seine are hardly in a position to monkey with the law, and if they escape with a fine they may consider themselves lucky."

Roar.

The bold and honest utterance of the Crawfordsville *Journal* is not imitated, as it might well be, in a recent roar by the Jerseyville *Democrat* of this State. The latter paper thinks that the recent Illinois fish law, establishing a size-limit for all fish to be marketed, is very wrong, and remarks: "This section alone almost destroys an industry, which furnishes employment to hundreds of men within the State." It would seem that these hundreds of men might be better employed than in destroying baby fish. But this is a fair sample of the sort of sentiment which comes up from lower Illinois against any intelligent movement for the protection of either fish or game. There is where we get our spring shooting laws killed.

Fined.

At Manistee, Mich., Ed. Norman, Paul Bloch and Anton Fountain were fined each $5 and costs for unlawful trout fishing this week.

Stole a Reservoir.

Above we see a few instances of the daring of the morally destitute men who use dynamite and seines and all sorts of things to capture fish illegally. But there are other heights to which the unlawful fisherman may climb. For the benefit of the two-penny fish thieves of Utah, of Indiana, of Illinois, let me recommend the ingenuity of some enterprising thieves in Ohio, who were not content with such slow work as killing a few hundred fish, but stole a whole reservoir full at one fell swoop. The names of the men alleged to be concerned in this bit of work are Willis Nethers, Fred. Marshall, Fet. Coulter, Benson Nethers, Ed. and Charles Mortimore, all living near Dresden and Frazeysburg, and they were arrested by Warden L. H. Reutinger. It seems that these men knew of a certain reservoir tributary to the Ohio Canal, known as Mortimore's Basin, in which numbers of fish abounded, and they conceived the notion that by cutting the canal bank they could drain the basin and thus get all the fish in it. They did so cut the channel through the bank, and placing a wire netting across it, they caught a vast quantity of fish as they were drawn out by the current of water. What they did not take away went on out into a field nearby, over which the water spread, and the next day a wagon load or so of fish were picked up in the field. The fish thus destroyed were peddled out in the neighborhood of the crime. All these men are now out on bail, and one of them thinks he can prove an alibi. It will be very desirable for all of them to prove alibis or jump their bailbonds and leave, for it happens that they can, and very likely will, be prosecuted for an offense worse than the illegal taking of fish. To cut the bank of any canal is in Ohio a felony. The men will very likely take a trip to the Penitentiary. It is not always that genius brings happiness.

Weights of Columbia River Salmon.

In the month of June there were received at Vancouver from the upper Columbia River five salmon which weighed 225lbs. The largest of these weighed 53lbs. There were other specimens, all of the Chinook salmon, weighing 57, 56, 49lbs. No wonder they don't take a fly. If they did the fishing would be too good to be true.

Fishing Clubs.

The Paul Jones Fishing Club has been organized this week at New Orleans, with the following officers: Col. J. H. Hoffstadt, president; Edmond Noris, first vice-president; Dan Young, second vice-president; Vic Vindon, secretary; Louis Hackemiller, treasurer, and Wm. Evans, sergeant-at-arms, and Wm. Petefield, commissary.

The Schoor Lake Fishing Club, of Waterloo, Ill., elected the former year's officers at their annual meeting last week, as follows: J. J. Koenigsmark, president; Dr. Fike, vice-president; F. Durfee, secretary; F. Jobusch, treasurer; John Lutz, R. Wolf, P. Bremser, H. Wallhaus and H. Murphy, trustees; M. C. Rodenberger, custodian.

Bass.

At Pearl Lake, Wis., in Waushara county, bass fishing is very good now. Wm. Brill, of Berlin, last week caught a 5lb. bass, and nearly everybody has had luck.

At Lake Winnebago, Wis., the sport at black bass and also at white bass continues very fine. One party caught eighty-five bass near Fond du Lac last week.

John Parmelee, of Chicago, went fishing up at Manitowish, Wis., last week. His friend Mr Upman, of Chicago, guyed him about his skill, and offered him 40 cents a pound for all the fish he caught. Mr. Parmelee sent him down 100lbs. by express as a starter, and Mr. Upman drew his cheque for $40. He doesn't want any more now.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

ANGLING IN CANADA.

Editor Forest and Stream:

Lake Edward has yielded, this spring, and continues to yield many of the large size brook trout for which it is famous. Among those who have lately had splendid sport are Mr. Harry Brown of Albany and his wife. They are stopping at the Laurentides House, and besides trying the deep water of the lake itself very successfully for some of its monster fish, have enjoyed good fly-fishing upon newly opened-up chains of lakes and their connecting streams, a short distance to the west of the big lake. Other American anglers who have done well here this season are, Mr. and Mrs. H. S. Brown, Scranton, Pa.; John L. Borston, Burlington, Vt.; and W. E. Hervey and J. C. French, M. D., of Burlington, Vt. Messrs. Clement H. Cox, of London, England; H. C. Foy, C. H. B. Caldwell and Major C. P. Waldron, of the same place, have also made good catches during the last few days at Lake Edward.

Messrs. J. D. Frink and C. L. Aiken, of Springfield, have had good sport at the lakes of the Amabalish Club.

The Triton Club is making large strides in membership and promises to be completely filled up at a very early date. Some more large fish have been taken on the tract since the date of my last letter, but the record fish therein reported, of a 9lb. trout taken with the fly, by the Hon. W. B. Kirk, of Syracuse, has not yet been broken there.

Dr. Porter, of Bridgeport, has acquired fresh territory, adjoining that of the Metabetchouan Fish and Game Club, near Lake St. John, and is establishing a new club.

Upon both the Tourilli Club's limits and the Jacques Cartier River, trout fishing has proved very good this spring, but not above the average.

Fishing for ouananiche is about at its best just now in the Grande Décharge. It opened late, like most of the other angling this year in Canada, and may therefore be expected to last longer than usual. No exceptionally heavy fish are yet reported, but the rising fish are plentiful. This fishing will doubtless be better in July than it has been in June. The fish are also running into the great northern feeders of Lake St. John, and from this date on to the end of the ouananiche season upon Sept. 15, the sport of fishing for them ought to be good in Lac Tschotagama up the Peribonca, at the fifth falls of the Mistassini, and in the other northern resorts of the ouananiche described, with the method of reaching them, in "The Ouananiche and its Canadian Environment." An unusully brisk ouananiche season is expected this summer and fall in the Lake St. John country, for with scarcely an exception the salmon fishing in Canada this year has been quite a failure. The Rev. Dr. Rainsford, of New York, is here on his way home from the Restigouche and reports the fishing very poor. Another member of the Restigouche Salmon Club, who spent three weeks on the river, only killed three fish, and Mr. A. N. Cheney, who recently visited the river for purposes of investigation, together with Mr. Burdick, of Albany, was fortunate enough to have some very fair sport there. He returned home last week. Dr. F. W. Campbell and Mr. I. H. Stearns, of Montreal, have fished Chamberlain Shoals on this river as usual, but report poor luck. Much the same kind of a story comes from all the south shore streams. The fishing on the north shore has been rather better, but nothing like what it usually is. This is principally accounted for by the prevalence of strong east winds at the time the fish generally enter the rivers, which has kept them away from the coast. In all the streams, the run of salmon is much later than usual this year. Mr. Pike, of New York, is at the Romaine, and so is Mr. Hodges, of Boston. Messrs. Jas. Law, of Montreal, and John Manuel, are fishing the Godbout with Thos. Peek and Robert Patterson, and Mr. A. C. Henry, has also fished with them. They had taken over a hundred salmon up to the end of last week, with an average weight of between 15 and 16lbs. Messrs Veasey Boswell, of Quebec, and Chas. Hope and Andrew A. Allan, of Montreal, and E. D. Foland, of Philadelphia, are on the Moisie, the newly acquired river of Messrs. Boswell and Hope. Mr. Edson Fitch, of this city, instead of fishing his own river this year, has been the guest of the two latter gentlemen for the last three weeks and reports a heavy catch, the bulk of the fish taken exceeding 23lbs. in weight. Up to the end of last week the total catch on the river was 122 fish. Mr. John D. Gilmour and his son, Master Dudley Gilmour, are having great sport with both salmon and sea-trout on their river, the Trinity. While their guest last week I was lucky enough to kill some twenty salmon, which is much below the average taken on the river at this time of the year. The largest fish was only 21lbs. Captain Wilberforce, A. D. C. to the Governor-General, is now fishing the Trinity with Mr. Gilmour, and Dr. Johnson and wife, of New York, and E. C. Fitch, Esq., President of the Waltham Watch Company, are fishing the Romaine, Mr. John Brown and Master Ritchie, the Becsic, and Major Collingwood and wife, of England, the Mingan. The Mistassini is being fished by a party of Americans, who up to date have only killed nine fish.

E. T. D. CHAMBERS.

QUEBEC, July 2.

BOSTON AND MAINE.

BOSTON, July 10.—Black bass fishing is very much in order at this time, and those who can visit the best bass waters are usually successful. The Belgrade lakes and ponds in Maine are very popular with bass fishermen, and never more so than this year. Mr. H. C. Sanderson and Mr. William M Farrington are just back from a fishing trip to Great Pond, at Belgrade Mills, Me. Both are much pleased with their success. Mr. Sanderson, at least, was not much accustomed to fishing for bass with a fly, but they struck the pond just right. In one day they caught nearly 200 bass, the most of which they returned to the water. They landed some of over 2lbs. They were told at the pond that theirs had been about the first success of the season, the weather having been backward, and the season cold. White perch fishing was also fairly good on several of the ponds in that section. There are also good reports from Maranocook and Annabessecook lakes in Winthrop, with the bass fishermen having good sport.

The trout fishing season in Maine is by no means over, though the movement of sportsmen in that direction is not quite as marked as early in the season. At Mooselucmaguntic Lake the trolling for trout has been unusually good of late, though that part of the sport is usually over before July 1. But this year the cold weather and high water has kept up the trolling, and good catches are still being reported. Mr. Greenleaf, of Lewiston, Me., and his uncle, from Albuquerque, New Mexico, were at that lake over the 4th, and caught a good many trout. Mr. A. R. Beadle, of Springfield, Mass., and R. F. Whiting, of Lewiston, Me., went in to Bemis, and then up the lake July 3, and came out the 5th. They had remarkably good luck, taking nearly 30lbs. of trout. Both were greatly pleased.

A week or two ago a fox chased a little fawn down to the lake, near Capt. Fred C. Barker's camps at Bemis. The little fellow took to the water, but was soon rescued by the men at the camps. It had been wounded by the fox, and was nearly exhausted. It was cared for that night, and immediately took to drinking milk, which was offered it. It has become very tame, is growing rapidly, and has become a great pet. Of buttercups it is especially fond, and it is a pretty sight to see Capt. Fred's little daughter of four years feeding it with flowers. The number of cameras that have been aimed at the little animal is great, and some good pictures should result. Indeed, the camera is getting to be the favorite weapon of lady sportsmen, and they are enjoying it, with the promise of something better hereafter. Mrs. Edward B. Hill and her daughter, of New York, were to try snap shots at live deer at some of the ponds in the Rangely region last week. Their guide, Lyman E. Moor, has several mapped out.

Mr. Galen C. Moses, of Bath, and president of the R F. and R. L. R. R., fished from the Birches July 5 with good success. Mr. George S. Wright, of Boston, with Mrs. Wright, son and daughter, are at the Birches, and having good success in fishing. Good reports of trout come from the vicinity of the Katahdin Iron Works, in Maine. Mr. G. W. Kimball, clerk of the late House of Representatives, on Beacon Hill, and Isaac H. Edgett, Assistant Secretary of State, with a friend, returned last week from a successful fishing trip to Chairback Pond, under Chairback Mountain, near Mount Katahdin. One day they caught 152 trout, returning all of the smaller ones to the water. Other days they had good success. Their fishing was all with flies. Mosquitoes and black flies were their chief sources of regret, with minges at night; but the fishing more than made up for the discomfort.

Trout fishing on the Cape is not very satisfactory of late, though Boston merchants and business men go down there as often as they can get away, and always take their rods along. They try the fishing faithfully, but success is the exception since the warm weather begun.

Mr. Henry C. Litchfield, with Dame, Stoddard & Kendall, was the recipient of a beautiful specimen of brook trout the other day, and showed it in the firm's window on Washington street. It weighed 5¼lbs. and was 19in. long; one of the finest specimens of plump, female *Salmo fontinalis* one will see in a series of many fishing trips. It came from Maine,

from Onawa Lake, and was taken by L. W. Lawton. Onawa Lake is above Moosehead, on the Canadian Pacific, and with Buxton's camps there, makes a fly-fishing resort where excellent sport is being had this year. The resort is reported to be comparatively new.

The salmon fishing season is on in full blast, and it would seem that the interest is unusually great. Boston and New England salmon fishermen are on their rivers or about starting. Mr. George von Meyer, of the Restigouche Club, is at the preserve. Mr Louis Curtis has returned from the same waters. Mr. L. R. Howe, of Boston, goes to his salmon waters on the Restigouche River to morrow. Mr. Herbert Dumaresq and Mr. T. R. Hoyet will accompany him. Mr. W. A. Ross goes to Miramichi early this month for salmon fishing. Mr. E. R. Horton, of Boston and Newport, R. I., is at his salmon waters on the Northeast Branch of the St. Marguerite. Mr. Francis Dumaresq, of Boston, will be his guest. Mr. E. A. Hitchcock, of St. Louis, starts about the fifth of this month for the Nipisquit.

The Rangeley and Moosehead sportsmen are not yet all done. M. C. W. Varney, of Lynn, left Saturday for the Rangeleys. Mr. Sumner Wright, with Mrs. Wright, started for the Birches, Lake Mooselucmaguntic, yesterday. They will be absent two or three weeks. Good reports of the fly-fishing there are current. Mr. H. W. Clark, of Watertown, Mass., is credited with a trout of 6½lbs. and three salmon at Rangeley last week. J. T. Louter, of Boston, is reported to have taken a salmon of 7½lbs. at the same waters the other day. Fish and Game Commissioner C. E. Oak is credited with taking a 5lb. salmon on the fly there. His wife took a 4lb. trout. Commissioner Stanley took a 4½lb. trout at the same place. Mrs D. E. Parlin, of Lewiston, is mentioned as taking a 7½lb salmon at Pleasant Hours camps last week. Last of all, there is a report at the tackle stores here of a salmon of 11lbs. taken at Rangeley Lake. If true, this beats the record there. SPECIAL.

EATING HABITS OF SALMON.

Editor Forest and Stream:

It is difficult to eradicate erroneous impressions which purely speculative writers have stamped upon the popular mind, and which even the best informed ichthyologists have inadvertently implanted. Habits of fish can only be learned by direct and continuous observations covering every period of their life history; and where their range of habitat is as great as that of the sea salmon, involving such extraordinary vicissitudes and requisite adaptions thereto, the study involves not only great practice, but the faculty of discernment and the logical adjustment of phenomena to actual biological conditions.

Close observers like John Mowatt, of the Restigouche, who was born beside a salmon pool and lived the full allotted period of human life in constant contact and association with the fish he marketed, may well be pardoned for his obstinate belief in the widespread notion that sea salmon do not feed when running up fresh-water streams to their spawning beds; but the astute fishculturist who watches their development from the egg to maturity knows differently, and when we have the testimony of experts like Mr. G. G. Armistead, in an official bulletin, to the effect that "everyone who is acquainted with the life history of *Salmo salar* is well aware that they not only feed, but feed voraciously, in our rivers at times," we must believe. (See bulletin U. S. Fish Commission for 1893, pp. 93 and 95.) "But sometimes they take but little food, as, for instance, when spawning, when the temperature is very low, and when on migration. It is quite possible, for these reasons, to get plenty of salmon with nothing in their stomachs; and, as their digestion is very rapid even after a good meal, little trace of it might be found in a few hours." And he adds, Hudibrastically: "The idea seems to exist in many minds that the huge bodies of the salmon (weighing in some instances 70lbs. and upward) are developed by a very indefinite something which the fish manage somehow or other to obtain by a process which they call suction; and this, as a recent writer very aptly remarked, points to something rather like microscopic supplies."

In further confirmation of his position, he says in another place: "Salmon have been kept in fresh water from the time of their birth to maturity, and after the absorption of the umbilical sac have fed and continued to feed very much in the same way that other members of the family are known to do."

This is now demonstrated every year at Brussels, France, where Dr Jourret de Bellesme is cultivating the *Salmo quinnat* artificially in ponds, and the same facts were learned at Stormont field ponds in Scotland, thirty years ago, and were reiterated by myself in my earlier publications on the habits of *Salmonidæ*, especially in the *Fishing Tourist*, published by Harper & Brothers in 1873, where I likened the feeding of spawning salmon to the practice of setting hens, which come off their nests at intervals for the provender necessary to sustain life. For a quarter of a century my published writings will show that I have held my position almost single-handed against the scientific field, obtaining concessions from time to time from accepted authorities like Profs. Goode, Gill and Gordon, and I think from Beau as well, and I am seeking a further endorsement from FOREST AND STREAM, whose dictum is always accepted as oracular. Neither fowls nor fish can live on air, and when I see great bodies, of whatever genus or kind, gravid with young, I know that nature must provide them with that means of procreation which is best afforded by a generous diet and ample food.

In my latest work, the "Salmon Fisher" (Forest and Stream Publishing Co.), the life history of the salmon of both the Atlantic and Pacific coasts is delineated with painstaking care to the fullest endorsements of the best authorities in England and America, and I think those of your readers, who have not met with it, may be pleased to examine its pages now. CHARLES HALLOCK.

Salmon in the Penobscot.

MR. GEORGE A. BOARDMAN sends us this note from a Calais paper relative to fishing in the St. Croix River:

"This has been an off week at the Union Mills pools. Although there appear to be plenty of salmon in the river they have been slow to rise to the flies cast by a few rodsmen, and only eight fish can be added to the record. This brings the total score from 97, reported last week, to 105. Interest in the sport has so far abated, and the season is so far advanced, that this record will not probably be much increased."

The pool is in the center of the town and the fish are all large sea salmon.

Some Minnesota Fishing.

GENEVA BEACH, Alexandria P O, Douglas County, Minn., June 29.—Four 5lb. small-mouthed black bass is the score to G. D. Antis, of St. Louis, and T. L. Blood, of St. Paul, for a quiet turn up the beach yesterday afternoon, casting with minnows from a boat within view of the hotel piazza. These are all they turned in as their catch. There is no available record of what else they caught or returned to the water. While large fish are not, to my taste, as sweetly edible as 2-pounders, or even smaller, these serve very well as a sample of what can be done in Geneva, as well as illustrating the honors which pertain to the saints. There is no difficulty in catching all the fish one wants right here, either croppies, pike, perch or bass, and later on some heavy muscalonge are sure to come in. One old gentleman, seventy-four years old, devotes his exclusive attention to croppies at this season, and from one bed he has taken out some 250 fish in the aggregate. He never misses a two hours' sit if the weather be favorable. St. Paul and St. Louis furnish a heavy contingent of guests, and the Hotel Alexandria has been even full ever since June 1. I have never struck a place where fish are better or more abundant, and whenever I stand on the wagon bridge which spans the creek connecting Geneva and Victoria lakes, I am certain to see heavy bass sculling leisurely about over the tops of the weeds. I like to stand and watch them play and feed. Of food there is variety and abundance, not counting frogs and minnows.

No less than five varieties of flies have swarmed since June 1, fairly covering the lake margin and the foliage. The most killing of these are the shad flies, or June flies, so-called. Besides these the maple caterpillar has swarmed all over the country in localities, denuding the forests until the limbs were as bare as in winter. Their period was something over three weeks in duration, and the trees are now putting out a second growth of leaves, having the appearance of early May foliage.

There is no end of fishing water in this part of Minnesota, Douglas county alone having 200 lakes. The hotel is comfortable and the table excellent. Your correspondent, Col. Jas. A. B. Van Cleave, of Chicago, has a cottage on Lake Miltona, quite near, and there are club houses in all directions. Many of the lakes connect, and one can make a sixty-mile trip without covering the same water and be within reach of supplies and railroad transportation all the time. It is one of those rare locations which a few are enjoying all the more because the crowd has not yet found its way here. Our house closes Sept. 1, when those who elect to remain for the chicken and duck shooting will adjourn to the Letson House, in Alexandria, two miles away, which is kept by the proprietor of the Hotel Alexandria. The duck shooting here in the fall is hard to beat.

C. HALLOCK.

New Jersey Coast Fishing.

ASBURY PARK, July 10.—I have visited some of the most noted fishing grounds of Barnegat during the present week and found the existing conditions very much as reported in my last letter to FOREST AND STREAM. The bluefish are very abundant, and while they are not taking the squid as fully as the angler might wish for, still, chumming with menhaden gives good results. The bay is literally alive with the menhaden; this, of course, accounts for the presence of the bluefish. Unmitigated butcher that he is, no mercy is shown the menhaden; he rushes through schools, snapping right and left, and rarely failing to take in half the object of his pursuit. None who have not witnessed the scene can form any conception of the awful slaughter. I have frequently been where acres of bluefish had the defenseless menhaden surrounded, and I have witnessed the mad frenzy with which the bluefish strikes his quarry, and his apparently earnest endeavor to allow none to escape. A chapter of deepest interest could well be written on the subject, covering the habits of the bluefish and his destruction of the bait fishes of the coast.

Weakfishing we found good, although none of the small-school fish were in evidence. Nothing but large fish, what are known as tide runners, were taken, and all fine, well-conditioned fish.

The surf, too, has given some very good results the present week in the way of kingfish and striped bass. A most peculiar condition of affairs exists in relation to the latter variety. Only a single specimen has been taken from either of our piers here, although the water and other conditions appear to be all right; all have been taken to the northward, at or in the vicinity of Deal Beach. The largest for the week was to the credit of the following: W. H. Moynan 18-24½lbs., L. P. Streeter 18½lbs., Chas. Hurley 19lbs., N. M. Nichols 21½lbs., Chas. A. Poland 8-21½lbs., Mr. Comegys 19lbs. Two black drum have been hooked, but owing to the peculiar formation of the beach the landing of this most stubborn of fighters is a most difficult feat, in consequence of which both were lost. The very cold weather has held the fishing back, so that now we are having about what June 20 usually produces.

The experience of the pound fishermen has induced them to set but few nets in this vicinity, and in consequence the future looks bright for the angling fraternity.

LEONARD HULIT.

Lake Champlain Fishing.

ESSEX, N. Y., July 5.—*Editor Forest and Stream:* The fishing in Lake Champlain just now is extremely good. Perch are large and unusually plentiful. Many of them run over ½lb. in weight.

To day I caught seventeen perch and two black bass in about two hours' fishing, and with the water perfectly still. The perch may be seen lying in schools, with their backs in some cases out of the water. Many of these fish will not bite, but there are enough that will to give fair sport. The bass were caught off Split Rock Point, and two more were hooked but lost. This is an ideal place for casting, but for some reason the bass do not seem to be very plentiful.

I also caught several fish, locally called "chub," which are very likely what are known further south as "fall fish." These fish are fast swimmers, and dart at the bait like a true game fish. They also readily take the fly. If I am not mistaken they are the same fish that I caught two years ago in the upper Delaware River while trolling for bass. On that occasion we used large phantom minnows, and at times fish would strike that were not more than twice the size of the bait, showing them to be thoroughly fearless. In Lake Champlain, the largest of these "chub" that I heard of weighed 2lbs. J.

The Maine Guide License System.

GREENVILLE, Moosehead Lake, July 5.—*Editor Forest and Stream:* The first arrest under the new guides' law occurred at Kineo the 2d inst. Joe La Crosse was taken in charge by Game Warden C. C. Nichols, of Foxcroft, for guiding without a license. He was arraigned before a justice at Dora, and settled by paying a fine of $50. He then took out a license, and claimed that his violation of the law arose from ignorance of its requirements rather than a disposition to resist it.

There is much dissatisfaction in this locality regarding the issuing of licenses by the State Game Commissioners, notably so in the case of an Adirondack guide named Darrow, who is a stranger here, and totally unacquainted with this region. Yet he was granted a license, in the face of the assertion from the Commissioners that one of the prime objects of the guides' law was to keep out unqualified men. In another instance a French-Canadian was licensed, despite the earnest protest of the guides' representative, on the ground that he had been discourteous to a lady member of a party he had guided, and was addicted to the use of liquor to excess. With such an application of the law our good men are asking where the benefit is to be derived from its operation. Moose and deer are more plentiful here than for years past. Four moose were seen at the lake shore last week, and a big bull came out in a field in this village last Tuesday.

ECHO.

Sacramento Salmon Increase.

UNITED STATES RESERVATION, Baird, Shasta County, Cal., July 5.—*Editor Forest and Stream:* The profitable results of fishculture have again been strikingly shown in the great increase of salmon in the Sacramento River this year.

Active operations in hatching salmon eggs at Baird Station, of the United States Fish Commission, on the McCloud River, a tributary of the Sacramento, were resumed by Commissioner McDonald in 1888. After a reasonable time subsequent to that date, the salmon in the Sacramento began to increase, and this year there are more salmon in the Sacramento than ever before since 1878, when 14,000,000 eggs were taken at Baird Station. The McCloud River also seems to be full of salmon this year, and the harvest of eggs at Baird Station will this year probably exceed that of any previous year, unless it be that of the year just mentioned, viz., 1878. LIVINGSTON STONE.

FIXTURES.

FIELD TRIALS.

Sept. 1.—Continental Field Trials Club's chicken trials, Morris, Man.
Sept. 6.—Manitoba Field Trials Club, Morris, Man.
Sept. —.—Northwestern Field Trial Club's Champion Stake, Morris, Man.
Oct. 25.—Brunswick Fur Club's ninth annual trials.
Nov. 1.—Dixie Red Fox Club's third annual meet, Waverly, Miss.
Nov. 1.—New England Beagle Club's trials, Oxford, Mass.
Nov. 2.—Monongahela Valley Game and Fish Protective Association's trials, Greene county, Pa.
Nov. 8.—Union Field Trials Club's trials, Carlisle, Ind.
Nov. 9.—Central Beagle Club's trials, Sharpsburg, Pa.
Nov. 15.—E. F. T. Club's trials, Newton, N. C.
Nov. 16.—International Field Trials Club's eighth annual trials, Chatham, Ont.
Nov. 22.—U. S. F. T. Club's autumn trials.

1898.

Jan. 10.—U. S. F. T. Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

AS TO THE JUDGES.

MR. T. T. ASHFORD, of Birmingham, Ala., having patronized field trials with intermittent enthusiasm and discriminating thriftiness in the past, has announced that he will abandon them "until the judging conditions change," and that he will use his influence with his friends who are pointer men to withhold their support also. To the end that the world may know the causes which have impelled him thus to inflict such punishment, he has published that, as the pointers are judged by setter men, they are unjustly discriminated against and deprived of their just deserts, presumably much against the peace, dignity, increment and good repute of their dogs; for there are few things which detract so much from a judge's good fame as his inability to give every dog a prize.

Mr. Ashford's assertion that the pointers are discriminated against by setter judges contains nothing in the way of specification other than the vaguest generalization, and nothing but assertion is advanced as proof. On these flimsy grounds the public is asked to believe that the judges are prejudiced against the pointers. Moreover, Mr. Ashford has a personal grievance in reference to the judging of Von Gull last winter, which, of itself, may be sufficient authority, from his point of view, to attack the integrity of the judges whose prejudice is proven by the fact that Von Gull failed to win. There are some aggrieved setter men who prove their cases on precisely the same grounds. Mr. Ashford has had similar grievances before, with similar action by way of showing resentment and withholding support, yet field trials flourished in spite of the shock.

There are pointer men who are sterling sportsmen, who take victory or defeat with equal and true graciousness, and for such he cannot possibly assume to speak. One can suspect a spasm of public reform which has its origin in a personal grievance, and this in particular when the method of reform finds expression in a boycott. And this, alas! is to be the case "until the judging conditions change." Isn't this rather an ambiguous condition? Change to what? If no pointers were to run there would be no pointer interests to consider, so that from his point of view there would, therefore, be no incentive to change, granting for the sake of argument that any is needed or desired. As a matter of fact, there is no need whatever of any change which has reference to the length of a dog's coat.

Let us now consider a few facts to be found in the records of many past years, and therefore free from the vagaries of imaginations whose sense of equity is measured by personal interests, and whose feeling of grievance must have a cause in the corruptness of others. In past years a number of the field trial clubs of this country ran separate pointer stakes, both All-Age and Derby, to afford them protection from setter competition, and thus to enable pointer owners and breeders to fully and freely develop their favorites to the utmost degree possible. Then pointer men frankly admitted

that as a class the pointers were inferior to the setters. If they were not, why were the separate pointer stakes? And if they were not, why were such stakes accepted? They are not entirely abandoned yet. Strange as it may seem, the support accorded the separate pointer stakes was in most instances insufficient to pay the prizes and incidental expenses, although the clubs always made them of equal value with corresponding setter stakes. There was nearly always a deficit resulting from them, which had to be made good from the surplus of the setter stakes or from the clubs' revenues. However, there was no cause of grievance to pointer men in all this. But the pointer, after many years of protection, so increased in merit, numbers and popularity that their competition was as good relatively as their long-haired rivals. So-called setter men and setter judges were active thus in affording means of competition for the pointers' advancement. But times became hard, and as the pointers needed no further protection in the way of separate stakes, and there was need of greater economy by the clubs, the separate stakes were abandoned by nearly all the clubs.

In a mixed stake, good work is such, whether done by a pointer or setter; so with bad or indifferent work. The theory of competition does not recognize the breed of a dog nor his owner's affections for him, nor contingent stud fees in case of success, or their loss in case of failure. Nor is it a sound argument to maintain that the true judges are those who will favor pointers because the allegation is made that some other judges favor setters. Rather advocate what is right and honest—advocate judges who will judge the competitors on their merits as shown in competition. The plea for the reign of the special pointer judge savors of things not governed by principles of strict equity. Granting merely for the sake of argument that there is a lapse from strict integrity on the part of the setter men, it is hardly good form for the discoverers of it to denounce it and then demand that they have an equal share in it. And yet the lack of integrity has no existence in fact; its abode is only in pinched, blunted minds.

When separate stakes were abandoned, setters and pointers were forced to compete together. Some pointer owners did not fear the competition against setters; other pointer owners did fear it. To divert attention from any defeat, a few have used the plea of prejudice on the part of the judges instead of seeking for the true cause of it. The plea of prejudice has been a standard plea for many years, and has done loyal service in kickers' interests.

Let us examine the records of last season's trials and note the names of the judges, concerning whom no defense is offered since none is necessary, even if the charge were less puerile than it is and had stronger support.

Monongahela Valley Game and Fish Protective Association's trials, Derby, 9 starters, one of which was a pointer which won third. All-Age Stake, 15 starters, 5 pointers, one won second, one divided third. The judges were Messrs. Bradley and Bell.

Eastern Field Trials Club: Judges, Messrs. Merriman, Bradley and Sturgis. Subscription Stake, 8 starters—4 pointers, of which one won second. Derby, 16 starters, 6 pointers, none of which won. All-Age Stake, 16 starters, 4 pointers, of which one won first prize.

U. S F. T. C. trials: Judges, Messrs. W. S. Bell, S. C. Bradley and Capt. Joseph H. Dew. Separate stakes, absolute competition won by setters.

Continental Field Trial Club: Judges, Messrs. Bell, Osthaus and Waters. Derby, 13 setters, 4 pointers; none won. All-Age Stake, 9 setters, 3 pointers, of which one won fourth prize.

U. S. F. T. C. trials, separate stakes; Judges, Dr. Geo. Eubank and Mr. J. D. King. A setter won the Derby absolute.

Chicken trials, Continental F. T. C.: Judge, Mr. W. S. Bell Derby, 5 starters, 2 pointers; one won fourth. All-Age Stake, 7 starters, 2 pointers; one won first.

Manitoba Field Trials Club's trials: Judge, Mr. P. H. Bryson. Derby, 8 starters, 2 pointers; one divided third. All Age Stake, 12 starters, 2 pointers; one won first.

Northwestern Stake, 9 starters, 2 pointers; one won first.

Considering the numerical odds against which the pointers competed, they made quite an admirable showing in the winnings. It would be absurd to assume that the winnings should be in like ratio with the numbers of setters and pointers; but the winnings do denote that the pointer was placed first or last impartially as he merited, and also it disproves the stock plea of discrimination. The reports of the trials contained generous praise alike of setters and pointers, so that we may safely infer that the discrimination exists nowhere else than in the imagination of the few, or in that of but one.

U. S. F. T. C. Derby Entries.

Editor Forest and Stream:

The entries to the United States Field Trials Club's Derby Stake, to be run at Newton, N. C., Nov. 22, number thirty-seven, twenty-seven English setters and ten pointers, all whelped in 1897:

SETTERS.

TOBASCO BUTTERFLY—Tobasco Kennels' l. and w. bitch (Antonio—Minnie T.).

HURSTBOURNE JOEL—Tobasco Kennels' b., w. and t. bitch (Tony Boy—Bonny Belle II.).

SPORT'S BELLE—W. G. Moore's b., w. and t. bitch (Marie's Sport—West End).

KING VICTOR—W. T. Hunter's b., w. and t. dog (Victor—Petrel).

SPOT'S GIRL—J. A. Leod's l. and w. bitch (Spot Cash—Nannie B.).

WINNIE GLADSTONE—R. C. Cornell's b., w. and t. bitch (Tory Sandstone—Mollie).

TORY SILAS—F. R. Hitchcock's b., w. and t. dog (Count Gladstone IV.—Tory Luna).

TORY NOVEL—F. R. Hitchcock's b., w. and t. bitch (Topsy's Rod—Novelist).

DICK BLAND—W. G. Graham's b. and w. dog (Sam Gross—Maida R.).

MISS MISCHIEF—R. Bangham's b., w. and t. bitch (Dash Antonio—Patty).

WHY NOT—P. Lorillard's b., w. and t. dog (Eugene T.—Miss Ruby).

MAIDEN MODESTY—P. Lorillard's b., w. and t. bitch (Eugene T.—Maiden Mine).

LORETTE—P. Lorillard's b. and w. bitch (Loris—Rosalie).

LENA BELLE—P. Lorillard's b., w. and t. bitch (Sam—Mamie B.).

WISE CHILD—P. Lorillard's b., w. and t. dog (Eugene T.—Maiden Mine).

FAIRVIEW BELLE—W. G. Brokaw's l. and w. bitch (Edgemark— ———).

FAIRVIEW VIC—W. G. Brokaw's b. and w. bitch (Dick Noble—Jennie).

ROMANCE—Avent, Thayer & Duryea's b., w. and t. dog (Topsy's Rod—Novelist).

ORLANDO GIRL—Avent, Thayer & Duryea's b., w. and t. bitch (Orlando—Dollie Wilson).

SAM T. II.—Avent, Thayer & Duryea's b., w. and t. dog (Sam T.—Belle Gladstone).

SPORT MCA.—J. J. Odom's b., w. and t. dog (Tony Boy—Blue).

PEARL R.—J. R. Horten's b., w. and t. bitch (Sam Gross—Donna Inez).

JESSIE C.—G. Chisholm's b., w. and t. bitch (——— ———).

MINNIE'S GIRL—Del Monte Kennels' o. and r. bitch (Antonio—Minnie T.).

LIBERTY—Del Monte Kennels' w. and b. bitch (Sam T.—Gath's Dora).

LIGHTFOOT—Del Monte Kennels' w. and b. bitch (Sam T.—Gath's Dora).

PIN FEATHER—Charlottesville Kennels' b. and w. bitch (Harold Skimpole—Daisy Croft).

POINTERS.

SEPOY—Charlottesville Kennels' l. and w. dog (Rip-Rap—Queen III.).

BEGUM—Charlottesville Kennels' b. and w. bitch (Rip-Rap—Queen III.).

GHOORKA—Charlottesville Kennels' l. and w. dog (Delhi—Selah).

MARK TAPLEY—J. W. Scudder's b. and w. dog (Rip Rap—Belle of Ossia).

LADY OF HESSEN—Tobasco Kennels' l. and w. bitch (Hessen Boy—Lady of Rush).

SAM'S BOW—J. R. Daniel's l. and w. dog (Plain Sam—Dolly D.

DOCTOR TASSIE—W. Elliott's l. and w. dog (Hal Pointer—Kent's Star).

FURY—Del Monte Kennels' b. and w. bitch (Tick Boy—Topsy Kent).

ST. CLAIR—Tyro Kennels' l. and w. dog (Rod—Ripsey).

TRACKTIR—Tyro Kennels' l. and w. bitch (Rob—Ripsey).

W. B. STAFFORD, Sec'y-Treas.

Monongahela Valley Game and Fish Protective Association.

PITTSBURG, Pa., July 7.—*Editor Forest and Stream:* The entries for the Monongahela Valley Game and Fish Protective Association's Derby will close Sept. 1. The All Age closes Oct. 1. The entry blanks and running rules will be ready for distribution Aug. 1. The entry fee will be as usual, $5 to accompany nominations and $5 to start. After deducting 20 per cent. from the entries to cover expenses, the remainder will be divided into purses of 50, 30 and 20 per cent. to the winners.

New grounds have been leased for the trials, level, and covered with much stubble, giving plenty of cover for the birds, and being an ideal piece of country for running trials. Inquiries concerning the trials are being made nearly every day, and a large entry list is assured.

Messrs. Bell and Bradly have been asked to judge, and their acceptance will insure a satisfactory running.

Birds are very plentiful this season on the preserves, and in fact the whole country seems to be stocked with the little Bob White, something that has not been for several years. We hope all who can will join us at the trials, and we will endeavor to make their stay pleasant, whether they have made entries or not. I will be glad to furnish any information possible upon application. S. B. CUMMINGS, Sec'y.

Irish Setter Club.

PHILADELPHIA, July 8.—At a meeting of the executive committee of the Irish Setter Club of America, held the 7th inst., it was decided that it would be impracticable to hold independent trials this fall owing to the lack of interest shown by Irish setter men in trials for the last few years, and the following resolution was adopted: The Irish Setter Club of America offers a cash prize of $25 to the Irish setter first winning an undivided first, second or third prize in the Derby or All-Age stakes of any of the following trials: The Western Canada Kennel Club, Continental Field Trial Club, Manitoba Field Trial Club, Northwestern Field Trial Club, Monongahela Valley Game and Fish Protective Association, Union Field Trial Club, Peninsula Field Trial Club, Eastern Field Trial Club, International Field Trial Club, United States Field Trial Club, Pacific Coast Field Trial Club.

GEO. H. THOMSON, Sec'y.

POINTS AND FLUSHES.

MR. B. GORDON received, July 8, from Messrs. Hiram Walker & Sons, Limited, a very handsome solid silver cup of beautiful design, which they have presented to the Northwestern Field Trials Club to be competed for at Morris, Manitoba, on Sept. 7, next. The cup is for the champion stake open to the world for dogs that have won a first or second prize in a field trial. There are no entry or starters' fees, everything being free. The cup becomes the property of the winner, besides the club's engrossed diploma, which accredits the winner with the title of field trial champion.

From Mr. W. S. Bell, secretary of the Continental Field Trials Club, we have received the following pleasing information in respect to the prospects of the chicken trials. He writes us that "the Minnesota Derby and the Northwestern Cup Stake of the Continental Field Trials Clubs will be held at Brown's Valley, Traverse county, Minnesota, on the line of the Great Northern Railroad. In a recent letter from Brown's Valley, we learn it is an ideal place for the trials. A splendid range with an abundance of chicken. These are the amateur events introduced by the Continental Club for the sportsmen of the Northwest included in North and South Dakota, Minnesota, Wisconsin and Iowa. The citizens of Brown's Valley have assured the Continental Club the most courteous treatment. Hotel and livery accommodations are good. A large and successful meeting, no doubt, will be held, as a great deal of enthusiasm has been excited by these trials. They will begin Aug. 25. The entries for the Northwestern cup close July 15. We hope the sportsmen of these States have not overlooked the date, and will be present and participate in an outing yielding so much pleasure."

Wheeling.

EXPERIENCE WITH PUNCTURES.

NEW YORK, June 25.—*Editor Forest and Stream:* I should like very much to know if there is any place in New York city where I can get practical instruction in the fine art of repairing punctures in tires. Such knowledge would tend very much to my peace of mind when on long rides into the country, and out of touch with repair shops.

Though I have been wheeling more than a year, and have ridden over 2,000 miles of all kinds of roads, I never had experience with a puncture of any kind till last week. Then, as I was riding, in company with a friend, over a hilly road, about twelve miles from the Hudson River, I chanced to pass over a small tack, business end up.

I did not immediately know what had happened, but after a time the air began to ooze out of my tire, and when I stopped to investigate, I found the tack still fast in the wound.

Acting upon the impulse of the moment, I pulled the tack out, without stopping to think that it made a very good plug as it was, and that all would be well as long as the tire was kept pumped tight. Immediately there was a hiss of escaping air, and in about four seconds the tire was down on its uppers, flabby and useless. I tried to put the tack back again, but the hole had closed, and for fear of making a new one, I soon gave up the attempt.

B. joined me presently. He had gotten on a quarter of a mile or so ahead before noticing that I had stopped, and at once assured me by saying: "Pooh! that's nothing. A little chewing gum and tire tape will fix it in no time." We had just passed through a village, and B. rode back to the nearest store and purchased a package of chewing gum. The lady in charge was a very particular person, and had to know the desired flavor before producing the "gum." But B. finally got it, and put in his time riding back to good advantage, manipulating it with his jaws. He applied a liberal piece to the neighborhood of the leak, which I had located by pumping a little air into the tire and listening to the escape, and smoothed it with the moistened blade of his penknife, and then bound some tire tape tightly around the tire. After which we pumped it up.

We had lost twenty minutes making the repair, and begrudged the time, as we were on our way to catch a night boat for New York. Fortunately, we were still nearly an hour ahead of the time which we calculated would be required to reach the river. We had scarcely started, however, when there was a loud explosion from the direction of B 's wheel, resembling the report produced by a genuine, old-fashioned fire-cracker.

B. tumbled off in a hurry, and began apostrophizing things in general and broken bottles in particular, from which I gathered that he, too, had had a puncture. They say that lightning never strikes twice in the same spot; but proverbs always go in pairs, one saying one thing and the other the exact opposite, so as to be suitable for all occasions. The complementary proverb, and the one suitable for this occasion, was that it never rains but it pours. Here were two punctures almost at the same spot, and twelve miles from the boat whose sailing time, at least during the busy season, is inexorable. This was ominous, and we began to have forebodings that our engagements in the city the following day would not be kept.

B. meanwhile had turned his wheel over on its handlebars and saddle and was examining the puncture. This time it was a jagged cut, half an-inch long, that exposed the virgin inner surface of the tube to the light of day. As it happened, this was only the second puncture that B. had ever had, and he was for the moment nonplussed by its extent. "You have a repair kit, old man?" he said to me. "Let me have some cement and a piece of rubber patching. I lost my kit last week." To tell the truth I didn't know what was in my kit aside from the tire tape; but I took it from the tool bag and brought it to B., who turned it inside out in his search for the desired articles. "That looks bad," he said, as he held up the cement tube, which was very flat. "Have you used it all up?"

I replied in the negative, but examination proved that there was nothing there. Some time during the last twelve months it had either leaked out or evaporated, and not a drop remained aside from a dry, gummy paste, that was useless.

"Well," said B., "seeing there is no cement, I must try what can be done with the gum"—he was still chewing mechanically. "If it was a question of doing without one or the other, I think I would give up the rubber cement. Gum will repair a tire and isn't bad to chew, while——"

"Are you aware," said I, interrupting, "that it only lacks an hour and three-quarters before the boat leaves? Chew on that if you want something to masticate, but for goodness sake hurry up with that repair."

Two or three men and half a dozen small boys had gathered as interested spectators of our undertaking, and a man driving by on the road shouted, banteringly: "Don't you want to trade horses?" "Wouldn't have your old plug if you'd give it to me," B. grumbled. But I was not so sure that we were not making a mistake in not engaging him to take our wheels on and drive us to the boat.

B. tried several expedients before he hit upon one that served at all. First he smoothed the gum over the cut, as he had done with the puncture to my wheel; but that was unavailing. Next, on the suggestion of one of the bystanders, he pushed a little of the chewing gum into the opening; but this seemed only to enable the air to escape with greater facility than before, and he could not pump up the tire as fast as the air leaked out. After a third attempt, which met with no better success, he gave it up, and announced that it was only a waste of time to try to repair the tire, and that he would walk to the nearest repair shop on our route, a matter of six miles.

On my solicitation, he consented to allow me to try my hand, with a total lack of enthusiasm in the project, however, that was by no means encouraging. Watching him had given me some ideas on the subject. First, with a penknife, I scraped the tire perfectly clean; next, I cut a patch of tire tape somewhat larger than the puncture, and applied it smoothly to the surface; then I took a small quantity of the chewing gum and plastered it smoothly about the edges of the patch, and finally bound tightly with the tire tape, and announced that all was ready for the pump.

B. fell to in a somewhat perfunctory way, but he was encouraged by finding that the air was not escaping in any perceptible quantity. Presently the tire was fairly hard, as hard as the small pump could be expected to make it, and B declared that it was ridable.

He mounted his wheel and I prepared to follow, when, to my dismay, I found that in the interval of waiting all the air had escaped from my punctured tire, and that the rim rested on the ground. I notified B. of this fact, but advised him to push on at once without waiting, as the chances were that he would soon be in a similar predicament himself. He took my advice, and disappeared in a cloud of dust scorching down the road.

As soon as possible I finished my monotonous task, and followed. I covered fully a mile before I caught up with B., who seemed to have recovered his good spirits, now that there was a possibility of getting through on time. A little further down the road I sighted the man who had offered to trade horses, and passing, had the satisfaction of giving him some of my dust. But my victory was short-lived, for I had to stop soon after to pump up, and before I was through with the operation, he had caught up.

"At it again, sonny?" he asked. "You fellers seem to spend most of your time getting up steam."

Meanwhile B. came along and passed. One good bicycle, used on the "ride and tie" principle, would have done us almost as well as our machines in their present disabled condition.

When we reached the town, where the repair shop was located, B. happened to be ahead. I had become thoroughly disgusted with my job of pumping. If I had been on a sinking vessel, pumping to keep from drowning, it might have been different. But here I was, with plenty of good solid earth under my feet, a blue sky above, and a pleasing landscape on either hand, toiling as if it were a life and death affair. I had pumped eleven times in the last fifty minutes. It was wrong, I argued, and illogical. Wrong, because there was no sufficient reason for such excessive work, and illogical, now that I had reached the neighborhood of a repair shop. I would have hailed B. and imparted my conviction to him if he had been within earshot, but just then he happened to have a long start, as a boy informed me who had seen him racing through the town, with his pump in his hand ready for immediate use. However B.'s puncture was of the kind that could not be quickly mended.

I found the repair shop with ease, but had more difficulty in locating the proprietor, who was enjoying life in the barroom of a neighboring hotel. Having explained my disaster, he consented to take a look at the wheel, and, with his companions, adjourned to his shop. Here, by doing a large part of the work myself and prodding him on at other times, I finally succeeded in plugging up the gaping void, as the tack-hole had become to my fevered imagination.

It was with emotions of profound satisfaction that I remounted, and pursued my journey, thinking that I might be of assistance to B. I hurried on to catch him, and finally came up with him as he was pumping for the twenty-second time. There was an expression of sardonic bitterness on his face that indicated the humor of the thing had long since lost its point. The finger-piece on the end of his pump was broken, which rendered his task still harder.

Now that my mind was relieved of my own trouble, I had no compunctions pumping up for a friend, so, taking out my own pump, I fell to, and soon had given B.'s tire all the ozonic pabulum it would hold. As a result of riding it too soft, the tire had become uncemented, and this aggravated the leak, and made it necessary to pump up much more frequently.

And so we made our way laboriously toward our goal. Quarter of a mile from the landing we had only one minute to spare. We filled B.'s tire for the last time and scorched down the hill. Near the bottom the dirt gave place to cobblestones, and here the rim began pounding. B. sprang off and ran beside his wheel, and in this way we reached the boat, just as the gangplank was being drawn in.

B. didn't ejaculate "Saved!" and drop in a faint, and if he felt hysterical he didn't show it, but we were both conscious of being mightily relieved.

B. walked from the boat the next morning, and left his tire at the manufacturer's agency. When he got it again, it had had a piece several inches long cut out and a new piece inserted in its place.

DAN DALY.

Yachting.

THE past week brought to an end the spring racing about New York, and for the next six weeks, at least, there will be a lull in the racing. The contest of the present week, the Seawanhaka trial races, though confined to the smallest but one of the yacht classes, will be watched with considerable interest by those who are able to be present in person at Oyster Bay and also by yachtsmen at a distance, both here and abroad, who have followed closely the international series inaugurated in 1895 by the Spruce-Ethelwynn matches. The following week will be a lively one at Larchmont, the club's annual "race week." A few races of the Sound club are scheduled for the end of July and to continue regularly through August; but one of the leading classes of the season, the special 30ft., will be missing. The class sailed its last race in the annual regatta of the Riverside Y. C., by which time it had grown to a fleet of six. Nearly all the rest of the class has been laid up at Newport through the spring, and after the Riverside race the New York division cleared for the eastward, where the racing will continue through the next two months. The first week of August brings the annual cruise of the New York Y. C.; but, save for the rendezvous and one race at Glen Cove, this is not a local function, and the bulk of the cruise racing is done at a distance from New York. With Labor Day comes a renewal of the racing in the smaller classes, then follows the fall regattas for the larger yachts, if any are left to race.

In spite of the liberal promises made by some of the nautical advance agents of prosperity last fall, when the draft limit and similar changes of rule were under consideration, it has been evident all through the late winter and spring that very little of even ordinary interest was to be expected this season. Leaving aside the wild roorbacks of Defender's sale abroad, of her racing, either at New York, Nice or Cowes, and of wonderful new Cup challengers, the certainties of the season were but few. Of these the first and most prominent was the meeting of Colonia, presumably better in her second than in her first season as a two-sticker, with the improved Emerald, the latter having a new bottom, increasing her draft from 10 to 14ft., and a new and larger sail plan. Next in interest to this came the new 51ft. class, with the new Gardner & Cox cutter Syce and the new Fife cutter. The new 20ft. class promised some excitement in the double form of the home trial races at Oyster Bay in July and the cup races in Canadian waters in August. Apart from this, there was good evidence of continued interest in the special 30ft. class, and also of a considerable amount of racing among existing boats in the classes below 51ft. At the present time the season is sufficiently far advanced to show just how these expectations have been realized.

The racing in the larger classes, it must be admitted, has been most unsatisfactory, there have been very few boats and no really conclusive racing. The schooner division has been limited to Emerald, Colonia and Amorita, and the latter has played a very small part. In the first place, she is obviously out-classed in size by the two 95-footers, and in the second, she has twice met with bad luck, once taking the ground and once doubling up her dolphin striker, the mishap in each case taking place early in the race and causing her to withdraw. Under the most favorable circumstances the difference of 20 odd feet in measurement between her and Colonia and Emerald is too great to make an interesting or decisive race, as the result must depend on an allowance of a quarter of an hour.

As between Emerald and Colonia, the case is very different, the rebuilding of the former, for the second time, has at last brought her well up in her class, and so near to Colonia that the larger boat allows her only about one minute, so that the two must start and finish very nearly together in order to make a good race.

While these two fine yachts, both in perfect racing form and ably handled, are capable of affording unlimited sport to both owners and spectators, their meetings thus far have been far from conclusive, and it is yet a question just how much Emerald has been improved. She has, it is true, won three out of the five races sailed, but in this there is no proof that she is faster than Colonia. Three of these races have been sailed on New York Bay and the waters immediately outside the Hook, where the long experience of Emerald's owner stands in good stead. The races have been very fluky and inconclusive, and what luck there has been has in each case favored Emerald rather than Colonia. The two races sailed on the Sound have been far fairer as tests, and though Emerald won the first one, it was only by 10s., and Colonia really did the better work all day. In spite of the general interest on the part of yachtsmen in this, the only large class of the year, Emerald's owner withdrew from the racing after the fourth meeting, it being generally understood that she would not meet Colonia again until the August cruise. Colonia started practically alone in the Seawanhaka Corinthian regatta, though Emerald was out with the fleet; in the annual regatta of the Larchmont Y. C. on July 5 Mr. Maxwell was persuaded to start in order to add to the interest of this special occasion, but at the Riverside Y. C. regatta a couple of days later, though both were present, Colonia was unable to start through the lack of a competitor. The Seawanhaka regatta, that of the Stamford Y. C. and several others, offered exceptional opportunities for the thorough trial of these two yachts, the wind having been strong and true, and very different from the baffling breezes of the early season. The owner of Colonia has been ready to start in every race open to the class, apparently only too anxious to settle the question of supremacy; and it is a matter of general comment and regret among yachtsmen, that the one other large racing yacht now in commission has not been at the line to meet her as often as the opportunity presented. Of course, an owner is not supposed to run his yacht and pay the bills solely for the benefit of the clubs or the yachting public; but at the present time, when clubs are giving money liberally, and committee men are giving their time and labor to instil a little life into the sport, it does seem as though they might by right count upon the entry of every racing yacht in commission.

In the larger single-stick classes there has been even less of interest than in the schooner division. While Vigilant has started twice and Navahoe once, the racing of this pair under cruising canvas fails naturally to awaken much excitement in the minds of those who have seen the big 90-footers under full racing kites. Their performance under reduced rigs and in cruising trim proves nothing as to the real speed of the pair, and such a meeting as that at Larchmont is interesting only as a part of the general patriotic pageant. While both will be with the New York Y. C. fleet on the cruise, and may start for the Goelet cup, it is doubtful whether either will be in such rig and trim as to make a decisive race with the other.

Going downward in the classes, there are Queen Mab, Wasp and the new Syce, all of very different measurements and too far apart in size to be fairly matched together. Wasp has started in a number of races, in some cases alone and in others against Syce, invariably beating the latter. Queen Mab has raced but once, then beating Wasp in a strong breeze. The only hope of racing in either of these classes rests in the completion of the new Fife 51-footer and her meetings with Syce; but she will not be under way before the August cruise, and even then it must be another month before the putty is out of her seams, her bottom fairly smooth, and her gear stretched. With her fresh from the ways and Syce in good form after three months of sailing, the races of the cruise are likely to be one-sided at best.

THE owners of yachts of the smaller classes, from the 43ft. downward, have no reason to complain this year either of the programme offered by the clubs, the general management of the races at the hands of the various committees, or the weather. There have been plenty of races scheduled for all of the regular classes, 43ft., 36ft., 30ft. and so down, including the special 30ft. class. Good prizes are offered in most cases, the schedule of dates has been well arranged in advance, and the details of courses, signals, etc., were never before so perfect. Especially is this true of the Sound Y. R. U., under whose rules most of the races of these classes have been sailed.

We confess that the result has been something of a disappointment to us in that some of the classes were not better filled, showing more than one or two boats.

In most of these classes the latest extremes of freak form and up-to-date construction have by no means been reached, and there is still more than a fighting chance for the average boat of the fast-cruiser or all-round type in both model and construction. In the larger cat classes, for instance, the racing boats have not yet got beyond the point where a man can live aboard while racing. In all of these classes there is still good sport for the average yachtsman of moderate means, who owns but one boat and must use her for much of the time for cruising and general sailing. If she be originally a good boat, not too old and of fairly light construction, with rig kept up to date and everything as it should be, he can get plenty of racing with others of the type. In our opinion there are many more of these boats about New York and the Sound than have started in the recent races. Of course business is not particularly good, and bicycling has claimed many a man who could formerly be relied on for mainsheet or topmast hand; but the racing of such boats does not involve a heavy expense; they are—or should be—handled by Corinthians, who live aboard with one or two paid hands; and if the owner is the right sort of a fellow his list of acquaintances will include some one who can take the tiller in his absence, or some reliable substitutes when his regular men cannot get away, as on a Wednesday. From what we know of the yachts about New York this year, we should say that there are enough in commission to make up at least five or six starters in each class, from 15ft. up to 43ft. in every race. That the average in most classes has been but two to three is either because yachtsmen do not realize the opportunities now offered to them, or else they do not care to avail themselves of the chance to race. This condition of affairs is not likely to last many years, each season sees the introduction of the racing machine into some new class, to the complete exclusion of such yachts as we speak of.

THE circuit, which began at Oyster Bay on June 26 and ended at Riverside on July 10, marks the third season of the Yacht Racing Union of Long Island Sound. Year by year the details of race management have been improved through the efforts of this organization; with results that are plainly visible even outside of its nominal jurisdiction. The changes made this year, during the non-racing season, have involved nothing radical outside of the acceptance of the draft limits adopted by some of the larger clubs, but they have resulted in a general improvement of racing routine. The rules of the Union, derived by careful compilation from the rules of the leading clubs, are now superior to those of any one club, and they are more generally lived up to than has ever before been the case. The circuit included nine races, or ten, including the division of the Riverside programme into two days. One of the scheduled races, that of July 2, was omitted, but even without it there was enough to keep the racing men busy. While, as already noted, some of the classes failed to fill as they should, there was on the whole some very good racing, and nearly every race was well worth watching.

THE 30-footers have done good work this year about New York, the fleet being well represented in every race open to the class, while the work of the boats has attracted general attention. The class has been criticised at times as not coming up to the idea of its promoters, in producing a generally useful and useable all-around boat, for other purposes as well as racing. Just how true this is in the abstract, we cannot say; the boats are not ideal cruisers, but we do not know that they were intended to be. From their racing this season as well as last, it would seem that they have exactly filled the end in view. The owners of the class are all wealthy men, with ample leisure for yachting, and able, as some of them do, to gratify their taste for other branches of the sport in larger craft when not racing. In their hands, the 30-footers are purely racing boats, sailed regularly and persistently through the season, and whether they are good, bad or indifferent for other uses has nothing to do with the case.

It is certain that this class, in the hands of such men as Mr. Duryea, Mr. Ellis, Mr. Stillman and Mr. Vanderbilt, is doing more than any other, small or large, to keep alive the racing spirit. If it has done nothing else, it has brought into active racing the two last-named young men, who possess not only ample means but a strong taste for yachting.

There is no lack of money in this country for the support of yacht racing even in the present depressed times; there are plenty of men who could build Valkyries or Defenders if they were inclined to do so, and plenty more with ample means to race in any of the regular classes, to outbuild Colonia, Quissetta, Queen Mab or Wasp. There is also no lack of the true yachting spirit; it abounds throughout the country, being by no means confined to the salt-water or the Eastern coast. The great trouble is that those who have unlimited means do not care for yachting, unless in the form of the ownership of a costly steam yacht; while those who are the keenest lovers of the sport are often unable to enjoy it through lack of money and time. The special 30-footer is essentially a rich man's yacht, in spite of her small size and comparatively moderate cost; to race such a yacht properly requires unlimited time and a residence at Newport for a good part of the season. Compared with the 30ft. cabin cat, the 30-footer is a bloated aristocrat, etc. At the same time the class has done a good deal for yacht racing at a time when some sort of a stimulus was needed.

Both Mr. Vanderbilt and Mr. Stillman are recruits of the right sort, at the stick all day in every race. Though tyros in match sailing, they have gone in boldly against two old hands—Mr. Duryea, of Vaquero III., and Mr. Ellis, of Hera; the former taking most of the first prizes this season and the latter some of the firsts and most of the seconds. Against these old Corinthians and some expert professionals, the two new men have held their own well, and have fought their way close up to the top in many of the races. The absence of Asahi and her skipper, Capt. Nat. Watson, from the class this year leaves Mr. Duryea at the head, but it is quite evident that some of the other Corinthians will push him hard through the balance of the season.

THERE are two details of race management which are still capable of improvement, and they are important in that they concern not the racing men, but the spectators. These latter are no unimportant part of the great body of yachtsmen; there is, fortunately, a widespread interest in the sport among many who are not in a position to enjoy the personal racing, and this class is well represented wherever the opportunity is afforded to witness a race. Especially is this the case since the racing has taken the form of a continuous series of events rather than a few isolated spectacles, such as the old-time regattas of the few large clubs. Such continuous racing as that of the 30-footers and 20-footers is followed attentively by many yachtsmen, through personal attendance at the races, when such is possible, and at other times through the published reports.

In order that the spectators on the club steamers may understand and enjoy the race, it is necessary that the yachts should be numbered, and complete lists of the numbers provided; and also that the steamer should be so handled as to be within reasonable distance of the yachts, at least close enough to read the numbers with a good glass. During the recent Sound races the popular interest centered largely on the new Vanderbilt 30-footer and the different 20-footers, but in most cases only an expert could place the boats. The system of class letters and numbers inaugurated by the Union and now generally adopted is an excellent one; the only fault is that it is not enforced as it should be and as the understanding was that it would be. The rules provide for a double system of letters and numbers, the former designating the class, the latter being the individual number of the yacht. Of course both letter and number are necessary in order to identify any unknown yacht. Many yachts comply with the rule, and carry the official number and letter, which may readily be obtained, but quite a number dispense with the letter, and some carry a wrong number. With numbers on the programmes which are not on the yachts, and with numbers on the yachts which are not on the programme, it is even more difficult to identify a yacht than when numbers were unknown. As a number is a permanent fixture through the season, possibly through several seasons, and not, as of old, changed in each club, there is no good reason why a yacht should not show her correct letter and number every time she starts.

THE club steamer is provided nominally to afford a view of the race to the non-owning contingent of the club and their families and friends. In every club there are many members who take no active part in yachting, but pay the same dues as the yacht owners, with, of course, much less in return. The club steamer is nominally provided for this class, and they board her with a hope—more or less faint, it is true, according to experience—of seeing something of the race. The steamer is invariably in charge of an old and experienced yachtsman, his uniform, his cap and his various insignia of rank all prove that; but in spite of this there is not one steamer in ten that is handled with reasonable care or judgment. It makes very little difference to the victims whether the committeeman in charge is posing in nautically correct attitudes beside the steamboat captain at the wheel, or whether he is totally invisible, entertaining his own friends below; the result is usually the same.

In one recent race, of which the chief feature, was the 20-footers, sailing with other yachts a small triangle, the club steamer was carefully and thoughtfully taken well out of the harbor before the start and placed exactly at right angles to the middle of the line and about half a mile away. All that was visible of the start was the crossing of the yachts head-on to the steamer, there being no possibility of identifying them or ascertaining their relative positions in working

for the gun. After this, while the yachts went one way the steamer went another. She might readily have laid to leeward of any of the marks, affording a fine view of the race; but her regular captain, who appeared to be in sole command, apparently knew little and cared less about yacht racing. He did, it is true, avoid all interference with the yachts; but, for all that his passengers saw of the race, he might as well have been on the other side of the Sound.

In another of the recent Sound races the club steamer began by getting on the course just as the gun fired for the first class, directly in the way of the first yacht to cross; at the same time, as she was at right angles to the line, the yachts were only seen head-on, which gives no idea whatever of the work at the line. After this she ran beside the fleet and threw a liberal wash against the boats; then she repented and kept off so far that the numbers of the 30-footers, just then in a hot fight for the first mark, were indistinguishable. There was a nice berth to leeward of the line where she might have laid during the start, showing every maneuver, and again, she might have taken the same berth at the finish of the first round; however, she again kept far away at the turn, so that the yachts could not be picked up and timed even with a glass. To make up for this she ran close to the tail of the fleet, giving a fine view of the rearmost yachts, and washing them until hailed and asked to keep away. At the finish she was again at a safe distance, head-on to the middle of the line, so that the yachts were seen stern-on, making it impossible to time them.

There was no necessity whatever for such maneuvering, with a little care she might have been in a position to see every yacht at the start, then she might have run out on the lee of the fleet nearly to the first mark, crossed half way over to the second and run in to the line.

There is always plenty to do on a race day, especially if it be a special occasion with a club steamer and entertainment ashore, and the race committee is usually more than busy with the actual details of the course, buoys, committee boat, instructions, etc. It should, however, be possible to find some member of the club, a practical yachtsman himself, who could take entire command of the pilotage of the club steamer. There may be others more competent to run the lunch and ice cream, the music, or different important details, but the actual maneuvering of the steamer should be left to such a man, he remaining beside the helmsman from the preparatory gun until the steamer starts for home, and indicating where the steamer should be placed from time to time. If this were done, the club steamer would be a far more enjoyable place from which to witness a race than it now is.

The promoters of steam yacht racing in this country have long since made a world's record for the number and variety of their excuses for not displaying the speed of their boats. Even the annals of professional rowing, with its sawed boats, cold poisons, hidden wires, etc., is surpassed by the steam yacht record of too rough water, too smooth water, too hot bearings, too cold bearings, too much sand or too little sand, boy pilots and hidden reefs, movable rocks, canal shipwrecks, absence of reporters, too many reporters, and similar fatal drawbacks to high speed. It has remained for the new steam yacht Ellide, however, to break the world's record with an excuse which is novel, if not plausible. The official trial trip of this yacht on the Hudson River, set for last week, was postponed for the extraordinary reason that the Coast Survey officers had not yet completed a reliable and unimpeachable survey and marking of the course.

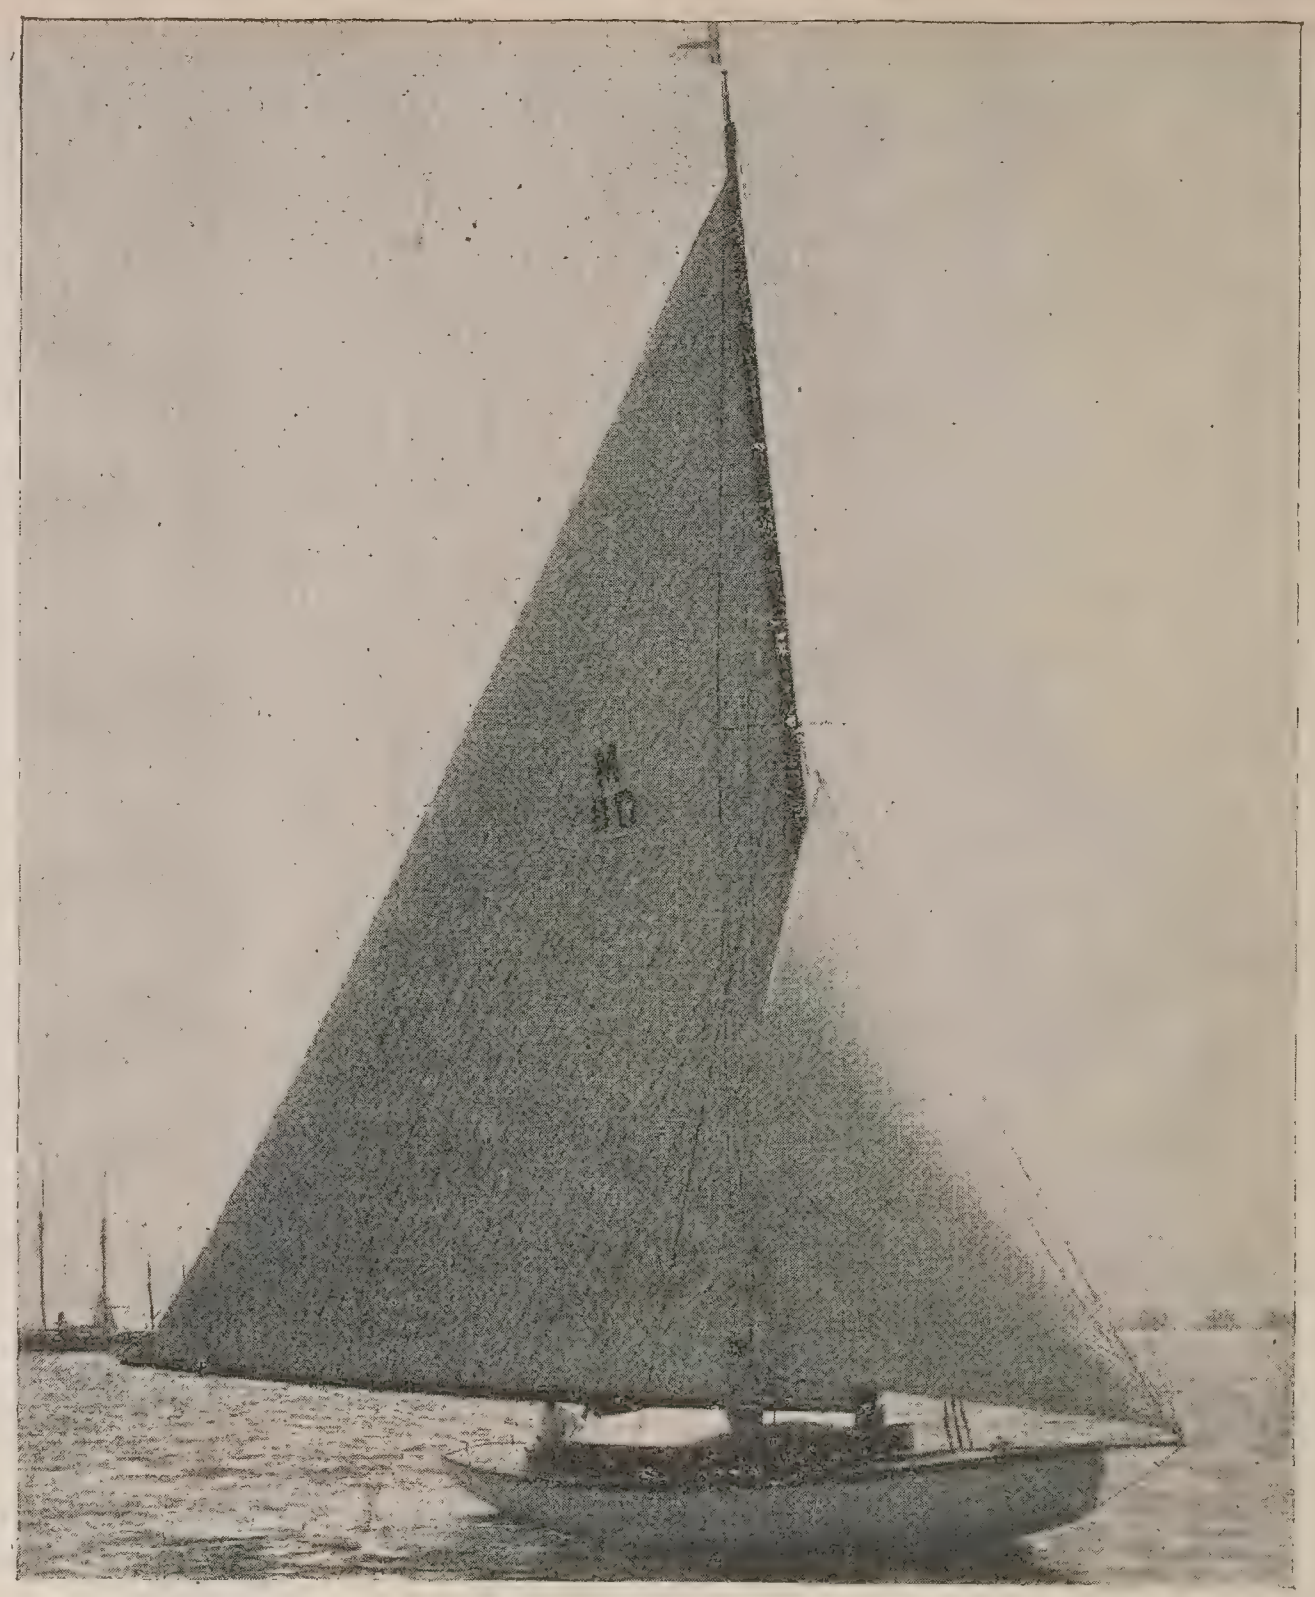
We had come to the belief that those interested in the Ellide had a really fast boat and were ready to prove it; but such an excuse as this is a disappointment to us. What on earth, or rather on the water, does a racing steam yachtsman want with reliable marks? It is this foolish trifling with cold facts that takes all the romance out of the sport of steam yacht racing.

The American Yacht Club proved this thirteen years ago, when it held two races on the Sound over accurately marked courses and with reliable timing, and proved that most of the 19-knot steam yachts of its fleet (nineteen knots was the fashionable speed at that remote day) could not go at a 12-mile gait when carefully refitted, coaled and fired for a real race. This ended steam yacht racing in the club; no attempt has ever been made to revive such a foolish and mortifying sport.

Since that day greatly improved methods have been introduced, both in the running, timing and reporting of high-speed boats. The cheapest and most popular method has been to to use the thirty-year-old reputation of the once famous Hudson River steamer Mary Powell, picking her up unawares and running by her, the tip having been given in advance to representatives of the daily papers. Another equally inexpensive method of making a world's record has been to run down the Bay for some unknown distance, which is accurately timed, in company with the Sandy Hook steamers Monmouth or Sandy Hook. From the data thus obtained, the time of the steam yacht can be computed to a small fraction of a knot, irrespective of the fact that the big steamboat may be running over the shoals instead of in the 30ft. channel. Still another plan is for two high-speed boats to go out with the fleet on an international cup race and to race to the horizon and back, each one on her return flying a "championship pennant" and claiming to have turned the other.

Of course there are no Cup races on this year, so this test is not possible, but there are commercial craft of all kinds about New York Harbor, from the Monmouth and Powell down to the big fleet of car floats, against which speed records can be easily made. To go to work deliberately to measure off an accurate distance is merely a waste of time and money, and may even be said to be unsportsmanlike in that it reduces to a matter of cold facts and figures a sport that has heretofore been surrounded with the most delightful glamour of romance and fiction.

MR. DUGGAN'S new 20-footer was launched at Dorval on July 11.



Akista.

THE accompanying drawings show the sail plan and further details of the fin, iron work, etc., of the fin-keel Akista, described last week. The details of the fittings have been worked out very carefully to give a rig that is light, effective and very easily handled. The mainsail runs in a track on the after side of the mast, the toggles on the luff of the sail being simple castings, somewhat similar in shape to a collar button. The centers have been worked out so as to secure a good balance under all conditions; *a* is the C. E. with lower sails, *b* with jibtopsail, *c* with whole mainsail and reefed jib, *d* with one reef and whole jib, *e* with one reef in both mainsail and jib, and *f* with two reefs in the mainsail and one in the jib.

The displacement is made up very nearly as follows:

Hull	6,000lbs.
Fin castings	6,250lbs.
Sails and spars	750lbs.
Furnishings	1,000lbs.
Soakage of hull	750lbs.
Water in tank	1,000lbs.
Crew	500lbs.
Boats	250lbs.
	16,500lbs.

The yacht has sailed thus far under the usual drawbacks of a new boat against older ones, bottom rough, seams swelled, etc., etc.; but has made a very good showing in the different races.

AKISTA.

Seawanhaka Corinthian Y. C. International Cup.

TRIAL RACES FOR CHALLENGER.

Oyster Bay—Long Island Sound.

FOR the third season the Seawanhaka Corinthian Y. C. holds its trial races at Oyster Bay, but while in both of the previous years the object of the racing was to select a suitable defender for its international cup, this year the representatives of the new 20ft. class are called together for a very different end, the selection of a yacht worthy to represent the club creditably in its attempt to recapture the cup, won last year by Messrs. Duggan and Shearwood, of the Royal St. Lawrence Y. C., in their 15-footer, Glencairn. While the general conditions of the races are the same as in the previous years, there is one important change, in the size of the yachts, which are now of 20ft. racing length, instead of 15, and manned by three instead of two men.

Thus far the yachts of the class have not been raced steadily enough to give any reliable idea of their positions, at least as to the upper places; several of them are apparently very fast, but which is the fastest must be determined by the trial races. The fleet, which includes none of last year's yachts, is made up as follows:

	Owner.	*Designer.*	*Builder.*	*Club.*
Momo, c.b.	J. N. Crane, A. W. Durkee	C. H. Crane	Spalding St. L. Co.	Seawanhaka
Al Anka, c.b.	C. H Crane	C. H. Crane	Lawley & Son	Seawanhaka.
Skate, c.b.	Irving Cox	Builder	L D Huntington	Seawanhaka.
Keneu, c.b.	M. H Clark	Builder	L D Huntington	New Rochelle.
Shark, fin	H. C Rouse, C. Hoyt	Gardner & Cox	Spalding St. L Co.	Seawanhaka.
Mary, c b.	H. S. Hicks	H. S. Hicks	Racine Boat Mfg Co	Wawasee.
Asthore, fin.	P. T Dodge.	C. Olmstead	Montauk Con. Co.	Larchmont.
Montauk, fin.	P. T Dodge	C. Olmstead	Montauk Con. Co.	Larchmont.
Arauca, c b.	W. W. Howard, Builder		L. E. Fry	
Vagary	Barclay Ward.	Barclay Ward	Spalding St. L. Co.	
Pioneer, fin.	H. M. Crane.	H. M. Crane.	Lawley & Son	Seawanhaka.
Idea	W. H. Jennings			Indian Harbor.

FIRST TRIAL RACE.

Monday, July 12.

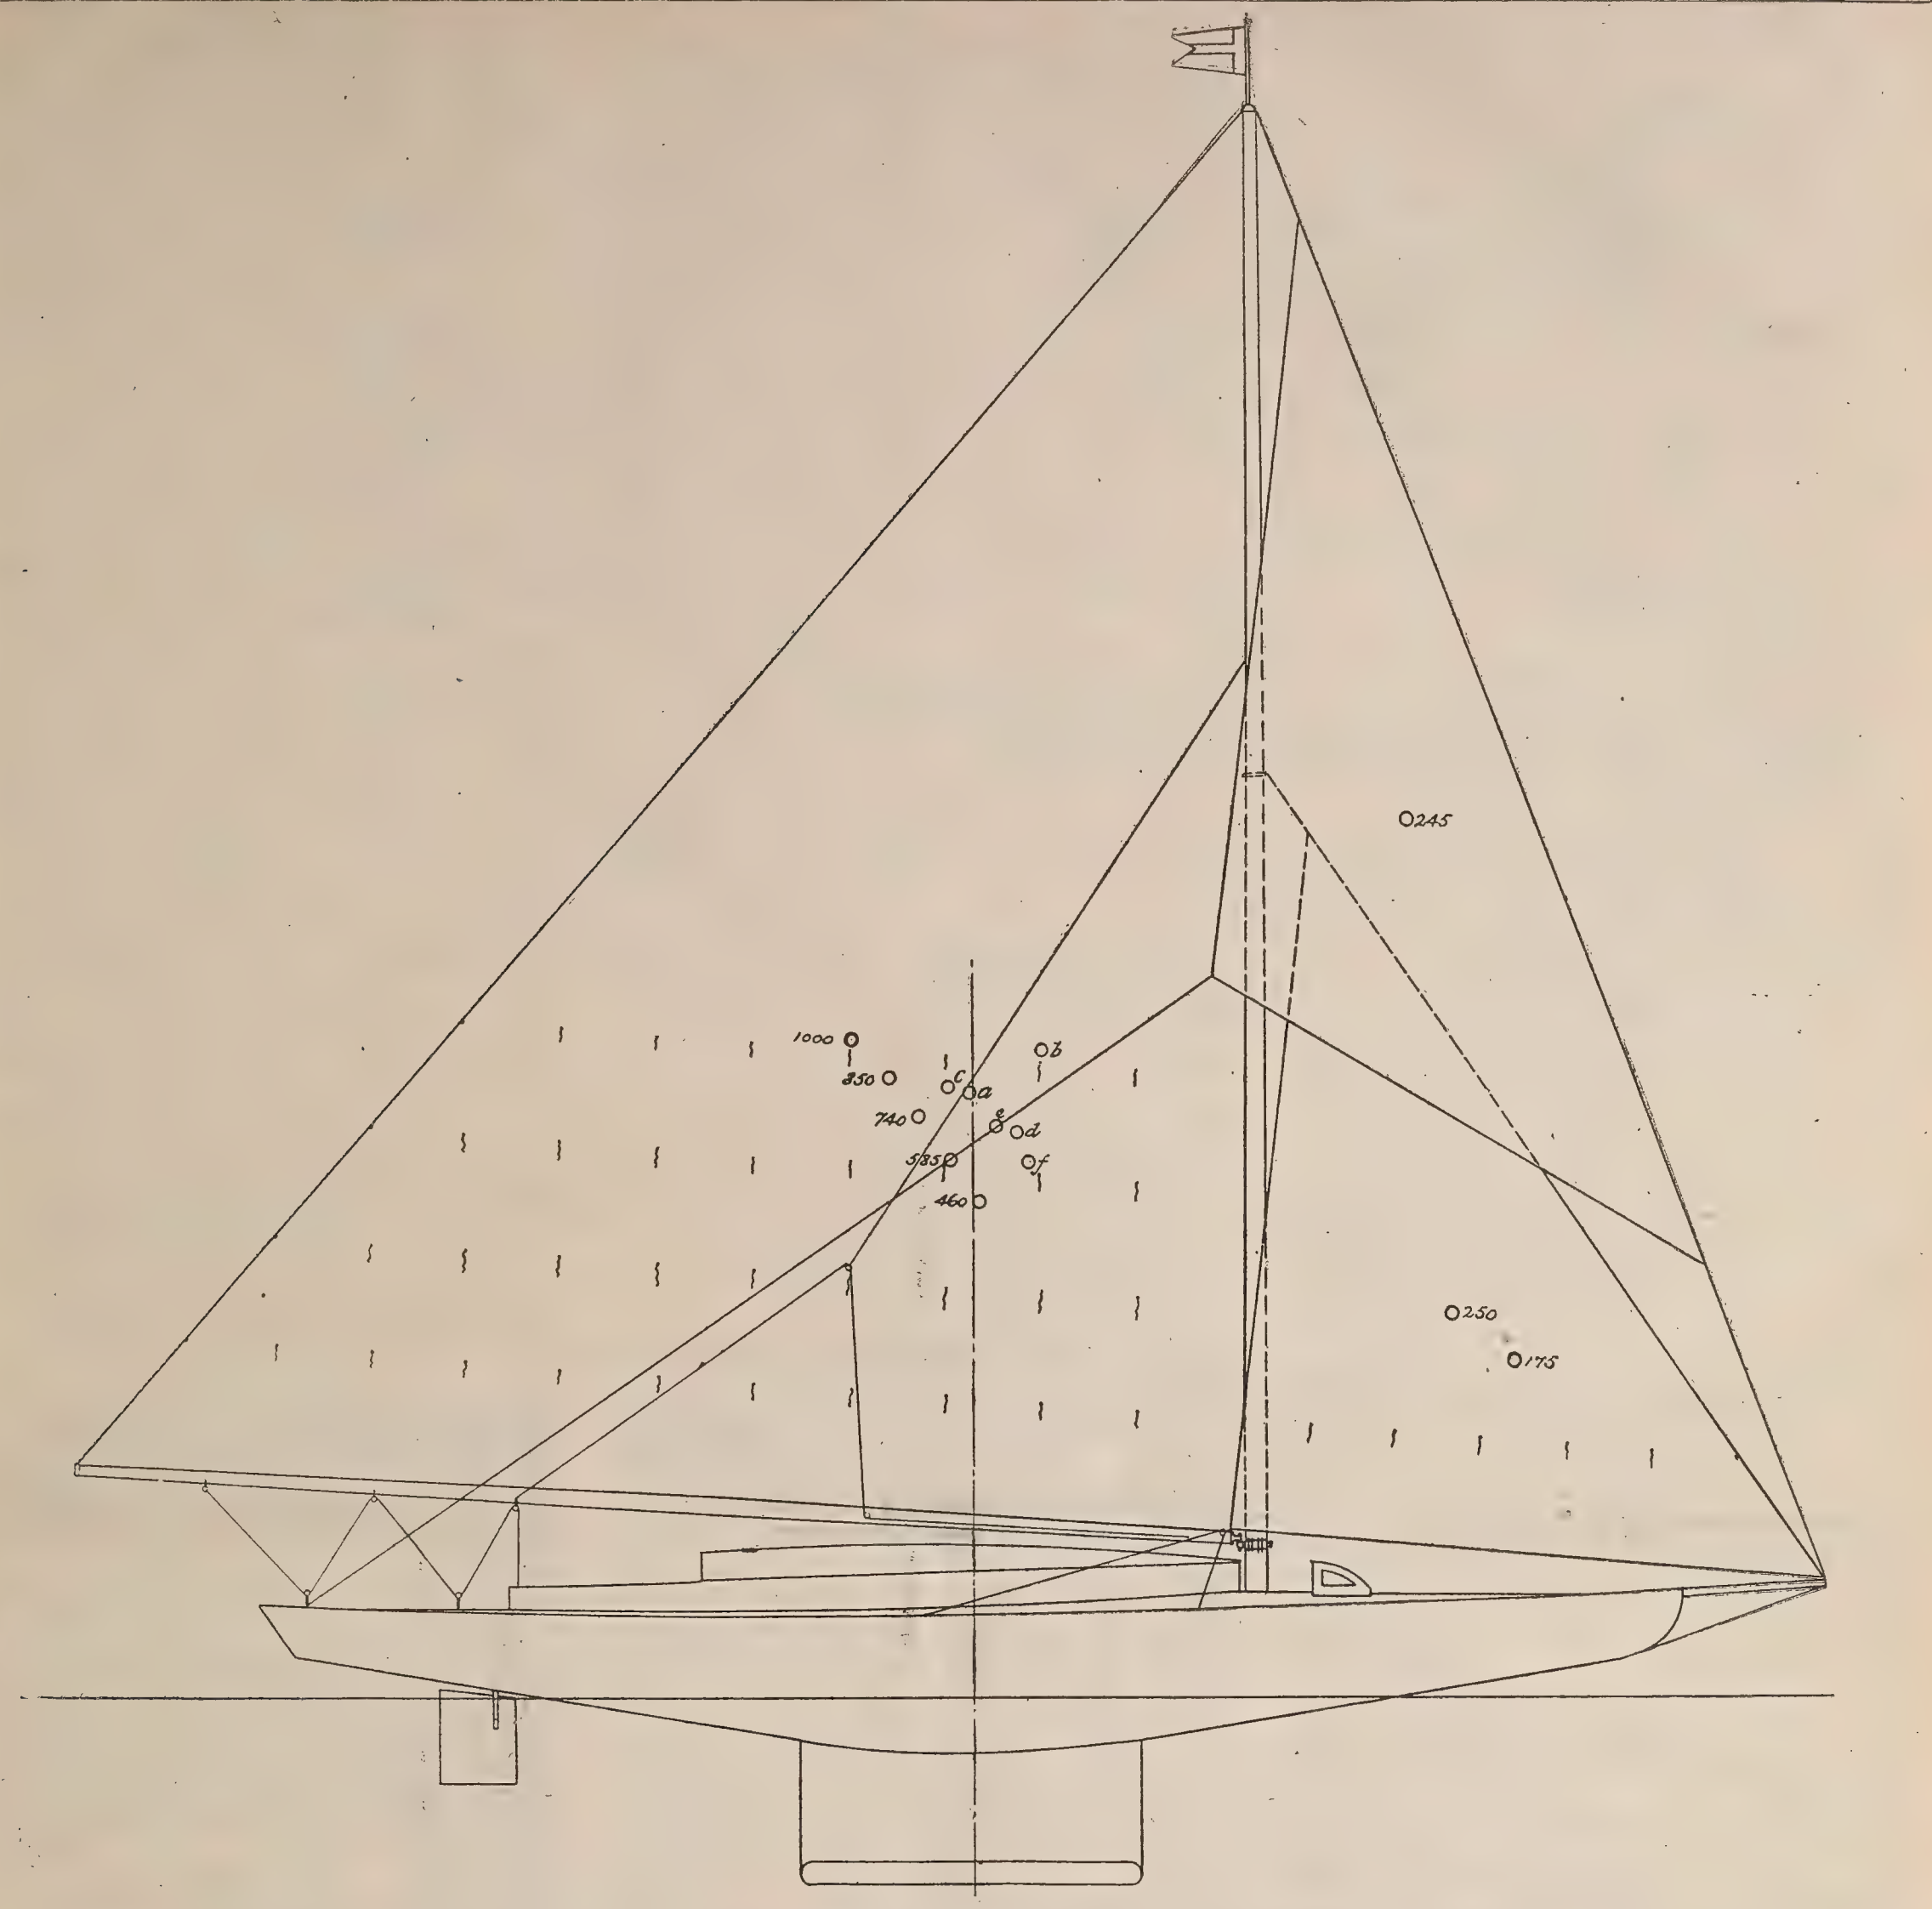
The conditions for the trial races were the same as in previous years, at least three races over the courses off Oyster Bay, triangular and windward-leeward in alternation, each a six-mile course, sailed twice. The fleet in Seawanhaka Harbor on Monday morning included but nine of the twelve boats. Asthore was not present, as she had not proved satisfactory in the earlier races, and her newer sister Montauk was evidently the better of the two. Pioneer had been left in Boston, as she had proved inferior, as was expected, to the other Crane boats, Momo and Al Anka. Vagary, a new boat of the freak order, broke her rudder on Saturday and could not start, being at Cold Spring Harbor for repairs.

Mr. Howard has worked diligently on Arauka since her breakdown in the race of June 26, her builder, Mr. Fray, coming from Clayton to repair and strengthen her. Others lent a hand, and the mast was stepped on Monday morning, the yacht being launched just prior to the start.

The race committee had chartered the steam yacht Chère Amie, neé Puzzle, as a committee boat, and she was at the line off Center Island Buoy before noon, the tide running ebb and a fresh wind kicking up a sea, about south by west in direction. Of the nine boats at the line all but Skate carried one or even two reefs. The Huntington boat carries a crew of three Corinthians, Irving Cox at the tiller, George Bullock on the main sheet, and D. Le Roy Dresser forward. The lightest man of the three weighs over 220lbs., and touches 6ft. 2in. in his bare feet; the other two are considerably heavier and 1in. or so taller. The boat is wide, and is sailed on edge, with 19 lineal feet of live ballast, some 750lbs., laid along the plankshear to windward, on the deck or the side, as the case demands.

The preparatory was given at 12:15, with the start at 12:20. Skate was first over, but only running across the line without much headway; Keneu made the best start, crossing a few seconds after Skate, but going like a steam launch. Al Anka, Shark, Idea and Montauk went over quickly, Mary was about a minute after the gun and Momo a minute and a half. Arauca was tardy and lost just five minutes.

The first of the numerous incidents of the day was a double foul, as Al Anka rushed on with boom well off to port she set a balloon jib, the sheet getting adrift. Before it was secured she luffed into Shark, and the latter, in also luffing, struck a dinghy in tow of a small yacht which was in the way on the course. All went clear at once, but Shark had sprung a leak forward and begun at once to fill.



With a strong, quartering wind and moderate sea, the boats flew along at a speed that almost justified some of the extravagant statements made this spring. The first leg was covered in 13 minutes, and the second in the same time—a speed of 9 knots. Skate and Keneu made a very close race to first mark, but the former was quicker at the turn and came out on Keneu's weather after the jibe. After them came Al Anka, Shark, Momo, Montauk, Mary, Idea, Arauca. Perched high on the weather edge of a float slab, the crews of the leading boats had no opportunity to pick up the next mark; they all overstood and the others followed, Shark being the only one to steer a straight course from mark to mark. The second leg was a reach with wind more nearly abeam, and Skate, though lugging her whole mainsail, ran away from Keneu. The times were:

Skate	12 46 16	Montauk	12 53 08
Keneu	12 47 19	Mary	12 53 22
Al Anka	12 50 12	Idea	12 57 10
Shark	12 50 35	Arauca	12 57 20
Momo	12 51 10		

Now came a long and trying beat to windward in a bad sea and rising wind, but Skate still lugged her whole mainsail. The mainsheet was never belayed during the race, but Mr. Bullock had it in hand, hauling in a few feet or slacking out with every puff. While Skate and Al Anka stood well to the westward, Momo, Keneu and Shark went off on starboard tack toward Lloyd's Neck. Skate held her lead on Al Anka, but when the others came up Shark was third and Momo fourth. As Shark came for the mark her bow was under water, though she was sailing very fast, she hailed for aid and was taken in tow; her fore compartment full of water. The times of the first round were:

Skate	1 37 15	Keneu	1 45 21
Al Anka	1 41 47	Montauk	1 54 00
Shark	1 42 20	Idea	1 54 45
Momo	1 42 32	Arauca	1 55 08
Mary	1 41 40		

The leaders hurried off with lifted sheets, Skate still dropping the others over the first two legs. When they came on the wind there was a nasty sea and a strong breeze; the others had all come down to three reefs and anything that could be made to stand forward, but Skate held her whole mainsail for fifteen minutes, when she stopped and tied in three reefs. Momo overhauled her rapidly, and even after she was under way again, Skate being very badly balanced under her three-reefed mainsail and no jib. Mr. Dresser worked forward for some time and finally set the working jib with an Irish reef, making a bag of the sail, but keeping her head off so that she could be steered. While she and Momo were fighting in the lead, Al Anka capsized, but was righted by her crew, who

FIN KEEL SLOOP "AKISTA"
OWNED AND DESIGNED BY GEORGE HILL, ESQ.

AKISTA—SAIL PLAN.

stood on the centerboard. She was under way again in less than two minutes, but once more capsized. This time she not only took more water below, but filled her hollow mast, and could not be righted. Com. Benedict went to her rescue in the Oneida.

Not one boat of the fleet, Shark, Arauca and Idea now having withdrawn, had the proper head canvas for a three-reefed mainsail; and all were steering badly, while their crews, drenched from the start, were almost exhausted. Skate had left her storm jib ashore that morning, and none of the others had or could set theirs. Momo was jilled along with boom topped up, and peak lowered.

Skate was very near to the finish, and just ahead of Momo at 3 o'clock, when she capsized. Her crew climbed on to the centerboard and soon righted her, but Mr. Cox went overboard as she started off. With sheets in a tangle she attempted to round to for him, but Momo came up and the two touched lightly. Skate went over again, and this time turned her mast to the bottom, so that her 280lb. sliding fin dropped out and, of course, was lost. Mr. Cox was picked up by Thos. Webber in his launch, and soon ran over to Skate. She was taken in tow by a friendly launch, but the attempt to tow her at full speed while her crew were righting her, drew her under water with the three men fouled in the lines, and nearly drowned them. The steam yacht Girolda finally took her into the harbor, the hull entirely submerged. She had no ballast whatever, but was open below from end to end.

Momo finished at 3:11:06, her time for the 12 miles being :51:06. Montauk came next, then Keneu. Mary had done very well in the windward work and was in a good place, probably third boat, when she parted a shroud and laid to for repairs. She lost a good deal of time, but finally came to the line in fourth place, but did not cross, though her time was taken.

When in the harbor her rudder broke in the stock. The official times were:

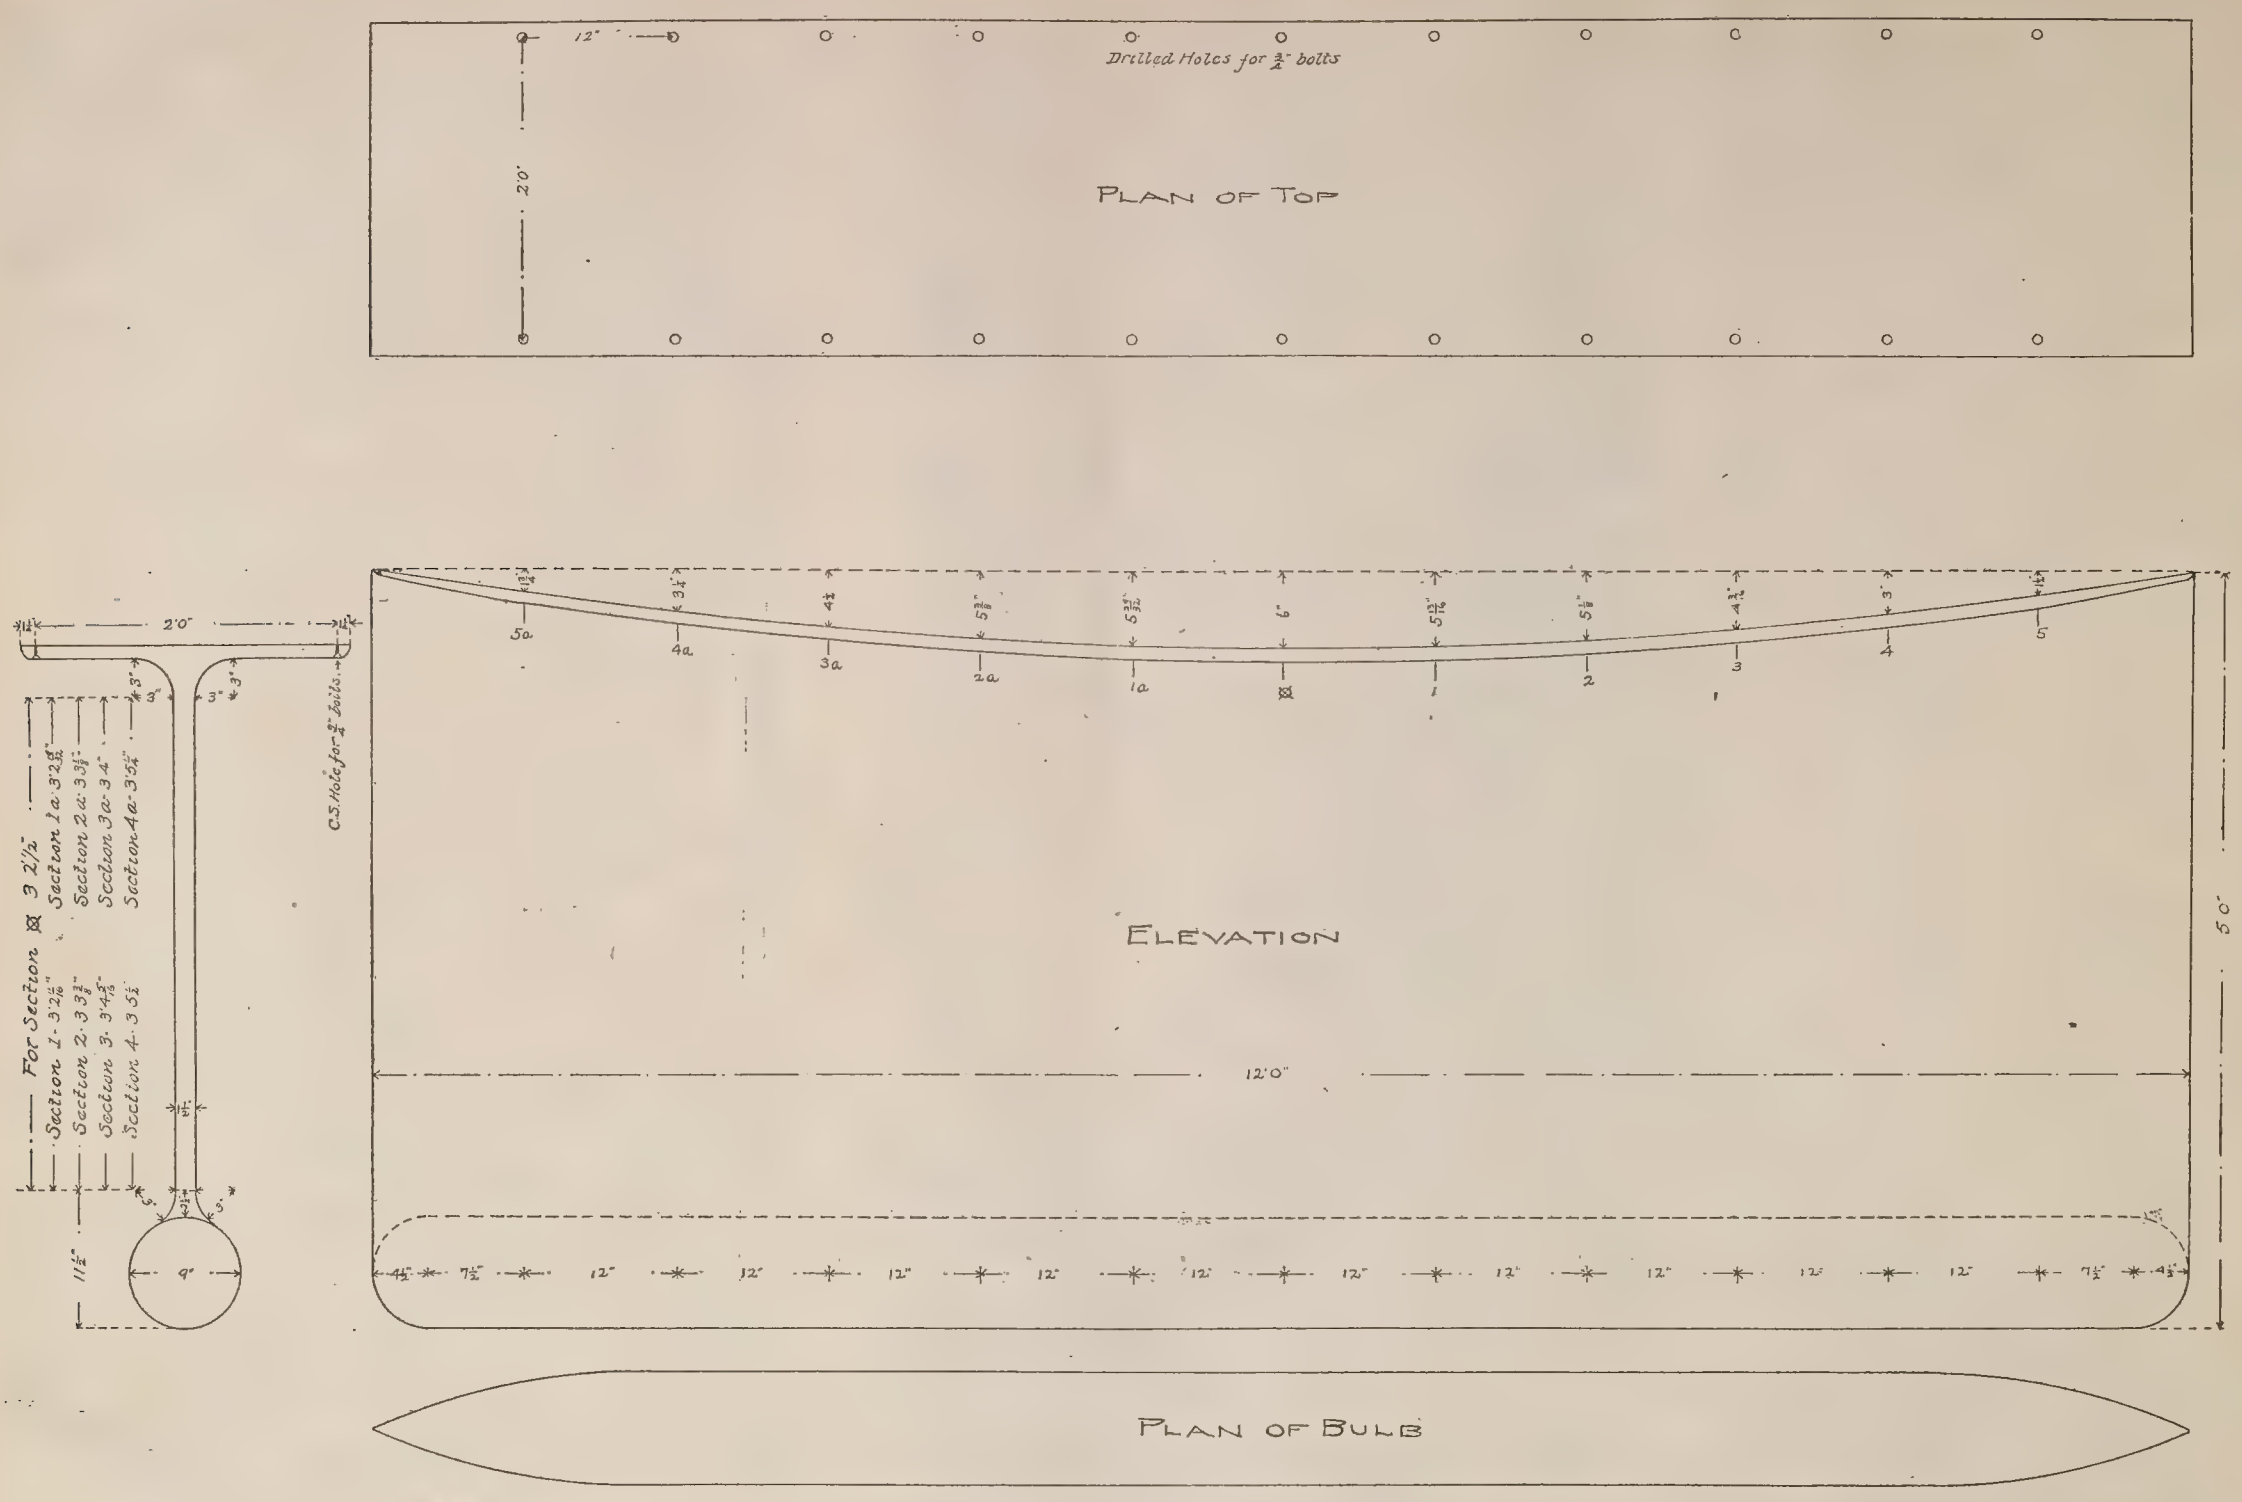
Start 12:?0.	Finish.	Elapsed.
Momo	3 11 06	2 51 06
Montauk	3 22 00	3 02 00
Keneu	3 25 46	3 05 46
Mary	3 29 00	. . . .
Skate	Capsized.	
Al Anki	Capsized.	
Shark	Bow stove.	
Idea	Withdrew.	
Arauca	Withdrew.	

Mary did not cross finish line.

The day was marked by innumerable minor incidents of fire and shipwreck of the "To be Continued" order. After reaching the club house the committee decided to postpone the second race to Wednesday.

Boston City Regatta.

BOSTON—BOSTON HARBOR.



Monday, July 5.

MASSACHUSETTS Y. R. A. RULES.

THE Boston City regatta of 1897 was sailed under the rules of the Massachusetts Y. R. A. and under the immediate management of Sec'y A. T. Bliss. The day was fair, with a very light wind. The old Shadow, so long victorious in her class, was beaten, though handled by Capt. Crocker. The times were:

	Length.	Elapsed.	Corrected.
CLASS A			
Chieftain, M. R. Peterson	30.00	3 14 28	2 30 37
Shadow, A. M. Amazeen	33.06	3 17 00	2 37 48
FIRST CLASS.			
Beatrice, John Cavanagh	24.00	2 17 55	1 39 13
Emma C., P. A. Coupal	27.06	2 14 47	1 39 18
Ida J., F. E. Beeman	28.04	2 14 18	1 39 50
Harbinger, C. F. Bactie	28.01	2 20 13	1 45 29
Hervine, C. A. J. Smith	27.06	2 23 21	1 48 57
Little Peter, A. H. Moebs	24.05	2 33 38	1 53 22
Elfrida, B. T. Hall	28.11	2 29 01	1 55 13
Lillian, Kears & Young	27.00	3 41 07	2 05 07
SECOND OPEN CLASS.			
Hoodlum, Higginson & Boardman	23.11	2 25 49	1 52 33
Romance, Loring Sears	22.00	2 30 15	1 54 56

AKISTA—DETAILS OF FIN AND BULB CASTING.

Beverly Y. C.

247th Regatta.

WENAUMET—BUZZARD'S BAY.

Saturday, June 26.

THE 247th regatta of the Beverly Y. C., first Corinthian race, was sailed off the club house at Wenaumet on June 26. Mr. C. E. Hodges, of the regatta committee, being the judge.

At the start the wind was fresh S.W. Many of the boats being reefed, then it petered out and became variable and was N.E. at the finish.

While it blew Anonyma took the lead, but as it got lighter Thordis passed her.

In third class Melro and Nobska had a close race, as they usually do, but Melro led by five seconds actual time, and is the smaller boat.

Opossum led again in the fourth class sloops, beating Heiress, her competitor, over six minutes. Imp beat Vif in fifth class cats and Royal Blue scored another win in the cruising class.

This race was open only to boats sailed and owned by members of the B. Y. C.

Courses—11¼ miles for cruising and second classes; 8½ miles for third class; 8 miles for fourth class; 5½ miles for fifth class.

* Sailed the third class; had no competitor.

First prizes won by Thordis, Melro, Opossum, Imp and Royal Blue, who also each scored one point for the championship.

Anonyma won second prize and scored one-half point for championship.

248th Regatta.

WENAUMET—BUZZARD'S BAY.

Saturday, July 3.

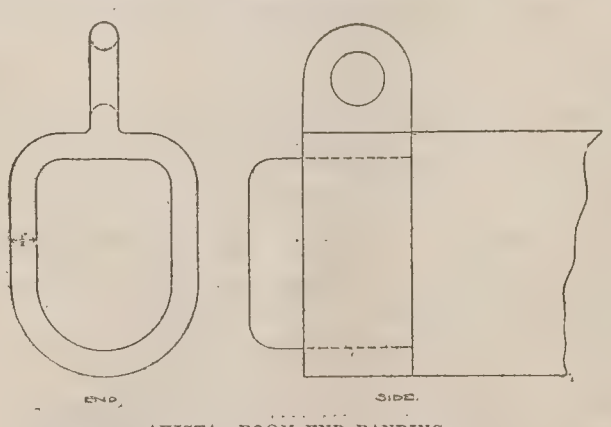
The 248th race was sailed off the club house on July 3, being the second open sweepstake. With the exception of the Coquette and Lara, all starters belonged to the club. These two hail from Monument Beach. Lara was only launched July 2, and her sail was hardly knocked into shape.

The race in the cruising class was good, the Edith, just built by Herreshoff, and the Mariposa, a new Lawley boat making their first appearance. This is the new restricted class—21ft. waterline, 3,000lbs. outside lead, 600ft. of working sail, and with limits on beam and depth. They are very handsome boats, each of a different color, all with good accommodations, watertight cockpits, etc. The class is a great success.

The race in the second class was also good, but Thordis again showed herself the best boat in moderate air.

In third class Molly, with her present sail, could not point with the others, and her owner drew her out at the end of first round. Nobska and Melro sailed a hot race, Nobska counting one, as she made the best actual time by eight seconds, but Melro getting prize on allowance.

In fourth class sloops, everyone who had sailed on Mr. Eustis's new Copelin expected her to win; she is the new boat with a centerboard, and a rudder on each side. For a short time at the start she had it her own way, when the jaws of her gaff broke, and after that she could not point with the other boats, though she ran very fast.



In the fourth class cats, Mr. Stockton's Daisy, looking like a new boat, though she is nearly ten years old, beat Howard and Coquette; and in the fifth class Imp won on both actual and corrected time.

Wind was south and moderate. Judges: George P. Gardner and Walter Lloyd Jeffries.

First prizes won by Thordis, Micaboo, Melro, Opossum, Daisy and Imp, all of these, except Melro, scoring 1 for championship, which Nobska got in this class.

Second prizes were won by Kalama, Royal Blue, Heiress and Lara.

Third prizes were won by Mist, Edith, Blue Fish; and the

AKISTA—BOOM END BANDING.

following boats scored ½ for championship—Kalama and Lara and Mist not being sailed by a member—Bernice, Royal Blue, Melro, Heiress and Hebe.

There is no allowance in the cruising class, Grilse took it easy, did not set her light sails, and her usual crew were on Capelin.

249th Regatta.

WENAUMET—BUZZARD'S BAY.

Monday, July 5.

The 249th regatta, the second Corinthian, was sailed on July 6 off the club house.

Courses same as race No. 247. Judge, W. Lloyd Jeffries A two-reef southwester was blowing, and for the first time this year the club had Buzzard's Bay weather.

In second class Anonyma beat everyone to windward, but Thordis ran her and got in first, but her length was protested as being out of the class, when first measured just launched she measured a ¼in. into the class, but she has soaked some water and now measures 1in. out of the class, so Anonyma takes the mug.

It was nip and tuck with Nobska and Melro up to a point half a mile from the finish, Nobska leading, but Melro, inside her time allowance, at this time Nobska's boom broke and put her out of it.

In cruising class the strong wind was expected to make Robin Hood win, and she did handsomely.

Howard won in fourth cats with a long lead. Opossum won again in fourth sloop class; she is a beauty, and has yet to be beaten. Imp won again, though Hebe led at end of first round.

Heiress led Opossum at end of first round, and set her spinaker very quickly, while Opossum was very slow in setting balloon jib, still on this last short leg Opossum took the lead and won by over 2m.:

AKISTA—DETAILS OF IRONWORK.

THE YACHT RACING UNION OF LONG ISLAND SOUND.

Racing Circuit.

June 26 to July 7.

American Y. C. Annual Regatta.

MILTON POINT—LONG ISLAND SOUND.

Tuesday, July 6.

THE annual regatta of the American Y. C. was sailed on July 6, starting off Milton Point, the club station. The course was a triangle, the marks being Parsonage Point, Red Springs and Larchmont Harbor; the starting line was in the middle of one side, the yachts going first to Parsonage Point. As it happened, the wind was so light that but one round, 10¾ miles, was sailed. The start was postponed until 1 P. M., the classes being timed:

1:10, 51ft. class—Syce.

1:15, 36 and 30ft. classes—Hera, Musme, Vaquero, Veda, Wa Wa, Surprise and Acushla.

1:20, 30ft. catboats and 25ft. sloops—Volsung, Dorothy, Vaquero, Houri and Skimmaug.

1:20, 25ft. catboats and 20ft, sloops—Momo, Shark, Colleen, Brant, Punch, Ethel, Sequel and Zelica.

1:30, 20ft. catboats and 15ft. sloops—Laura Lee, Dorothy and Caprice.

With the wind S.W. by W., sheets were eased to port and some of the yachts set spinakers for the short half-leg to Parsonage Point; then the fleet beat across to the Red Springs mark, the wind still very light, reached back across the Sound to Larchmont and after a jibe ran to the line, where they were timed:

Syce	3 26 20	Houri	3 48 54
Acushla	3 26 25	Vaquero I.	3 50 48
Hera	3 28 32	Shark	3 51 15
Vaquero III.	3 29 01	Skimmaug	3 57 12

The winners were:

Syce, Hera, Vaquero III., 2d prize; Acushla, Houri, Momo, Dorothy, Ethel, Skimmaug, Colleen, Punch, 2d prize; Dorothy of the 20-foot class.

The fleet of the Atlantic Y. C. was at anchor off Milton Point or under-way about the courre all day, and in the evening a reception was held in honor of the visitors. The officers of the Atlantic Y. C. were entertained at dinner by the officers of the American Y. C., and afterward there was dancing and a supper for the guests. The grounds and club house were very handsomely illuminated. The race was managed by the regatta committee, Messrs. Stuyvesant Wainright, H. de B. Parsons, Mulford Martin, M. C. Parsons and Thomas Dimond.

Riverside Y. C. Annual Regatta.

RIVERSIDE—LONG ISLAND SOUND.

Wednesday, July 7.

THE Riverside Y. C. this year divided its regatta into two parts, the larger yachts sailing on Wednesday, on the occasion of the visit of the Atlantic Y. C. fleet, while the smaller ones waited until Saturday. Wednesday was clear and hot, but pleasant enough on the Sound, where a light easterly wind was blowing. The courses were triangles, the larger of 15 miles, from off the Gas Buoy at the mouth of the harbor, to Matinnicock Buoy, Center Island Buoy and home. The smaller from the same point to the Spar Buoy in the middle of the Sound, thence eastward to a markboat and home, 9 miles. The start was timed:

Schooners, 1:05—Adrienne.

Sloops, Cutters and Yawls over 43ft., 1:10—Syce, Volante, Nirvana, Eidolon, Eclipse, Sistae.

Sloops, Cutters and Yawls under 43ft., 1:15—Veda, Wa Wa, Vaquero III., Hera, Musme, Acushla, Ninita, Vorant II., Penelope, Akista and Consuelo.

Both Colonia and Emerald were present, the former entered, but as she had no competitor she remained at anchor. The larger yachts, headed by Syce, stood off for Matinnicock, while the smaller reached for the first mark and then trimmed flat for a beat to second. The wind fell very light and then came in from the south'ard, the third leg being covered very slowly under spinakers, the 30-footer and 36-footers in a bunch. Vaquero had a small lead at the end of the first round, where they were timed:

Vaquero III.	2 52 57	Penelope	2 59 25
Acushla	2 53 07	Ninita	3 05 00
Wa Wa	2 54 03	Syce	3 15 12
Veda	2 54 45	Consuelo	3 18 44
Akista	2 54 53	Sistae	3 28 44
Hera	2 54 55	Eclipse	3 29 42
Musme	2 55 02	Eidolon	3 30 16
Vorant	2 58 30		

At the mark with very little wind the fleet was tangled up, Wa Wa picking up the mooring line of the stakeboat with her fin. Vaquero succeeded in getting around first and clear of the others, constantly improving her advantage to windward, the first leg now being a beat. The others were some time in getting clear of each other. The beat out was a very pretty sight, the boats crossing and changing positions. Vaquero had a good lead at this mark, and held it all the way in. The finish was timed:

Vaquero III.	4 29 01	Ninia	5 05 58
Wa Wa	4 34 31	Syce	5 41 23
Acushla	4 34 50	Consuelo	5 54 39
Veda	4 34 54	Sistae	6 31 09
Hera	4 35 24	Eclipse	6 34 29
Musme	4 37 53	Eidolon	6 37 12
Vorant II.	4 38 05	Volante	6 57 56
Akista	4 50 41	Nirvana	6 58 59
Penelope	5 00 02		

The final times were:

Veda, C. Vanderbilt, Jr.	30.00	3 19 54	3 19 54

* Disqualified.

The winners were: Adrienne, sail over; Syce, sail over; Eclipse, Sistae, Acushla, Penelope, Consuelo, sail over; Vaquero, with Veda second. The race was managed by Messrs. F. B. Jones, George B. Clark and H. W. Tyler. The steamer Bay Queen carried a large number of members and guests over the course. In the evening the club house was gaily decorated and illuminated in honor of the Atlantic Y. C. fleet, and a reception was held.

Saturday, July 10.

THE races for the smaller classes were sailed on July 10, one of the very hot days of the season, with very little wind and that variable, from E. to S.E. The start was postponed to 1 P. M., there being no wind at all at noon. The times were:

	Finish.	Elapsed.	Corrected

Comet, A. A. Barnes	Did not finish.		

The judges were: G. W. Mansfield, Herman Parker, G. B. Percival, Jr., W. B. Stearns, George Smith.

Cock Robin was beaten for the first time. Verona, the new Stearns knockabout, won in her class.

Atlantic Y. C.—Annual Cruise.

THE annual cruise of the Atlantic Y. C. began with the rendezvous at Larchmont on July 3-5, a number of yachts being present over Sunday and during the race of Monday. The programme of the cruise included a number of races for prizes offered by the club. In the absence of Com. Gould, Vice-Com. Adams was in command. On Tuesday morning the fleet sailed the few miles from Larchmont to Milton Point and anchored to watch the American Y. C. regatta. In the evening a reception was tendered to the visitors by the American Y. C. Next day the fleet sailed to Greenwich and anchored over night, the members witnessing the Riverside Y. C. regatta and spending the evening ashore at the house of the Riverside Y. C., where they were most hospitably entertained. The fleet, by Thursday morning, included the following yachts:

STEAM YACHTS—Clermont, A. Van Santvoord; Wabeno, Fred. Gerken; Hildegarde, Rear-Com. B. M. Whitlock; Scionda, Alfred W. Booth; Sultana, W. H. Langley; Marietta, Harrison B. Moore; Alcedo, W. H. Hamilton; Now Then, Edgar F. Luckenback; Victory, Frank L. Camp.

SCHOONERS—Sachem, Vice-Com. F. T. Adams; Colonia, C. A. Postley; Emerald, J. Rogers Maxwell; Priscilla, W. J. Goulding; Nirvana, G. G. Tyson.

YAWLS—Huron, E. S. Hatch; Sultan, John H. Cromwell.

SLOOPS AND CUTTERS—Awa, A. De Witt Cochrane; Syce, F. M. Hoyt; Eurybia, Charles Pryer; Eidolon, James Wier, Jr.; Sistae, John Rhodes; Eclipse, L. J. Callanan; Gaviota, Col. David E. Austen; Akista, George Hill; Penelope, I. V. Ketchum; Vorant II., G. G. Tyson; Volante, S. L. Sweet; Tique, H. A. Harrison; Laurel, Richard Pease; Volusia, J. J. Allen.

The first squadron run was set for Thursday, from Greenwhich to Black Rock, by way of Eaton's Neck Buoy, and a start was made at 11:30, though there was little or no wind. In addition to the regular prizes, Com. Postley, of the Larchmont Y. C., offered a special cup for schooners and one for single-stickers, each with double time allowance, for the two runs to New London. The race proved a long and tedious drift, Syce being over six hours in covering the twenty miles, while others arrived so late that the entertainments of the evening were sadly marred. The official times were:

CLASS 1—SCHOONERS IN RACING TRIM.

	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	6 05 45	6 55 45

CLASS 2—SCHOONERS IN CRUISING TRIM.

Sachem, F. T Adams	90.61	Withdrew.	
Nirvana, G G Tyson	76.50	7 30 50	.. .. ..
Priscilla, W. J. Goulding	69.00	7 30 55	.. .. ..

SLOOPS IN RACING TRIM.

Syce, F. M. Hoyt	50.86	5 58 45	5 58 45

CLASS 5—SLOOPS IN CRUISING TRIM.

Eclipse, L. J. Callanan	55.00	7 26 02	.. .. ..
Gaviota, D. E. Austen	55.00	7 21 40	.. .. ..

CLASS 6—SLOOPS IN CRUISING TRIM

Sistae, John Rhodes	45.29	7 19 49	.. .. ..
Volante, S M. Swett	Not Meas.	Withdrew.	
Eidolon, J. Weir, Jr	42.61	7 26 25	.. .. ..
Awa, A. D. Cochrane	46.78	7 02 33	.. .. ..
Eurybia, C. Pryor	39.50	Withdrew.	
Volusia, J. J. Allen	33.50	Withdrew.	

CLASS 7—SLOOPS IN CRUISING TRIM.

Akista, G. Hill	34.75	7 06 05	.. .. ..
Vorant II., G G. Tyson	24.00	7 06 50	.. .. ..
Tiger, A. J. Harrison	35.50	7 59 10	.. .. ..

The winners were Colonia, Syce, Gaviota, Sistae and Vorant II. Colonia and Syce each won a leg for the Postley cups.

The Bridgeport Y. C. gave a reception in the evening, and Fleet Captain Watson, of the Atlantic Y. C., held open house for his fellow-members.

The second day's run, from Black Rock to New London, was made with a good southerly breeze, and proved exciting and interesting. The times were:

CLASS 1—SCHOONERS.

	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	9 18 00	7 18 00

CLASS 2—SCHOONERS—CRUISING TRIM.

Sachem, F. T. Adams	90.61	7 45 30	7 45 30
Nirvana, G. G. Tyson	76.50	8 36 25	8 07 13

CLASS 3—SLOOPS—RACING TRIM.

Syce, F. M. Hoyt	50.86	8 05 05	8 05 05

CLASS 4—SLOOPS—CRUISING TRIM

Eclipse, L. J. Callanan	55.34	8 17 25	8 17 25
Gaviota, D. E. Austen	55.00	7 58 25	7 57 31

CLASS V.—SLOOPS, CRUISING TRIM.

Liris, C. B. Henriques	...	8 44 10	8 44 10
Awa, A. D. Cochrane	46.78	Did not finish.	
Sistae, John Rhodes	45.29	8 27 15	8 17 38
Volante, S. M. Swett	...	Not timed.	
Eidolon, Jas. Weir, Jr	42.61	8 32 05	8 13 33
Volusia, J. J. Allen	33.50	9 21 20	.. .. ..

CLASS VI—SLOOPS RACING TRIM.

Akista, George Hill	34.75	9 35 10	9 35 10
Vorant II., G. G. Tyson	34.00	10 02 05	9 58 00
Rover, James Manning	....	Did not finish.	

The regular prizes went to Colonia, Sachem, Syce, Gaviota, Eidolon and Akista. Colonia and Akista each won a leg for the Postley cups. At a meeting in the evening it was decided to change the programme, remaining another day at New London and sailing a special race, the run to Shelter Island being made informally on Sunday.

The race of Saturday, counting as a squadron run, was over a 28-mile course, to Cornfield Light and return. The race was sailed in a light to moderate wind, the times being:

	Length.	Elapsed.	Corrected.
Syce, F. Hopt	50.86	7 28 18	7 29 18
Awa, A D Cochrane	46.78—602	8 36 19	9 30 17
Akista, Geo. Hill	34.75—2938	.....	.....
POSTLEY PRIZE.			
Syce	50.86	7 29 18	7 29 18
Awa	46.78—1204	8 36 19	8 24 15
Eidolon	42.61—2610	.....	.....
Akista	34.75—5916	.....	.....

The schooner prizes, for the squadron runs and the Postley prize, were already won by Colonia; this race gave the single-stick prizes to Syce.

Minnetonka Y. C.

LAKE MINNETONKA.

Saturday, June 26.

THE race of the Minnetonka Y. C. on June 26 was sailed in a moderate breeze, the times being:

FIRST CLASS—SLOOPS.

Western Yachts.

On July 5 Pewaukee Y. C. held its fourth regatta on Lake Pewaukee, Wis., with the following results:

	Time.
Sirocco, Wallber Bros., A	1 21 39
Idle Hour, R. Giljohan, A	1 22 29
Mistral, A. S. Hathaway, A	1 22 31
Lorraine, Schiller & Bauch, A	1 23 05
Christine, Louis Auer, A	1 42 00
* Lottie, L. D. Markwell, A	.. .. ..
*Gretchen, William Gerlach, A	.. .. ..
Martha, A. H. Steinman, B	1 58 20
Sophia, Meyers, B	2 01 40
*Aida, Zinn, B	.. .. ..

* Did not finish.

FAILURE.

The Racine regatta this week was a failure, little interest being shown, and severe press criticism has followed.

INTER-LAKE REGATTA.

On the first day at Put-in-Bay, the 52-footer Vanenna, of Chicago, had things all her own way. The time:

Start, 8:40:	Finish.	Elapsed.	Corrected.
Vanenna	11 48 15	3 08 15	3 08 15
Surprise	12 02 35	3 22 35	3 14 15
Minx	Did not finish.		

In the 42-footers, Sultana won. Time:

Start, 8:50:	Finish.	Elapsed.	Corrected.
Sultana	12 11 50	2 21 50	3 21 20
Czarina	12 15 50	3 25 50	3 25 50
Alice Enright	12 56 45	4 06 45	4 06 45

In the 37-footers the best sport of the day was brought off. In this event were entered Shamrock, of Cleveland; Puritana, of Toledo; Miriam, of Erie; and Meteor, of Cleveland. Miriam crossed the line first, Puritana was a minute behind, and Shamrock was directly behind her. Meteor got a poor start. Puritana had no more than crossed the line when her topmast went by the board. She gave Shamrock a hard race, however. Miriam was overhauled by both boats. The summary follows:

Start, 9:00:	Finish.	Elapsed.	Corrected.
Shamrock	12 53 75	3 53 25	3 49 20
Puritana	12 55 15	3 55 15	3 55 15
Miriam	1 01 40	4 01 40	3 58 36
Meteor	Did not finish.		

On the third day the wind was light and unsatisfactory. Shamrock and Sultana won again in their respective classes.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Eastern Y. C. Handicap Race.

MARBLEHEAD—MASSACHUSETTS BAY.

Friday, July 2.

THE Eastern Y. C. will sail a series of handicap races this season, the first having taken place on July 2, the times being:

FIRST CLASS—SCHOONERS.

	Handicap.	Elapsed.	Corrected.
Puritan, H. B Dennison	8 00	3 47 24	3 39 24
Marguerite, H. W. Lamb	....	3 39 36	3 39 36
Fortuna, H. S Hovey	....	3 40 25	3 0 25
SECOND CLASS—SCHOONERS.			
Adrienne, H. P Smith	....	3 51 08	3 51 08
Virgilda, N. S. Myrick	7 00	4 14 13	4 07 13
Frolic, H. H. White	19 00	4 27 31	4 18 31
Hope Leslie, L Minot	2 00	4 27 21	4 25 21
Kathleen, E. A. Bangs	22 00	4 38 22	4 16 22
SECOND CLASS—SLOOPS.			
Gloriana, J. M. Lasell	....	3 51 05	3 51 05
THIRD CLASS—SLOOPS.			
Crystal, E T. Bigelow	13 00	3 21 05	3 08 05
Saladin, J. P. & C. E Loud	3 00	3 14 31	3 11 31
Tomboy, W. S. H. Lothrop	6 00	3 17 46	3 11 46
Mildred, Gordon Dexter	....	3 18 07	3 18 07

Puritan wins $100; Adrienne $75; and Crystal $50. No second prizes were awarded.

The America's Cup.

THERE has been no foundation whatever for the rumors afloat this spring of a new challenge from Mr. Rose for the America's Cup; the following dispatch, from London, is quite superfluous, as the time for a challenge has long since passed, for this year, and it is entirely too soon for a challenge for 1898. Mr. Rose's new yacht is much too small to race against Defender, and was not designed for international racing.

Mr. Rose is reported as saying:

"There is nothing I would like better than to challenge for the America's Cup. When I contemplated so doing before it would have been misconstrued, and as one must stand by one's friends, I was obliged to withdraw, which was unfortunate.

"In regard to Aurora, which first appears during Cowes' week, challenging for the America's Cup, I have not given it a thought and it would be altogether premature to say anything on the subject. There is plenty of time. But, up to the present, the idea of challenging has not crossed my mind."

The Lake Y. R. A. Circuit.

A CHANGE has been made in the programme for the Lake Y. R. A. circuit, as Charlotte (Rochester Y. C.) has been omitted. The first race will be at Kingston on July 19; second Cobourg, July 23; third Toronto, July 27; fourth Hamilton, July 29, and fifth Niagara, July 31. Mr. W. Q. Phillips, who has before served to the satisfaction of all in the same capacity, will be in charge of all details of the racing.

YACHTING NEWS NOTES.

VALHALLA, auxiliary steam yacht, seen here at the Valkyrie-Defender races, has been chartered by J. F. Laycock to Count Castellane, husband of Miss Anna Gould.

Hildegarde, steam yacht, designed by A. S. Chesebrough for G. W. Weld, was launched on July 8 at the Harlan & Hollingsworth yards, Wilmington. Work on the yacht has been pushed very rapidly since she was first begun, and she will be ready for the New York Y. C. cruise.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 20-23.—CLEAR LAKE, Ia.—First annual Indian Wolf shoot. Three days targets; one day live birds. $500 added. For programmes and particulars write to C. M. Grimm, Clear Lake, Ia.

July 21-22.—CRAWFORDSVILLE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Crawfordsville Gun Club. Chas. E Lacey, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

July (last week).—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Company.

July 27-28.—BAY CITY, Mich.—Tournament of the Michigan Trap-Shooters' League. W. H Brady, Sec'y, Detroit, Mich.

July 28-29.—DULUTH, Minn.—Annual tournament of the Central Gun Club G C Maxfield, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O Bush, Manager.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Mr. Carl von Lengerke, captain of the Endeavor Gun Club, of Jersey City, N J., writes us as follows: "On Labor Day, Monday, Sept. 6, there will be an all-day shoot at Marion, N. J. Two sets of expert traps with bluerock targets will be kept busy from 10 A. M until dark. Sweepstake events will be shot on one set of traps, while the other set will be occupied with the following special event, open to the world: '147 Handicap'; 100 bluerocks per man, one man up, expert rules; entrance fee, the price of the targets, with optional sweeps to suit the shooters The prize will be the 'Austin 147 Cup' of sterling silver. This cup will be given to the winner of the race, subject to challenge every thirty (30) days at 100 targets, expert rules, *no handicap*, $25 a side. The cup to become the property of the man who holds it for one year against all competitors A S. A rules to govern, one man up, unknown traps, known angles." For several years past it has been the custom of the Endeavor Gun Club to hold an open to all shoot on Labor Day, and these gatherings have come to be very popular, each annual shoot being well attended by members of neighboring clubs. The Endeavor Gun Club merits all the support that may be given it by outside clubs, for its members always attend the shoots of other clubs in goodly numbers. If any further information regarding this shoot is desired, the same can be obtained by writing to Carl von Lengerke, 8 Murray street, New York city.

A meeting of the New Jersey State Sportsmen's Association was held in Jersey City, July 13, at 2 o'clock. Capt. A W Money presided, Colin S Wise, secretary. There were present: South Side Gun Club (Isaac H. Terrill), Bergen County (Capt. Money), Freehold (J. W. Danser, James Laird) Climax (T. Keller and W. F. Quimby), Newark (W. H. Green and J. Pentz), Maplewood (W. N. Drake), Passaic (M J. Coman and C S. Wise), Jersey City Heights (J. von Lengerke), Essex (A. Whitehead, Carrington and Thomas). The constitution, by-laws and rules were adopted as reported by the committee. Mr. Pentz, committee to investigate finances, reported a balance of $40.45 in hands of Mr. Conover, ex-treasurer. The Association decided to incorporate. Officers were elected as follows: President, Captain A. W. Money; First, Second and Third Vice-Presidents, W. S Gummere, Colonel A. R. Kuser, E. Bird Grubb; Secretary, W. H. Huck; Treasurer, Isaac H. Terrill. Directors: Messrs. Keller, Greene, Terrill, Jeanneret, Pentz. Executive Committee: Messrs. Greene, Huck, Terrill, E. Banks, J. von Lengerke. Legislative Committee: Messrs Wise, Pentz, E Jeanneret, Herrington and Ricardo. The Association will hold a tournament Sept. 28 to Oct. 1, two days for targets, two for pigeons.

We have previously made a note regarding the merchandise live-bird shoot to be held at Dexter Park, L. I., on July 29, under the auspices of the Emerald Gun Club. Additional information on this point is contained in the following letter from Dr. G. V. Hudson: "In regard to the merchandise prize shoot of the Emerald Gun Club, July 29, will you be kind enough to place same in your list of fixtures. We have at the present time thirty-eight prizes, which will be divided into three classes. The shoot will commence at 10 A. M., but will be kept open until 1 P. M. The conditions are 7 live birds per man, $4 entrance, birds included, 28yds. rise for 12-gauge guns, and 30yds. rise for 10-gauge guns, open to all Our expectations are that this will be the largest live-bird shoot for merchandise prizes that ever took place around New York. I have had quite a number of letters from different parties, making inquiries in regard to this shoot, and you might add that any one addressing me at 9 Madison street, New York city, can obtain any information that may be desired. In all points, outside of rise and boundary (about 50yds), Emerald Gun Club rules will govern."

The programme for the Interstate tournament at Lewiston, Me., Aug. 4-5, is now ready for distribution, and advance copies of the same have been received at this office. This tournament will be held under the auspices of the Androscoggin Gun Club, of Lewiston. The schedule of events for each day is a simple one to remember; ten events of 15 targets each, entrance $1.50 in each event, making a total entrance for the day of $15 All events will be at known traps and angles, something rather unusual at this date. The purses will be divided into four moneys under the Rose system, with ratio points of 4, 3, 2 to 1. Guns and ammunition sent in care of H. E. Doten, 85 Lisbon street, will be delivered at the grounds free of charge. The Elm House, Auburn, "being pleasantly situated near the Lewiston Falls, and supplied with all modern conveniences," will be the headquarters for shooters during the tournament. Electric cars to the shooting grounds leave every half-hour. Shooting commences at 9 A. M. each day.

Circular letters, full of challenges, are floating around just now quite promiscuously. These challenges happily differ from the majority of such articles received at this office, in that there is money up in each case. Still there is one feature that is almost tiresome from the frequency with which it recurs: One person makes one challenge, names his conditions and puts up a forfeit. Another apparently takes up the challenge, but names different conditions, and also puts up money. When both parties who are talking shoot really want a match, it doesn't take long to arrange the preliminaries. Witness that match between Frank Parmelee and Jim Elliott a few months ago; also the match between Elliott and Fulford last winter, and the Elliott-Gay match that followed close on the heels of the last-named match.

The regular monthly handicap shoot for the Bergen County E C. cup will be held at Hackensack, N. J., Saturday, July 24 on the grounds of the Bergen County Gun Club. The contest for the cup will commence at 2 P M. Traps will be ready for practice at 1 P M. Mr. E A. Jackson secretary of the club, writes regarding this handicap: "This shoot, as is generally known, is open to all amateur shots who are 'members or friends of the Bergen County Gun Club' The conditions are 50 targets per man, 25 known angles and 25 unknown angles. Entrance, price of the targets at 2 cents each. Sweepstakes and practice shooting both before and after the main event."

Edgar Murphy has been doing some good work at the Elkwood Park and Hollywood traps lately. On July 3, at Elkwood, he killed 58 pigeons straight. At Hollywood, on July 5, he won the Ouverture prize with 15 straight, and then tied on 13 out of 15 for the Independence handicap. On the shoot-off of the tie in this handicap, Phil Daly, Jr., won by killing three straight. From what we can learn, the birds at Hollywood, which were helped by quite a strong wind, were an excellent lot of summer birds.

Jack Parker, who represents the King Powder Co. and the Peters Cartridge Co., writes us as follows regarding the records made by the goods of the above firms at the recent tournament of the Michigan Trap-Shooters' League: "At the shoot of the Michigan Trap-Shooters' League, held here (Detroit) June 29-30, Graham and Parker won first and second average for the two days. Graham, Marks and Brady won the 3 men team race, and the same three won the expert, semi-expert and amateur State medals. J Klein won the King's Smokeless Powder Co.'s trophy. All the above used King's Smokeless and Peters's cartridges."

At the Arkansas State shoot, to be held at Pine Bluff, Ark., July 20-22, the Arkansas State Sportsmen's Association will add $500 to the purses. Programmes of this tournament are ready for distribution, and parties desiring copies of the same should write at once to Paul R. Litzke, Secretary of the Association, Little Rock, Ark., or to Ed. Howell, secretary gun club, Pine Bluff, Ark.

Mr. J. L. Head, president of the Indiana Trap Shooters' League, writes us that Mr. L. H. Cumberland, of the Kokomo Gun Club, has been appointed secretary-treasurer of the League. All communications relating to League matters claiming dates for tournaments, etc., should be addressed to Mr. Cumberland at Kokomo, Ind.

The third team race of the series between the Endeavor Gun Club, of Jersey City, and the Bergen County Gun Club, of Hackensack, N. J., will take place on Saturday next, July 17, on the grounds of the Endeavor Gun Club. The team race will be started as soon after 2 P. M. as practicable.

There will be great times at Clear Lake, Ia., July 20-23, the dates for the Indian Wolf shoot. All particulars are arranged, and we can safely say that anyone who goes to Clear Lake for a shooting match, will find that he has gone to the right place for such an article. Given fine weather, the shoot will be a success.

Ferd Van Dyke has recovered his form at the traps and is now pounding out straights and 24s out of 25s with monotonous regularity. At the Boiling Springs Gun Club's shoot on Wednesday, July 7, he scored 101 out of 105 at unknown angles, and got more than "his bait" back in the events shot under expert rules.

On July 24 the Uxbridge (Mass.) Gun Club will hold an all-day tournament at targets on its grounds. For further information regarding the shoot write to G. F. Day, Secretary.

JULY 13. EDWARD BANKS.

The Trade in Champions.

VIEWS OF AN OUTSIDER.

CINCINNATI, O., June 30.—*Editor Forest and Stream:* A champion, in most sports, is one man who has shown decided superiority over his class; that is, one who has defeated the best men in his profession. He is the best of the experts, by practical demonstration. The *best* is superlative. There can be but one true best; therefore, there can be but one true champion.

But, in trap shooting now, the test of superiority no more rests on a foundation of manly contest—man against man, or against all other men—with the manly issue alone as to which is the best.

The ambition to excel, the glory of victory, the just pride in personal excellence, have been seized upon by commercial interests as a medium of advertising—a bill-board, as it were, on which to paste a notice of their merchandise.

The seizure of trap-shooting contests by different commercial interests, for the purpose of gaining good advertising, has increased from year to year, and most so within the past few years. Various small attempts—years ago—had been made to associate contests with commercial interests, but the true commercial wave was not inaugurated till about ten years ago, when a Western sporting journal gave a cup for trap-shooting competition, and this cup bore the journal's name. That constituted the advertisement. This was the real purpose of the cup, as likewise advertising is the purpose of all other trophies given by commercial houses for advertising purposes. These trophies are invariably dressed with earnest conditions purporting to determine a true championship contest, and yet each is so cunningly devised as to these conditions that it serves as a constant advertisement of the business of the donors. At the bottom, there is no intention whatever to determine a champion. The deed of gift governing the trophies always fits the business interests of the donors, however badly it may fit with the purposes of a championship. The trade cup is so blended then with tournament money, and therefore with the business interests of shooters, that to oppose or expose the fictions of the champion cups would involve contingent business interests which have been cunningly attached to the cups, so that immediately one who opposed would be confronted with powerful business interests in opposition, and also confronted with the disapproval of those who are satisfied to have two championships, or two thousand, when they are associated with a means of revenue.

There is presented only a gauzy pretense of concealing the purpose of the trade cups. The donors know it is all a sham, and there is not a man who shoots for the sham but appreciates it for what it is; yet if the sham be properly sugar-coated, there are but few who will not swallow it.

TO DRIVE THE ADVERTISING WEDGE.

All the trade cups are for the single purpose of driving the advertising wedge, and drive it again and again. A trade cup gives an advantage over some competitors. While seeming to do but one thing, a big hearted thing in the way of promoting sport, the real purpose is to promote trade.

The venture of the Western journal seemed to be a good thing as an advertising dodge, and would have done no particular harm had it had no imitators. But other trophies, each with its own peculiar advertising tail tacked to it, and each given under the same hypocritical plea of a desire to find out who was the champion, sprung up, till at the present time, by the multiplicity of these trophies, the trap shooting world has degenerated from a contest among men to a squabble about trophies. Each donor wrangles about his own particular trophy, as if the championship was inseparably wrapped in it, gabbling about championships while each one's heart is set on making the world dance to his business interests. Trade methods have greatly aided in furthering the interest of trade championships. Let me say that trade enterprise is all right when it is honest, but it is not all right when it deceives.

If there is anything which militates against a trade trophy, it is to have some manly shooter come forth and denounce all conditions except those which apply fairly to man and man in a manly contest. Instead of being a contest then to advertise someone's merchandise, it is a *bona fide* contest, and as such, it being free from trade control, it has no special interest to manufacturers or merchants. If it is not a contest for the championship of which the Hungry Arms Co. or the Everything In-Sight Powder Co. is the only true, good and pure emblem, it is tame sport. In fact, it is irregular, if we are to believe some of the trade interpretations.

A MANLY CHALLENGE FROM ELLIOTT.

Mr. J. A. R. Elliott has recently come forth with a manly challenge to shoot matches with the whole aggregation of motley, much-branded commercial trophy holders, to determine which is the real champion. He puts up a forfeit as material evidence of his sincerity. Few of them do that. He proposes five matches. He proposes a change of ground at each match. He gives his opponent an equal chance with himself in selecting the ground, as he does in all matters. He clearly desires to shoot. That is unprofessional from a trade standpoint, since if there is anything the average trade champion detests, that thing is a contest. Do the trade champions approve of a contest to determine a real champion, one not a champion with a firm's name painted on his back? Not a bit of it. They have no sympathy whatever with the twaddle of self-styled champions." No, they haven't. There is no advertising in it for the firms which back the trade trophies. Why should they support such a manly challenge? Why shouldn't they attempt to discredit it and make it objectionable? Yes; why not? It interferes with their trade property trophies.

The trade trophies are held up with the trade jargon of "good faith," "honesty of purpose," and "to bring together the gentlemanly wing shots of the world in an honorable contest, the result of which must necessarily be creditable to the winner," and also—what is studiously concealed—a profitable advertisement to the manufacturers.

All honor to Mr. Elliott for the manliness displayed in cutting away from the debased championships, the spurious trophies of trade, the fictions which have been forced into a noble sport. All honor to him for a challenge which brings contestants together man to man, and which will determine the best man apart from trade interests.

It is natural that a part of the trade should rally to preserve their advertising cups, for if there should at last be a true champion, some dozen or so of cups and badges would have no significance. It is, therefore, natural that there should be an effort to preserve the fiction of champion as long as it will serve a dozen dealers and manufacturers to bear their advertisements.

In conclusion, I will be much pleased to discuss this matter further with any trade champion or his backers, if he or they desire to do so, if you, Mr. Editor, will give us the space. BOTH EYES.

TWO CIRCULAR LETTERS.

In addition to the above communication we have also received two circular letters, both of which are more or less connected with the championship question. One letter is from J. A. R. Elliott, and is dated Kansas City, Mo., July 2; the other is from E. S. Rice, and is dated from Chicago, July 3.

Mr. Elliott's letter is a poor sequel to the one we published in our issue of June 19, in which he issues a broadcast challenge to anybody and everybody. There is nothing definite in the letter, save that he does not agree with Mr Rice as to the status of the Kansas City *Star* cup and of the Du Pont trophy. In regard to the latter trophy Mr. Elliott says:

"Let Mr. Rice give the holder of his trophy $100, the price of the side stake, which should go with it, and have the trophy represent championship honors only, and I may conclude to give it prestige by a challenge in the near future."

A CHALLENGE TO ELLIOTT.

The pith of Mr. Rice's letter is contained in the following paragraph:

"I offer, authorized by Mr. Charles M. Grimm, to Mr. Elliott, three matches, all to be shot during the month of October; one in Chicago, one in St Louis, and one at Omaha; 100 birds to the man, $100 per side, with $200 as a side bet, to go to the man who scores the greatest number of birds in the three races; American Shooting Association rules to govern, and $100 now deposited by me in the hands of the *American Field*, of Chicago, to be covered; party failing to shoot forfeiting the deposit. In this connection I would state that Mr. Charles M. Grimm is not an employe of my office, or an employe of my company."

ELLIOTT'S ORIGINAL CHALLENGE

The challenge issued by Elliott, which was published in our number of June 19, was couched in the following terms:

"LITTLE ROCK, Ark., June 10.—I have to-day posted a forfeit with the First National Bank of Kansas City, Mo., of $100, and herewith annex certificate of Mr. E F Swinney, cashier, showing receipt of the same. I challenge any shooter in the world for a series of three or five matches for the Championship of all Champions, $500 a side, to be decided or divided in three or five matches, as follows: If three matches, 100 pigeons each match, 100 birds to each man, $100 a side on each individual race, with $100 side bet on the highest aggregate number killed in the three races. If five races, each race to be for $100 a side, under either of the above conditions, the winner to take the entire gate receipts, if any are collected, and the loser to pay for the pigeons shot at by both men and all necessary ground expenses which may be incurred. In no instance are there to be two matches shot on the same ground or in the same city; Hurlingham and American Association rules, 30yds. rise, to govern the contest.

"I will toss up for the first choice of shooting grounds, which are to be chosen by each man alternately. The first series of matches to commence Sept. 1 to 10, with the man who first accepts this challenge by posting a forfeit, and following in rapid succession with the next in turn, who likewise complies with the conditions.

"I will accept and put up an additional forfeit of $100 with as many men as desire to compete with me.

"My forfeit will remain deposited for your consideration thirty days from the date hereof."

HOW MATTERS STAND.

From a perusal of the above letter, and of the extract from Mr. Rice's letter of July 3, it will be seen that matters stand thus:

Mr. Elliott makes one proposal and posts $100 forfeit on June 10, the challenge remaining open for thirty days from that date, that is, until July 10. Mr. Rice makes an entirely different proposition as regards dates and places for holding the series of three matches, and also deposits $100 forfeit to make good his proposition.

Heikes Accepts Gilbert's Challenge.

DAYTON O., July 9.—*Editor Forest and Stream:* Will you please give notice through your valuable paper of my acceptance to Mr. Gilbert's challenge for American E. C championship cup. The contest will take place at Fairview Park, Dayton, O., July 31, 3 P. M.

ROLLA O. HEIKES.

P. S.—Rike and I will give an all-day shoot commencing at 8:30 A. M same day. Eight 20-bird races, $2.50 entrance, five moneys. All invited.

Elliott Challenges Them All.

KANSAS CITY, Mo., July 8.—*Editor Forest and Stream:* The forfeit limit of thirty days' time given the aspirants for championship honors has about expired, and I have concluded to extend the time of my deposit and challenge to the world for the championship of all champions another thirty days, as there may be a few eligible aspirants which the thirty days' notice has not reached, owing to their being out of town, perhaps spending their summer vacation, or possibly in Europe practicing on A No. 1 first class pigeons, etc. I am growing quite weary waiting for the world-beaters to put up their cash, and it seems all the old fossils who were anxious to have a chance at me because some one told them a man was handicapped using a repeating shotgun, have disappeared. Gone off to the hard-times meeting to grasp a few consoling thoughts from the representatives of double-barreled gun builders, who have come to the conclusion that the expert professionals are killing the shooting business. I don't wonder they complain, as the wideawake expert or professional of the present date shows new and advanced art in gunmaking to which they must finally succumb.

I started out with the intention of paying my personal attention to a few of the numerous American champions, but was surprised by my son Fred, who just called my attention to an ar icle in a sporting journal, in which Mr Willard, of Colt's Fire Arms Company, and Mr. McMurchy of Hunter's Arms Company, have asserted that professional shooters are killing the business. I can scarcely credit this statement. And before embracing it as the unvarnished truth, I should like to have these gentlemen, and kickers in general answer through the columns of the various papers, a few plain questions bordering on the professional. Commencing with my earliest recollections, when Capt. A. H. Bogardus, Gwynne Price and many other experts were in their prime, Capt. Bogardus stood the recognized champion of the world. He was shooting and advancing the interests of W. C. Scott & Son's guns, the importation of which, at that date, amounted to an enormous number. Then come a period of our own American inventors, Messrs. Parker Brothers, Lefever Arms Company and others; and well do I remember the advancement into popularity of Parker Brothers' breech-loader, represented and shot by that well-known old expert, S. A. Tucker, and I have noted personally the sale of hundreds and hundreds of guns, disposed of through the skillful shooting which they witnessed Mr. Tucker do with that particular make of guns. Following the above manufacturers came the L. C. Smith gun, with new and improved ideas in gun making, etc. Who is there to day to dispute the fact that the early efforts of Mr. C. W. Budd and the same Harvey McMurchy, who are well-known experts and professionals, did in a great measure advance and develop the popularity of that gun, which, like the popularity of Mr. S. A. Tucker, greatly assisted in making their employers independently rich in a few years. Remember, gentlemen, there are other new inventions now on the market, in the form of a repeating shotgun, which have equal claims to merit, and the popular favor with which it is now being greeted bids fair to excel all other prehistoric inventions. I have the honor of being one of the professionals employed in the interests of this gun, to demonstrate the superior and skillful shooting which it is possible to do with it, and as a professional, I do not propose to remain quiet while being publicly misrepresented in conjunction with the various manufacturers who employ skill to advance their business interests.

The first question I desire answered is: do not a few gun, ammunition and other interested manufacturers in the United States donate and give to gun clubs, associations and members of such other organizations, directly and indirectly, one hundred times the amount won by the entire corps of professional shooters which they employ? Second, with this statement of facts before you, for pity's sake, who has the professional robbed? Third, did not the professional manufacturer, as Mr. Willard suggests, subscribe liberally to the erection of a handsome gun club house and ground in California? And has not dissatisfaction arose in the general management, by different clubs, which has caused club after club to vacate and build independent ones within gunshot? Does it not stand to day a silent witness of the manufacturers experiment, to Mr Willard's certain knowledge? Fourth, Mr. Harvey McMurchy at the present time is about the only expert professional representative who visits the Pacific slope and attends their convention. Is he, then, alone responsible for the depressed condition of shooting events in that section? Fifth, there is in the world to day a large number of private clubs (of which I could name a number that your readers are familiar with) which are composed of Simon-pure amateurs, where a professional cannot even gain admission except as a special invited guest (a privilege seldom accorded them). These clubs to-day, although having a large membership, can scarcely raise a quorum, while a few months since they were well attended and in prosperous condition. The professional has had no opportunity to destroy their interests by winning their purses, neither have they been a source of expense to the manufacturer, as they are usually composed of gentlemen who are amply able to provide their own comforts. Sixth and last—Is shooting dead? when the annual business of the target, powder and shell manufacturers shows an immense increase from year to year, to 1897.

While the calamity howlers, for the general public's instruction, are propounding answers to the above few matter-of-fact questions, I will pay my respects to a number of the shooting princes of America, by first sending a forfeit of $25 to the Sporting Review Publishing Company, Chicago, Ill., and I challenge Mr. C. W. Budd, of Des Moines, Ia., for the Du Pont trophy, under the rules governing the same.

Secondly, I inclose to Mr. E. Hough, of Chicago, Ill., Western representative of FOREST AND STREAM, a forfeit of $50, and challenge Mr. C. M. Grimm, of Clear Lake, Ia., to a match for $100 a side including the cast iron medal, according to the rules governing that. Having noted in a recent issue of the journals that Mr. Peter Murphy, of Philadelphia, Pa., was anxious to meet any man west of Germantown in a one-barrel gun below the elbow, for a hundred or two, I have to-day forwarded a deposit of $25 to *Sporting Life*, of Philadelphia, Pa., and challenge Mr. Murphy to a series of three matches, for $50 a match, 50 birds each man, with $50 a side on the highest aggregate killed in the three matches; under the following conditions: 26yds. rise, five ground traps, 50yds. boundary, gun to be held clear below the elbow until the bird is on the wing; otherwise American Association rules to govern. The three matches to take place the first week of September, 1897. Last, but not least, I have to day deposited with the Kansas City *Star* $50, and challenge Mr Sim Glover, of Rochester, N. Y., for the Kansas City *Star* cup, emblematic of the champion live-bird wing shot of America according to the rules governing that trophy. Provided the payments of these forfeits are not admissible unless dates are so named that it is possible for me to appear against the various parties in support of my challenge. J. A. R. ELLIOTT.

Haverhill Gun Club.

HAVERHILL, Mass., July 3.—The past week has been a busy one for a few members of the Haverhill Gun Club, for we have been obliged to change our grounds all over, owing to the locating of a new bicycle track near us, and in such a position as to make shooting at right-quarterers a dangerous amusement. The invitation had been sent out for our shoot on July 5, and some one had to hustle to get things in readiness for that date. Everything is now completed, and we find the change to be quite a decided improvement over the old grounds, and, barring bad weather, we should have quite a lively shoot on Monday.

Below are some scores made by half a dozen or more of our club members at the regular weekly practice shoot held this afternoon: Nos. 1, 2 and 6 were at known traps and angles; Nos. 3 and 4 at unknown angles; No. 5 at reversed order, and No. 7 at 5 pairs:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	10	10	10	10	15	10	Targets:	10	10	10	10	10	15	10

George	7	9	7	8	9	..	..	Ingham	..	..	..	..	..	10	..

July 5.—The Haverhill Gun Club held its first annual tournament on the club grounds at Hoy's Grove, in this city. The day was one of the hottest known for years, but the shooters turned out in full force. A large delegation from the Portsmouth Gun Club, accompanied by several ladies, were present, together with representatives from the Exeter Sportsmen's Club, the Boston Gun Club, and the Hingham Club.

One lady shooter took part in several of the events, and the workmanlike manner in which she smashed up the targets excited universal admiration from the numerous spectators. Only a little more than one-half the programme was shot, for owing to the almost unbearable heat it was impossible to hurry the events along.

Below are the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	10	15	15	10	10	10	10	10	10	10	10

Events 1, 2, 6, 10, 11 and 13 were at known traps and angles; Nos 3, 4, 7, 8, 9, 12 and 14 were at known traps, unknown angles, and No. 5 was at regular angles, with traps pulled in reversed order.

Between events 7 and 8 a two men team race was shot between teams from the Portsmouth Gun Club, the Exeter Sportsman's Club, the Boston Gun Club and the Haverhill Gun Club. The race was at 15 targets per man, unknown angles, and resulted in a victory for the Portsmouth Gun Club. Below are the scores:

GEO. F. STEVENS, Sec'y-Treas.

Capital City Gun Club.

LINCOLN, Neb., July 5.—The holiday tournament of the Capital City Gun Club, advertised for to-day, was a success in every respect. Among the out-of-town boys present were Dewer and White, both well-known shots from Hastings; E. E. Hairgrove, of Sutton; F. Miller, of Berwyn; M. Cable, of Murray; McGill, Hungate and Adams, from Weeping Water; C. C. Holzworth, of Juniata; Alexander Johnson and Lamson, from Milford.

Ray Welch, of this city, with a handicap of 6, succeeded in carrying off the championship cup which was put up. In this event he was obliged to shoot off four times in order to win; there being six tied for the cup, all but Mr. Welch gradually dropping out in the three succeeding shoot offs.

The scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	15	20	10	15	25	10	15	25	15	10

A sweep at 7 live birds was decided as follows: Rogers and Duer 7, Ray 6, Holzworth 5, Clyde 4, Moore and Miller 3.

Another event on the programme was a 25 target race, handicap allowances. The results were: Rogers (0) 24, Duer (0) 23, Miller (0) 23, Ray (3) 22, Cable (4) 22, Holzworth (4) 22, Johnson (5) 22, Moore (6) 20, Adams (5) 19, Welch (6) 19, Harley (4) 18, Clyde (6) 18, Randall (6) 12.

The shoot-off of the tie was taken part in by all those who, with their handicaps, made 25 or better. SECRETARY.

Western Traps.

IN ILLINOIS.

CHICAGO, Ill., July 3.—Peoria Gun Club shot for the new club medal for the first time last week, and J. M. Brown won the medal. Under the conditions the holder is subject to challenge, and when challenged must shoot within fifteen days. The scores of the first contest were as follows:

Class A, at 30 unknown angles at 20 expert rule from three traps: George W. Pool 37, C J. Fannius 41, W. Bordeau 40, E. Giles 45, J. M. Brown 46, G. F. Simmons 43, F. K. Whiting 42, A. E. Leisy 30, C. G. Pfeiffer 40, G. N. Portman 41, F. D. Waugh 35, D. F. Thorne 40.

Class C, at 30 unknown angles and 20 straightaway: A. E. Giles 31, W. E. Weber 39, W. F. Meidroth 28. M. E. Wilson 34.

At J. J. Smith's shooting park, West Emerson street, Evanston, to-day, live-bird and target sweeps are in progress. At Eureka grounds, Vincennes avenue, to-day, the new magautrap is in process of trying out, and the *Shooting and Fishing* trophy will be shot for. On July 5 several clubs will open their grounds for sweeps.

IN WISCONSIN.

At Oconomowoc Lake, June 26, Dr. Carver and Dr. Williamson shot a race at 25 live birds, each killing 25 straight. At Eau Claire there will this week be a team race between Eau Claire and Neillsville at 12 live birds and 50 bluerocks. The teams will be: Eau Claire: Cousins, Churchill, James Smith, John S. Owen, R. R. Chase, James Joyce; Neillsville: Graves, Huntzicker, Enkhauser, Eilert, Pratt and one other.

A 2-men team race was shot June 26 at Eau Claire, between Messrs. Fish and Winslow on one team and Messrs. James Smith and C. W. Churchill on the other, at 20 birds. The score was: Fish 14, Winslow 15; Smith 16, Churchill 19.

IN MINNESOTA.

Minneapolis has five lady shots who are perhaps the best five to be boasted by any one city of the West. These are Mrs. Shattuck, Mrs. S S. Johnson, Mrs. Chamberlain, Mrs. Tarbell and Miss Bader. At the last club shoot of the Minneapolis Gun Club Mrs. Shattuck scored 92½ per cent. of her targets and won the Schlitz badge with ease from twenty-five members. Mrs. Chamberlain broke over 60 per cent. of her birds. Miss Bader broke 8 out of her first 12 birds at the practice traps. Minneapolis Gun Club holds two shoots each week, on Thursday and Saturday, just one more weekly than most clubs can keep up.

Aitkin Gun Club, of Minnesota, is in good condition, and sent a large contingent to Brainerd tournament last week. The officers of Aitkin Club for the ensuing year are: Bresident, J. L. Spalding; Treasurer, H Haugen; Secretary, J. A. Danewick. Following are the scores of the last club shoot for the Gwathmey medal:

Frank Ebner	01110111111011111111111101—21
J F Knowles	11011111111101001111011—20

Jas N Marr	00101101100101111100111110—15
Albert Zeese	10001011011101011101111100—15
George A Rice	00100000001011010111111111—13
Max Steinhauer	00001101100010100000000111—10

IN MICHIGAN.

The Celery City Gun Club, of Kalamazoo, met Thursday evening this week at H. Waruf's store to take up plans for promoting interest in the regular club shoots. The club is in good condition, but wants a larger membership.

Coldwater Gun Club has moved its shooting traps to the fair grounds. About a dozen members were at the last club shoot, June 29. In the handicap at 25 singles and 5 pairs Wilcox and Larrabee tied and shot off at 10 singles, Larrabee winning.

At the last club shoot of Grand Rapids Club at Grand Rapids, Mich., June 24 the following scores were made at 25 targets, unknown angles:

W. G. Scott 17, J. R. Chapman 16, W. D. Harvie 12, A. J. Hasbrouck 11, I. E. Philleo 10, D B. Philleo 10, S. F. Durga 9, A. Crawford 9, Glenn Williams 8, C Scott 7, C. Olson 4, John Arpin 2, C. G. Morrison 2.

Centralia Club made the following scores:

Gus Yonki 20, W. H. Carey 18, W. W. Meade 17, Will Nash 16, Theron Lyons 14, Hugh Boles 14, L. M. Nash 12, Clark Lyons 12, Ernest Oberbeck 7, G. W. Mason 6, L. Oberbeck 5, Albert Ray 5, C. F. Kellogg 4, Arthur Love 4.

IN MISSOURI.

The Du Pont live bird medal of St. Louis was won at the latter city June 28, by Edward W. Prendergast. Following is part of the record of Mr. Prendergast in earlier years: He won the championship shoot of Missouri in 1893, in a field of fifty seven of the best shots. He also defeated Jim Hagerty in a 100-bird match for $500, killing 88 against Hagerty's 81. After that he defeated John Cabanne in a 100-bird race for $200, with a score of 93. Last October he was third with a score of 83 out of 100, in a match of 100 birds, $50 entrance, with Conrades, Griesedieck, Kling, Starkloff and John Cabanne In the shoot for the Du Pont medal, June 26, the scores were as follows: Ed. Prendergast 24 J. Selzer 24, Peter Kling 23, Dr. Cummings 23, John Cabanne 22, Dr. J. W. Smith 22, Blakely Collins 22, J. H. Conrades 21, Dr. Brown 21, C F. Kroel 21, A. E Stoll 21, C. F. Clark 18, W. B. Noid 18, H. C. Lingenbrink 17, and E. A. Mallinckrodt 17.

Prendergast and Selzer shot five tie birds Selzer lost his fifth.

Prendergast was challenged by Dr. J. W. Smith, J. H. Conrades and Dr. Brown He accepted the challenge of Dr. Smith and named Du Pont Park as the place of holding the shoot and 100 birds as the number to be shot.

IN OHIO.

Members of Findlay Gun Club held a club shoot Thursday of last week, H. N. Askam winning in Class A, John Ritter in Class B.

IN IOWA.

Marshalltown Gun Club met last Thursday, June 25, in its first bimonthly club contest, Geo. L. Marsh winning first prize and J. C Dunn second. The season will close Dec. 1, shoots to be held meantime each two weeks. Valuable merchandise prizes will be given for high averages at the close of the season. Following were the scores at the initial shoot: Densel 39, Dunn 42, Wasson 40, Rogers 34, Abbott 42, Swift 27, Devine 31, Marsh 43, Seely 34, Nason 39, Little 40.

IN DAKOTA.

On June 28 the Sioux Falls (S. D.) Gun Club met in weekly contest, shooting till 4 P. M., when the shooting was stopped by rain. Following were among the scores, at 20 targets: Burgess 12, Sidwell 11, Rounds 14, Hills 4, De Good 13, Dr. Brown 15, Miles 14, Howell 12, Hackman 4, F. Hyde 21, Hutchinson 18, De Good 13.

IN NEBRASKA.

In Fremont Gun Club, at the last club shoot, June 29, Richards and Lucraft tied on 22, Nicodemus, Stoner and Hinman on 21. The club is prosperous.

At Hastings, on July 5, the Hastings Gun Club will give a good tournament, eight events being scheduled, four moneys each sweep, rapid fire, known traps and unknown angles. W. S. McKinney is president of Hastings Gun Club, and Jay Lawson secretary.

IN INDIANA.

Harry Norton, traveling agent of the Winchester Repeating Arms Co., was at Greensburg, Ind., June 29, and the Greensburg Gun Club gave a little special shoot in his honor. Following were scores made, 50 targets, known traps, unknown angles:

Harry Norton 28, A. M. Willoughby 23, C. D. Tillson 40, D. A. Myers 36, Will Winchester 33, J. H. Parker 38, Ralph Buckley 35, J. T. Alexander 24, S. P. Minear 31, Web Woodfill 32, Chas. Zoller, Jr., 28, Thos. E. Davidson 19.

IN BRITISH COLUMBIA.

In the tournament at Victoria, last week, E. A. Kimball, R. L. Pierce and Mr. White, representing Tacoma in the team shoot, took first prize, with a score of 47; Vancouver second, with 46; Victoria third, 45. Kimball, White and Pierce are members of the Tacoma Rod and Gun Club; Kimball and Pierce being in the team which carried off nearly every prize at Anaconda, Mont.

THE FOURTH AT THE TRAPS

CHICAGO, Ill , July 8.—The glorious Fourth was celebrated with fire and smoke by others than the small boy. Many clubs had special events, these falling on the 3d, 4th or 5th, according to the taste or fancy of the different clubs. Cicero Club, of Chicago, had a big shoot, with five different live-bird events and a good crowd. The Douglas Gun Club took away from the Eureka Club the *Shooting and Fishing* trophy it has held since 1891, the scores being 170 to 165. Garfield Club challenges for the trophy; and, moreover, will challenge any ten men in the State to a team race. Calumet Heights Club, of course, held high revelry. Garden City Club tested its appointments for the next Cook County League shoot, July 17 Out at Ottumwa, Ia , a 1-day shoot was held, which Eddie Steck, of Eureka Club, who attended, says was a warm one in more ways than one. He shot into third average. At Louisville, Ky., Ralph Trimble took away from Mr. Gay, the former holder, the State championship trophy. The San Antonio Gun Club, of Texas, had a big shoot. At Lincoln, Neb., C. E. Latshaw won everything in sight at the well-attended tournament of the Lincoln Gun Club. The Omaha Gun Club, of Nebraska, had a big shoot and a big crowd to see Frank Parmelee win the setter pup which was offered as first prize in the live-bird handicap. The East Side Gun Club, of Saginaw, Mich., had a big shoot at Stolz Grove, where everything went merrier than four assorted marriage bells. At Superior, Wis., there was a rally of the gun club which must have terrified any foreign foe who might have contemplated invading American independence at that part of the border. Besides these events, there were dozens and dozens of club shoots all over the West. The weather was hot—not warm, but hot—yet the lovers of the traps do not report any inconvenience. It is all in the enthusiasm. Thus one young man of this city, who runs to bicycycling rather than to trap-shooting, undertook to ride a century last Sunday when the thermometer here was about 100°. He said he had to stop at eighty-seven miles because he got kind of warm. There is no record of any trap-shooter having stopped at all. Following are some of the scores in events shot at the different points above mentioned:

AT LOUISVILLE.—Among the cities which had representatives present were Cincinnati, Lexington, Indianapolis, Frankfort, Aurora, Ind., Henderson, Owensboro, Bowling Green, Hardinsburg, Russellville and a number of other cities.

AT OMAHA.—The chief event of the day was the live-bird handicap, 15 birds, entrance, price of the birds. The handicap committee made the following allotments: Brucker 30, Kyote 31, Smead 31, Fogg 29, Dennis 29, Tremens 29, Parmelee 33, Squirrel 30, Searles 27, Dickey 29, Johannes 29. The prize was a Llewellin setter offered by W. D. Harding, of Council Bluffs, and was won by Frank Parmelee, who killed 14 birds out of a possible 15.

AT SAGINAW —The following is the score of the medal shoot: W. M. Nouggle 17, E. E. Bliss 19, Joseph Wolf 8, Frank Jones 19, Kirt Mathewson 10, A. Henry 16, John M, Messner 10, John F. Miller 3, F. A. Bastain 17, J. B. Baum 15, Charles Scudder 14, John Popp 14, L. R. Cooper 14, Joseph Smith 10, William Browne 11, John Lafayette 15, H. G. Krogman 18, J. Wilhite 15, F. Hunt 13, J. Brechtelsbauer 15, Ed Skolil 13, Charles Schmidt 15, J. H. Loundra 10, Fred Baumgartner 11.

E. E. Bliss and F. C. Jones chose sides for a 10-bird shoot, Jones's side winning. The shoot was exciting, being a tie after the first 10 birds had been shot, the score then standing 63 and 63.

SCATTERED CLUB MATTERS.

The annual meeting of the St. Paul Gun Club was held July 2 at the Commercial Club The following officers were elected: M. F. Kennedy, President; Dr. L. W Lyon, Vice-President; H. C. Lawrence, Secretary; W. L. Perkins, Jr., Treasurer; P. H. Gotzian, T. L. Wann and B. F. Schurmeier, directors. It was decided to hold the annual tournament this fall at the State fair grounds, and to have the regular weekly shoots Thursdays at 4 P. M., beginning July 15. P. H. Gotzian entertained the members at luncheon.

The Oakfield Gun Club met the East Side Club, of Fond du Lac, Wis., in a friendly shoot July 5.

A gun club has been organized at Montezuma, Ia., long without such a body.

At Sioux Falls, S. D., the following were the last week's scores of the gun club: First shoot: DeGood 12, Marson 12, Burgess 14. Hutchinson 12, Sidwell 12. Second shoot: DeGood 11, Marson 11, Burgess 11, Hutchinson 10, Sidwell 4. Hutchinson, DeGood and Burgess shot off a tie, walking match of 10 birds: Hutchinson 10, Burgess 5.

At Lawrence, Kans., July 2, the gun club had a pleasant shoot, George Leonard carrying off high score, 22 out of 25, Walter Headen a good second with 21.

In upper Minnesota, the Kennedy, Stephen and Hallock gun clubs held a shooting match at Kennedy, Wednesday. Stephen won with a score of 54, Kennedy 52 and Hallock 51.

The City Park Gun Club, of New Orleans, has been organized with a membership of twenty-two. Mr. L. A. Richards was elected President; Gus R. Nelso, Vice-President; Louis Gerteis, Captain; Percy Benedict, Secretary-Treasurer, and Messrs. L. C. Thornhill, Albert Schwartz and H. W. Benedict, Trustees. The grounds are situated at the upper end of the city park, within a stone's throw of the terminus of the Esplanade and Bayou Bridge.

The Watertown, S. D., Gun Club shot July 1, Ed Jones proving the best on hand with 16 out of 25. Mr. Cory ran 13 to his string, and Mr. Ransom 9. Practice will make the scores higher.

The Rod and Gun Club, of New Ulm, Minn., made the following scores at the club shoot last week: Theo. Mueller 8, J. Buschers 10, J. Toberer 6, Herman Amme 10, Wm. Cordes 7, Norman Lind 9, W. E. Koch 9, Wm. Meyer 0, Albert F. Koch 7, Robert Fritsche 7, H. Manderfield 10

The Pinconning Gun Club, of Bay City, Mich., shot for valuable prizes July 5, and will keep up club shoots.

At Peoria, Ill., July 5, the Lower Free Bridge Shooting Club held a little meet. E. G. Kempf and T. J. Walters shot a match at 15 birds, scoring respectively 17 and 12.

At Pontiac, Ill., the Pontiac Gun Club made the following scores at the last club shoot: C. Lommatsch 23, M. Lommatsch 22, Blue Rock 21, H Lommatsch 19, Dr. Daly 18, Knight 18, Brinkman 17, Talbott 17, Holmes 17, Morris 16, Opperman 16, Richardson 10.

At Alameda, Cal., the Empire Gun Club held its medal shoot recently with the following results: King first, Daniels second, Kerrison third, Huie fourth. There are four medals in competition. The club grounds are at Alameda Point.

TWO GOOD ONES.

The dates of the big Indian shoot and the Arkansas State shoot conflict, falling on July 20-24, the Indian shoot claiming the 24th for the close of its four days' programme. The programmes for both these stiff events are at hand, and promise all sorts of good things—if you can get them. There will be hot company on foot at both events. Much interest centers on the first annual of the Indians, as this tournament is expected to become a fixture in the Western circuit. Manager Charlie Grimm has arranged an attractive list of trophies for the belts of the visitors who can get there, and the man who goes there and does not enjoy himself will be a strange one.

Down in Arkansaw, Mr. J. T. Lloyd, president, and Mr. Paul R. Litzke, secretary, have fixed up a scorching hot layout for their visitors to tackle, and all who know the Arkansas standard know the entertainment at Pine Bluff will be all that could be asked by the most captious. The added money is $500 in the Arkansas State shoot, and, as it also happens, is also $500 in the Indian Wolf shoot at Clear Lake, Ia.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Danville Gun and Rifle Club.

SOUTH DANVILLE, Me., July 7.—At our second annual tournament, held at Danville Junction, Me., by the Danville Gun and Rifle Club on June 29, will say we had one of the most successful shoots ever held in this State. There were sixty-two shooters here who came from all over the State, and about forty of them Maine's best. The forenoon was fine and many high scores were made, but at noon a strong southerly wind set in and caused the birds to go along some, and made high scores hard to get in the merchandise match, which opened at 1 P. M.; there were forty-two entries in this event.

Portland sent a delegation of sixteen shooters, all of whom can shoot from the word go; next came Lewiston and Auburn with fifteen men, mostly of the Androscoggin Gun Club. Waterville also sent her crack shots, who now hold the State championship for both 5-man teams and individuals, men who know how to handle a gun. There were also delegates from Oakland, Wilton, Georgetown, Bath, Richmond, Brunswick, Welchville, Norway, Paris, New Gloucester, and other places.

The club threw 8,746 targets during the day from two sets of expert traps, and was highly complimented by the shooters from all over Maine for the promptness and ease with which the events were pulled off. In the $40 guaranteed purse there were forty-eight entries, and it was a good race. Mr. Prebble, of Waterville, one of Maine's cracks, broke a clean score of 25, and took first money: next was Wheeler, of Portland, with 23; then comes Jones, of Georgetown, and Wyman, of Waterville, with 22 each; Arthur and Harry, of Portland; Honesty, of Waterville; Dr. Bates, of Bath, and Dolin, of Lewiston, winning fourth money with a score of 21 each.

The merchandise match opened with forty-two entries. Arthur, of Portland, was successful in winning first prize, also the beautiful challenge cup donated by the E. C. and Schultze Powder Co., with a score of 46 out of 50, in a high wind. Next comes Hunnewell, of Danville, with 45, and Wilton, of Wilton, with 44 for third prize; Doten, of Lewiston; Tom Jones, of Georgetown; Preble, of Waterville; Foss, of Danville, with 43; Dr. Bates, of Bath; Joslyn, of Lewiston, 42; Henry, of Portland, 41; Randall and Wilkes, of Portland; Bean, of Danville, 40; Herbert and Fisher, of Portland; Ray, of Sabattis; Godfrey, of Lewiston; Berry and Bobb, of Danville, 39; Edwards, of Portland; Honesty and Wyman, of Waterville; Capt. Trundy, of Portland; Collins and H. Williams, of Lewiston, 38; Lord, of Portland: Miles, of Winthrop, 36; Maybery, of Westbrook; W. Cobb, of Boston, 35; Thompson, of Bath: Blake, of Oakland; Wheeler and Hayden, of Portland. 34; Tookey, of Danville, 33; Williams, of Portland, 31; L. Keys, of Lewiston, 30; Dr. Strickland and L. Brown, of Danville; Eastman and O. P. Kews, of Lewiston, 28; Lawrence, of Danville; Hurst, of North Gloucester, 27.

The Maine shooters are all much interested in the Interstate shoot to be held in Lewiston, Me , Aug. 4-5, and with good weather there is sure to be a large gathering at that event. I inclose you the percentage made at this shoot:

Preble 90, Waymouth 90, Rounds 90, Arthur 89½, Hunnewell 88⅝, Wilton 87⅓, Dolen 87, Wilkes 85⅝, Randal 84⅘, Dr. Bates 83⅞, Honesty 82⅜, Wheeler 82½, Herbert 81⅘, Harry 81½, Berry 81⅜, Capt. Trundy 80⅝, Fisher 79⅔, G. Cobb 79⅕, Tom Jones 79, Foss 79, Godfrey 79, Edwards 78⅜, Lord 77⅕, Thompson 76⅜, W. Jones 75⅚, Bean 74⅕, Blake 74, Tictomb 73⅜, W. Cobb 72⅘, Ray 71¹³⁄₁₇, Joselyn 70⅛, Mayberry 69¼, Taylor 68½, Williams 67²⁵, Tookey 66¹⁷⁄₂₁, Collins 66, H. Williams 66, Miles 65³⁵, Sanborn 65, Gording 64⅞, Johnson 64, Andrews 64, Gilmore 63³⁵, Sawyer 63, Fickett 63, Rowe 62⅞, Hatch 62, L. Keys 61¼, Record 58, Strickland 57⅒, L. Brown 54⅔, A. A. Mown 54, F. C. Mown 52⅕ Brett 51, Earlman 49⁵⁄₁₁, Lawrence 49, O. P. Keys 48⅓, Stanley 44, Hariman 42, Gile 41⅓.

Ratio Points in the Rose System.

CHARLESTON, S. C., June 6.—*Editor Forest and Stream:* For some time past the question of how to encourage the average shooter to go into the regular sweepstake events has been agitating the minds of trap-shooters here, as elsewhere, and with a view to placing the poorer shots on a better footing the secretary of the Palmetto Gun Club presented a proposed change of ratio in the Rose system for the consideration of the members of this club and those of the Forest City Gun Club, with the result that it was adopted by both clubs and will be used during their series of shoots this summer. It was tried in the first shoot with satisfactory results. As it may prove of interest to other clubs the scheme is given in full, and is respectfully submitted to the consideration of the Interstate Association.

Take the example that appears in every programme issued by the Interstate Association, which runs as follows:

Handicap, 25 to 33 targets, $2.50 entrance, four moneys, twenty entries, $25 added to the purse, targets 3 cents each.

NAMES.	Score.	Points.	Value of each Point.	Amount due.
Edwards	20			
Money	20			
Von L	21			
Dickey	21			
Fanning	23	2	$2 14	$4 28
Tucker	24	3	2 14	6 42
Barrett	25	5	2 14	10 70
Town	19			
U. M. C	21			
Standish	21			
Colvin	25	5	2 14	10 70
Morris	25	5	2 14	10 70
Morgan	20			
Barrows	23	2	2 14	4 28
Phelps	20			
French	25	5	2 14	10 70
Blue Ribbon	19			
Liddiard	20			
Worthen	22	1	2 14	2 14
Ward	18			
		28		
Add amount over				08
				60 00

20 entries at $2.50 ..... $50 00
Added money 25 00
$75 00
Deduct for targets at 3 cents each 15 00
Net purse $60 00

28) 60.00 (2.14 value of each point.
56
40
28
120
112
8 cents over

In the above example the ratio points are 5, 2 and 2 to 1.

Now take the same event under the same system of division, but change the ratio points to 5, 4, and 3 to 2:

WINNERS.	Score.	Points.	Value of each point.	Amount due.
Barrett	25	5	$1 87	$9 35
Colvin	25	5	1 87	9 35
Morris	25	5	1 87	9 35
French	25	5	1 87	9 35
Tucker	24	4	1 87	7 48
Fanning	23	3	1 87	5 61
Barrows	23	3	1 87	5 61
Worthen	22	2	1 87	3 74
		32		16
				$60 00

32) 60.00 (1.87
32
280
256
240
224
16 cents over.

Notice the equable graduation of moneys to targets broken.

Under the Rose system (four moneys, ratio 5, 3, 2 and 1) we get the following proportions:

22 targets broken pays ⅛ as much as 23.
23 targets broken pays ⅔ as much as 24.
24 targets broken pays ³⁄₅ as much as 25.

Under the change of ratio to 5, 4, 3 and 2, note the difference:

22 targets broken pays ⅔ as much as 23.
23 targets broken pays ¾ as much as 24.
24 targets broken pays ⁴⁄₅ as much as 25.

The proportion of money is manifestly more in keeping with the comparative merits of the scores under a system which pays two-fifths as much for 22 as for 25, than it is when five times as much is paid for a straight as for 22.

Would respectfully suggest the following changes to the Interstate Association:

2 moneys—ratio 3 to 2.
3 moneys—ratio 4, 3 to 2.
4 moneys—ratio 5, 4, 3 to 2.
5 moneys—ratio 6, 5, 4, 3 to 2.
6 moneys—ratio 7, 6, 5, 4, 3 to 2.

Take the same sample event used above, and make a comparison between the scheduled ratio of 8, 5, 3, 2 to 1 (five moneys, Rose system) and the suggested change Then I think no further argument will be necessary to convince the average shooter that the Rose system can be improved upon:

Winners.	Score.	Points, Rose System.	Points, Proposed Change.	Rose System.	Proposed Changes.
Barrett, Colorin, Morris, French	25	8	6	$9.76 each.	$7.50 each.
Tucker	24	5	5	6.10	6.25
Fanning, Barrows	23	3	4	3.66 each.	5.00 each.
Worthen	22	2	3	2.44	3.75
Von L., Dickey, U M C, Standish	21	1	2	1.22 each.	2.50 each.
		49	48

A New Kind of a Handicap.

THE general purpose of a handicap is to equalize as far as possible the chances of both novices and experts. The idea is to give the novice a chance to beat the expert once in a while. But a new system of handicapping has been brought out that casts all others into the shade. This system enables the novice occasionally to *tie* the expert, but never allows him a chance to beat out his superior, save under the most exceptional circumstances, which might occur once in a decade.

The system is this (it was used at the Boiling Springs shoot on July 7): The highest possible in any match is the greatest number of targets broken by any contestant in that match; in other words, "the high man sets the pace." All who break less than the "high man" are allowed as many extra targets to shoot at as constitute the difference between their scores and that of the high man. For instance: The "high man" breaks 48 out of 50, then 48 is the highest possible. Those who broke 47, 46, 44, 42 and 39, would shoot at 1, 2, 4, 6 and 9 extra targets, respectively.

Now figure how it works. The 48 man is, according to the above figures, a 96 per cent. shot; the 39 man is only a 78 per cent. man. The latter is allowed 9 extra targets to shoot at, out of which his average score would be about 7; but he has to break them *all* to even *tie* the high man—the crackerjack. Suppose he does tie him, and the tie is shot off at 25 targets each, same system of handicapping. What then? The 96 per cent. man will break 24 or 23, while the poor novice breaks in the neighborhood of 20, and has to break his 3 or 4 extra targets to *tie* the expert. Multiply the above examples as often as you will; it all comes down to one thing: The winner will be found in the ranks of the expert, while the novice simply walks up and pays for his targets, but has absolutely only one chance in a million of winning; the expert must either drop dead, burst his gun, or be otherwise incapaciated from proceeding with the game, if the novice is to have a show under this system.

IN NEW JERSEY.

BOILING SPRINGS GUN CLUB.

July 3.—The regular weekly shoot of the Boiling Springs Gun Club, of Rutherford, held this afternoon, was poorly attended, chiefly owing to the very hot weather and the general exodus from the city for the 4th of July. Only six members of the club were present; these, together with two guests, Donley Deacon of the New Utrecht Gun Club, and Marshall Herrington, of the W-A Powder Co., and F. Sinnock, of the Forester Gun Club of Newark, made up the total of nine shooters who took part in the events shot this afternoon. The weather was decidedly warm, and a slackness was consequently apparent in the way in which the events were shot off. It was too hot to move rapidly. With scarcely a breath of wind stirring, good scores were only to be expected. In the club race Paul, with a handicap allowance of 4 extra targets to shoot at, scored 49, and was tied by Platt Adams with a handicap allowance of 8. On the shoot off at 10 targets, each missed 3 and tied again; they shot off at 5 more, Paul scoring 5 straight, while Adams dropped 1. Paul thus won the cup. Dr. De Wolfe again shot well up, scoring 46 out of his first 59 targets. Detailed scores in this race were:

Club handicap:

Paul (4).....1111111111101110111111101011100111111111111111111—45

July 7.—The first shoot for the silver tea service, donated by the Boiling Springs Gun Club, was decided this afternoon on the club's grounds at Rutherford. The shoot had not been well advertised, so the attendance was not up to what might have been expected. The conditions of the contest are as follows: 50 targets, handicap allowance, entrance price of the targets; shoots held on the first and third Wednesdays of every month until the end of the year, the tea service becoming the property of the shooter who has most wins to his credit; open to all.

The system of handicapping adopted at to-day's shoot was one suggested by J. 147 L. Winston. It ran thus: The high score on the first 50 targets constituted the highest possible, all who broke less than that highest possible out of their first 50 targets receiving an allowance of extra targets to shoot at equal in number to the difference between their scores and that highest possible. For instance, Van Dyke broke 48 out of his 50, and 48 was thus the highest possible; Winston, with 47 out of 50, and Banks, with 46 out of the same number, shot at 1 and 2 extra targets, respectively; breaking their allowances, they were credited with highest possibles. Huck only broke 42 out of his 50, so had to break 6 straight to get into the first tie. Chris Wright, with a score of 44, broke 4 straight and was in the tie. Collins, B. James and Greiff, who had 5, 10 and 14 extra targets to shoot at, being the difference, respectively, between their respective scores of 43, 38 and 34 out of 50 and the highest possible, dropped out early in shooting off their allowances.

This left five still in the tie. It was shot off under similar conditions as to handicap, but at 25 targets. Van Dyke and Banks broke 24 each and thus set the highest possible; 147 broke 23 and his allowance of 1 extra; Huck broke 20 out of 25 and completed his highest possible by breaking his allowance of 4 extras. Wright only broke 19 and lost the first target in his allowance of 5.

With four still in the tie it was agreed to shoot off at 15 targets, with similar conditions as to handicap. Van Dyke and Winston broke 14 and were high; Banks broke 13 and his allowance of 1; Huck fell down to 11 and lost his first allowance target. This left three tied for the service, and it was agreed to shoot off the tie on 15 targets, no allowance, high gun to count the win for to-day's shoot. Van Dyke won by breaking 15 straight, with 147 1 behind, and Banks bringing up the rear with 13.

There can be no question but that Van Dyke fully deserved his win; his record for the 105 shot at in this race was 101 breaks. In addi ion to this great average he shot at 35 targets, one man up, expert rules, breaking 33; his percentage for the 140 targets shot at during the afternoon was 95.7.

The detailed scores in the tea service contest were as follows:

F Van Dyke..1111111111111111111111111111101111101111111111111 —48

Nos. 1, 2, 3, 10 and 11 were at expert rules; Nos 4, 5 and 6 at unknown angles; No. 7, 5 pairs; Nos. 8 and 9, reversed order.

Two miss and outs were also shot during the afternoon. The first was shot in this manner: All stood at No. 1 score and shot at a target thrown from No. 5 trap, regular angles, use of both barrels. Chris. Wright was the winner in the 4th round. Scores were: Wright 4, Winston 3, Collins, Van Dyke and Banks 1 each. No. 2 was shot with all standing at No. 5 score, the targets being thrown from No. 1 trap, regular angles. Banks was the winner in the 6th round. Scores: Banks 6, Winston 5, Wright 3, Collins (re-entry) 2, Van Dyke 1, Collins (first chance) 0.

WALSRODE GUN CLUB

July 5.—Ten members of the Walsrode Gun Club gathered at the club's grounds, at Varnum street, to day and shot a number of 10-target sweeps. Nos. 1, 2 and 3 were at known angles; Nos. 4 and 9 at unknown angles, and Nos. 5, 6, 7 and 8 were English snipe events. A friendly match at 10 pairs and 10 singles was also shot between J. Schilling and H. Reinhardt. The scores:

H Price (25).....0010110l0— 4	10—1	0 —0
Marks (27).....	0 —0	121—3

July 9.—The futurity preliminary, at 15 birds, $10 entry, was shot to-day. Kling won first money alone, while four men tied for second place. In the shoot-off for second money Bradley won with 6 straight kills. Event No. 2 was at 15 birds, $15 entry, Murphy winning with a clean score. Bradley beat out Dolan and Winston for second place. No. 3, 4 and 5 were miss-and-outs, $5 entry. Scores:

CHATHAM GAME AND FISH PROTECTIVE ASTOCIATION

July 5.—The special "Fourth of July" shoot held on the grounds of the Chatham Fish and Game Protective Association, Chatham, N. J., to-day, was thoroughly enjoyed by quite a large contingent of the club members and their friends. The shoot lasted from about 10:30 in the morning until late in the afternoon. All of the participants, while oppressed by the terribly hot weather, passed a most enjoyable day at the traps. Scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	10	10	10	10	10	10	15	10	10	10

H. E. WINANS, Sec'y.

AT ELKWOOD PARK

July 3.—The special event at 50 birds, scheduled for to-day, failed to fill, but there was some excellent shooting witnessed by quite a numerous crowd of spectators. The feature of the day was Edgar Murphy's run of 58 straight, a run that is remarkable under any conditions, but is the more astonishing in this case as it is about five months since Murphy did any shooting at the trap. Event No. 5 was also a feature, the five contestants scoring all their birds. Below are the detailed scores of the events decided to-day:

	No. 1.	No. 2.	No. 3.
J L Winston (30).....	122.0	2222121 2212	.....
B Ballard (30).....	0	22221222120	20
P Daly (30).....	1221120	2220	2222221212222
E G Murphy (30).....	1111222	22111222221	112211111222
P Murphy (30).....	2212110	20	2122221222210

	No. 4.	No. 5.	Tie.	No. 6.
P Murphy....	2221212222	(29)..2112212122	(31)..11222•	(29)..02•22222•
Daly.....	2111222122	(29)..1222122211	(31)..2•	(29)..21222222222
E G Murphy..	12120	(29)..1112121222	(31)..212211	(.9½)211•21222
Ballard.....	2221222210	(29)..1222222222	(31)..2122•	(29)..212•222121
Winston.....		(29)..2212221211	(31)..111212	.....

The seventh event was at 15 birds, $15, and resulted thus: Daly (30) and Ballard (29) 14, Edgar Murphy (29½) 13, Doctor (29) 8.

THE OPENING DAY AT HOLLYWOOD.

July 5.—The opening day of the season of 1897 at the Hollywood traps was marked by a good attendance and warm, bright weather, with breeze enough to make the birds good. Edgar Murphy, who is shooting in excellent form just now, won the Overture prize with 15 straight, and took first money, which amounted to $72. Winston, who had his 14th bird drop dead out of bounds; and Bland Ballard, who lost his 5th bird, divided second and third money—$35—with 14 each. In the Independence handicap, another 15-bird event, Daly, Patten and Murphy tied on 13 each. The tie was shot off at 3 birds, Daly winning, as shown in the scores below:

	Overture Prize.	Independence Handicap.	Tie.
P Daly, Jr (29).....	2220202222222222—13	(29)..22•222222•21122—13	222
W R Patten (27).....	222.02•2022222—12	(26)..202222122222.2 2—13	202
F Hoey (28).....	2022222222020	(29)..•22 2222 2200	
J 147 Winston (29)....2222222222222•2—14		(30)..•2022222221222•—12	
E G Murphy (30).....	222212.2122222—15	(30)..022211•2112222—13	
Capt Money (30).....	221112.•1211021—13	(28)..2•102122 2210	
A L Ivins (29).....	2012•22 10	.....	
B Ballard (28).....	2222021212222222—14	.....	
A Loening.....	.....	(26)..2.00120100	

In addition to the above two big races, there were three miss-and-outs, $5 entrance, which resulted as follows:

No. 1: Winston 3, Capt. Money, Patten, Daly and A. Loenig 2, Hoey 1, Murphy 0.

No. 2: Winston, Daly and Patten 3, Murphy, Money and Loening 2, Hoey 1.

No. 3: Winston and Hoey 13, Capt. Money 11, Dr Knowlton 9, Daly and Murphy 4, Ballard 3, Gaynor 3, N. E. Money 1.

Haverhill Gun Club.

HAVERHILL, Mass., July 11.—Below I hand you scores made at the regular Saturday afternoon practice shoot of the Haverhill Gun Club, Saturday, July 10.

Only a few of the members were present, although the day was undeniable, from a trap-shooting point of view, quite in contrast with last Monday, the day we held our tournament.

Hot Weather and a Hot Shoot at Little Rock.

LITTLE ROCK, Ark., July 6.—The attendance at the shoot here yesterday reminded one very forcibly of the good old days of '92, when the sport of trap shooting was booming and all the shoots were well attended. The shoot of to-day brought together one of the old-time crowds. Forty-eight shooters participated, which exceeded anything in the way of attendance since the State shoot here in '95.

This is a great showing, when you take into consideration the fact that none but residents of the State were present. Only one short year ago it would have been a difficult matter to have gotten two squads to a shoot here, no matter what the inducements might have been But things have changed now, and the revival of this great sport of ours is very gratifying, and also seems to be of the stalible kind.

The programme that had been arranged for the day was certainly a very liberal one. The feature of the day was the four-men team race, for the purse of $100. with an entrance fee of only price of the birds. Then there were also five 15 target events, with $10 added to each. As stated above, the interest centered in the team race, and ten teams were entered; no less than six of these belonging to Little Rock. two represented Pine Bluff, and one each from Hot Springs and Fort Smith. The purse of $100 was cut into three moneys $50, $30 and $20. This was a hot contest, and it was nip-and tuck between Little Rock, Fort Smith and Hot Springs, and finally resulted in Little Rock team No 1 winning first and Fort Smith second, while Hot Springs took third

The scores were very poor, and some of those teams who promised to attend, but stayed away, will now realize what a good thing they overlooked by staying away. Memphis was to have been represented, but failed to materialize. They could very readily muster several teams that could beat 78, but if they would have been equal to the emergency on this occasion is another thing Conner led the Little Rock team with 21, Matthews was high for Ft. Smith with 22, Dobbins and Hughes led the Hot Springs team with a like score. The high score on the Pine Bluff team was made by Clements, 21. The remaining teams were never factors in the race. It is more than likely that Hot Springs would have walked off with first money, only for Rix's gun going wrong, which began snapping, and he was compelled to shoot the other barrel, which changed the trigger pull, and it was then that he lost 5 of his last 8 birds. The scores of the first four teams are given in detail, while the others have been condensed. The scores made in the sweeps are given in tabulated form. Nos. 1 and 2 are extras, while the remaining five are the programme events, to each of which $10 was added. Clements was high man for the day with 84.6 per cent., Dickinson 82.6, Matthews and Hughes 80.7, Forster, Woodson and Connor 80. The purses to the sweeps were divided, Rose system, four moneys, and the following points were paid for the respective positions: 7, 5, 4, 3.

There were only two straight scores made during the day, one of these by young Matthews, of Fort Smith, and the other by Conner, a local shooter. The following also participated in the sweeps, but as they shot in but one event their name does not appear in the table: Rose, Kerr, Nichols, Irwin, Overstreet, Schare, Beaver, Hickman and Lenow. Of all of these Lenow was the only one to get in for money; he scored 12 in the fifth event. Two cents were charged for targets, and a lunch was served gratis to the shooters. The weather was clear and red-hot:

Little Rock No. 1.

Conner	01111101111011111111011111—21
Dickinson	10001111111111111111011101—20

PAUL R. LITZKE.

Oneida County vs. Richfield Springs.

RICHFIELD SPRINGS, July 10.—*Editor Forest and Stream:* The second of a series of three matches between the Oneida County Sportsman's Asssociation and the Richfield Springs Gun Club was shot here the 7th. The conditions were nine men to a team, 25 birds per man. The O. C. S. A. won by the narrow margin of three targets. This makes the series stand one each, as Richfield won the first one at Utica. Four sweeps of 15 targets each, and two at 5 pairs were shot during the afternoon. The scores were good considering the conditions, which were quite hard, the targets being thrown about 60yds. against a very trying background. Mr. M. E Barker, with a Lefever gun and E C. powder, was high average, .923.

The scores in the team shoot were as follows:

Utica.		Richfield Springs.	
Gates	19	Yeoman	23
Scott	19	Barland	19
Pfiffer	16	Caney	18
Brunner	15	Weatherbee	19
Judson	16	Tunnicliffe	16
Mahew	21	Barker	24
J W Fulford	24	Nuhf	10
E D Fulford	22	Cole	19
Dexter	19—171	Mungar	20—168

The sweeps:

Recreation Gun Club.

BARRE, Vt., July 3.—I herewith inclose you the scores made at the shoot of the Recreation Gun Club to-day. The shooting was done on the grounds of the Fairview Trotting Association. The traps were set at a distance from the race track, so that the shooting would not interfere with the horse trotting and other sports. The Association kindly gave the club $25 to use as added money. The Sergeant system of trapping was used, and many of the low scores were due to the shooters' unacquaintance with that method of trapping. The club was pleased to welcome C. O. Barrett, F. A. Standish and Mr Stoddard, from Montpelier. Most of the shooters found the sun and extremely hot air a little enervating:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

J. F. PERRY,

Boston Gun Club.

WELLINGTON, Mass., June 30.—The last half of the Boston Gun Club summer prize series was successfully initiated at Wellington to-day by thirteen trap-shooting enthusiasts, who took full advantage of a clearing afternoon to follow their favorite line of sport The high wind which had succeeded the deluge of the morning was a little troublesome to some of those who desired straights, but very little complaint was heard.

Among the visitors to-day was one who called forth many encomiums of praise by reason of his excellent shooting, notwithstanding a physical drawback of no mean proportion—a lameness which necessitated the use of a crutch; yet with no apparent effort he followed the squad evolutions with considerable success. To the ordinary shooter in possession of every physical advantage, the ease with which he handled the gun was wonderful to note, and proved a lesson in many ways.

Summary as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	6	10	10	15	10	10	10	6	10	10	10
Brown	8	9	2	8	7	11	6	..	..	..	..	..	..
Banks	5	6	3	4	0	5	5	..	..	..	..	..	..
Nickols	8	7	..	8	5	9	..	..	..	..	..	..	..

Nickols (16)	0100111010111110— 9	.....

July 7.—Though Monday was quite generally devoted to trap-shooting in this vicinity, eleven found sufficient interest to draw them to the Boston Gun Club grounds at Wellington, but two days later, when the sixth serial prize shoot took place. On a warm day such as this proved to be, Wellington is considered an ideal place, being fairly cool and comfortable when Boston is sweltering, so it is not strange that those who are well aware of this fact should flee the city on Wednesday afternoon, but it is strange that all should go equipped with a heat generating instrument; in other words, a double-barreled shotgun. This is where the fun comes in, however, and very shortly after train arrival each and all are eager for the fray. To day the participants seemed to possess a mania for shooting pairs, and no less than three events were of this description. On other days, when the gun keeps cool of itself, three pairs make a score, but to day nothing less than five satisfied a shooter, and those who had left their Heikes at home did not need to be reminded of the fact. Complete scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	10	10	10	15	10	10	10	10	10	10
Brown	7	7	8	5	7	11	7	7	9	8	8	6
Sheffield	6	5	7	..	10	13	7	3	5	5	7	4
Miskay	9	6	6	7	10	13	4	7	9	7	7	6
Pickles	7	8	9	8	8	14	5	7	7	4	5	5
Chadwick	7	7	5	5	8	11	9	2	5	5	7	3
Osgood	4	..	..	..	3	8	..	..	..	..	..	..
Benton	6	5	5	3	0	11	6	..	..	..	..	..
Paine	8	8	8	9	7	13	9	5	9	6	9	3
Horace	7	8	8	..	10	11	8	7	7	6	..	..
Nickols	4	7	6	..	8	13	..	..	..	..	..	..
Spencer	..	..	..	..	4	9	13	8	6	6	7	7

Events 1, 5 and 6, known angles; 2, 7 and 11, unknown; 3 and 10, reverse pull; 4, 8 and 12, pairs; 9, expert rules, unknown traps and angles.

Merchandise match, 25 targets, 15 known, 10 unknown; distance handicap:

Paine (16)	1111111110101111—13	1101111111— 9—22

BOSTON.

Missoula Rod and Gun Club.

MISSOULA, Mont., July 6.—Enclosed please find scores of two shoots held on July 4 and 5.

We had a fair attendance considering the holiday and some good shooting was done, especially that of R E. Rodgers, who occasionally gets his shooting jacket on, and shows the boys what he can do when he tries.

We also had a beginner in R. Hammond, who is only about fifteen years old, and had never shot at a bluerock before. We think he did very well in getting 13 out of 25, and he promises to make a good shot. Scores of July 4:

	No. 1, Club Shoot.	No. 2, Practice.
R E Rodgers	1111111111111101100111111—22	1101111111—9

W. E GRAHAM, Sec'y.

Oneida County Sportsmen's Association.

UTICA, N. Y., July 3.—The regular weekly shoot of the Oneida County Sportsmen's Association was held this afternoon, eleven members taking part in the club event. This event resulted in a tie between Marks (3) and Chas. Brunner (4) with 24 each. E D. Fulford from scratch ran 15 straight in the expert rules, and then lost the last target in each of his last two pairs, finishing with 23 out of 25. Scores were:

Club shoot, 15 singles, expert rules, and 5 pairs:

Marks (3)	110111101111111	10 11 11 11 10—21	+3—24
Chas Brunner (4)	001111111111111	11 11 10 11 00—20	+4—24
E D Fulford (0)	111111111111111	11 11 11 10 10	—23
C R Mizner (4)	111111101110010	11 10 11 11 10—19	+4—23
J Pfeiffer (5)	111010011101101	11 11 10 11 10—18	+5—23

C. R. MIZNER, Sec'y.

Rhode Island Trap-Shooting Association.

PROVIDENCE, R. I., July 1.—The attendance at the weekly shoot of the Rhode Island Trap-Shooting Association. held this afternoon, was very light, owing probably to the desire of many shooters to save their powder until the shoot on July 5. The following scores were made by those present:

Twenty-five targets, known angles: H. Swindell 20, H. W. Bain 18, J. Lamb, 18, C. H. Staniels 12, G. Jenore 11, Rossie 9.

Twenty-five targets, unknown angles: H. Swindell 17, H. W. Bain 17, J. Lamb 17, C. H. Staniels 15, Morton 9.

July 5.—The Rhode Island Trap-Shooting Association carried out a programme of events suitable to the occasion at its shoot held to-day. A large number of members from the Pawtuxet Gun Club were on hand and did some creditable shooting, in addition to carrying off the chief honors in the prize shoots. Scores were as below, Nos. 1, 2 and 4 being at known angles, and No 3 at unknown angles:

In the first event, F. L. Corey won first by breaking 24 out of 25, Stephen Green won second with a score of 22. In the second prize event, F. I. Greener and F. L. Corey were tied for first, and in the shoot off at 10 targets F. L. Corey broke 10 and F. I. Greener 9. The second prize was won by Mr. S. Green with 21 breaks. Wm. Sheldon and Frank Arnold did not arrive in time to enter the prize events. E. C. Whitaker did some good shooting and tied the best score of the day by breaking 24. F. I. Greener did fairly well, but was out of form by the excessive heat. Taking it as a whole, very good scores were made, as will be seen by the following events:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
Henry Moore	15	17	..	..	P H Handell	20	..	15	..
F I Greener	18	22	15	20	Stephen Green	22	21	13	..
F L Corey	24	22	17	..	John Paye	9	11	12	..
H W Bain	15	16	18	..	J F Rossie	12	8	..	10
A M Hunt	13	14	..	11	Charles Adams	..	18	15	13
E C Whitaker	20	17	18	24	A Mowry	..	10	..	8
Amos Arnold	18	17	12	..	Wm Sheldon	..	..	21	22
C H Mathewson	14	16	..	..	F Arnold	..	..	6	19
C H Staniels	16	16	..	..	J Armstrong, Jr	..	..	..	15

In the third event S. Green and F. Arnold did not finish. They shot at 15 targets. Only the first and second were prize events.

J. F. RUSSELL, Sec'y.

Catchpole Gun Club.

WOLCOTT, N. Y., July 5.—The Catchpole Gun Club, of Wolcott, held a very successful shoot to-day at Bonnicastle, Sodus Bay, the fine summer resort and home of our president, Uncle Ben Catchpole. A very nice attendance of shooters was the result, the following cities being represented: Rochester, Oswego, Clyde, Sterling and Savannah. A series of nine events was decided, the results being given below in tabulated form:

Events:	1	2	3	4	5	6	7	8	9

HAZELWOOD GUN CLUB.

PITTSBURG, Pa., July 2.—The members of the Hazelwood Gun Club had a little practice shoot at sparrows to-day, and when the sparrows gave out they took revenge on targets. Below are the scores in tabulated form:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Sparrows:	25	25	7	10	15	Sparrows:	25	25	7	10	15
Crossland	23	24	6	7	13	W-A	..	..	7	..	10
Lovatt	19	..	5	..	..	Parley	..	..	..	..	8
Munson	18	19	5	..	..	Smith	..	..	..	..	8
Stilley	..	21	7	8	10						

All the above events were at sparrows, except No. 5, which was at 15 targets. No. 4 was at 5 pairs of sparrows.

Answers to Correspondents.

No notice taken of anonymous communications

S. J. D., Richfield Springs, N. Y.—1. What is the best treatment to rid a dog of pinworms? 2 At what time or age are a dog's olfactories first fully developed. 3. Is a spayed bitch taxed at the same rate as one that is not? Ans (1) Give areca nut. Reduce to a powder by grating, using the darker colored nut. Give one drachm, in the form of a large pill incorporated with lard. (2) It would be quite as difficult to determine just when a dog's eyesight or hearing is fully developed, all being of the senses. The dog uses his nose constantly, so it presumably is developed fully as soon as the puppy has senses enough to use it. (3) We think she is.

W. I. P., Portsmouth, N. H.—My Irish setter dog, aged two years, last winter had an attack of distemper. He apparently recovered from it, but since that time has been afflicted with what seems like a bad head cold or sniffles. His nose runs and scabs over, and he breathes as if the nostrils were partially closed. He is otherwise well, eyes bright, appetite good, is lively and playful. But the noise he makes when breathing, especially when asleep, and his bad looking nose, make it unpleasant to have him in the house. What would you suggest doing for him? Can he be cured? Ans. If possible syringe the nostrils twice a day with Seiler's solution. (to make this solution tablets can be obtained at any drug store), also spray nostrils with the following:

Menthol	gr. x
Aldene	3i

Sol. Use as directed. For sponging use an oil atomizer.

PUBLISHERS' DEPARTMENT.

Absence of Plague Due to the Advancement of Science.

IN 1490 B. C. a plague destroyed 624,000 Israelites in the Wilderness. A plague in London in 1625 destroyed 35,000 people. In the years 1635–36 there was a plague mortality of 14,000, and from 1663 to 1665 it is stated that there were in the same town 70,000 to 80,000 deaths.

In civilized countries at present those outbreaks of disease are practically unknown on account of the advancement of medical and chemical knowledge, but there is no doubt that the present death rates could be largely diminished, and the general health of the community greatly improved by further sanitary precautions, especially in the homes, and the judicious use of some approved non-poisonous disinfectant, such as the "Sanitas" preparations, to which we take pleasure in calling attention, and would suggest writing to the "Sanitas" Co., 636 West 55th street, New York city, for a copy of their useful work, "How to Disinfect."—*Adv.*

THE J. Stevens Arms and Tool Co., Chicopee Falls, Mass., have recently issued several very attractive circulars bearing on rifle and pistol shooting. The latest is a four page folder intended to convey to yachtsmen the suggestion that Stevens rifles may be very desirable adjuncts to yachting cruises. This is illustrated by two very suggestive marine photographs, in both of which the cloud effects are remarkably fine.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 24, 1897.

VOL. XLVIX.—No. 4. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

An impulse, often irresistible it seems, leads man away from civilization, from its artificial pleasures and its mechanical life, to the forests, the fields, and the waters, where he may have that freedom and peace which civilization denies him. He will undergo all sorts of bodily discomforts—coarse food and rough bed, the wet and the cold—and yet be happy, because for a little spell he is free; in other words, he has, for the time, become a civilized savage. He will learn how few are the real wants of a happy life in the midst of an uncivilized nature. His troubles, if he carried any with him, will vanish; time will seem of as little value to him as to the savage, and like all true sportsmen and 'honest anglers,' he will return to his home with a calm spirit and a contented mind.

Alfred M. Mayer.

SNAP SHOTS.

THE death of N. C. Creede, from whom the town in the Cripple Creek mining district in Colorado took its name, recalls the fact that in the late 60's he served as an officer in the Pawnee scouts, under the command of Major Frank North. This force consisted of several companies, enlisted by Major North from the Pawnee tribe, officered by white men, and rendered admirable service against the hostile Sioux and Cheyennes, at a time when those tribes were giving much trouble to the Government. No detailed history of this force has ever been written, yet it performed a great work for the settling up of the Western country by guarding the frontier, and guiding the regular troops prior to and during the building of the Union Pacific Railroad. Many of the old-time army officers who were stationed on the plains just after the war are familiar with the achievements of Major North's battalion between the years 1865 and 1877, but the number of those who have personal knowledge of the Pawnee scouts is rapidly growing smaller. Although no detailed history of this organization has been written, Mr. Grinnell, in his book on the Pawnees, has given much information about it and its heroic commander, and a Nebraska newspaper has recently printed a series of articles giving some account of Major North's adventures. Such material, which is real history—a part of the winning of the West—ought to be preserved before it is too late.

Professor Alfred M. Mayer, of Stevens Institute, whose death occurred at Maplewood, N. J., on Tuesday of last week, was an enthusiastic sportsman, and belonged to that type of men who find their best recreations in the field. He was particularly fond of quail shooting, and in the magnificent volume of "Sport with Gun and Rod," which he edited for the Century Company, he chose for his own pen the chapter devoted to "Bob White, the Game Bird of America," the bird, in his estimation, which is destined to remain the most popular feathered game in American covers. In adopting the name "Bob White," we recall, Professor Mayer quite won the heart of our contributor "Wells," of North Carolina, who was impatient of the designations quail and partridge alike. The pleasure of quail shooting depends much upon the amiability and congenial make-up of one's shooting comrades; of Professor Mayer it is to be said that he was a delightful field companion. Professor Mayer was a physicist whose high attainments were recognized throughout the scientific circles of all countries. He gave special study to the problems of acoustics, and one of the recorded results of his researches was the discovery of the auditory apparatus of the mosquito. It was natural that his devotion to the gun should have prompted Professor Mayer to a study of ballistics; and he once conducted a long series of exhaustive experiments with the chronograph, to determine the velocities of shot; the results were published in FOREST AND STREAM, to which he was a frequent contributor.

That is an extraordinary showing which is made in the first chapter, printed to-day, of our annual report on the game in American game preserves. It gives a census of six hundred buffalo in parks and gardens, which are probably six times as many as are roaming wild within the bounds of the Republic. This is the rescued remnant. The figures are full of promise for the perpetuation of the species by breeding in captivity, if only this shall be pursued with the intelligence which governs the raising of domestic stock. By judicious infusion of new blood, now quite practicable with such a large stock to draw upon, the native stamina may be preserved, and we may expect to maintain indefinitely in our game parks and zöological gardens representatives of this unique American game. The breeding of buffalo in captivity is an enterprise so admirable that we hope to see it taken up by an increasing number of those who have the means and the opportunity to prosecute it.

It is given out that Chief Wade, of the Massachusetts State Police, will undertake to enforce the new statute, which forbids having in possession the body or feathers of song and insectivorous birds; and the lawyers have passed on the law's application to women as well as to men. A curious notion appears to hold in Massachusetts that just because the statute does apply to woman, fair woman, bird's body bedecked woman, it was not meant in earnest by the Legislature, and is now to be regarded as a bit of pleasantry. As a cold matter of fact, the law was designed for just what appears on the face of it, as a means to reach people who could not be reached in any other way. Appeals to woman's humanity, and arguments based upon economic considerations have been ineffectual. The only recourse, in Massachusetts as elsewhere, is to sterner measures and methods. The law is a good law; it should be enforced.

The answer to Mount Tom's propounded question, "Who is Responsible?" appears to be that we are all in it together, townspeople and farmers; and one class may not point finger at the other. But the old way of blaming one another for the sins of both will continue. That is human nature. The sportsman from the town is intensely human, and the countryman is his brother. If there is not game enough for both, or for either, the sensible way of going about a remedy is to sit down together and talk it over. We do not share in Mount Tom's implication that the sportsman lays all the blame upon the farmer. We have been preaching for many years that the interests of the two classes are mutual, and we are convinced that the recognition of this truth is more general and more sincerely accepted to-day than it has ever been in the past. There is on the part of both town dweller and country dweller less tendency to berate one another, and more inclination to stand together for the advantage of both.

An Indiana genius has devised an electric fishing rod with which he expects to revolutionize the world. The apparatus consists of an ordinary, every-day "bamboo pole," with the ordinary, every-day bob, hook and sinker. Then there is a brass tip, with an arrangement for connecting live wires, and another arrangement near the hook, making a complete circuit for the electricity, which may be opened or closed at the will of the fisherman. When the gentle angler experiences the electric thrill of the nibbling fish, he presses the switch button and the current does the rest. It is claimed by the inventor that "with the pole and the battery no fish can nibble the hook without being instantly killed or shocked, so he can be captured with an ordinary landing net. The fish is never on the hook, but after being shocked immediately arises to the top of the water and floats." Some of the fishermen of Columbus, Ind., who have tested the new device, and have taken with it 6 and 7-pounders, never failing to capture any fish, big or little, that bit, are loud in praise of the dead-sure certainty with which the electric fishing pole does its work. The inventor is convinced that he has a good thing, and we understand that he is ready to part with his patent rights if some enterprising anglers' supply firm will take hold of the device.

If the electric rod will do all that is claimed for it, we fancy that the Indiana member will look long and far before he finds any fishing tackle dealer to take stock in it. The tool is not only opposed in toto to the prevailing and growing sentiment which governs angling, but it is equally foreign to the mechanical development of rod-making, which is the triumph and glory of the makers of our time. A fishing rod is an implement for anglers. It has those qualities of delicacy, resiliency and strength which make its use a pleasure in the practice of the art of angling. The primary purpose of a rod is not to catch fish, but rather to make of that catching an exciting sport. No real angler would give a rap for an electric shock arrangement which, on simple contact, causes the fish to turn their bellies up. It is not the fish on the sudden he is after, but the fun of taking in the fish at last after an output of skill and craft in its capture; and the greater the degree of skill called for, so much the more decided gratification at the end. In a word, then, the electric rod is not an angler's device; anglers do not want it, and no fishing tackle maker who has real rods to sell to real anglers will care to have anything to do with the shocker.

Moreover, with the increased stringency of the statutes limiting the lawful modes of fishing, there is question whether such an electric device would not be barred by law, along with the spear, net and dynamite cartridge. Such restrictions are being drawn more and more rigidly every year. This is a poor time for the inventors of deadly devices, ambitious to make fishing or shooting more certain.

The Pennsylvania Fish Commission finds itself in a serious dilemma. By gross negligence, or by intent almost criminal, the last Legislature failed to make any appropriation whatever for carrying on the fishcultural work. This means that unless some way shall be found to devote the State funds to the purpose, the Commission's work must stop. What such an issue would mean to Pennsylvania is shown in the summary of the Commission's work by the Philadelphia *Ledger:*

"By close attention to duty, by intelligent direction, the Commission has brought the work of fishculture in this State to such a condition of excellence that, notwithstanding the obstructionists, it was unsurpassed by any other Commonwealth, with the single exception possibly of Michigan, and the annual output of fish reached to within one-fifth of the number hatched and distributed by the United States Government. This work has been accomplished with a much smaller sum of money than is allowed by any other large State, and little more than New Jersey appropriates for its wardens or fish and game police alone.

"The greater portion of the labor of the Commission has been directed to the increase of the commercial food fishes in the State. Of the 164,000,000 fish hatched and distributed, about 160,000,000 were white fish and pike-perch for Lake Erie, and shad for the Delaware and Susquehanna rivers, and only about 4,000,000 so-called game fish were distributed for the pleasure or use of the angler. By the efforts of the Commission, seconded by those of similar bodies in Ohio, and, to some extent, Michigan and the United States, the annual value of the commercial fisheries of Lake Erie was raised from $400,000 to more than $1,000,000, and with the assistance of the United States Commission, the shad industry of the Delaware River was brought up from $80,000 to $500,000 a year. Yet, with full knowledge of these facts, the Legislature this year adjourned without making a dollar of appropriation with with which to continue this great work, and by this neglect risks the loss to the State of over $100,000 worth of breeding fish."

We are advised that the Pennsylvania Fish Protective Association is endeavoring to devise a plan by which, at least, the stock of breeding fish may be maintained for the two years which will elapse before, in regular session, the Legislature can repair its oversight. The subject was the occasion of a special meeting of the Association at its rooms in Philadelphia, on Tuesday night of this week, too late for a report to reach us. In view of the gravity of the injury to the fishery interests of the State, the situation would appear to call for a special session of the Legislature to appropriate the necessary funds.

Another oversight by the Legislature was the appropriation of $15,000 for the fish warden and deputies, officers created by the Baldwin fish bill, passed at this session. In view of this lack of funds to carry out the provisions of the measure, Governor Hastings has decided to veto it.

AMERICAN GAME PARKS.

The "Forest and Stream's" Fourth Annual Report on Game in Preserves.

Part One.—Fenced Parks.

IN presenting FOREST AND STREAM'S fourth annual report on American game parks, it has been considered abundantly worth while to devote a part of the space to matters of interest relative to buffalo in captivity.

The total extinction of wild buffalo on the North American continent is at the present time an assured fact; for even if the few scattered animals still at large could be guaranteed protection, the stock is so pitiably reduced that perpetuation of the race by breeding is out of the question.

A few years at best will see the disappearance of the last of the buffalo at liberty, and it is therefore to the semi-domesticated buffalo under man's control that we must look for the future of the race.

According to the best information obtainable, there are at present upward of 600 buffalo in captivity. Allard has about 250; the Corbin herd (including the buffalo at Van Cortlandt) numbers 82; Goodnight has about 50; J. J. Hill 30; D. F. Carlin 25, Buffalo Bill 24, Sir Donald A. Smith (Winnipeg) 15, Hon. Wm. C. Whitney 13, J. G. McNair 10, Page Fence Co. 9, John H. Starin 7, J. H. Bass 5, etc. Including those in other small herds and in zoölogical gardens, such as at Philadelphia, Buffalo, Cincinnati, New York, Chicago, St. Louis, and the various European gardens, the total will probably not be far from the above figures.

It is encouraging to note that the numbers of these semi-domesticated buffalo are increasing, and that a more general interest in the subject of scientific breeding has been awakened.

Under these circumstances, and also in view of the fact that the stock at present in existence has been secured from both the northern and southern herds of the wild buffalo, as widely separated strains as existed, it seems not unreasonable to hope that the total extinction of the race may be long averted.

Mr. Arthur Erwin Brown, of the Philadelphia Zoölogical Gardens, whose notes appear elsewhere, is perhaps the authority best qualified to give an opinion on the subject.

His note of warning directed against the evil of inbreeding is timely and should receive the attention it deserves. Aside from a few notable instances, there seems to have been little or no exchange of bulls among owners of buffalo, and though care has been taken to prevent intercourse between animals closely related, the blood of the herds now in existence is becoming more closely commingled each year.

Long ago FOREST AND STREAM suggested the plan of a buffalo herd book. It would not be such a difficult undertaking to record the pedigree and history of every known animal, and such information would be of incalculable value in governing future breeding.

Buffalo may be classed among the most valuable stock in the world. From a mercenary point of view, and aside from any sentiment in favor of this noble animal, it would seem good business to take this simple precaution against mistakes of inbreeding, which are likely to become more common as time goes by.

An interesting fact is that noted at the Philadelphia Zoological Gardens relative to the preponderance of males. Here the ratio was 19 to 9. On the other hand, we are informed that, taking the births for a period of seven years in the Corbin herd the sexes have exactly balanced. A possible explanation of this contradictory state of affairs may be found in the conditions under which the buffalo existed. At Philadelphia their quarters were limited, while at the Corbin park they had a wide range, and the conditions more closely resembled those to which they had been accustomed in a wild state.

The Allard Buffalo Herd.

The largest single herd of buffalo in existence is the Allard head in Missoula county, Mont. Although we have no very recent figures on which to base an estimate of their numbers, it is probable that the herd comprises at the present time 250 full-blooded animals, besides crosses with domestic cattle. Their home is in one of the fertile valleys of western Montana, where they are not restrained by fences, and wander around in much the same manner as range cattle. The animals forming the nucleus of the herd were captured when calves, and domesticated by the late Charles Allard in 1879. Allard was quarter Indian, and to this fact is probably due his attachment for the animal which for generations had furnished food and clothing to the red plainsman, and so won his gratitude and reverence. He realized that the race would soon become extinct, and determined to save some from the general fate. One of the cows captured at this time is still living, and is supposed to be over twenty years old. In a letter written to Mr. William T. Hornaday, April 20, Charles Allard, a son of the elder Allard, writes:

"I have seen a great deal of the buffalo in their wild as well as domesticated state, and believe they will live to be at least thirty years old. No snow storm or blizzard has any effect on them. They are very hardy, and live very fat through the hard winters."

In speaking of the crosses, he writes:

"We have about twenty cateloes, a cross between a common cow and buffalo bull. They make a very fine animal if crossed with Polled Angus cows. We have been trying very hard to cross more, but owing to some reason unknown to us, a cow with calf from buffalo bull will, in nine cases out of ten, die before she is eight months gone; and I know of a case where we took a calf out of its mother two weeks before time. I only hope we can make some discovery that will make us more successful.

"Mr. Allard bought the Jones herd then in Nebraska, in'93, consisting of thirty-one full-bloods and three cross. They were in very poor condition when taken to Montana, from lack of care, but are looking very well now.

"I and my brother Joseph have come into possession of the herd since our father's death last July."

The Buffalo at Van Cortlandt Park.

A practical buffalo breeder, and a man than whom no one has been more successful in the care of the noble animal so near extinction, is Wm. Morisson. William, or Billy, as he is familiarly called, has charge of the herd which the Corbins loaned the city of New York, and which is now quartered on a breezy hillside in Van Cortlandt Park, kept from straying beyond the limits of their seventy-six-acre inclosure by an unobtrusive, but tremendously powerful fence of Page woven wire.

Morisson is a Scotchman, from Murrayshire, where for eight years he was in the employment of Wm. Robertson an agent and breeder of black cattle—Aberdeen and Polled Angus. His brother was, and is, with the Dukes of Gordon and Richmond, and Billy learned from him of the breeding of deer and pheasants. Six years ago last April the late Austin Corbin bought some stock from Robertson, and wanted some one who understood the breeding and care of black cattle to come over with them. The inducement which he offered was considered liberal, and, as a result, there were twenty-one applicants for the place, including men of ten and twelve years' experience in the business. Morisson, however, though he had only had eight years' experience with black cattle, got the appointment, and, well satisfied with his good luck—which was probably owing to his steadiness and reliability as much as experience—started for America forthwith.

When he arrived at the Blue Mountain Forest Park, Corbin's great game preserve was still in its infancy. There were but thirteen buffalo, and hardly a tenth of the game that is to be found there at the present time.

Morisson's position was that of gamekeeper, and though at first his duties were confined to the care of the black cattle and buffalo, they were soon extended to include the breeding and oversight of all the other game.

Shortly after his arrival the buffalo herd was increased by the purchase of ten more animals from Buffalo Jones, including two fine bulls named in honor of the President and Vice-President of the United States, Cleveland and Stevenson.

Cleveland was president of the herd and Stevenson second in command. They were insanely jealous of each other, and one day, in a lonely part of the park, they met in mortal combat. The tragedy that resulted is well known. Cleveland killed Stevenson, and while the latter was "new dead" Morisson happened along too late to avert the evil. On one side of the dead buffalo were fourteen holes, in evidence of the vicious goring he had received from his antagonist. Cleveland still holds the leadership of the herd, but Mountain Chief or McKinley will eventually relegate him to a place in the ranks.

M'KINLEY AND A THREE YEAR-OLD.

Buffalo Breeding.

Under Morisson's care the buffalo bred successfully, till from twenty-three purchased animals they number now eighty-two, a net increase of fifty-nine for seven seasons. He never lost a cow, but on one occasion several calves were born prematurely from driving cows across the mountain at too rapid a gait. When with calf the buffalo must be handled "very easy," he says. "Just let them take their own swing and all will go well." Aside from this incident he never had any trouble at Blue Mountain Park at calving time. Calving time runs from the middle of April to the first week in June, though calves have been born as late as August and September. The cows are nine months with calf and breed their second or third season. As a rule Billy prefers the cow to be three years old before getting with young. The progeny of the herd of which he has had charge have been evenly divided between the sexes—half bulls and half heifers.

Billy says there is no trouble at all about breeding buffalo successfully. His one pre-requisite is that there must be plenty of good grass land for pasture. Hay cannot be depended on to keep the breeding stock in proper condition at the time when they should have grass.

Great care has been taken with the Corbin herd to avert as far as possible the evils of inbreeding. Before the rutting time all but the service bulls are separated from the cows, and these bulls are selected from as distant a strain as possible. Cleveland, Mountain Chief and a four-year-old were used one year. The next year McKinley and two three-year-olds, etc. Billy is anxious now to trade off a bull or two, so as to get an influx of entirely new blood in the herd, though as a matter of fact no signs of inbreeding have manifested themselves in his charges, and a more thrifty, healthy lot of animals would be hard to find.

In November last the twenty-five buffalo at Van Cortlandt were brought on from New Hampshire. They were selected, as far as possible, to include no cows with calf; but, as it happened, four cows were at the time in this condition. The shipment included fourteen bulls of various ages, from McKinley (who, though only five years old, is a magnificent specimen) down, and eleven heifers and cows. Among the latter were three old cows. All the rest were young stock, and the entire herd, with the exception of one cow ten years old, was bred by Morisson, and included no alien stock.

As will be recollected, the shipment had been delayed owing to Mr. Corbin's sudden death, and this also caused a considerable change in the original plan, which had in view the sending of thirty-five buffalo, including eighteen cows. Morisson says that the best time to ship buffalo is about the first of April. Five years ago on the 22d of June he took five bulls from New Hampshire to Manhattan Beach, L. I., and only got them through alive with the greatest difficulty. Most of the time during the journey was spent sousing them with buckets of water.

"It's a wonder we didn't make some of those cows slip their calves last November bringing them down to Van Cortlandt," he remarked. "But we handled them very easy and got them through all right."

As it happened, one calf was born two weeks too early in the spring and died. Three others survived and are doing well. The mother of the calf that died was the old cow mentioned above, and Billy thinks she hurt herself "hopping down off the mountain" just before the calf was born, "div ye see?" Billy is pretty thoroughly Americanized, but the "div ye's" and "dinnas" still cling to his vocabulary. He said he could tell that the calf came from ten to fifteen days too soon from the fact that the teeth had just cut through the skin of the gums and were not yet clean, as is the case with those that go the full time.

When the FOREST AND STREAM representative visited the buffalo paddock recently he found all the animals in fine condition, and reflecting credit upon their keeper. They were sleek and fat, and most of them had shed their old coats and displayed fine, glossy coats. Morisson attributed their good condition to the abundant rain of the early summer. "That did all the good to me," he said in explanation "If it had been a dry spring my buffalo wouldn't have been looking half so well. We got rain every week twice There wouldn't have been pasture for six if we hadn't."

Morisson calls the buffalo inclosure "A mountain of rocks and sand," which, to any one who knows the locality, exactly describes it. The soil is scanty and poor and there is very little pasturage there. What grass there is the buffalo have long since cropped close to the ground. Now that the buffalo have become a fixture at Van Cortlandt, the city should carry out the plan that was originally proposed and fence in the 140-acre tract lying just north of the present inclosure, connecting the two by a pass way. This would insure enough grass to carry the buffalo through the summer, and would be of inestimable benefit in a dry season.

For the last three weeks Morisson has been getting a load of grass every two days from the park authorities for the buffalo, and previous to that, since the 1st of April, he fed them a bale of hay per day. During the winter their allowance was two small bales of hay per day, weighing from 300 to 400lbs.

Newspaper Natural History.

Billy wanted to deny a story which was published in two New York daily newspapers, saying that the buffalo were destroying the beauty of the park, rooting up the ground and stripping the trees of their foliage and breaking down the shrubbery. If the reporters had taken the trouble to visit the park, they could have seen for themselves that there was no foundation for the story in fact; and if they had known anything of natural history they would have been aware that buffalo are grazers, and not browsers or rooters. As a matter of fact, the buffalo spend their time on the open hillside at the east side of the inclosure, and rarely, if ever, enter the woods. They do not care for leaves as food, and never touch the few scrubby trees growing in the open, except possibly occasionally to horn them.

What newspaper reporters don't know about natural history is surprising. Mr. Wm. T. Hornaday has a clipping taken from the Chicago *Chronicle* which is worth quoting in this connection. It tells about a beaver farm on Muscatatuck Creek, a few miles south of Greensburg, Ind., owned by Mr. Lafayette Bowman. When questioned as to the food supply of his beaver, Mr. Bowman is made to reply;

"They are omnivorous. The timber is full of wild animals, such as coons, ground hogs, rabbits and squirrels, and they are anxious to catch them. We do not kill these animals off, but leave them for the beavers."

Picture, if you can, this innocent rodent, a full-fledged flesh eater, chasing squirrels through the trees, and pouncing on ground hogs, rabbits, etc.

Photographing in the Paddock.

Mr. John M. Corbett looks after a herd of thirteen fallow deer, which also occupy the buffalo inclosure. Two of these deer at present have fawns, and are hiding in the woods near the summit of the hill in the middle of the inclosure. The others were resting in plain sight under some apple trees in

THE HERD.

one corner of the paddock at the time of my visit. Mr. Corbett thought it would be a good plan to try a photograph of the deer, so in company we walked over toward them. On the way we passed the buffalo, who eyed us unconcernedly. The deer, however, were built on a different plan, and though they allowed Corbett to go up to them, and took corn from his hand, they would not permit me to get within 100ft. of them. For half an hour we tried unsuccessfully to outwit them, but they were always on the lookout, and just as we thought our ruse on the point of succeeding, off they would scamper out of range.

Corbett had pet names for the various deer, and addressed them in the most endearing terms when he was trying to edge them over to toward the spot where the camera was located. The next moment, however, he would be "damming" the "little divils" for their contrariness.

Buffalo Characteristics.

When photographing the buffalo, Morisson took a position on the opposite side of the herd to keep them from moving away in that direction too fast, and between us we could manage them very well. Morisson separated McKinley from the others so that I could photograph him independently, and presently the big animal, who was feeling very lazy and sleepy, laid down. Watching my chance, I walked up to within 15ft. of him, directly in front, before he opened his eyes and saw me. He blinked once or twice, as if he could not understand exactly what had happened, and then lowered one horn and shook his ponderous head at me. Finding that I stood my ground, he presently rolled on his side three successive times as a preliminary to getting up, and having finally gained his feet, turned in the other direction and walked away.

The photograph taken at this time, unfortunately, did not materialize.

We wanted to get a better background for the herd, and so began driving them slowly over toward the spot that had been determined on. As they walked, some of the animals hooked at and drove others out of their way. Occasionally they grunted, making a sound very much more like the grunt of a pig than the tone of domestic cattle.

On coming to a fringe of small trees that grew along what had formerly been the line of an old stone wall, all the buffalo suddenly, and with the same impulse, broke into a gallop and dashed through this slight obstruction.

Reaching the other side they resumed the slow walk at which they had previously been proceeding. This seemed an indication of the old wild nature, and later, when a deer or some other animal dislodged a small stone on the hillside above them, they exhibited the same alarm, and for a moment dashed off in a momentary panic.

When we first found the buffalo they were lying down, chewing the cud.

They got on their feet when we approached too close, and the exercise seemed to stimulate the appetite of the calves, for forthwith they began rooting around for dinner, butting their mothers underneath with a vigor that would have driven the old beasts crazy if they had been at all ticklish. I got a picture of one of these suckling calves, and noted that when the old cow turned my way her look was rather ominous. Later this cow got tired of our fooling, and lowering her head ran full tilt at Billy as if she intended, by the combined butt and boost, to send him into the next county. Billy, however, had not reared her for nothing, and he knew just how to handle her. At the moment when I was looking to see him shoot over the trees, he stooped, and then raising suddenly, waved his arms about his head, with the result of turning the cow. A little later she charged him again, but he was used to this, and no fatality resulted.

As a whole, the buffalo were very tame, and personally I had less compunction in going close to them than I should have felt with a like number of domestic cattle—bulls and cows—in a barnyard.

J. B. BURNHAM.

The Goodnight Buffalo Herd.

The third largest herd of buffalo in captivity is that belonging to Charles Goodnight in the Texas "Pan Handle." Mr. Goodnight, who is one of the largest cattle owners in the State, has a game preserve on his ranch surrounded by an 8ft. fence, in which are confined a number of elk, antelope and deer of different species, besides the buffalo.

Under date of Aug. 23 last, our Petty, Tex., correspondent wrote:

"Mr. Goodnight started the buffalo herd in June, 1878, by roping young calves from among the few wild ones that were left at that time near his ranch. This was done at the suggestion of Mrs. Goodnight.

"There are now forty full-blood buffalo in this herd, with a number of half and three-quarter bloods. Four have been lost by various accidents, and twelve head have been sold at an average of a little over $300 each. Those sold were the oldest cows and oldest bulls. Mr. Goodnight still has for sale four very large bulls, which will weigh about 2,000lbs. each."

In addition to the full-blood buffalo, Mr. Goodnight has a herd of Hereford crosses.

J. G. McNair.

Mr. J. G. McNair, president of the McNair Fruit and Land Company, of St. Louis, has ten full-blood buffalo, four bulls and six cows, aged from one to twelve years, on his ranch at St. Elmo, Oregon county, Mo.

John H. Starin.

Mr. John H. Starin has thirteen buffalo at Glen Island, N. Y., including four calves. Of these, seven are said to be full blood, and six the result of crosses with domestic cattle. Recently Mr. Starin exchanged bulls with the Philadelphia Zoölogical Gardens.

DOMESTIC FELICITY.

D. F. Carlin.

LESLIE, S. D., July 10.—*Editor Forest and Stream:* Our herd of buffalo consists of about thirty head of yearlings and upward. At present I am unable to say what the increase has been this spring. Besides these thirty head of full-blood buffalo, we have about fifty head of mixed bloods. We get these mixed bloods through a cross with the buffalo bull and the domestic cow. We have never had cross with the domestic male and the female bison.

It is the opinion of some that a half-breed will not breed; but this is a mistake, as most of our half-breed cows are the most regular breeders we have on the ranch.

Our buffalo run at large on the range with our other cattle, and show no inclination to leave the range. They are easily handled; that is to say, they can be driven any place by horsemen.

We secured the nucleus of this herd in 1882 by catching calves in the northwestern part of this State.

Natural History.

NOTES ON BUFFALO BREEDING.

ZOÖLOGICAL GARDENS, Philadelphia, June 13.—It is a fact of much interest, with a direct bearing on the principle of inheritance, that of the herbivorous mammals native to the plains and mountains west of the Missouri River, the only ones which appear to thrive in captivity in the East are the elk and the buffalo—both of which, but a few generations back, included the Atlantic slope in their range.

Few wild species adapt themselves as well to domestication as does the buffalo; none require less care. Even shelters do not seem requisite to their comfort, as, with free access to dry sheds, the whole herd, bulls, cows and calves, usually lie out in the open through the worst of winter storms. They are coarse and hearty feeders, and common hay, with a free allowance of fresh grass during the season, will suffice to keep them in good condition. They take readily to corn-stalk fodder also, but this is not always easily obtained, nor cheap; and the quantity of litter made by it is objectionable when cleanliness of inclosures is important.

The limited area of the pens which can be afforded by the zoölogical garden of ordinary extent does not offer the same favorable conditions to these large animals as may be had in larger preserves, but in our gardens they have done well for many years; have bred freely, and the young have in no case required care other than that of the mother; nor has there yet been an instance where aid was needed by the mother in parturition.

Probably the best results may be reached in breeding, by keeping but one bull at a time in the inclosure with the cows; the keeping of a straight pedigree is simplified, and the combats are avoided which are sure to take place if more than one bull is present. Any number of bulls, unaccompanied by cows, may usually be kept together with little breach of the peace. The species is not naturally vicious, and the bulls are, in fact, much less so than those of many domestic breeds; a cow with a young calf is, however, to be avoided, except by those with whom she is upon terms of acquaintance.

I am disposed to believe that in the end the best results will be obtained by not allowing the cow to meet the male until she is three years old. The tendency of domestication with all wild animals is toward defective nutrition, and consequently to lessened vitality, and the economy in metabolism resulting from sparing the young female, while still engaged in building up her own tissues, from the further drain of gestation, is probably more than repaid in later life. The profound influence which domestication exerts upon the generative functions of wild animals is so well known that it is not surprising that the period of the year during which births occur is much enlarged. In our gardens calves have been dropped as early as April 10, and as late as Oct. 24, though the greatest number of births take place in July and August. As appears to be the case with most species which breed in zoölogical collections, the male births much outnumber the female; in our gardens nineteen males having been bred to nine of the other sex; an apparent result of domestication which may be explained by those who believe themselves to possess the secret of sex causation, but concerning which the wise biologist will at present content himself with merely stating the facts.

In these brief notes, put together in unavoidable haste, I feel disposed to sound two notes of warning to those interested in the future of the buffalo. In the first place, inbreed-

ing is a danger real and impending. There is reason to believe that the buffalo is peculiarly subject to its evils, and these evils are probably present within a much wider range—always, be it understood, under the artificial conditions of captivity—than is commonly believed. The statistics published within a year past in FOREST AND STREAM, regarding the herd of aurochs in the Grodno forest, gave rise to no pleasant reflections in one who realizes the small numerical circle which will inclose the survivors of our American species, and seriously raises the question whether, all told, there are enough left to recruit and perpetuate the race, even with the best of protection from incidental dangers and with the exchanges of blood which should be made at least every two years, between herds as distinct in strain as may be had.

In the second place, there should be an end of crossing the buffalo with domestic races; curiosity in this direction has had its fullest claim gratified. It has been pretty well shown that no commercial gain has followed upon the many experiments which have been made—a certain and lamentable result of which, however, has been the placing of a more or less concealed hybrid strain in very many of the buffalo now scattered through the country.

ARTHUR ERWIN BROWN.

Another Singing Mouse.

MR. HOUGH wrote a short time ago about the singing mouse, and I see that another contributor acknowledges having heard the mysterious little songster. I also am led to confess to a similar experience, though I have hestitated about mentioning the fact. I remember it very distinctly, when I was quite a small boy at home, how night after night we heard the strange sound, and finally we caught the little fellow in a live trap and kept him for several weeks. He seemed, as I now recollect, to have had a little scale of four or five notes that he ran up and down for a couple of minutes at a time, and his captivity apparently had no bad effect on his musical ability; but we boys fed him injudiciously and he died.

W. R. HALL.

Porcupine in New York.

NEW YORK STATE MUSEUM, Albany, N. Y., July 12.—*Editor Forest and Stream:* On Saturday last a full-grown porcupine was killed at McKownville, just outside the city limits. As it is the first specimen from New York State which has been brought to my attention during the past seven years, I have thought it might be of interest to your readers to note the fact.

F. J. H. MERRIL, Director.

The Sportsman Tourist.

THE CHESTNUT RIDGE AND ALONG ITS FOOT.—III.

IN earlier times, before the encroachments of civilization had destroyed or driven away the fish, the Conemaugh teemed with such species as seem to be native to the streams of western Pennsylvania. Angling was then always in season, and there was no week day, when the river was not frozen over, that men were not to be seen at favorite spots trolling the waters in search of their scaly inhabitants. In front of my native village was a broad slackwater, which extended a mile in length, being a part of the navigation system which had been constructed by the State; and just below the town was a dam. A deep pool which lay immediately below this dam was a famous fishing ground, and particularly in time of a moderate freshet every accessible inch around the edge of this pool was occupied with fishing poles and dip-nets as thick as the "quills upon the fretful porcupine." There were weeks when, I think, tons of fish must have been carried away from the "breast of the dam."

Another favorite and famous pool was about a quarter of a mile below, and this was called Jack Reed's Hole. Scores of boys who would have been at a loss to give the geographical position of Hudson's Bay or Long Island Sound could locate Jack Reed's Hole to a nicety. It was a calm, deep eddy with a riffle of stones at the lower side, and seemed to be full of fish. I well remember the first fish ever I caught was at Jack Reed's Hole. I went down there one summer afternoon, just after a warm shower, in company with my father. When we get there we found other people there as usual. On the way down I picked up a discarded hoop pole in the street. To this I tied a piece of string which I happened to have in my pocket—what boy ever happened to be without a piece of string in his pocket? and to this I tied a bent pin for a hook. This was my fishing outfit. Upon this hook I impaled an unhappy worm, and, more playing than fishing, I was whipping the hook into the water, when all at once, to my amazement and almost consternation, I drew out a fine large fish, a sucker (*Catostomus communis*), a fish the eating of which is, as Dr. Jackson remarks, "not much unlike the mastication of a pincushion." Anyhow, that was for me the greatest fish in the world, and I doubt if the surprise of the creature when it discovered itself suddenly leveled on the dry sand was any greater than mine to see it there. I presume the fish weighed a couple of pounds; to my excited imagination it was a 15 pounder at least. What added to the great triumph of the occasion was that my father, with his elegant bamboo rod, his sea-grass line, his fine barbed hook, and his shining brass reel, did not so much as get "a bite." Great was my glory as I entered the town with my wonderful fish. Good reason have I to remember Jack Reed's Hole.

Some men, says Shakespeare, are born great, some achieve greatness, and some have greatness thrust upon them. Jack Reed figures among the latter. While millions of other men, his cotemporaries, have passed away and their names are forgotten, he, perhaps these fifty years in his grave, seems destined to enjoy at least a local immortality. Who Jack Reed was I have never been able to find out. I believe he was a fisherman who frequented the shores of the Conemaugh, and to whom this pool, that has for threescore years borne his name, was a favorite spot. Fifty years ago there were to be seen the ruins of a cabin in a small field on the plateau above the river bank at this point. I imagine this to have been the home of this man. It must have been a residence in the first quarter of the present century; I know, as a matter of fact, that fifty years ago Jack Reed was as much of a myth as he is to-day; as early as the year 1840 the pool in question was called by the name it has ever since borne, but Jack Reed himself had already vanished from the scene and left no other memorial of himself behind. I wonder if in that land of shadows into which he has long since fled, he knows, and if it is any gratification to him to know, that his name is still uttered in the old familiar places, and in connection with the quiet river eddy into which he had so often cast the alluring bait.

An animal formerly found in great abundance in the larger streams of western Pennsylvania, though very rarely on the eastern side of the Alleghenies, is the large aquatic salamander, or water newt, generally called the alligator. It was very abundant in the Conemaugh, and was the special pest of the angler. Its scientific name is the *Protonopsis gigantea*. Dr. Jackson, whose valuable work "The Mountain," I mentioned in a former paper, and who is to be regarded as our Pennsylvanian Thoreau, thus describes the creature in his unique way: "This enormous newt, which sometimes attains to 30in. or nearly 3ft., lives entirely in the water, eating fish, worms, shell-fish, etc. It is one of the most revolting creatures in existence, resembling Milton's sin; its sprawling, flabby, slimy, and almost amorphic outlines suggesting some 'fortuitous concourse of atoms' presided over by the genius of deformity and disgust, rather than the clearly demarked structure of a regularly-organized animal. The euphonious name of hellbender, which is commonly applied to this newt, seems exceedingly appropriate. It is constantly seizing the boy-angler's hook, and when landed with gaping mouth and wicked gestures, is generally left in the quiet possession of rod, line, hook and all, the terror-stricken lad retreating with precipitation and fear from what he calls the 'poison alligator.' The *Protonopsis* follows the streams of the western side of the mountain as high up as there are any considerable volumes of water. It is almost confined to Western waters; abounding in streams which contain the soft-shelled turtles, and seeming, like that animal, to have an original natural affinity for that region." Of this ugly customer, I helped to slay thirty individuals one morning, that were found on a night line in the Allegheny. I would say that not a fish was on the line. The Doctor adds, that the Allegheny mountain range "being the eastern line of the great central North American zoölogical region, would seem to exhibit some actual limits to the general diffusion of some of the reptiles and fishes at least."

"Oh, the gallant fisher's life,
It is the best of any!
'Tis full of pleasure, void of strife,
And 'tis beloved by many."

Thus sings Piscator in "Walton," whereupon good Venator speaks up: "Well sung, master; this day's fortune and pleasure, and this night's company and song, do all make me more and more in love with angling." Innocent recreation, healthy thoughts, the sound mind in the sound body so desirable, constitute in part the reward of the angler. The man who lived longest of all moderns—Henry Jenkins, who died at 169—was a fisherman to the last, and when above 100 years old he was "able to swim across rapid rivers." He was a Yorkshireman, and, possibly, of kin to that other old Yorkshire sportsman who, when he was about to die, on being asked by the clergyman if he had any confession to make, or if there was anything he wished to say that would give his mind relief, after some little deliberation, feebly replied that "he believed, if he had his life to live over again, he would fish less with flies and more with bait."

Our game laws have been enacted none too soon. In earlier times, as I well recollect, an unceasing war of extermination was carried on against the finny tribe; and hook, gun, sledgehammer, gigging-fork, seine, dip-net, set-net, sweep-net, night-line, and every other possible engine of destruction was employed against the poor victim whose only fault was that he was a fish. The modern pot-hunter and bird-butcher had his rival and counterpart in the fish fiend of earlier years. Of all these methods of piscatory warfare, the most picturesque was gigging fish by the light of a torch. On a different scale, it was the same thing in principle as the salmon spearing described in "Redgauntlet." The giggers, threading their way through the shallow stream, each holding a blazing torch above his head and poising in his right hand the long-shafted fish spear, called a gig, explored the waters carefully as they proceeded, and ever and anon the swiftly descending trident dispatched another unsuspecting victim. This species of sport was carried on only after nightfall. A more cruel and destructive method was that of "sledging," which consisted in thumping the large stones that lay along in the water with a heavy hammer, thus stunning and killing whatever creatures might be secreted below. So far as I know, these methods of fish killing, which are to be classed in point of sportmanship with the hounding and clubbing to death of deer in the water, are no longer practiced in civilized communities.

To the practical man the question may occur, What is the use of these old-world stories and discussions? Why not let the dead bury the dead? There is no great use in it at all This, I think, must be admitted; and yet there is a class of persons, especially as they decline toward the sere and yellow leaf, to whom memory is everything, and the reminiscences of earlier years are more precious than the stock quotations and political diatribes of the present hour.

"Life's vain delusions are gone by,
Its idle hopes are o'er;
Yet age remembers with a sigh
The days that are no more."

T. J. CHAPMAN.

PITTSBURG, Pa.

Advertisement, July 5, 1660.

☞ A Smooth Black Dog, less than a Greyhound, with white under his breast, Belonging to the King's Majesty, was taken from Whitehall, the eighteenth day of this instant, June, or thereabouts. If any one can give notice to John Ellis, one of his Majesties servants, or to His Majesties Back Stairs, shall be well rewarded for their labor.

A Few Days Later.

☞ We must call upon you again for a Black Dog, between a Greyhound and a Spaniel, no white about him—onely a streak on his Breast, and Tayl a little bobbed. It is His Majesties own Dog, and doubtless was stolen, for the Dog was not born or bred in England, and would never forsake his master. Whosoever findes him, may acquaint any at Whitehall, for the Dog was better known at Court than those who stole him. Will they never leave robbing his Majesty? Must he not keep a Dog? This Dog's place (though better than some imagine) is the only place which nobody offers to beg.

PACIFIC ISLANDS.

IV.—Juan Fernandez.

WHO has not read, or at least heard of, Robinson Crusoe? Among my childhood memories none are more distinct than the pleasant hours I spent with Robinson Crusoe and his man Friday. And so, when in 1860 we neared the island of Juan Fernandez, I seemed to feel that I was now on the borders of Wonderland.

I formed one of the crew of a small bark which, several months before, had left the States, drifted down across the line, floundered around Cape Horn, and was now headed north with the whole Pacific before her.

We were a motley crew: Yankee, English, Irish, Scotch, etc., with Portuguese and Kanaka thrown in to make weight. Among us were some who were simply sailors, who were sailing for their bread and butter, and were no better nor worse than the majority of their class. One or two there were who had left their country for their country's good. Some who had adopted the life for a life's work, and some who were there because they had to go somewhere and had little or no choice. But we were a fair crew, as they go, with a fair share of sentiment, some education and plenty of common sense.

Among us were two Dutchmen. Dutchy was short, slight and quarrelsome. Big John was broad of face and immense of body and limbs, with an ever-happy smile on his broad face. Neither were of much account as sailors, but as sources of amusement they were invaluable. Big John would sometimes get melancholy and mope for an hour or two by himself; at such times it was always best to leave him alone. As we neared Juan his "thinking spells" as he called them, were more frequent, and before we left the island we knew the reason.

But while I am telling of the crew, we have lifted the island above the horizon and are making preparations to come to anchor. The island shows a bold front of rock generally bare and ragged, but with here and there little patches of green. We sweep along close to some high and almost perpendicular bluffs, and see, looking like flies upon a wall, several goats scrambling along the face of the rock, where it appears impossible for anything to get a foothold. Soon we open out the harbor, and some houses are seen near the water, where there is a small space of open land, with narrow ravines running back into the hills.

One after another the sails are clewed up, and as we scramble aloft and out on the yards, all eyes are turned languidly to the patches of bright green turf which look so inviting after our long and tedious tumble on blue water.

It was Saturday when we dropped our anchor. Our purpose was wood and water; but nothing was done except to snug the ship that day. On the morrow all hands were to go ashore. Do you happen to know what that means to men who have been months off soundings?

We were full of anticipations for to-morrow; how we eyed that rocky shore; how we ransacked our memories to recall the story of Robinson Crusoe (we all believed it) and believed we were looking at the lonely island where he spent so many years.

Would that we could carry the faith of childhood through life. We were all children, to be sure. Many of us were well along toward the meridian, but sailors are all children.

To-morrow came at last, and, like a crowd of school-boys, we manned the boat and pulled ashore. We found a rocky beach; above and nearby was a small plateau of a few acres, occupied by the houses of the people. Leading back from the houses was a rude path, which, following a ravine, ran on and out of sight up the mountain.

On the left of the village lay the ruins of an old fort. Beyond, still to the left, were a number of oven-like caves, cut out of the rock, and said to have been prisons for the convicts when Juan was a penal colony.

Several rusty cannon were lying half buried in the ground. Some round shot and other relics were speculated over, and we had exhausted the resources of that place. What next? for we must have some fun. Some of the natives mentioned horses; that was enough, for, though a sailor is the poorest horseman in the world, he is always ready to ride.

Then began a hullabaloo. The horses were half wild ponies, and it took an immense amount of yelling, running and shouting before enough animals were collected for our party. And then the real fun began. The ponies were wild, and determined not to be mounted. Four or five natives would gather around a pony, while one man held him with a lasso; after several rushes they would manage to get hold, some around the neck, some of the mane, while one would twist the rope, trying to choke the poor brute into submission. All this time Jack would be dancing about trying to take command of his new craft. Many got on, but few stayed there; for, while a man may be able to jockey a yardarm in a gale of wind, it's another thing to ride a wild horse.

After mounting, the real trouble began; every one of those disreputable horses seemed bound to go every way but the right one. We wanted to go up the mountain; they wanted to go for the beach, into the bushes and up the sides of perpendicular rocks; but by perseverance and the liberal use of the whip some few of us managed to get a mile or so up the mountain. Our ride down was easy enough. All one had to do was to hold on; the horses seemed to be crazy to get back to the beach.

It was fun alive to see a sailor hanging on by tooth and nail, while the half wild pony came tearing down the steep mountain path. Through bushes, over rocks and gulfs, hatless, with hair streaming in the wind, Jack came down in two or three minutes, where it had taken an hour to climb.

When it came time to go on board the ship we mustered at the landing—all but Big John. No one could remember where they had seen him last. One thing only was certain; he was not there. We called, we waited, but he never came, and when we left the island we left without Big John.

For a week or more we were busy getting wood and water. The wood we cut and backed to the boats. The water was an easier job. We towed the casks ashore, rolled them one by one under a wooden spout leading from the spring, and when all were full towed them back and hoisted in and stowed down.

Every day our boat's crew would go fishing. Fish were plentiful, and no time did we come home empty-handed.

One day we went for crawfish. We made some nets. The base of the net was a large hoop some 4ft. in diameter; over this we worked rope yarn in meshes of 2in. or so. Then slinging the net over the side, we ballasted it with rock, baited it with fish, and slacked away till the net was resting on the bottom. Then when the crawfish were gathered for the bait, it was proposed to pull up the net very gently until it was at the top of the water and flop the crawfish into the

boat. The theory was all right, but in practice it didn't work worth a cent.

For every crawfish that climbed on to our net there would be three or four conger eels from 3 to 6ft. long. We got one big eel into the boat. He was about 5ft. long and as big as a man's leg, and when he decided to take charge of the boat, every man promptly got overboard and his majesty had possession. Finally, one man reached over the gunwale with a hatchet and chopped the monster into two pieces, and we took possession of the boat once more. But we didn't fish for crawfish with a net any more.

We had a Kanaka in the boat who said he could catch crawfish. Off went his clothes, and balancing himself on the gunwale he watched for a fish. The water was about 12ft. deep and very clear. Soon he made a plunge, and in a few seconds came to the surface with a large crawfish. The crawfish here is about the size of a lobster and shaped like one, but without the large claws. Upon seeing the Kanaka come up with his prize, Dick, a Massachusetts Yankee, said he could do as well; so over he went, and between the two we had crawfish enough for all hands.

One day the mate went goat hunting; he brought home two, they looked very good, but when cooked were too strong to be eaten. We afterward captured one alive which we made a pet of for a year, and finally left at Chatham Island (one of the Galipagos) with a copper collar on his neck, containing the ship's name.

Altogether we passed the time very pleasantly, fishing along the shore, hunting goats in the hills, or tramping for sandal wood on the mountains. Peaches and a small wild tomato were the only fruit we were able to get, but of fresh eggs, chickens and beef we had our fill. And when we filled our topsail and turned from the land, we all said "Good-bye, Big John," for he had not come back.

TARPON.

ALONG THE POTOMAC.—V.

IN one of my communications I promised to give a detailed description in vindication of our action in disposing of certain corn thieves. The source of the trouble was as follows: Dr. Smith, the proprietor of the plantation, embracing the pocoson within its bounds, had a field of about 200 acres planted in corn, in fine condition, promising an abundant yield, as it was perfectly developed in growth and undergoing the process of maturing under the rays of the autumn sun, when the marauders entered it night after night, destroying great quantities, thereby blasting the expectations of the proprietor. Several attempts had been made to capture, or prevent the nocturnal visitors from committing further depredations; but all efforts had been ineffectual. The destruction was so great it had become a serious matter with the proprietor in reference to the food supply. For corn was the staple crop and was indispensable for the horses, cattle and hogs. Then there were the slaves, fifty to seventy-five, on this plantation, for whom the proprietor had to provide food and clothing. This was a great responsibility resting upon the slaveholders, consequently they were vitally interested in the protection of their crops. Consequently we had *carte blanche* to hunt, gun and fish, when and where one wished.

We frequently availed of the privilege to indulge in night hunting, as well as other field sports, and had made two or three of such hunts, in that identical field, which were complete failures, although we found ample evidence of the recent presence of the marauders on each occasion of our visits. Such a repetition of failures we had never before experienced, and concluded to visit the locality in daylight and discover, if possible, the cause of our failure, and to adopt a plan of campaign with the view of retrieving our reputation as huntsmen. Therefore, my two usual companions, Nathan Kell and Joseph Elliott and myself, proceeded to investigate. We crossed the creek at our usual place and followed its banks about one mile, which brought us to the cornfield. It extended from the banks of the river running parallel with the creek on one side, and the pocoson on the other, to a wooded ridge about a half mile distant. On the side of the field next to the pocoson there was a vacant strip of land about 100yds. in width, too wet for cultivation, across which the marauders crossed to gain access to the object of their plundering operations. Therefore, we found that by approaching from the direction we invariably used, we must necessarily enter the field from the side which placed the objects of the hunt between us and their place of concealment with an open line of retreat. Therefore, the cause of our previous failures were obvious, and we determined to avoid in future failure from similar causes.

Before leaving the plantation we saw Lewis, one of the colored plantation hands, who was considered an authority in woodcraft by all young aspirants for the honors of the chase. Lewis had often accompanied us on nocturnal hunts, and after telling him of our previous experience, we wished to get his opinion on the case, which we considered of the greatest importance. He said: "I heerd dem dogs ebery time you was in dat cornfele, but neber heerd 'em tree. I knowed dem dogs was fooled. You kan't ketch dem varmints widout you git 'twe'n dem and dere hollers were da sleep all day wid one eye open. Dat's my 'pinion." We then suggested to cross the creek on the following night in a boat with our dogs, and enter the field from the strip of wet ground separating the cornfield from the swamp containing the hollow trees. "Dat 'il do," said Lewis, "and ile be dare wid you."

According to agreement we embarked with our three dogs, and in due time the bow of our boat touched the sandy beach at the desired point; the river end of the open strip alluded to, where we found Lewis with his dog quietly awaiting us. His dog was secured with a stout cord tied around the neck, then brought forward and a half-hitch taken around the jaws; and Lewis peremptorily insisted that ours must be secured in the same manner, to prevent premature tongueing before we reached the point he considered absolutely essential, to frustrate the exceedingly vigilant and crafty objects of our quest. After securing our dogs satisfactory to Lewis, who assumed the position of leader (to which we willingly assented), and after receiving a peremptory order to keep quiet, we set out on the war path in Indian file, Lewis leading. After proceeding a considerable distance he directed us to halt and keep quiet until we heard his dog tongueing, then to let ours loose. He then vanished through the silent gloom as stealthily as an Indian. We remained as quiet as possible under the circumstances, as the dogs were tugging and straining to relieve themselves from restraint, as they evidently scented the game, which, doubtless, had passed over the ground where we stood within a few hours. While exerting ourselves to the utmost to restrain their frantic efforts, we heard the welcome signal notes from Dandy, the dog of Lewis. It required but a few seconds to release ours, whose music joined the chorus.

Above the din and turmoil of the unrelenting notes of the dogs in full cry, the stentorian voice of Lewis could be heard encouraging the pursuit:

"W'ere is you, Dandy? Let me hyar fum you. Dat's right, speak to um."

In addition to the clamor and turmoil inseparable from the chase, all those gloomy, inharmonious birds of night aroused from their lethargy and joined the chorus with their blood-curdling, discordant notes. Notwithstanding the weird and hideous sounds which filled the surrounding gloom, we pursued the chase oblivious to all other objects. The game made desperate efforts to escape, but they were cut off from their usual route to their hollow trees; and, as if knowing that it was inevitable death to take refuge in a tree without a cavity, they attempted stratagem, by running in small streams to break the trail. But their pursuers were too close, and so their last and desperate resort was to take refuge in a tree, with the dogs dangerously close to their hindquarters as they ascended. This was the tree spoken of in my article, and the ring-tailed marauders were the ones that were lynched. They made a judicious selection, for it was a difficult tree to climb. I was generally the climber on these nocturnal hunts, but on this occasion I was disabled during the chase; in running, a large thorn pierced the side of my foot through a thin part of my shoe, therefore I was the last one to arrive. As I limped up to the tree, around which the dogs were frantic, Lewis remarked, "Dere's more dan one coon up dat tree; dere's more den two; my dog had one a-gwyin', and w'en your dogs cum up dere, every one had one wid him. Sum of their obercotes will be hanging on the end of my cabin 'fore to-morro', mine I tell y'u."

In the meantime Nathan Kell was climbing the tree, while I was performing the duties of astronomer, or astrologer of the hunt. No doubt the idea of astronomer to a coon hunt will be read with a smile of derision. Nevertheless, it's a position which frequently prevents the escape of the game. A raccoon seldom hides in a crotch, but goes to the extreme end of a branch, and manages, with the assistance of the leaves, to make it difficult to spot him. Then the above functionary walks around outside the spreading limbs of the tree intently observing its upper branches. If he discovers a suspicious clump of leaves or a dark spot, he obtains a position which places the object of his suspicion in the line of his vision and a star in the firmament, thereby he can nearly always ascertain if his suspicions are correct.

After the climber had reached near the top of the tree, he announced the discovery of one. Lewis immediately took hold of his dog, and after ascertaining upon which side to expect him, said, "Shake him down." In a few moments the vibration of the branch sent him plunging through the outer branches. Dandy was there to receive him when he touched terra firma. They all joined in the fray, and as they were specially trained coon dogs, he was disposed of in short order. The climber shouted, "Look out for another," "Let her come." It came, crushing down very close to the site of its comrade's disaster. This fellow was an immense animal for that species, and held the dogs at bay a considerable time; and when they did attack he made a terrible fight, and the contest would have been doubtful if the dogs had not been so thoroughly trained; but they forced him to succumb. In a short time the climber announced that he was ready to present another gladiator to contest for the honors of the arena. In due time he came, saw, was vanquished. The climber, after a careful search without discovering any more, started down; upon reaching one of the lower limbs he noticed a protuberance, which he thought was a slight deformity on one of the large limbs, but upon close examination it proved to be another member (perhaps a director) of the ring-tail coon league. He also descended, and after the usual preliminaries on such occasions, was placed by the side of his comrades at the foot of the tree.

We considered it a successful hunt, though it was not a propitious night for coons—not for those four at least. As the gray streaks of early morn appeared on the eastern horizon we set out on our return, bearing our trophies, like old Atlas, on our backs.

There is a strange fascination attached to night hunting, and yet if its features are analyzed, we fail to see its attractions. The huntsman cannot see the beauties around his gloomy pathway; the notes of the screeching owl are not harmonious to his ear; yet the mind will become intensely eager when one hears the peculiar notes from his dog, plainly indicating that the game is treed. Therefore, the only solution is that inherent principle in man to overcome the cunning of all other animals.

Before transferring my thoughts to other localities I propose to impart my recollection of the status occupied by our companion, Lewis, in this hunt, and his comrades in bondage on this plantation. There were fifty or sixty. The field hands occupied cabins at what was called the quarters, which consisted of twelve or fifteen log cabins, located near the center of the plantation. Each cabin was inclosed with a paling fence split from the woods, within which there was ample ground to cultivate such vegetables as they wished. The head of each family was also permitted to raise two hogs, and fatten them with corn from the general crop, and dispose of them as they pleased; as their master furnished their rations, they frequently sold the hogs to get surplus articles of dress. Don't smile. Every one knows they were fond of gewgaws, particularly bandannas. I suppose if I should say they lived in epicurean style, I would be ridiculed out of court, yet such was the case on this plantation. There was nothing to prevent it—with an abundance of water-fowl of all kinds, from the canvasback down, myriads of fish of the finest quality—shad, rock, perch and others. But the toothsome catfish was their delight. The marsh furnished them an occasional change to gratify their palate; the snapper was a favorite dish, while rail could be taken with so little trouble (by knocking them down with a paddle at night(that their taste would become monotonous. When their taste became palled they could readily change for the productions of the field and forest, and as they were skillful in trapping, they could easily supply their larder with partridges, pheasants and an occasional wild turkey, as they were in this vicinity also.

JAMES NORRIS.

SHEEP AND SNOWSHOES.—V.

A Winter Hunt on the Summit of the Rockies.

Rifle and Snowshoes.

IT snowed at or near our camp every day during our stay in the mountains, and nearly always more snow fell at night than during the daytime. It was no surprise, therefore, on the morning of our first hunt for sheep to find that the woods were full of a deep, soft snow, which made shoeing a most laborious affair. The morning broke bright and dazzling, so that we were forced to wear the smoked glasses for the protection of our eyes most of the time, even while we were in the shadow of the forest, the reflection from the snow being intensely trying to the eyes.

We had about three or four miles to go through the woods skirting the foot of the high ridges before we got up to the foot of the big mountain where O-to-kò-mi had seen his sheep. Part of this was over a trail broken by Schultz the day before over in that direction, but this only ran a little over a mile, and then we were adrift in the big snow. At each step one would sink down to the knees in spite of the shoes. The snow would pile in on the shoe, so that after a while the muscles of even the hardiest would begin to weary. Schultz and Jackson started on ahead, then O-to-kò-mi took a turn at it for a time, McChesney and I being spared as long as possible. It is not such very hard work to snowshoe, even in the worst of snow, when one is fourth or even third on the trail, the trail-breakers having the real work to do. Alternating as best we could, we were all tired when we got to the foot of our mountain, along about 9 o'clock or so in the morning. The weather was still bright, for a wonder, and our heavy clothing, which had seemed too light when we left the lodge, now was oppressively warm. It is a continual error on the part of most winter hunters to put on too much clothing. As we became more and more used to our work we dressed more and more lightly, of course depending upon being constantly in motion until we got back to the camp. One chills out very quickly as soon as he stops the violent exercise of climbing; and on top of the mountain, where the wind gets a fair sweep over the rocks and icy slopes, the temperature is much lower than it is down in the forest.

When we got to the edge of our mountain, O-to-kò-mi called a halt, and there was a long consultation among our leaders in the Piegan tongue. The use of the field glasses showed no sheep trails on the ground where they had been seen the day previous, and O-to-kò-mi said the sheep had gone further back into the mountains, so that it would take a long climb to get to them. He also said that our party was too large for a successful hunt, and that we would have to divide. There were six of us in all, and we finally concluded that O-to-kò-mi, McChesney and hunter Powell should go together, taking the route pointed out by O-to-kò-mi. We considered that this was the surest chance to get a sheep, and, indeed, considered it perfectly certain that McChesney would kill a sheep that day. The latter had along his small camera, in order to take a picture of any game he might get; and the other party had my large camera, which we had also brought, Billy Jackson having this slung over his back as well as his rifle. The other party had three rifles.

After we left the others, Billy, Schultz and I made off to the left from them, upon the other side of the mountain from them, or rather upon the further side of a second mountain, which would take us far from their hunting ground. We knew that we were making our first exploration, and did not expect to find anything on that part of the country, though we were continually listening for the sounds of shots behind us. We crossed some choppy little hills and *coulees* at the foot of the big mountain we intended to climb, working all the time as high up as we could. We noted a number of trails on the mountain-side above us, which we took to be made by a mountain lion. The animal had been traveling all over the country up there, and we concluded it must have driven the sheep away from that country.

I must say, in order to describe the nature of the place we were hunting over, that at the foot of the mountains the ravines ran up sharp and steep, covered with heavy pine timber. Still further below, this timber became very dense and swampy. A little above us, the timber thinned out, and there was a great bare strip of wind-swept snow, with no cover of any kind showing upon its expanse. Yet a little higher above this, there was a rim of bare rock, too smooth for the snow to take hold upon. This wall rock was kept bare by the wind. From the wall rock the mountain ran on up and back boldly, with no more snow upon its summit except where it caught in eddies and hollows and depressions in the summit. Once in a while a gnarled cedar showed above us on the rocks, but no other growth broke the expanse of windy and icy waste that lay above us, and beyond the band of snow which ran up the edge of the naked wall rock. When we started we were low down in the timber. Then after a hard climb in the shifting, yielding, soft snow, we began to get into thinner timber, and finally came out to the edge of the naked strip of snow. Here the snow was hard under foot, and we began to climb up more rapidly. Always the bighorn of the Rockies must be hunted upon the tops of the mountains, even in the winter time, as it seemed, for though at that season they feed low down toward the timber, the least alarm sends them as high up as they can get. We figured that thirteen rifle shots and a mountain lion had not tended to soothe the nature of any sheep near us on the day before, so we kept on climbing as high as we could, all the time circling around the mountain as we went on.

The Bighorn in the Snow.

We were just at the edge of a last little strip of timber, around the shoulder of the mountain where we had left our friends, perhaps two miles from where we left them and about six miles from camp, when all at once I saw Schultz, who was ahead, suddenly squat down and come rapidly back on the trail.

"Shoot! shoot!" he whispered hoarsely and with excitement. "Hurry up!"

At that instant I saw the reason for his excitement. There, on the mountain side above us and before us, on this same strip of naked snow which I have mentioned, was a big, grayish white object, with an exaggerated head whose horns seemed to have been done up in curl papers. It was the first mountain sheep I had ever seen, but it needed no second look. It was a ram, a good head; I felt that at the first look. Also it was an able-bodied ram; for

it was slipping and gliding swiftly forward and upward over the open space of snow, and evidently making for the bare rocks above. Its speed was wonderful in view of the difficulties it was meeting; for the snow was 2ft. deep at the least where it was traveling, and underlaid with a glare of solid ice.

I often hear persons describe a battle or a dog fight or something else of interest, and wonder at the inaccuracy which is apparent in such conflicting reports. Yet it is not real y wonderful at all, for in point of fact no man can describe a battle or even a dog fight, since he cannot see it all. I am not sure that I saw all that happened in the moments immediately following our sight of the sheep, but I will try to tell how it seemed exactly as it appeared to me, so that it may be known how it feels to be in a sheep fight.

In the first place, I was not excited, strange as that may seem. I don't believe one is so apt to be excited in shooting at big game as he is in shooting small game. A measly little quail or prairie chicken, of which I suppose I have shot perhaps thousands, can scare all my senses out of me when it flies up out of the grass near my feet, but big game doesn't rattle a fellow so much until the affair is all over. Perhaps this sheep was so far away it could not rattle anyone to look at it. I don't know. All I know is that it all seemed to me precisely like a dream, in which I could see myself acting as a third person. I can see it all now, and it appears like a vitascope picture, the incidents of it flying by upon a continuous ribbon.

Altogether in a dream, I saw Schultz throw himself down in the snow and heard his hurried call, "250yds.!" I knew he was a good judge of distance and was glad to hear his dictum on this. What became of Billy Jackson I never knew at the time. It seems he had fallen over his shoe and was floundering in the snow in a little hole he had stepped into. Schultz was groaning all the time, "Shoot! shoot! Why don't you shoot?"

The why on my part was because I had to get my rifle out of the case. In this sort of hunting one is under the snow as much as he is above it, and a rifle must be carefully covered, or it will be rendered worthless at the time it is needed. My little rifle—for I had taken the .30-30 for a trial this morning—was in a cloth case, which had the bottom tied with a string. This I jerked off. Then there was a cleaning string, with the wiper pulled fast into the muzzle of the rifle in order to keep out the snow—a most wise precaution, but one taking time to undo. This string I also jerked out. Then I pulled off my smoked glasses and put them in my pocket. All this time I was acting in a dream, but as swiftly as I could, all the time, too, having my eye fixed on that strange, gray, flitting creature far away up on the mountain. In the dream I stepped forward beyond Schultz, and, throwing the cartridge into the chamber, raised the rifle to fire. The sheep was now nearing the rocks and Schultz was groaning behind me in great anguish. No Billy Jackson anywhere. I raised the rifle, but could not see through the sights! The Lyman rear sight was full of snow!

I made a quick grab at the smaller aperture, stop trying to free the sight with a wipe, for I knew it was no time to be picking out the snow from the sight with any pointed substance. I still could not see through it, but—in the dream—I raised the rifle to the best line I could guess at and fired, never seeing through the rear sight at all. It is unknown to mortal man where that bullet went. I watched anxiously for the sign where it hit—as that is the only way I can shoot long distance shots, it making no difference what the distance is in yards if one can only see where his shots are going in fact Again—in the dream—I fired, this time carefully and deliberately, but again I failed to see where the bullet struck. Schultz was groaning very badly now. Then there was a ringing shot at my right ear, and I knew Billy had got into action. I don't know whether I told him to shoot or not, but maybe I did, as I was having trouble with the sights. A third shot I fired with the Lyman in that condition, and then Billy must have fired again. Then I turned down the Lyman on the tang, and was back to the open sights of my youth. I don't know who fired next, but some time along in there, it seemed now half an hour since the action began, I heard Schultz exclaim, "That shot went low!" I thought the sheep must now be at least 300yds. away, but I had no time to turn up the second leaf of my open sights. I simply drew full and tried to find where the balls were falling. The others of our party, upon the other side of the mountain, said they heard nine shots, but I don't know whether I fired five or six shots, or whether Billy fired three or four. My impression is that I fired five shots, three with the Lyman and two with the open sights, all in the dream, hurriedly, nervously, but apparently with coolness and without excitement, because it was not myself, but some one else who was doing it. I was conscious at one time that Billy was near me, for I saw his rifle barrel sticking up at an angle, and I saw, too, that he was holding his fire, as if anxious not to shoot if he thought there was to be any show of my killing the sheep. Yet three times, as the keen cracks of the small-bores rang on the air, and as the sheep stumbled and seemed near to falling, Billy called out, "That knocked him!" and apparently expected to see him drop at any moment. I thought we were hitting the sheep, but hitting it too low and too far back to stop it. In the dream I felt that I must get up a little higher.

The sheep, drawn on and up upon that invisible ribbon, flitted along until it was just at the edge of the wall rock, and near, as it must have seemed to it, to that safety it had sought when it first winded us as we approached along the edge of the timber in which it was feeding. For an instant, a glorious picture, it stood, apparently weak from its wounds and almost ready to drop, directly upon the top of a huge boulder, at the foot of a scraggy cedar tree which grew at the base of the wall rock. The nitro rifles left no smoke, and I doubt if it had seen us at all, hid as we were at the edge of the piece of woods. It was a good mark, and barely moving. I steadied down the rifle carefully, got the line perfectly, drew fine on the distant gray object, and then raised the sight until I could see the whole of the fore sight and part of the muzzle of the gun. At the crack of rifle that time, which sounded far away and not pertinent, there happened a very strange thing. That great gray creature up on the rock, so far away, so strong, so full of life and skill and cunning, and so seeming entirely outside of any connection whatever with us—at the insignificant sound of the little load, this wild thing dropped flat, fell at once, prone, as though struck from above with some mighty hammer unseen in the dream! How did that happen? I heard myself ask, in the dream. But a whoop sounded in my ear. Schultz was shaking my hand. Billy was grinning happily. What was it about? In this dream, then, I, had this man whom I had been watching, had I really killed a sheep? Had I come out here into these Rocky Mountains, in the middle of winter, and on my first day out after sheep, within a few miles of the camp and in a few hours' journeying, killed the first bighorn I had ever seen, moreover a good one? No, no. Impossible. These men were crazy. It was still in a dream!

The Tragedy.

But far up on the rocks a little tragedy was going on. With a slow, heavy movement, as with its last strength, the great animal heaved itself up for an instant. It turned over upon its side. Then, slipping from the face of the rock which had supported it, it began to slide, to slip, and then to roll down the face of the mountain. Slowly, over and over, with the hindlegs sticking stiffly straight out behind and the forelegs equally straight out in front, it rolled down and down, until it began to look very much larger than it had. Saving us a half hour's climb over the icy snow, it rolled down, more than 200yds., to a place where the snow was deep and soft, and where we soon met it, as we panted upward eagerly on our snowshoes. We reached the noble creature, which, a game animal to the last, uttered no sound as it moved its head feebly. We raised up the great curving, crescent horns, and saw the coveted trophy of the mountains actually in possession. Then, I think, I got somewhat excited, and babbled many things of which I have no recollection. The dream then was past.

"You've got him, old man," said Schultz, and Billy still grinned amiably. All at once I recalled that maybe it wasn't my sheep after all, or at least that there might be a cloud on my title to him. "I guess we'd better say *we* got him, Billy," said I; but Billy stoutly protested he had never touched it. We turned the sheep over and looked for the first bullet holes, expecting to see the sheep cut to pieces about the legs. But never a bullet hole did we find but the one. My last shot had struck the ram in the point of the shoulder as he stood quartering and facing us, and the soft-nosed bullet smashed the shoulder to pieces, then ranging back, and finally stopping in the middle of the backbone. This at once paralyzed the hindlegs, and of course dropped the animal where it stood. The stumbling which we had noticed in its gait as we were firing at it had been simply the slipping of the animal on the ice underneath the snow—although we have been taught to believe that the mountain sheep never slips, no matter what its footing.

When we got to our sheep as it lay in the deep snow near to the timber line, we were in a position to better see the distance at which it had been shot. The side view made this distance seem much longer, and indeed it seemed incredible that a tame man should have been able to stop this great, wild, powerful creature by an agency no more formidable than this little fine-talking rifle with the soprano voice. As nearly as we could tell, the distance at which the sheep was actually killed was somewhat above 300yds, probably 325 or over. At so great a distance more game is missed than is killed, and I hardly think I should have hit the sheep with my old rifle. To be sure, only one hit out of five shots for one man and four for another is not a very great record; but two of my shots were useless from the condition of the sights, and Billy said he shot when he was half up to his neck and struggling in the snow. Actual shooting on a winter mountain side at big game is different from shooting on a target range, or perhaps somewhat different sometimes from shooting by a fireside or in print. Well, anyhow, we got him.

A Good Head.

One of the swift changes of the mountains came on just as we were toiling up to the spot where our game lay. The sun disappeared in a gray blanket of cloud, and the wind swept pitilessly sharp and cold over the exposed mountain side. We regretted this, as we wanted to make some pictures of our sheep, which we feared would not be so good in the fainter light. We made a number of views of the old ram, however, which to our pleasure turned out very well. The old fellow was something of a veteran, with horns much worn and splintered at the tips. Schultz and Billy said it was a head above the average in size. In actual measurement it proved to be 15½in. This is what is usually called a 16½ or 17, or 18in. horn, according to the fancy of the owner of it. Of course, such a head appears small compared to the old giant which was given to me last year by Billy Jackson, the like of which has not been seen in sportingdom since the days of recorded measurements; but none the less I have reason to be very well contented with the specimen, and so I told the boys as we were hauling our victim down into the shelter of the woods to skin and dismember him. I did not feel then as though I wanted anything else in the world. Schultz pointed out that this old ram had been feeding low down in the timber, and had been frightened by getting our wind as we came up the slope at the edge of the wood. The rest of the band had run straight on over a little ridge, instead of starting up the rock face as this one had tried to do. He said that if I wanted to kill another head we could easily do it by going on perhaps half a mile further, as the sheep had not seen us. But this I did not wish to do, having had sport enough for at least one day. At that time it seemed the easiest thing in the world to go out and kill a good ram any time I wanted to, and I was really indifferent whether I got another head on the trip, as this one was so good a specimen.

In the Winter Mountains.

It grew very cold before we got through our work of skinning out, and meantime a perfect kaleidoscope of light and shadow was playing on the face of the country about and above us. On up through the narrow little valley into which we were heading, the clouds broke away and showed a series of knife-blade peaks standing sharply up across the head of the valley, a very rough and impossible country, and now apparently entirely prohibitory to us, as it was too far from our camp to reach in one day. Schultz said there would very likely be goats up on on those bare peaks, but we thought we could not get to them. To our left, across a deep cañon, which made down into Two Medicine basin behind us, rose the imposing and formidable front of the great Rising Wolf, covered with snow up to the cap rock, where rested a glittering hood of icy, naked rock. From where we were we could see the fork in the top of Rising Wolf, and knew there was a little depression or "pot" in the extreme summit, where the upper peak split and dipped down. Here Schultz thought there would surely be goats, but as we glanced over that sheer, glaring face of white, we knew that no mortal being could climb that mountain on the side we faced. A noble but a fearsome front it offered us, as we gazed at it from our vantage ground high up on the opposing peak. Any way we looked, the spectacle was magnificent. We were folded into the hills. We had come around a shoulder of the mountain which cut off the view of our lake from us, so that we had no suggestion of anything but rugged mountains all around. The mountains in summer are grand enough. What they are in winter I shall not try to tell.

When we made up our packs for our trip down the mountain to camp, Schultz assumed the greatest burden, that of the head of the ram. I took the skin and a little meat, and Billy carried his rifle and the camera. We had brought along with us plenty of the thongs and ropes which come so handy at times in such work as this, and so our packs were fairly practicable. We expected to come up again for more meat. My friends said it was a pity we did not have a steel trap or some poison to put out at the carcass, as we would then be sure to get that big cat, whatever it was, not later than that night.

We plunged down hill very much faster than we came up, cutting across country which had been much too steep for us coming up. Soon we reached the point where we had separated from the others in the morning, but we got no token of their whereabouts. As Schultz was now very weary with carrying the big head, and Billy was complaining of his old enemy, the mountain rheumatism, I went on ahead from this point, expecting that the others would soon overtake me on the trail. It was three or four miles to camp, but when I got there my companions were still back somewhere on the trail, so I put off my pack, and taking the toboggan went back to meet them. I found them coming on in very bad order, Billy suffering with his back, and Schultz about played out with the big head, which he said he was sure weighed over a ton. We lightened up by putting the stuff on the toboggan, and so were soon all in camp around a hot fire, cooking fresh sheep liver and telling all about it to each other. We agreed that it had been a very lucky day. It was only 12:30 at the time we were skinning out the sheep, and we got into camp before it was beginning to grow dusky.

"The FOREST AND STREAM luck is sure with us," said Schultz. We all hoped McChesney had done as well, though there were those who remembered with a shudder the umbrella which he had brought out so far as the reservation. If McChesney should prove able to overcome the evil agency of the umbrella, then surely his medicine must be strong.

At the Lodge-Fire.

We three—Schultz, Jackson and myself—held camp alone for some time that evening. At first we thought we would go out on the ice and take a few trout before it got too dark, as we had a couple of lines set through the ice—saving the principles of all decent trout fishing outside of reservations—and Billy thought the trout, which had no doubt taken these baits, would "get tired, staked out there in one position all the time;" but we concluded we were too tired to go even half a mile still further so long as the fire and the grub held out. It was 8:15 in the evening and quite dark, before we had any sign of our comrades of the other party, and Schultz was very uneasy lest McChesney had given out under the exhausting work of climbing, so that he would not be able to get into camp at all. To stay out over night in the summer or fall is one thing, but to lie out in the winter time with no blankets, and perhaps no grub, with the thermometer maybe 10 to 20° below zero, is another and far more dangerous experience. We were, therefore, very glad when we heard the shuffle of snowshoes coming up back of the lodge, and saw O-to-kò-mi's dark face, framed with a rim of white, protrude through the opening of the door-flap.

One by one the tardy ones came into the lodge and dropped upon the sitting places on the beds about the fire. No one said anything to them, and they did not speak to anyone. McChesney's hair and moustache were full of snow. Powell and the Indian hunter were equally frozen-looking, and none of them seemed any too brisk or brilliant at the time. At length McChesney said: "Well, you got him;" then presently: "I didn't."

It all came out as we sat about the fire, at which Schultz was now busy getting a meal for the newcomers. They had found that the sheep seen by O-to-kò-mi the previous day had all taken fright and gone far back and high up in the hills. They had climbed and climbed in the pursuit until they had topped the great mountain above the point where we had parted, and then gone even down on the other side, on which the Cut Bank Creek runs clear out into the prairies. Sheep they had seen, and O-to-kò-mi had killed a little ram, and they had chances to kill several ewes, had they cared to do that; but, though he hunted faithfully all day, following the tireless Indian, for whose quality as a mountain man he could not say enough, McChesney had had no opportunity to get a head. They had been within 60yds. of ewes more than once. It seemed that nearly all the sheep wintering on that side of the mountains were ewes, the big rams having gone away by themselves and worked off in the direction which the others of us had taken in the morning. O-to-kò-mi and McChesney figured out that, in the two days just past, there had been seen not less than ninety-five sheep in all on the country over which they had been hunting.

Good Sheep Country.

I doubt if anywhere in the country there could be so great a number of mountain sheep seen in the space of two days, at any season of the year. Of course, in the winter the sheep find their feeding grounds very much restricted, and so are apt to be found more or less banded up; but even so, to see nearly 100 in two days is something which few hunters of late days can tell about. Our friends who live in that country, and who were good enough to ask us out to see it, say that the sheep are not now so abundant as they once were, as the hunting seems to keep them from breeding as they formerly did when undisturbed. Schultz mentioned one band of nine ewes seen the previous summer, in which only two lambs could

be seen, instead of nearly a dozen, as might have been the case at one time.

We all felt very badly that McChesney had not killed his ram that day, but figured that it must have been most unusual good fortune had he done so, and remarked that the hunt was just beginning and that we were sure to get all the game we wanted without any trouble. At this McChesney was visibly consoled. He resented vigorously any intimation that his umbrella had anything to do with his killing a sheep, though O-to-kò-mi seemed sensible of some evil influence which had worked against them.

I asked O-to-kò-mi if he liked the big rifle (the .45-70) which I had given him instead of the .30-30, and he replied with a smile and a movement of his right hand, palm down, straight out in front of him, which in sign language is to say, "It is good, it is all right." But he shrugged his shoulder and looked unresponsive when I told him that I had found the little rifle all right, too. He never would carry that gun again, though he seemed pleased when I told him that I, too, had had trouble with the sight, and had so missed some shots with it.

Meat in Camp.

O-to-kò-mi had brought down some ribs from his sheep and we made a fine roast of a side of ribs, spreading the side apart with a pointed stick, which was hung by the middle to a rope, suspended from a cross-pole above the fire. Here the rib roast sputtered and crackled and grew brown and aggravatingly good to look upon, slowly getting itself cooked as it spun around on the twisting rope, while we were getting the coffee and tea ready, and while Billy was engineering his inevitable pot of ten thousand joys. Thus we soon forgot our aches and pains and sore spots and grew very cheerful and communicative. McChesney was highly pleased with his ability to keep up on this hunt. "If any one back home had told me I could do a day of such work as I have done to-day, I should have thought him joking," said he. "We must have gone fifteen or twenty miles, I should think, over country I did not know human beings could cross. After we left you we did not need to use the snowshoes much longer, for we got to bare ground. Then we climbed up to hard snow, some of the time having to dig footholds with the heels of our snowshoes. When we got up on the top of the mountain the wind had the snow packed into ice, and it was cold, awfully, bitterly cold. That Indian, there, is made of iron, and he can't get tired. He'll go anywhere, and he has fairly walked the legs off of us to-day. He's a corker to climb, I want to tell you."

Asked if he was tired, O-to-kò-mi thoughtfully rubbed his legs a little but shook his head. He is indeed a man of iron, and I imagine few men are his betters in the mountains. If he wanted to get out and extend himself he could have gone clean away from any of our party.

Hunter Powell had had a shot at a sheep that day, but failed to score. He too was like O-to-kò-mi about the fire, silent, but with eyes fixed firmly on the rib-roast which was swinging above the blaze of the lodge fire. "I have eaten skunk," said he at one time, "an' I'm hungry enough to eat it now. I want to say that skunk is all right if you can't get anything better, though I don't believe but what this here roast is a little better."

How the Bannocks Get Bighorns.

Powell told us that he at one time lived over in the country of the Bannock Indians, and said that those Indians were very fond of sheep hunting and very successful at it. They use dogs in their hunting, taking advantage of the fact that the sheep, when pursued by dogs, make a stand and turn heads out to fight the dogs, so giving the hunters a chance to slip up on them. It was said even to-day the Bannocks sometimes use their old weapons, the bow and arrow, in killing sheep thus with dogs, preferring the bow and arrow to the rifle, as making no noise. Sometimes they have killed nearly all of a bunch of sheep thus bayed up by dogs, shooting them down with arrows from a point not far away. The bighorn, usually an animal of great speed and resource, seems to lose its head entirely when pursued by a dog. This fact is well known by local hunters. Schultz said that the dog Patti, owned by Scott, the trapper, would stop any sheep which it once sighted, and that Scott could take this one dog and kill a sheep without much trouble any time he wanted meat. I fancy this would be a very practical method for getting meat, but not one to be used by a sportsman after a trophy, whose greatest value would lie in the fact that it had been gained by hard work and honest stalking.

Bad for Rheumatism.

That night Billy Jackson began to complain of his rheumatism. It was a poor place for one troubled with such a complaint. I speak of the lodge as warm, and so it is by comparison; but no one should take this to mean an absolute and comfortable or even warmth, and one is more or less underdone all the time, though his system in time comes to adjust itself to that fact if the man be in good health. For a rheumatic complaint the constant cold drafts cannot be the best thing in the world. We rubbed Billy with some liniment, and he arranged his sleeping bag the best he could to cut off the cutting wind, which was coming in under the lodge at his back. The night was coming on bitterly cold, so cold that we thought the thermometer would go to 20° below before morning. We went to bed with all our clothing on, piling on top of us all the extra coats, bags, and odds and ends on which we could lay our hands. The lodge was shaking and groaning in a bitter wind, which came howling down out of the cañons above us. The last word heard from O-to-kò-mi as he went into seclusion under his blankets was something like a wail of prophecy.

"Ai-so-poin-stan," muttered O-to-kò-mi. "Ai-so-pom-stan!" And when laughingly questioned about it he expressed his firm belief that the old cow moose was plenty angry at us.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

AN old-time Lord Mayor of London, whose sporting experience was limited, rode forth one day to join the city hunt in the fields about Marylebone. Placed by his escort under a tree, his Lordship heard the hounds give tongue in the distance, and the sounds grew louder and louder, till one of the city scouts shouted out: "The hare comes this way, my Lord." The Lord Mayor rose to the occasion, and drawing his sword he exclaimed heroically: "Let him come! I thank my God I fear him not!"—*Household Words.*

Game Bag and Gun.

WHO IS RESPONSIBLE?

VINTON, Ia.—*Editor Forest and Stream:* Is it possible that the time has come when our songbirds, such as the meadowlark, robin, blackbird and bobolink, are being looked upon as game? Fashion has caused several kinds of our birds of plumage to become scarce. Sportsmanship is fast driving the remnant of the grouse family into the last corner. Specimens of the big game are being placed in private reserves to prevent their total extinction, and our lakes and rivers within the easy reach of civilization are kept stocked with fish only by artificial means, and the strong arm of the law backed up with close watchfulness and vigilance. Who is responsible?

We read the report of a sporting club on the Pacific Coast in which is stated the number of robins killed. A man in New England—a resident of a city—places the responsiblity for the scarcity of some of our birds of plumage on the country girls, and does it in a slurring way. And again, we learn that at one place, in one day, nearly 2,000 bobolinks were shot—and not by country boys to decorate their sisters' hats, but by city gunners, for sport. Mr. Hough says it is reported that single sportsmen have shot as high as 500 mourning doves in one day, and a party of sportsmen shot 12,000 in a few days. These birds are not killed for decorative purposes, for the pot or the market, for when the sportsmen have left the field where they have been shooting, the negroes pick up hundreds of wounded and dead birds.

The reason why hunters are shooting songbirds for game, is the scarcity of larger game, But again, who is responsible?

A gentleman in Charlestown, N. H., says in FOREST AND STREAM that "it is the cursed country boys." I believe the gentleman had been trout fishing, and had had poor success. After this I read in the same paper that a Jersey City man caught between 300 and 400 trout in one day. And a man in Pennsylvania said that there had been fine trout fishing around the city he lived in, and the fishermen had great sport; but to get any more trout fishing they had to go fifteen miles into the country, as they had been all caught out nearer by. Then among other pleasant things that I read was how a merchant's boy had shot 2,700 grouse in northwestern Nebraska last fall, and that he had not shot near as many as he usually shot, because his father could not spare him from the store. Yet no eruption of indignation arose from the New Hampshire hills.

A writer says (if I remember correctly) that railroad officials say that their roads carried 2,000 deer hunters into Wisconsin last fall from Indiana and Ohio. I do not think that the railroad officials knew of all the deer hunters that went over their lines. Add to this army of well-equipped men all those that no doubt went into the same State from other directions, and all shooting at every deer that came within range, and how long could one expect the supply to hold out, even though the resident countrymen killed none at all?

If one of these many sportsmen was a countryman, and he will be kind enough to write me how he happened to be able to take a trip of that kind last fall, he will oblige me greatly.

Three or four years ago deer were as scarce in Maine as they are now in Wisconsin or Michigan, but after the amount of game that non-residents could take out of the State was limited, and officers were appointed to see that the laws were enforced, deer have become more plenty than they have been known to be before. Does anyone suppose that the backwoodsmen of Maine do not use as much venison, either legally or otherwise, as they ever did? if so why should there be such an increase of game, unless it is that the visiting sportsmen are held in check, and we do not have to be told what class of people they belong to? If one can see the name of one countryman among the many sportsmen that have been mentioned by Special as having gone into the Maine woods in a season, he can see what I have been unable to discover.

Yet there are those who would have us believe that it is the country boys, with their horse pistols and flint-lock guns, who are swiping the game from off the face of the earth. It is not a countryman, but a resident of Boston that we heard of last winter as hiding from the Maine authorities for having killed a moose last summer. What class of people are paying $500 apiece for buffalo heads, thereby tempting the poachers that live around the Yellowstone Park to exterminate the few that remain. Are those people countrymen?

I saw in FOREST AND STREAM that a party of Chicago sportsmen who had been hunting in Colorado last season, had brought home with them about thirty deer and elk heads. I have a good many times wondered how large the party of sportsmen was, and whether they left a trail of stench through those mountains. Did they use the carcases for bear bait? Did they pack out a carload of meat and take it to Chicago and pass it around among their friends? How much game did they kill besides what they took heads from?

From the shores of the Pacific to the marshes of the Atlantic we continually read of hunters shooting from fifty to 150 ducks or geese or other game in one day, and sometimes the names of our best-known sportsmen are connected with the shooting. To do this it seems to me one would have to begin early, take advantage of every chance to shoot, and stick to it as long as there was a streak of daylight. What more could a countryman do?

After the meadow lark, robin, blackbird and bobolink are gone, then sportsmen will turn to the oriole, yellowbird and song sparrow for amusement, and soon the days of the chickadee, the hummingbird and the butterfly will be numbered. At this stage of the game it is supposed that sportsmen will pause and take breath before reaching out for the horsefly and beetle. When this period of sport is well advanced we will still have left the pismire and gnat, and so the boom of the gun will go merrily on. I regret to see the tendency growing to shoot song and dooryard birds for sport. When I shoot a song bird it will be when I am both hungry and penniless, for I swear to high heaven I shall never shoot one for sport.

We have seen the game birds of our prairies become scarce and almost extinct in places. What is the trouble? Not the laws, but sportsmanship. It is the bad, deplorable and criminal condition of sportsmanship that is to blame, and nothing else. Game laws are made to protect and perpetuate the game; good sportsmanship would accomplish this without the enactment of statutes. It cannot be laid to the market shooter, because there are 1,000 sportsmen to one market hunter, and, with a few exceptions, both will shoot as long as they can see. The market shooter is a sportsman who hunts for pleasure and disposes of his game for profit. The day has come when this is bad sportsmanship, because the traffic in game is one cause that is threatening the annihilation of the game that is left. But the market hunter is just as good, as manly and honorable as a sportsman who will kill game illegally or dispose of his game to the market hunter. Both are better than the sportsman who will kill game when he knows that it cannot be used.

I believe in game protection, and that there should be more stringent laws, until sportsmanship shall have reached a higher level. I believe that there should be no traffic in game. Not that I would deprive any one of the right to use it, but because this would close one channel through which game interests are passing to their destruction. I believe in private reserves. Not that I would place privileges in the hands of a few, but because it gives more protection to game during the breeding season. And I believe that the farmer, who sees game grow on his land, and feed more or less on the fruits of his labor, should be given the same privileges, decent usage and respect that are accorded to the club man. I believe it is as "mean," "narrow-minded," "penurious," and as "churlish" for one as for the other to refuse sporting privileges to others. I believe it shows one to be ill-bred, uncivil and as being low down in the heel as to common decency and the higher traits of manhood to ridicule and apply slanderous epithets to a class of people that one has been asking favors and privileges of.

A New York *Sun* correspondent, writing from Jacksonville, Fla., says: "Twenty years ago the beautiful trees of Jacksonville were alive with mockingbirds, whose incomparable songs made the mornings and afternoons vocal with music. Every tree seemed to hold one or more songsters. But now no note of a mockingbird is ever heard, and no mockingbird is ever seen."

As to the snowy heron, a Chicago paper says: "Twenty years ago these birds were abundant in the South. Now they are the rarest of their family. Professional plume hunters, who formerly had plenty to do at home, now go to every part of the world in search of herons. They get up expeditions to go up the Orinoco and Amazon, and the birds have been exterminated on the coast of Yucatan."

No one section or class of people is responsible for the condition that the wild animal and bird life is in to-day. Do you not think, my brother sportsmen, that it is quite necessary to give our guns more rest, and give more attention to the preservation and welfare of the wild life around us, and to spend less time in trying to destroy the life of something and more time in trying to raise the standard of sportsmanship, for this is where the trouble is?

I can look back to my early childhood days and see myself wading in the little brook with others, and either catching fishes with our straw hats or picking the sweet flag buds, and I well remember the interest we took in the blackbirds that were frightened from their nests, and sat close by swinging on the flag or cat-tail leaves, and how cautiously we would peek into the nests, but never disturb them. We would watch the bobolinks as they soared upward, fluttering and singing as only a bobolink can.

I have just received a letter from a brother living in Massachusetts on the old homestead, at the foot of the hills that overlook the Connecticut River to the east, and almost in the southern shadow of Mt. Tom. Not far from the homestead is a cemetery; my father and his ancestors are sleeping there, and my mother and her ancestors are sleeping there. The family has scattered from the homestead, one brother living alone with his St. Bernard dog, his cats and cattle is left. It is from him that the letter came, and this is what touched me: "I read your piece in the paper about saving the birds. That's right. If the landowners do not protect the birds they will be destroyed. The farms would be very desolate without their songs and winsome ways. Some kinds are most gone from here. No yellowbirds; very few bluebirds. We used to watch longingly for the bluebirds in spring; when we saw and heard them on the old cow and the old elm it seemed like the dawning of hope." And so it did, after a cheerless winter of cold weather and snowdrifts. The old elm was set out in the spring of 1751 by a member of the fourth generation back, and it is one of the largest trees in the State. The old cow was a weathervane on the big red barn.

How about the birds at my present home? No robin made its nest in my dooryard during the past summer. No plover alighting with shrill notes and uplifted wings were seen in my meadows. The meadowlarks that used to be here in flocks were scarce, and when the frosts of fall covered the ground, and but few summer birds remained, if the clear notes of the lark were heard it was a treat indeed. Two or three bobolinks were seen while taking their musical flight, and the sweet song of the brown thrush was heard less common than before.

It looks as though the pismire age is approaching—almost in sight; but if it must come, I hope we will not see sportsmen blowing whole nests of them out of the ground, and at the same time abusing the farmers because there are not more pismires for them to shoot.

MOUNT TOM.

A MISSISSIPPI TURKEY HUNT.

ON Nov. 4, 1896, I met, by arrangement, some former companions in our annual hunts, at our camp in Greene county, Miss., for an eight days' hunt for deer and turkeys. The party was made up of Sage, Dr. Inge and Ervin, of Mobile, Ala.; Pickett, Howze, Denny, Brown and the writer, from Scranton and Moss Point, Miss. Our wagon, with the provisions for the hunt, had preceded us, with our colored cook, Haywood. We were joined by our driver, Henry Bush and Pomp Denham, our handy man, both colored. The location of our hunting grounds was about forty-five miles from the seacoast, on the headwaters of the Pascagoula River. We were all in camp by 1 o'clock, and a good dinner was spread before us, and soon made us happy in our reunion.

A silver-mounted hickory walking cane was to be given to the one scoring the first kill on turkeys. The time for the hunt to commence was 3 o'clock. Each man took his route for the hunting ground.

As the sun sank to rest beneath the bank of dark-green pines, shedding its bright rays upon the many-colored autumn leaves, enlivened by the voices of hundreds of the forest creatures, the scene made a picture beautiful to behold.

I heard the call of a turkey, but he passed and went to where Ervin was located, who bagged the bird and won the cane.

By nightfall all were in camp except Ervin; he got lost, and we had to hunt him up. The result of the evening's

hunt was one turkey each for Ervin, Pickett and Denny, with three misses against Brown and one against Ervin.

The next morning (Thursday) I had all up by 4 o'clock to go after turkeys. As daylight made its appearance, guns were heard in every direction, and our gathering in camp resulted in seven turkeys. The remainder of the morning was spent in a fruitless chase after deer. The evening we hunted for turkeys, resulting in five more being added to our string.

Friday morning we sent twelve turkeys home to our families. That day Ervin killed a three-point buck, and Sage a spike buck, Dr. Inge one turkey (his first), Pickett two turkeys, and Cochran, a visitor, two turkeys.

Saturday's hunt resulted in four turkeys, with a score of squirrels. Sunday morning Howze left for home, and we sent the horns of our deer and all the turkeys we did not need for camp use to our families We spent the day in resting, with several of the neighbors to take dinner with us. Monday's hunt resulted in adding four turkeys to our list.

Tuesday we were out early after deer. Ervin killed a young doe and a nice spike buck, and Ervin and I together killed a very large old buck with a magnificent set of horns. Wednesday, Brown killed two turkeys and Ervin one. This ended the fourteenth annual hunt of our club, the score being as follows: Ervin, three deer, seven turkeys. Brown, seven turkeys. Sage, one deer, five turkeys. Denny, four turkeys. Pickett, four turkeys. Wood, four turkeys. Howze, two turkeys Cochran, two turkeys. Inge, one turkey, and one deer between Wood and Ervin. Total score: five deer, thirty-three turkeys, two ducks, and squirrels too numerous too count.

C. H. WOOD.

ONE DAY AFTER ELK.

"COME, Capt., let's go down the valley and kill an elk. I'm so all-fired hungry for an elk steak, and so blamed tired of bacon, that I must either pull my freight out of here or free Ireland." Freeing Ireland was easily indulged in after a visit to town, and as I preferred elk, I readily accepted the invitation.

It is always pleasant to be out with Dad any way. He is an "old timer," a diamond in the rough, with a heart as big as the mountains; honest, truthful; always ready to do you a service, and if he likes you—well, if he likes you, you may take possession of anything belonging to him, even Dad himself. On the hunt he is keen, alert, untiring; an excellent shot, cool and deliberate, never knows defeat, open-handed and generous to a fault. Such is the man I spent nearly five months with last summer and fall. Every day with him was a revelation. What a treat to live in the woods and hunt and fish with such a man after having spent time with some arrogant, boastful, lying guide, such as many of us have met; men who wouldn't tell an Eastern man the truth, if a lie would suffice, and it generally did.

Dad knew he had but to say "hunt" and I would acquiesce instanter. Hastily packing small camp outfit and provisions, while he rounded up the horses, we were soon off for the elk country. It was a beautiful ride down the creek, and what though the trail was a little rough in places, we didn't mind it in the least, because we were pretty sure of elk at the end of it. Half a day in the saddle brought us into a beautiful basin and camping ground. Elk sign was everywhere. One could almost smell the liver frying for supper.

Horses picketed or hobbled and turned loose, and rifles in hand, we are off, silently following fresh sign. A mile up the basin and 300yds. ahead, we hear a bull whistle. Separating, Dad goes to the right while I bear slightly to the left, with nerves strung to the highest pitch, watching, listening, hoping (selfishly) that the "dude" might be the first to catch a glimpse of his Royal Highness. Hark! Again that unearthly sound some one has labeled "Whistle," once heard never forgotten, this time, quite within 100yds. and apparently right ahead, but, through timber one can scarcely see 100ft.

Stealthily stealing through I emerge into a small park, and, much to my chagrin, I find that the bull has crossed and entered the timber beyond.

Here I find more fresh sign—he evidently has comrades. While contemplating which to follow, I hear Dad's rifle speak—once, twice, thrice—then all is still.

All right, Dad; we'll have that liver anyway, and I'll go up and help you take care of him. One elk is all the meat we can use. So, shouldering my .45-90 Marlin, my companion in many a chase, I trudged on.

The day so far had been perfect. Half a mile and I strike Dad's trail—one empty shell—then another, but no Dad. Following on and up I soon see patches of snow, covered with blood. Wounded, eh? Well, from the color, I guess he is ours. Further climbing, however, didn't reveal either man or elk. Crossing a tableland, at whose edge I find that both had descended almost a perpendicular wall, and here the elk bled profusely. Again I follow, and get into one of the roughest places I have ever seen—stretching for several miles was one mass of broken rock and boulders. Taking my glasses I scan the country, but not a sign of life is visible. Clouds have gathered and flakes of snow began to fall, and, not being familiar ground, I beat a retreat, trying to console myself with the thought that liver wasn't wholesome diet for supper anyway; but somehow my stomach kept saying: "It is excellent."

As I descended the hill I had but a half hour before gone up, I heard a bull whistle, apparently beside me. I looked up. There stood a beauty, about 85yds. away, in front of me. Quickly raising my rifle, I fired. He jumped, and with a mighty bound was in the timber. So surprised was I that I couldn't give him a parting salute, and he was evidently not hit. Could it be possible! On examining the ground where it stood, I found not a drop of blood, and none on the trail. I certainly deserve to eat bacon; but I'll follow him and get him, too, even though I am compelled to camp on his trail.

Following him into the timber a short distance, I come almost upon him, standing and swaying like a drunken man. Moving quickly to one side, I give him another shot, and he went down like a log. Not a single drop of blood had come from him. It took but a few moments to get to work. Dad came back empty-handed, the first and last time I knew him to lose a wounded animal. We soon had the hide off the one one I had down and the meat hung up. His head now adorns my hall. We proceeded to camp, and ate? Oh, yes; and slept, too, I assure you. Next morning we breakfasted early, and broke camp, packed on our meat and hit the trail for home.

This country has an abundance of game, and will afford the sportsman shooting for years to come, provided it is properly protected and not killed for market.

I have heard the Eastern man abused because he killed several head of elk That was just. He should be blamed and punished as well. But I also know it to be a fact that the same guide who condemned the dude after having helped him do the killing, shot down elk for bear bait and market—killed them in Wyoming, packed the hindquarters into Montana and sold them, thus violating the law of both States. Give both guide and dude the same medicine.

WABASH.

RED LODGE, Mont.

CHICAGO AND THE WEST.

Buffalo Jones in the Far Northwest.

It is hard to suppress a good man, and it is difficult for that good man to suppress the stronger impulses of his own nature. We have all heard of Buffalo Jones, who got together the largest herd of buffalo ever held in captivity in this country. These buffalo are now scattered. Most of them are in the Allard herd of the Flathead Reservation, some are in England, and some are in Russia. The great herd proved something of a white elephant for Mr. Jones to handle. But it was the instinct of Buffalo Jones to go out into wild places and catch wild animals, and, although we have not heard of him for some time, it was natural that he would turn up again sooner or later. This time he appears in the far Northwest, and of his mission in that country, the *Winnipeg Free Press* has the following to say:

"He is going into the far Northwest for the purpose of capturing valuable fur-bearing animals, and wild animals whose meat is used for food, which he will place on islands in the Pacific, off the Alaskan Coast, in order to propagate them for mercantile purposes. The undertaking is backed by a strong company of United States capitalists. He intends to secure, if possible, a herd of musk oxen; he will also endeavor to procure silver, gray, black foxes, sable, fisher, reindeer, moose, caribou, etc. He will establish collecting depots in the North and make shipments periodically to the island on which the ranch will be located. Mr. Jones intends to explore for a wagon road to the Yukon from the east side of the mountains while in the North. He leaves to-day for Edmonton, where he will complete his outfit and start thence for the barren lands. He does not expect to return until next year. He has had much experience in hunting and capturing wild animals, and has every hope that his expedition will be attended with success."

We have a right to expect something interesting from this silent and determined man. I have been out with Buffalo Jones, and he is nearer like a taciturn steam engine on legs than anything I ever saw.

Still Another Singing Mouse.

I was interested to note the statement by Awahsoose that he had at one time heard a singing mouse. I am able this week to add still another instance of the identification of this singular little animal. This time the report comes from no less a person than Mr. Charles Hallock, first in art, first in sport and first in the hearts of his countrymen. Mr. Hallock will permit me to make use of his letter *verbatim* in order that the record may be more complete. He says: "At No. 22 Princess Terrace, in Kingston, Canada, in the summer of 1888, at the house of George Smith, M. P., in the dining room, behind a buffet, we had a fine singing mouse. We heard the chirrups and trills and A minors for many days before we were able to locate the sounds. I guessed what the source was, and finally caught the little animal in a bag, baited with cracker crumbs and cheese. We squeezed the top of a 10in. bag together and placed it behind the buffet, with the open end inward, and when the bag began to rustle one evening, we knew that the mouse had pressed his way in, so we simply took up the bag by the top and had him a prisoner. We kept him in a bird cage for ten days, and he sang very sweetly to us and numerous visitors, but one day he escaped and we never saw him more, though one of the ladies thought she heard him once. I reckon the tom cat could tell what became of him. He looked like an ordinary little mouse."

Animal Statues for the National Zoo.

Mr. Edward Kemeys, of Chicago, known on more than one continent as the greatest living sculptor of wild animals, has recently returned from a trip to the East At Washington he paid a visit to the National Zoölogical Gardens, and one of the results of that trip will be an enthusiastic attempt by the managers of the National Zoo to secure an appropriation from Congress for the purpose of erecting, at different places in the gardens, bronze statues of the leading American wild animals, and also certain statues typifying the American Indian at the time when he also was really wild. Mr. Kemeys is no kid glove sculptor. He was a hunter in the old days of the real West, and he has killed and studied every one of the animals he wishes to embody in enduring bronze. He has seen the glories of the old West, and knows that they are passing away forever. It is his ambition and his dream in life to be able to leave behind him a permanent record of the wild men and wild things of that glorious West which has now gone by. It has been hoped that his masterpiece, the expression of the sum of his studies and his hope, would be placed in Chicago, the gateway of the West, and perhaps this may at some time yet be done; but, after Chicago, there is no more appropriate place for extended representation of his work than those gardens of wild animals which are destined to be perhaps the most important in the world. Mr. Kemeys has expressed himself as delighted with the surroundings at the National Zoölogical Gardens and eager to place among the perishing wild animals some that will not perish with the years.

Minnesota.

A great many sportsmen are just as hoggish as market shooters, and the only difference between them and the latter is that they do not stay at the business so steadily and so long. Yet I believe that it was not merely the non-resident sportsman, hoggish or not hoggish, who destroyed much of Minnesota's heritage of game. Her prairie chickens went chiefly into the ice barrels of early market shooters. Tamarack Lake was ruined as a mallard ground not by amateur shooters but by market shooters, who burned it to death by relentless and murderous shooting for the shambles of the cities. It would be unfair and unkind to criticise the game wardens of Minnesota for not having stopped all the shipments of game since her non-export laws were passed, for such a thing is an impossibility to be measured best by a familiarity with the extent of the region to be patrolled. But while all things are relative, and while it is sad to see the fish and game disappear from spots where we once found them, it is perhaps just to say to Grumbler that if he had the power to choose between two evils, that of market shooting or of non-resident sportsman shooting, he would probably save more game by taking the latter horn of the dilemma. It still lies within the power of the State of Minnesota to save much of her remaining game by stopping the sale of her native game. This cannot be done all at once, and it can never be done more than approximately, but it can be done to so great an extent that Minnesota can afford to be glad to have non-resident sportsmen of the better class come and visit her, and not grudge them what they take in reason. The mere passing of a law determines nothing. Should Grumbler see a sweeping non-resident license law go on the Minnesota statutes, it would not signify that non-residents would not shoot just the same and not in all cases pay any license. That would be something for the executive to look into. So is the present good law something for the executive to enforce. Gradually the time is coming, though perhaps it will arrive too late, when the game laws are to be enforced more and more strictly. But as to this invasion of Minnesota, I am afraid there is no dodging that. Sportsmen will continue to press further and further on beyond their latest lines of venturing from home, until finally the American sportsman has learned unmistakably what has been predicted for him so long, that there are no longer any new or relatively new places for him to go to. Then come the day of preserves, perhaps also the days of tags, tickets, checks and licenses now in vogue in Maine. Grumbler and I have no differences of opinion, and I only wish that he could devise some system by which he could avert the day when we will all have to have a million dollars and a duenna when we go out shooting or try to catch a trout. As to the really wild country I don't know where it is to-day. I never saw a trout stream in Wisconsin or Michigan in all my life which did not have a path along it, and I doubt if there are many in Minnesota not so decorated. Even from the Rocky Mountains comes much the same cry. There is no country really wild, but only some that is relatively wild. Those who have a heritage in a little of that sort of country will do well to do a lot of thinking about it. One of the first questions for decision is that implying a choice between the hunter who is always hoggish, and the non-resident sportsmen who sometimes are not.

Wisconsin.

In Oneida county, Wis., John W. Schafer, of Rhinelander, and W. H. Chapman, of Tomahawk Lake, have been appointed deputy wardens with a salary, respectively, of $75 and $50 per year, this being determined by action of the county board. There are a great many counties in Wisconsin which would make money for themselves by appointing good wardens, who would actually protect the woods and streams from the continuous depredations of the market shooters and fishers. If there were any decent scheme of such protection in many parts of the State, the wilder parts most frequented by sportsmen tourists from other States, who bring in considerable amounts of money, there is no doubt that a still larger number of anglers would visit the State, and still larger sums of money would be spent there. Life in a pine woods town is one of such limited opportunity for money making that the local men can well afford to invite and encourage the outside traffic of this sort. It may do to get a sportsman once to a shot-out cover or a fished-out water, but he won't come again.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

New Brunswick and Quebec Game Notes.

EDMUNDSTON, N. B., July 13.—As many letters of inquiry are daily reaching me relating to the hunting and fishing in this part of the two Provinces, which here join, as the line is but twelve miles away which divides New Brunswick from Quebec, I will give your readers a few items.

There are nine good places to my own personal knowledge, and many more by report (but these I have not looked over), where moose abound. Some of these places are of quite easy access, while others require walking, and the outfit must be carried by men; in most places one or two miles would be the longest carry. As all these will be taken up this fall, I mean to keep the easy trips for the old, and those who do not feel like roughing it. When I get notice from a party who mean to come, I take the guide intended, inspect the places, so that there may be no mistake of the game being there, also that the guide may learn all about the best way of getting there, and many other points of great value, unless he is perfectly familiar with it before.

These places are widely apart; no one party will be near another, as many miles intervene. Just as many parties will be located as there are places, and no more. As for caribou and deer hunting, with very often a moose, I can furnish good places for hundreds of parties; in fact, caribou especially are very plentiful, while the black bear is also numerous; on a twelve days' trip we saw five of these animals.

By leaving Boston one night you reach here the next. A license to hunt is required, which, in Quebec, costs $25, in New Brunswick, $20. Season opens in New Brunswick Sept. 1, in Quebec, for caribou Sept. 1, for moose and deer Oct. 1.

S. J. RAYMOND,
Overseer of Game and Fish, Province of Quebec.

Idaho Bears.

KNOX TAYLOR, the former Princeton football player, who was in New York at the time of the Sportsman's Exposition, is a mining engineer at Ketchum, Idaho. The other day, while off on a hunt, he had the luck to encounter four bears at close quarters. He fired at and wounded the first one he saw, which happened to be a large she bear. The next moment a male bear charged him, but was stopped by a bullet from Taylor's .50-110 Winchester, which struck him fairly between the eyes. Thinking he had settled the male, Taylor turned his attention again to the she bear; but, as it happened, the bullet had glanced from the bear's skull without inflicting much damage, and a second later the wounded bear, No. 2, was on his feet and charging the hunter for the second time. Fortunately Taylor caught sight of the bear, and by a well-directed bullet in the chest forever settled his ugly customer. For a few brief moments things had been pretty lively in that neck of the woods, and when he turned to look for the female bear, he found she had taken advantage of the excitement and escaped. Taylor, however, was well satisfied to have secured his first bear, and alone.

The substance of these facts is contained in a private letter to his cousin, Mr. Percival Chrystie, of High Bridge, N. J., to whom I am indebted for the information.

J. B. BURNHAM

The Unlucky Umbrella.

PAWNEE, Neb.—It is always with a great deal of pleasure that I read Bro. Hough's articles—they always contain a fund of useful information aside from the mere pleasure they give, and occasionally, as in the article of June 19, "Sheep and Snowshoes," they solve problems that vex one.

The "Kickers," in their annual camp trip, have at times met with trials and tribulations unnumbered. Particularly in the year 1894 was the hoodoo that haunted the camp most persistent, as I wrote about that time. The cause of our continued ill luck we never were able to determine, though George and I have been gunning for it ever since. Now comes Bro. Hough with the explanation. It was an umbrella. How well do I recall the dismay of George and myself when Phil arrived at the camp, for under his arm was stuck a genuine Sary Gamp. Phil was not much of a sportsman, we all knew, and his umbrella caused many a laugh at his expense; but had we suspected its power for evil, I fancy it would have helped to make our camp-fire, and saved us much trouble. Well, it is better late than never. We now know where our hams and fishing tackle went, and I will not do a thing to that umbrella when I next see it.

W. R. HALL.

An Ancient Arm.

MR. CLINTON STEWART, of Roscoe, N Y., writes us of a highly-prized arm in his possession: The gun you refer to is in my possession and has never been out of the Stewart family. I prize it very highly, owing to its age and its having been made for my grandfather, who carried it all through the Revolutionary War. My grandfather was only eighteen years of age when the gun was made, but I cannot state positively how old he was at the time of the war. I believe, however, that the gun is 135 years old, if not more. The gun was originally a flint-lock, but has been changed to a cap-lock and restocked. It is said that my grandfather shot and killed a Tory, who was leading a band of Indians against the settlers, at a distance of half a mile. The gun shoots well yet, and I have killed many deer and other game with it.

CLINTON STEWART.

The Arkansas Outlook.

LITTLE ROCK, Ark., July 14.—There are good quail prospects this year, and also a good crop of acorns for the deer.

EXMORE.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co on receipt of price, 25 cents.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

MEN I HAVE FISHED WITH.

I.—Edward Zane Carroll Judson (Ned Buntline).

HALF a century ago few names were more familiar in New York and neighboring States than that of Ned Buntline. Erratic to such a degree that no man could tell what Ned would do next; fierce as a tiger; gentle as a woman; filled to the brim with poetry and romance, his life was one of adventure until mature age toned him down, as it tones down all men. After a study of him from personal knowledge and a mass of correspondence gathered during the past six months, his many sided character and strong personality makes him appear a man without a counterpart.

As a boy I read the weekly journal called *Ned Buntline's Own*, which was filled with tales of heroism and adventure, and when the Astor Place Opera House riot occurred in New York city on May 10, 1849, my fifteen-year-old mind applauded the men who gathered to avenge the insult to the world's greatest tragedian, Edwin Forrest. Looking at that event now with a mind somewhat more mature, my sympathies have gone to the other side. How much difference it makes which end of life's telescope we look through! How our youthful idols shrink, and how they change in appearance! Some men do not seem to have had any idols, but I had, for I was always a hero worshiper, even after reading Carlisle's essay on that subject, and coming to the conclusion that the egotistical old writer worshiped only one hero and that was himself, and that the chronic grumbler believed that the world would have been much better made if he had been consulted in the beginning.

Early in May, 1865, while strolling about the steamboat landing at Albany, N. Y., looking for some fisherman who had a sturgeon and would sell me the eggs to use as bait for striped bass the next day, I saw a man slip on what afterward proved to be an orange-peel, and drop into the river. He was a good swimmer and got hold of the rudder of a steamer and hung there until a boatman brought him where we could help him up the dock. He was a short, powerfully built man of perhaps forty-five, and wore the undress uniform of a Union officer, with no indication of rank, the blue cord in the trousers merely indicating that he belonged to the infantry arm. I was then home awaiting a discharge order, and my uniform differed from his only that a red cord signified that the wearer was an artilleryman.

"Comrade," said I, "if you will come with me I can furnish you with dry clothing and a place to dry your own."

"Thanks," he replied, "I will step on board of this barge, hang up my outer garments in the sun and wind and dry my underclothing by bodily heat. I'm an old campaigner, my boy, and have learned never to change wet clothing unless I take a bath and rub off dry; that's the only way to avoid taking cold."

I agreed with him in this and continued my search for sturgeon eggs up the basin to State street, where I secured what I wanted for $2. As a historian of more or less truthfulness, I wish to say that in boyhood days I could have bought a boat load of sturgeon eggs for 10 cents. Unless some angler wanted them for bait they were thrown over with the offal, but the European taste for caviare had begun to invade the Eastern States, and at that time the eggs of a sturgeon brought more money than the fish did. Caviare is a luxury; sturgeon meat merely food. After writing about individual tastes last week and quoting *de gustibus non est disputandem*, nothing is left for me to say but that my only use for sturgeon eggs is as a bait for striped bass

I had lost recollection of the wet soldier until I returned and found him, an hour later, smoking and drying his clothing on the barge. "How are you getting on?" I hailed.

"First rate, come aboard—do you know this town well?"

"Certainly, know it from Alpha to Omaha, from Dan to the beer sheebeens; was born and reared about yer, and know Albany from the goose pasture to the Patroon's bridge. Why?"

"Because I am a stranger here and expect to stay a few days, and want to know somebody who knows the town. Your uniform is sufficient introduction and I hope mine is. I will put on my clothes and ask you to go with me to the Delevan House, where I have a suite of rooms."

We walked up Broadway to the Delevan—you can't walk far in Albany, although you may climb nearly a quarter as high as in Lynchburgh, Va., but at State street he turned in to the newsroom of Tom Hastings, and, picking up a copy of

NED BUNTLINE.
From a photograph by Sarony.

Ned Buntline's Own, said, "Let me present you with a copy of my paper."

I took the paper, looked at the heading, and asked: "Are you Ned Buntline?"

"Tom," said my new friend, "introduce me to this gentleman." And so I made the acquaintance of the redoubtable Ned. I dined with him at the Delevan that night, enjoyed the dinner, and remembered it because Ned enlivened it with tales of adventure which he probably evolved as he told them, and as probably forgot next day.

I had asked him to fish next day with George Tweddle and myself, without consulting George, and at 8 A. M. we met at State street bridge, where our boat and bait was ready. Tweddle and I had fished for striped bass with sturgeon spawn often in the ante bellum days, but the mode was new to Ned. We anchored near the eastern edge of the channel, in order to be out of the way of vessels, and Ned watched the baiting of the hooks with interest. We used hand lines with ½oz. sinkers; the hook was on a gut snell about a foot long, and placed so as to hang 2ft. above the sinker and float away from it down stream. A foot of linen thread was tied just above the hook, a mass of spawn wrapped around it and then enveloped in a square of mosquito netting, which was wound with the thread to keep it in place.

"Now, Ned," said I, "this river is infested with a minnow which is locally called 'spawn-eater,' and it well deserves the name. When you throw out your bait a few eggs will escape through the netting and these pests will follow it to the bottom. When you feel the slightest touch, strike. Strike with right and left hand alternately as the spawn-eaters follow you up, and after half a dozen strikes and no more follow, you may conclude that a new bait is needed."

"Yes," said George, "with a gang of spawn-eaters about your hook, a bass or an eel will make a rush for them, but on smelling the bait will snatch it bald-headed; there will be no nibbling."

"All right," said Ned, "I'll try to ——" and three or four jerks came on his line and he struck. George and I were getting touches and were striking right and left. Ned resumed: "I had a bite, but the fish has gone away."

"You didn't strike soon enough, and the spawn-eaters have cleaned up your bait," said George. "This way of fishing requires as quick a strike as fly-fishing, if not quicker, for the bait is so lightly held. If a bass rushes for it, as it will if one gets a sniff of the spawn, you can't snatch the hook from it, but will at once feel the fight of the fish, which cannot be mistaken for the picking of the spawn-eaters."

George and I took several half-pound striped bass, and finally Ned took a large eel. About noon Ned took his first bass, and remarked that he believed he had "found out how to take these fellows in the striped suits." He took several after that, among them one which weighed over a pound, and was the largest taken by us that day. As we returned and gave the man who kept boats for hire several eels and a dozen bass, Ned said: "Gentlemen, it is now 4 P. M., and as you don't care for the rest of these fish, I will propose to send them to John McArdle's, where I will ask you to dine with me at 8. The party will be rather small with only us three, so please invite two of your friends, who will enliven the party, and with McArdle it will make half a dozen. I'll tell John to make a spread for six." And he bribed a boy to accompany him to Albany's swell café and carry the fish.

After he had departed, George said: "There's a personal magnetism about that man which explains all that I have read of him. When you told me that you had asked Ned Buntline to fish with us I imagined him as a Bowery tough; but I'll make a mental apology to him, for I owe him no other. Will meet you in the evening."

Col. John McArdle was a veteran of the Mexican war, and so was Ned, and they were very chummy, having served in the same regiment, or brigade; but McArdle had lost an arm while in command of a regiment under William Walker in 1856, when he invaded Nicaragua, and McArdle's flag was at half-mast when the news came to Albany that Walker had been publicly shot at Trujillo in September, 1869.

Just what part Ned Buntline took in the Mexican war I don't know, but that he was in it, and in the Seminole war in Florida, I know from both Col. John McArdle and from his brother-in-law, Col. Michael K. Bryan, who commanded the Twenty-fifth N. Y. Militia, and was killed at Port Hudson, La., that he served in both wars. There are men who know that Ned was a romancer, and having no sympathy with his mode of thought, are disposed to look upon all his published life as a romance. That is not a fair way to view a man. His ambitions may differ from yours You may care to accumulate money, or to be recognized in a swell set. All ambition is egotism, and Ned Buntline's egotism took the direction of the heroic. He desired to be a hero, such as he had read of, and the ways of commerce had no attractions for him. This was also my own ambition in early life, the great obstacle seeming to be opportunity. I have spent much time and postage in getting at facts in the life of this man, and overlaid with fable, as many of the stories of him are, his life was truly a romantic one.

Going up State street I met Shirley Campbell, once of Campbell's Minstrels, and later the basso of the Caroline Riching's Opera Troupe. "Shirley," said I, "my friend Tweddle and I are going to dine with Ned Buntline and John McArdle to-night, and we lack two of half a dozen; you never was known to go back on a good dinner. Will you join us? No use to regret a lack of evening dress, there will be none there. Have you a friend in town who likes a social dinner?" He accepted and hunted up Tom Pendergast, at that time the best tenor on the minstrel stage, and we had only to mention it and Tom was there. Ned had no idea that our friends were professionals, and was surprised at Campbell's rendering of several songs.

Then Ned spoke: "To-day we caught several fishes which habitually wear a striped suit. I wore one for a year and didn't like it. You know why I wore it, and under the same circumstances I would risk wearing it again. I am proud of the fact that I stood up for American manhood at that time, for there was need of men to stand for it." He talked long and eloquently of the riot in 1849, for which he was fined $250 and suffered a year's imprisonment, and he was a most eloquent speaker. I will not attempt to repeat his words, for if I could remember them, I could never reproduce his grand effects of elocution.

After Ned had ceased, I said: "Our friend Pendergast knows a song or two, and I think we can get them out of him without resorting to violence," when a clapping of hands brought the tenor on his feet. What he sang was new then, and had not been sung on the stage. It was that pathetic ballad, "Father, dear father, come home with me now," sung with such an emphasis and pathos that when he finished there were tears in many eyes. McArdle's only hand hid his face, Campbell's head was bowed in deep thought, Ned jumped up and kissed Pendergast on both cheeks while tears streamed down his own, and he afterward declared that it was the best temperance song ever written or sung, and then he ordered another quart of Heidsieck.

The riot which has been referred to, and which Ned was punished for, was a great event, occurring only forty-eight years ago, but is almost forgotten. It was a quarrel between the foremost American tragedian, Edwin Forrest, and the English actor, Macready. Forrest had been hissed in England, and the "Native American" party declared that Macready's friends did the hissing, and that the English actor must not be allowed to play in New York. In looking up this subject I have accumulated enough material for a magazine article on the riot, but here can only say that at the Astor Place Opera House the play was "Macbeth," on Thursday, May 10, 1849, and Macready had been driven from the stage on the Monday night previous. Tickets were bought and distributed. *Ned Buntline's Own* had called on Americans to resist the possession of the opera house by crews of British steamships, and so the storm gathered. The Seventh Regiment, Col. Abram Duryea, after being stoned and firing blank cartridges, finally fired with ball. The result was that thirty-four of the mob were killed and 141 members of the Seventh were wounded, including Col. Duryea. One man got ten years in prison for this riot; therefore, Ned Buntline could not have been the head and front of it.

Col. James E. Kerrigan, now living in New York city, a veteran of the Mexican War and colonel of the Twenty-fifth New York Volunteers in our late war, was there when the riot began. Of course, he "took no part in it," but he says that Ned was arrested while haranguing a crowd in Lafayette place, and "now," said the veteran, "when you write up Ned Buntline I want you to say that he was a man who believed in having America governed by Americans, and at the head of his paper he placed George Washington's famous saying: 'Put none but Americans on guard.' We needed a man like Buntline then, and we need a thousand of them in this city to day to teach patriotism and Americanism to our youth. I tell you, New York city is in America, but not of it. Look at the draft riots of July, 1863, when a foreign mob terrorized the city, hung men to the lamp posts and burned a colored orphan asylum; we needed Ned Buntline then to arouse the people while the Governor of the State addressed the mob as 'my friends.'" And the old warrior paced the floor with excitement.

From the office of the Adjutant-General of the State I get this record: "Judson, Edward Z. C., age thirty-seven years, enlisted Sept. 25, 1862, at Mt. Pleasant, as a private in Co. K, 1st N. Y. Mounted Rifles, to serve three years. Promoted

sergeant Oct. 24, 1862. Transferred to Co. A, 22d Regiment Veteran Reserve Corps, Aug. 29, 1863." He served his term in the latter regiment and was honorably discharged as first lieutenant. Ned had five wounds, one of which made him somewhat lame. At Suffolk, Va., Col. Dodge put Ned in charge of a squad of scouts, and when the regiment went into winter quarters Ned was allowed a cabin where he wrote stories. He was the most prolific writer that I ever knew of. For over two years he ran six stories each week, under different nom de plumes, beginning and ending one in each issue. They were stories of impossible as well as improbable adventure, in which the hero arrived at the proper time and the villains were foiled. This sort of thing must have paid well, for I am told that Ned's estate footed up near $200,000. Not so bad for writing trashy tales.

In his earlier days he wrote "The Mysteries and Miseries of New York," which sketched the Bowery in its palmy days. This was dramatised under the title "New York as It Is," and F. S. Chanfrau made a great hit in his character of Mose, a soap-locked, red-shirted volunteer fireman, who always wore a plug hat on one side of his head and held a cigar tilted up at an acute angle. The play furnished popular quotations of firemen's talk, and we schoolboys would quote: "Sykesy take der butt," and "Get off dem hose or I'll hit yer wid a spanner," etc. Mose was our hero about 1850, and now as I go through Centre street on my way to the FOREST AND STREAM office, I stop each week and look in the window of No. 20 at a picture of Chanfrau as Mose, disgustedly saying: "I'm bound not to run wid der machine any more." Five old-timers were in the City Hall by invitation of Martin J. Keese, an old fire laddy, to meet me and talk of Ned Buntline, and when I mentioned this picture they went to see it. "It's like a glimpse of the old days," said Keese, "to see that picture, but it's sad to think of the descent from Mose to Chimmie Fadden. Ned Buntline took the character of Mose from Mose Humphrey, you remember him, Jake? He run with old 40 engine and got licked in every fight he went into. Chanfrau spent weeks studying Mose and made up just like him." And then these old "boys" became reminiscent of fires, fights, Harry Howard and other chiefs, and I enjoyed their enthusiasm as they lived their lives over again.

There are so many men who never saw any good in Ned Buntline because they did not know him, that I have tried to portray him as I knew him. If he were pleading his own case, he might say, with Othello:

> "I have done the State some service, and they know it;
> No more of that. I pray you, in your letters,
> When you shall these unlucky deeds relate,
> Speak of me as I am; nothing extenuate,
> Nor set down aught in malice."

If I wanted a quotation to fit Ned I might find it in John Hay's "Jim Bludsoe" in just four words: "He weren't no saint," and let it go at that. What in the world could be expected of a boy whose parents had handicapped with such a name as Edward Zane Carroll Judson? Yet this boy, by virtue carried, and sometimes staggered, under that load for over three-score years.

Ned was born in Philadelphia in 1822. His father was a lawyer and intended the boy for the clergy, but, luckily for the cloth, he had no inclination that way. Then the elder Judson decided that his son should be educated for the bar, and at times Ned got there, but he wasted no time in study for this purpose. He ran away and went to sea as a cabin boy when eleven years old, and the next year shipped on a war vessel. Appleton's "Cyclopedia of Biography" says that when thirteen years old he rescued the crew of a boat that had been run down by a Fulton Ferry boat, and received from President Van Buren a commission as midshipman in the U. S. Navy. After reading this, I consulted Hamersley's "Register of the U. S. Navy for 100 Years." There only the frigid facts are given, and under the misprinted name of E. J. C. Judson, he appears as "Midshipman, Feb. 10, 1838; resigned June 8, 1842." That shows that he was four years in the navy while he was between the ages of sixteen and twenty, and during this time he acquired enough of sea lingo to write his first sea tales under his nautical pen name. Because he had come on the quarter-deck through the hawsehole instead of over the rail, he was unpopular with the other middies, but, according to Appleton's book: "On being assigned to the Levant, he fought seven duels with midshipmen, who refused to associate with him because he had been a common sailor, and escaped from each without a wound. * * * He died in Stamford, Delaware county, N. Y., July 16, 1886." Surely, the boy who escaped from home at the early age of eleven was a boy full of vim and one that would make a mark of some kind.

Ned went into the Adirondacks in 1859 and built him a cabin on the shores of Eagle Lake, one of the Eckford chain, and christened it "Eagles's Nest." He there wrote the following verses which have been reproduced in almost every article on the Adirondacks:

> "Where the silvery gleam of the rushing stream
> Is so brightly seen on the rock's dark green,
> Where the white pink grows by the wild red rose
> And the bluebird sings till the welkin rings.
>
> Where the red deer leaps and the panther creeps,
> And the eagles scream over cliff and stream,
> Where the lilies bow their heads of snow,
> And the hemlocks tall throw a shade o'er all.
>
> Where the rolling surf laves the emerald turf,
> Where the trout leaps high at the hovering fly,
> Where the sportive fawn crops the soft green lawn,
> And the crow's shrill cry bodes a tempest nigh.
> There is my home—my wildwood home."

I alluded to his quarrel with Alvah Dunning in my sketch of the latter, and will not go into it now further than to say: Ned held ideas regarding the protection of game which Alvah did not share. One was independent of game as a food supply in close seasons and the other was not, and they had other causes of difference, and they threatened to shoot each other on sight. Ned died at his home and Alvah is living yet. Ned abandoned Eagle Lake in 1861 and went into the Catskills and built an elegant residence at Stamford, Delaware county, N. Y., which he named after the original Eagle's Nest, and there I wet a line with him in 1881 on a swift mountain stream.

That Ned did at times indulge in prolonged sprees is a well known fact, but I never saw him when he was under the rye. Once he said to me: "I had been writing for weeks and had become tired. There was no company there in the woods in the winter except Alvah Dunning and other amaroogians, and I got a horse at North Creek and lit out for Glens Falls and was gone a month."

That meant more than the words implied, unless we except "Amaroogians." The word is not in the Standard dictionary, nor in any other which I have access to; yet somehow I seem to know that it signifies a kind of unsophisticated woodsman, who cannot fraternize with a man of the world like Ned Buntline.

It has been said that Ned was an orator of much strength. From 1880 to 1885 he lectured on temperance for the Order of Good Templars, and was the founder of the Order of the Sons of Temperance. The picture of him which is here presented, was taken by Sarony, of New York, when Ned brought Buffalo Bill (William C. Cody) and Texas Jack (John Omohondro) from the West, and introduced them to the people of the East. Omohondro died too soon to reap a harvest from Ned's advertising; but Cody, who was a regimental butcher when Ned discovered him, and surrounded him with a romance which has made his fortune, is living, and no doubt will see that Ned's grave is kept green.

The great defect in the character of Ned Buntline up to his reaching middle age was unselfishness, and by this I mean a Quixotic disposition to espouse the quarrels of others, or, as in the Adirondack instance, to try to enforce an unpopular game law among a people who were averse to game laws of any kind. Ned had a high standard of morals, but could not always climb their heights. He was very deficient in humor; that point is well illustrated by the rig in which he permitted himself to be photographed, and his professional writing of romance had probably the effect of making him consider himself seriously.

When I fished with Ned in the Catskills, the drift of his talk would give an uninformed person the impression that his services to the country were equal to those of Grant, Sherman or Sheridan. His vanity was not balanced by modesty or humor, yet he was always clean in speech, as I knew him.

Only last week Col. Kerrigan wrote me: "When you write up Ned Buntline don't put wings on him. He was a grand, good man all the same, and there is no use in trying to hide his faults, for he had plenty of them; other people have worked up Ned's faults, and you know that he was a man in whom the good predominated."

Accepting Col. Kerrigan's estimate of Ned Buntline as my own, I leave Ned's character as a whole to the readers of FOREST AND STREAM. FRED MATHER.

CHICAGO FLY-CASTING TOURNAMENT.

CHICAGO, Ill., July 17.—*Editor Forest and Stream:* The Chicago Fly-Casting Club's second scientific angling tournament for the world's championship, open to all, will be held at Garfield Park, Chicago, Aug. 13 and 14.

Six championship diamond medals, valued at $50 each, will be awarded as first prizes in each event. Additional merchandise prizes, valued at several hundred dollars, will be awarded as second, third, fourth and fifth prizes in each event. In addition to these prizes, President B W. Goodsell has donated an oil painting (trout) for the contestant making the highest general average in all events.

First Day, Aug. 13.

First Event.—Fixed distance and accuracy fly-casting, at buoys 50, 55 and 60ft. Rod not to exceed 8½oz. Five casts at each buoy; for each foot or fraction of a foot from buoy a demerit of one shall be scored. One minute allowed to extend line.

Second Event.—Accuracy bait-casting, at buoys 60, 70, 80, 90 and 100ft. One cast at each buoy with ½oz. rubber frog; for each foot or fraction of a foot frog drops from buoy a demerit of one shall be scored. Free running reel required.

Third Event.—Dry fly-casting for accuracy and delicacy combined, at buoys 35, 40 and 45ft. Rod not to exceed 5¾oz. Five casts at each buoy; thirty seconds allowed to extend line, thereafter each time fly strikes it will be scored. Delicacy of cast will also be scored.

Second Day, Aug. 14.

Fourth Event.—Roll fly-casting for accuracy, at buoys 50, 45 and 40ft. Rod not to exceed 8½oz. Five casts at each buoy; for each foot or fraction of a foot from the buoy cast at a demerit of one shall be scored.

Fifth Event.—Bait casting for distance and accuracy combined. Casting on the lawn in court 30ft. wide. Tape line running down the center. Five casts with ½oz rubber frog; for every foot or fraction of a foot from tape line a demerit of one shall be scored from the distance cast. Free running reel required.

Sixth Event.—Long distance fly-casting. No limit to rod or line. Ten minutes allowed to extend line to greatest possible distance.

Rules Governing the Contest.

Rule 1.—All persons competing for prizes shall pay an entrance fee as follows: One event, $3. Two events, $5. Three events, $7. All events, $10. Entries to each event close thirty minutes before contest commences.

Rule 2. The captain shall be the executive officer of the day, and the secretary-treasurer shall receive all entry fees, and issue cards to contestants designating their number in the order of competition. The time-keeper shall start and close all events. He shall signal the judges with a flag, and call time to the contestants.

Rule 3. The contests shall be governed by two judges and a referee. In case of disagreement the referee shall decide.

Rule 4. All casting shall be done single-handed only.

Rule 5. Competitors may consult their own wishes in choice of reel and line, but lines must not be knotted or weighted, and bait casting reels must be free running.

Rule 6. The leader shall be of single gut, and shall not be less than 6 nor more than 9ft. in length. One fly only shall be used, of a size not smaller than No. 12 or larger than No. 6. Hooks shall be broken off at the head.

Complete official programme, giving detailed information and entry blanks, mailed on application to me.

GEO. A. MURRELL, Sec'y-Treas.

617, No. 36 LASALLE STREET, Chicago, Ill.

Vermont League's Midsummer Meet.

ST. JOHNSBURY, Vt., July 17.—The midsummer meeting of the Vermont Fish and Game League, called for July 22, will be postponed until Aug. 6, word having been received from Senator Proctor that President McKinley will attend, together with several cabinet officers.

J. W. TITCOMB, President.

New Jersey Coast Fishing.

ASBURY PARK, N. J., July 17.—Last week I wrote that no bass had been taken from our piers here; as if to more particularly emphasize the never ending vagaries of fish life, the past week has been one of glory as regards pier fishing. Never has there been more bass taken in a single week than in the one last past. To give names of the successful, and weights, would be impossible. To say that the fishing is superb is sufficient. The score has run as high as twenty in a single day, and range of weights 4 to 22lbs. The prevailing easterly winds has produced a high and choppy sea, which is always productive of best results. Kingfish are abundant and being taken on every tide. There are a number of New York anglers here who pride themselves on their success with rod and reel. I counted at one time eighty-four rods being busily plied on Thursday morning, and while all did not get prizes, still all met with some success, and the consequence is that tackle stores are doing a rushing business, and Seger, the local rod maker, has his hands full to supply new goods and keep up with repairs. I made mention recently that but few ground nets were in use in this immediate vicinity, owing to financial stress of the parties who formerly operated them. As a consequence Shark River is alive with weakfish, a circumstance which has not occurred before in years, as the mouth of the river has been so hemmed in by the nets as to make their entrance impossible. No better evidence is needed by the advocates of fish protection than these mute but unimpeachable witnesses. Parties intending fishing should take C. R. R. N. J. to Belmar. At Buhler's boats and bait can be procured, which is only two minutes' walk from station. LEONARD HULIT.

WATERTOWN, N. J., July 19.—Weakfishing and bluefishing good. Nine parties out over Saturday and Sunday. All got nice catches. Mr. T. M. Hageton and son Leon caught sixty striped bass on Friday last; weight 150lbs. Mr. Leon Hageton caught one weighing 6½lbs., and Mr. T. M. Hageton caught one 5¼lbs. These gentlemen are from Westfield, Mass. J. H. BIRDSALL

NEW YORK, July 13.—Last Saturday four of us at Forked River, Barnegat Bay, caught in three hours nearly 200 weakfish, of which we put back in the bay, unharmed, over 100. The fish were tide runners, weighing from 2 to 3½lbs., not one schoolfish among them. For bait we used shedder crab. E. S.

FORKED RIVER, N. J., July 8.—Both weak and bluefish are biting here, large numbers being caught daily. To-day 200 weakfish were caught in one boat. J. B TILTON.

A Bargain in Trout Fry.

THE North Branch Fishing Club received a large addition to the stock of trout in the brook yesterday, the addition coming in rather an unexpected way. A stranger named Follett came to the city Thursday with 4,000 trout fry from the hatchery in Meriden. He was on his way to the Adirondack Mountains, where he was to stock a body of water there near Mt. Marcy. He came up on the noon train on the Consolidated road and was planning to take the 1:14 train for Albany. But on his arrival here, he was told that there was no room on the baggage car of that train for his fish. Four thousand trout, even though they are little fellows, take up considerable room, and in this case were being carried in four or five large cans.

This announcement from the baggage men upset Mr. Follett's plans completely.

The 1:14 train was the only one that gave him his connections except another late at night. He would, therefore, have to wait over in this city some twelve or thirteen hours and be obliged to stay with his fish almost constantly, for young trout have to be tenderly cared for; the water must be iced constantly and changed every hour or two. Even with these precautions he was not sure of arriving in the Adirondacks with many live fish after so long a time on the road. He therefore hunted up J. A. Murphy, president of the North Branch Club, and a bargain was soon struck. He then went back to Meriden and secured another cargo and took it out to the Empire State, taking care this time to arrange his trains so that he could make better connections. —*Springfield Republican.*

Fishing into the Circus.

DOWN in Edmundston, Washburn's circus was being billed to show on the 7th. As they were only going to advertise a few miles above here, I thought it would be a good scheme to charter the train on the Temiscousta Railroad from Connor's Station, the up-river terminus of the road. This I did. Then taking a lot of circus bills I went through the country distributing them. After I got away up country, where houses and people were scarce, I fell in with some who would like to come, but said money was scarce. I told them to go catch a lot of trout the day before and bring them, nice and cool, to Connor's, and that this would give them money all right. The morning we left the station nine of these men brought 500lbs. of fine trout, for which I paid them $50. You may believe that they were surprised, as they had no idea that the fish were of any value, being so plenty with them. I got some ice, packed them nicely, and landed them in Edmundston all right, where they were instantly turned over to the circus people and hotels. There were very nearly 3,000 people at the circus; but I don't believe that any thought they saw the show as cheaply as these men who fished for the means to get in. I cleared $100 with the train, and felt pleased with my day's fishing. S. J. R.

Rapid River Closed.

MIDDLE DAM, Me., July 15.—*Editor Forest and Stream:* In answer to a petition signed by twenty-six names of residents of this vicinity, the Fish and Game Commissioners of the State met here yesterday, and, as no remonstrants appeared, they decided to close Rapid River, from the swing bridge to Umbagog Lake, to all kinds of fishing for four years. The close season to date from the 20th of current month. To show what this means to the young salmon and trout, I will say that during an afternoon's casting there this week I hooked and returned to the water no less than eleven young salmon, not one of which reached the legal limit in length. It is the grandest piece of water in Maine for the young "landlocked," and the wisdom of the Commissioners must be apparent to everyone. Hot weather and high water has been the rule for the past week. J. W. B.

CHICAGO AND THE WEST.

Carp in the Park Ponds.

In common with a great many other people, the Park Commissioners of Chicago at one time thought the German carp a highly beautiful and desirable fish, and an ornament calculated to shine in the best society. Such is not now the belief. The carp which have been planted in the park lakes have increased and multiplied, and they manage to keep the waters stirred up until it is of the general consistency and color of restaurant coffee. During the past month it was decided to have the park improved by the removal of all the carp from the lagoons, the experiment being made first in Garfield Park. A professional net-fisherman from the lake was engaged, who agreed to take the carp for his pay. He worked for two days with a good force, but only succeeded in taking a very few carp. He declared that the weeds at the bottom of the water offered a refuge for the carp, out of which they could not be driven. Burrowing in the mud, the carp allowed the lead lines of the net to drag harmlessly above them. In consequence of this the professional fisherman has thrown up his hands in horror, and we still have carp in our park lakes. Acclimatization is a good thing sometimes, but in the case of carp, Chinese and other foreign substances, its results are not always to be hailed with acclamation.

Cisco Season at Lake Geneva.

One of the curious features of Western angling is the cisco season at Lake Geneva. These little fish appear at a certain time of the year, usually in June, at this favorite water of Lake Geneva. They run near the surface in schools of thousands, and are taken in great numbers by the long lines of boats which go out for the fast and curious fun of this brief and curious form of angling. The fish bite for perhaps a week or ten days, then they drop down to the deep water of the lake and give absolutely no sign of their presence until the following year. This year the cisco run lasted for over four weeks, an unprecedentedly long time. One day in the last week of June six rods took over 1,000 cisco at Lake Geneva.

I do not know of the presence of the cisco in any other Wisconsin lake excepting Big Sand Lake, more than 150 miles north of Lake Geneva. In Big Sand Lake ciscos are often taken by means of sunken gill nets, but I have never heard of their taking bait at that lake.

New Warden for Missouri.

Mr. A. J. D. Burford, of Burfordville, Cape Girardeau county, was, on June 28, appointed by Governor Stevens as State Game and Fish Warden, vice Jesse W. Henry, of Jefferson City. Mr Burford will find abundance of work to do along the naturally prolific waters of his State.

In Montana.

The Boulder River, near Big Timber, has offered fine trout fishing the past week. Messrs. C. N. Skillman, Ed Hall, Bert Snook and E B. Clark had exceptional luck on that stream, taking one 8lb. trout, one of 6lbs., three of 5lbs. and two over 5lbs. They had twenty other fish running between 2 and 4lbs., the total making certainly a very fine catch.

In Wyoming.

Trout fishing near Sheridan, Wyo., is now extraordinarily good. There are a number of streams in the county which are well spoken of, but luck has been especially good in Big Goose Creek, from Beckton up to the cañon.

Trout on the Gunnison, Colorado.

Mr. Milward Hewitt reports to the Denver press the following results of fishing along the Gunnison River, Col.:

"On Saturday last three trout were shown in Gunnison city aggregating 24½lbs., the largest being 10½lbs., and from Iola, the headquarters of the Denver Fishing Club, I hear of one 7lbs., one 4½lbs. Last Sunday Charles Shaw caught one of 6lbs. at the Stevens bridge, and the agent one of 4½lbs. Louis Pomel had sixteen one day last week in three hours, and thirteen another day in a few hours. A party of Gunnison Fishermen at Iola had a fine string one day last week from 1 to 7lbs., and so on.

Michigan Commission Cut Down.

There was a strong lobby of the market fishermen on hand at the last session of the Michigan Legislature, this lobby fighting the sportsmen element, who have sought to regulate the size of mesh to be used and the manner of fishing in the open waters. The result of this fight was that instead of the Fish Commission getting its usual appropriation of $55,000, it was cut to $15,000, this to last for the term of two years. If this result be the work of the market fishermen, it is difficult to see the wisdom of their course. Mr. A. Booth, the most prominent market-fisherman on the Great Lakes, once told me that if it had not been for the efforts of the State Hatcheries of Ohio and Michigan there would not be a whitefish to-day south of Lake Superior. The Michigan Commission, under its curtailed appropriation, will throw nearly all of its force out of employment. It will make a specialty for the next two years of brook trout and other game fish, and the market fish will be allowed to take care of themselves. The Detroit hatchery for whitefish, the carp hatchery at Glenwood, the lake trout and commercial hatcheries at the Soo, and the wall-eyed pike and bass hatcheries will be put out of commission, and the only hatcheries that will be maintained will be those for brook trout at Paris, Mecosta county, and at the Soo.

Camping.

Mr. Harry Lawrence Wilbur, of this city, asks me where he can go trout fishing, taking along his wife, for a camping trip. I recommended the Prairie River of Wisconsin, or the Au Sable River of Michigan. These streams are good for trout. As to camping out for a lady, the trout country, with its mosquitoes and flies, is about the hardest and most uncomfortable that can be found. The Au Sable trip must be made by boat, with a new camp each day. It could be made by a lady, but few would think it enjoyable. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A Large Bass From a Small Lake.

NEW YORK, July 15.—*Editor Forest and Stream:* Dr. H. A. Mandeville, of Orange, N. J., a member of the Bellport Gun Club, has recently had mounted a large-mouth black bass weighing 7lbs., which he caught in Artist Lake, near Bellport, L. I. This fish very closely resembled a small-mouth, but after careful examination Dr. Tarleton H. Bean pronounced it a large-mouth.

NEW ENGLAND FISHING.

BOSTON, July 17.—Again the Maine trout and salmon lakes, ponds and rivers have been swollen to entraordinary proportions. The rain of early this week brought a July freshet unheard of; and the waters of northern and eastern New England are up to full banks. What this unseasonable rise will do for the fishing is a question. These is no doubt but what the unusually high position of the Rangeley, the Moosehead and other waters has prolonged trolling for salmon and trout till well into July, when it is generally about all done by the middle of June. What this additional freshet and high water will do remains to be seen.

S. R. Morse, of Atlantic City, N. J., a camp owner on the shores of Rangeley Lake, is reported to have broken the record of those waters for landlocked salmon last week, landing a big one that weighed 13½lbs. The fish was 30in. long and very, very deep, the largest salmon by 2½lbs. that has ever been taken from the Rangeleys. The Maine Fish and Game Commissioners are very busy with what may be termed a week of hearings. These hearings are mostly in regard to closing tributary streams to all fishing. They have invariably refused to close waters that are not being stocked by the State. A few rather bitter hearings are set down in regard to the question of fishways at certain dams.

Black Bass fishing continues to be very much in order. D. W. Linnehan, of Boston, with a friend, spent a day at one of the ponds in Winchester this week with a catch of forty nice bass. The lucky sportsmen are rather proud, and mention that the curious part of the trip was that they met an old farmer near the pond. He saw their string of bass with considerable surprise, and remarked that he had lived on the shores of the pond for many years, and was never before aware that such a string of fish could be taken from it.

Mr. E. C. Stevens, of Boston, is back from a nice fishing trip to Lake Dunmore, Salisbury, Vt. This time he was alone, except for a guide, but had excellent fishing. He took all the bass he wanted, catching thirty-eight on Monday, of good size. Pickerel fishing was also good. A 6lb. pickerel was Mr. Stevens's largest this year, though he has taken larger ones there on former seasons. The lake seems to be particularly noted for the size of its pickerel.

Mr. Frank F. Dodge is back from his first fishing trip this season to the camp owned by himself and Mr. Fadin, at Lake Barrio, Nova Scotia. This lake is but little known to sportsmen, being in the woods a long distance from settlement, approached by carriage road and on foot six or eight miles to Silver River, and thence to the lake by canoes. The fishing is all that the sportsman could wish of small trout. Mr. Dodge will start his boys for a summer outing at his camp in a few days. He has a man there that can be trusted. Mr. Dodge and Mr. Fadin are fortunate in being able to purchase their camp lot outright, not being obliged to lease, as is almost universally the case in Maine. They are obliged to pay annually "one peppercorn" to the Crown for the use of their land.

Black bass fishing is reported good in Sunapee Lake, New Hampshire. Mr. L. O. Crane is at home from a short stay at that lake. He found all the bass fishing he desired. He landed a bass weighing 3½lbs. there Monday. Almost every time he went out he took about all the bass he desired. He fished with the fly altogether, using in his cast the parmacheene-belle, coachman and brown-hackle. This may be a new cast to some bass fishermen, but it did well with Mr. Crane.

SPECIAL.

But Some are Fishing Still.

A MAN I HAVE FISHED WITH, and who is so fortunate as to have survived it, is now successfully persuading the salmon of New Brunswick that a diet of feathers, tinsel, pig's wool and feathers is more palatable and wholesome than the small fish and crustaceans that have comprised their ocean *menu*. When I dropped into Conroy's last week to look over some tackle, he said to me; "Major Fred, there was a party of anglers in here last week discussing your articles in FOREST AND STREAM, and one man remarked: 'In reading those articles I've noticed that nearly every man who ever fished with Mather is dead, and I think that I wouldn't care to fish with him.' How is this? Is he right?"

"Surely he is right, Thomas," I replied. "A generation of man is thirty years and few reach the limit of three score and ten. You must not forget that my first sketch was of Reuben Wood, whom I fished with just fifty-seven years ago, when he was a boy of a dozen or more years and I a child of seven; Reuben lived to be sixty-two years old, even if he did fish with me. Port Tyler lived to be nearly eighty; Geo. Dawson died at seventy; Ira Wood at fifty-three; Bill Patterson, Guyon, Fish and "Jack" Sheppard are living, while Alvah Dunning is still an Adirondack guide nearly ninety years old, not to mention Charles Hallock, who is just five months and eleven days younger than I. Put these facts before your friends, Tom, for I don't care to pose as a hoodoo."

"That's a new way to look at it," said Tom, "we somehow forget that you were born so long before us; but tell me about your friend on the Restigouche who has been taking all these big salmon."

"My friend who is now there fishing is one whom I have written up in FOREST AND STREAM, and he and I fished together more than fifty years ago. He sent me a 25lb. salmon this week, and it came through from Matapedia in good shape. Oh, no, Thomas, the old boys are not all dead; there's good leather in some of them and they wear well. Tell that to your friends next time." FRED MATHER.

Chicago Fly-Casting Club.

CHICAGO, July 17.—*Editor Forest and Stream:* The score of our club contest to-day was as follows:

	Long Distance Fly, feet.	Distance and Acc'y, per cent.	Accuracy and Del'cy, per cent.	Bait Casting per cent
W. H. Babcock..	75	69⅔	83⅓	....
I. H. Bellows....	80	76	86⅔	94
L. F. Crosby.....	...	....	....	101⅝
J. M Clark.....	...	87⅓	....	84⅝
B. W. Goodsell..	100	86⅔	91	83
C. G. Ludlow....	77	80⅔	80⅓	73
G. A. Murrell....	77	86⅓	74	96⅘
F. N. Peet.....	88	89⅓	85	91
G. W. Strell.....	...	....	....	72⅘
H. G. Hoscall....	...	....	....	79
H. W. Perce.....	...	....	....	72⅙
E. C Smith.....	...	....	....	....
M. D. Smith.....	...	....	....	92
L. G. Stiles.....	...	....	....	....
T. D. Whitney...	...	....	....	....

Holders of medals: Long distance fly, B. W. Goodsell; distance and accuracy, F. N. Peet; accuracy and delicacy, B. W. Goodsell; bait casting, G. A. Murrell.

G. A. MURRELL, Sec'y.

Green Mountain Notes.

MILTON, Vt., July 12.—Bass fishing in this section of the State is uncommonly good this year. A party came in last week from the mouth of the Lamoille with heavy strings, averaging 3 and 4lbs. The baits used were minnows, frogs, and helgamites. Pike are being brought in in large numbers, a party of three gentlemen taking over seventy in less than four hours; the bait used was small frogs. Trout are fairly numerous, but the excellent fishing in Lake Champlain has drawn most of the fishing population there, so the trout streams have received scanty attention in this part of the State at least.

The Lamoille River bids fair to become a good fighting ground for those who love the wily salmon trout. The stream was stacked with fry of that variety a few years ago, and several good strings of medium-sized fish have been taken. In some parts of the river, in shallow water, small trout, 3 or 4in. long, fairly swarm, promising good sport at some future time.

From present indications, it looks as though shooting would be unusually good in Vermont this fall. Duck are nesting in large numbers in the marshes, or, as they are locally called, "slango" along the lake. Plover and snipe are also plenty, but woodcock are not numerous. Partridges, too, are plenty, and nearly every patch of woodland contains at least one brood of these shyest of nature's children. It is gratifying to note that the English ringneck pheasant is doing well in this State. They appear to be a very hardy bird, enduring our severe winters well, and bid fair to become as numerous as the grouse.

Vermont hunters are eagerly awaiting the open season for deer that begins Oct. 1, and continues one month. From reports from various sections of the State, deer seem to be quite abundant, particularly in the central and southern portion. It is rather a pity that the old law could not have remained in force a few years longer, so that the deer might have multiplied unmolested. As it is now, the deer are so tame that it will be no hard task for a good shot to bag them, and I fear the first season will see them wellnigh exterminated. Happily, however, the law is as nearly right as it is possible to make a game law, and hunting with dog, jack, salt-lick or trap, are prohibited, as well as the killing of deer without horns. Possibly the deer will survive this autumn's host of hunters and become a permanent fixture of the State, but that remains to be seen. KENEWAH.

Bass Fishing in Bay of Quinte.

BELLEVILLE, Ont., July 16.—The following will give your readers an idea of what bass fishing is like in the Bay of Quinte at present. On Wednesday afternoon last the Forest and Stream Club held their first bass fishing competition of the season, for prizes given by the club for largest and second largest catches of bass, and by Mr. C. N. Sulman, a member of the club, for three largest bass caught during the season. The conditions prescribe not more than two men in a boat; to leave the harbor not earlier than 1 P. M., returning not later than 10 P. M.; fish to be counted and weighed at a certain boat house; anglers to troll, still-fish, or with the fly or bait casting at will, but not to use more than one line at a time. Twelve boats took part, and, although several boats failed to secure any bass, the fishing was good, thirty-three fish being caught. The fish, however, were small, and the veterans were once more easy winners. The results were:

Largest catch—W. Ormond and Major Casswell, thirteen fish.

Next largest catch—W. P. Clarke and John Haslett, five fish.

Largest bass—R. Burke and H. P. Day, 2lbs. 7oz.

For the Sulman prize, for the three heaviest bass, Messrs. Burke and Day weighed in three which weighed 5lbs. 7oz.

At Trent Bridge, a few evenings ago, Mr. John Garneau went out on the River Trent, and in less than an hour he was fortunate in catching twelve maskinonge. A boy, the evening previous, captured in twenty minutes two 'lunge, one weighing 12lbs. R. L. B.

Rangely Fishing.

RANGELY, Me., July 12.—I have noticed a number of articles in your paper in reference to the fishing this year at the Rangeleys. I have been coming here for five or six weeks vacation for the past five years, and have never found fishing so good as last year and this.

We have caught two 8lb. salmon, and about twenty that weighed from 3 to 7lbs. We have also caught a number of trout running in weight from 2 to 4½lbs. On Saturday, 10th inst., while fishing with me, with Ernest Ross, guide, Prof. S. R. Morse, of Atlantic City, N. J., took a 13½lb. salmon. This is the largest landlocked salmon ever taken by hook and line from the Rangeley waters. The large salmon was 31in. long, 20in. in circumference, and 9in. spread of tail. A Mr. Winship, about the same time, caught a salmon that weighed 12lbs. There were a number of salmon taken on the 10th that ran from 4 to 6lbs. This is the fishing on the Oquossoc or Rangely Lake. I have been here since June 17th, and have had fine sport.

We never get five or six large fish any one day, but, with one or two exceptions, we have had sport enough each time we have been fishing. This may be of some interest to your readers who are visitors to this section. W. A. FAUNCE.

Maine Guides in New Brunswick.

MR. R. S. BARKER, Chief Game Constable, Fredericton, N B., writes: "I cannot see any reason why you should not bring State of Maine guides with you. It would not be necessary for them to have a license provided they did not carry guns. I presume you would have local guides as well."

The Kennel.

SCHOOLING THE DOG.—VII.

HAVING taught the puppy the meaning of the orders, "Come in" and "Go on," his further special training may rest till he is naturally developed to a reasonable degree, mentally and physically, say at the age of about ten months. In the intervening time, if the trainer in his walks makes a companion of him and give him freedom under proper conditions at other times, he will become way-wise, and from his own powers of perception will learn to adjust his actions to the governing circumstances of his life.

A puppy kept on chain or in confinement can learn nothing, for the reason that under such conditions no opportunity to learn is afforded. The aged city dog which for the first time is given a run in the country, is filled with amazement at the sight of a cow, and often is divided in his mind as to whether it is better to flee and escape or stand and fight, though his bristling hair and saucy barkings at a safe distance, with waverings to and fro, in alert retreats and reluctant advances, indicate that his heart is filled with many alarms and misgivings at the sight of the strange monster. And so it is with him in a thousand other circumstances equally trifling. They either fill him with wonderment, or he is forever at cross purposes with them.

A dog which has his liberty learns the meaning of all the things about him, and adjusts his deportment accordingly. If confined constantly, he grows up in ignorance, mentally dwarfed and physically inferior and misshapen, with a soured temper and a general depreciation which is lifelong. The education which the dog gains from his own personal experience is the real education. The education given by the trainer is but a tiny fraction when compared with it. Without this self education, so necessary in life, and which can be acquired only from experience, the relatively trifling special education which the trainer gives to subserve his own purposes is worthless. In long confinement, the dog being ignorant, his understanding dormant, and his bodily powers injured, the mere training of him to obey a few commands does nothing toward fitting him for active practical service.

The serious part of the yard training may be begun by teaching the dog to "drop" or "charge," which is simply to teach him to lie down to order and so remain till he is ordered to rise or to go on. It is much more difficult to teach than either "Go on" or "Come in," inasmuch as the dog is required to cease all effort and to lie still, which nearly always run counter to his inclination. Furthermore, he is required to drop promptly to the command whether he be nearby or not. If at a distance, he feels that his nimble heels are sufficient warrant for disobedience. After he has been taught the meaning of the order, and will drop promptly to it, it requires a long schooling to establish discipline. He may drop to it, then become impatient and rise up the next moment. He must be schooled to lie reliably as long as the trainer desires him to do so. In the yard, where there is nothing to excite his interest, he may remain down steadily till ordered up; while in the fields, where he wishes to be at large, or where there is fur or feather to distract him, he may utterly disregard all orders.

His discipline is not properly established till he drops promptly to the order, wherever he can hear it, far or near, and remain till the trainer orders him to rise or go on.

Schooling the dog to lie down to order should be persisted in till obedience is prompt and reliable So long as the dog obeys reluctantly or imperfectly, his schooling should be continued. If imperfect obedience is accepted, obedience will be less and less till at last there will be no obedience at all.

It is desirable many times that the dog should lie down at the will of his master, either about the house or in the field, to prevent prowling and annoyance, or to make him cease hunting. So long as he is on his feet he will be moving about, when lying down action ceases.

Some sportsmen desire that their dogs be taught to drop to shot and wing, they contending that it puts a more artistic finish to the dogs' performance and prevents them from breaking shot or chasing. So far as any finish to the performance is concerned, it is one of fancy, not of utility. It is in the class of tricks, and if a dog were to turn a summersault when the bird rose or the gun was fired, it would be quite as pertinent to the occasion. There is nothing whatever in the rise of a bird or the report of the gun which can be usefully supplemented by the drop of the dog. It is of no importance as a preventive of chasing or shot-breaking, for there is nothing easier to teach than steadiness to shot and wing. A dog can be broken to steadiness much easier than he can be taught to drop. The mistaken claim of greater finish in work to the gun and on birds, and of greater steadiness, is all that can be advanced for it On the other hand, there are a number of important considerations to be urged against it. First, on wet or sloppy ground, or in mud or swamps, particularly in cold weather, there is a certain inhumanity in requiring a dog to drop on his stomach and there remain until ordered up. In briers and thorns it is often painful for the dog to drop. Sometimes, if he flushes in cover or at a distance from the shooter, where the latter cannot see him, he will remain a long time dropped to wing waiting for the order to get up and go on. After dropping to wing for a time, the dog anticipates the rise as the shooter walks up to flush, and therefore drops before the birds take wing. When fatigued, he finds that lying down on point is restful and agreeable. He therefore anticipates the rise more and more, till at length he may drop on his points wholly. Many a dog drops to his points from a beginning which referred only to dropping to wing. A dog which drops to his points adds greatly to the difficulties of the shooter, since the latter must watch him unceasingly; for if he drops when the shooter does not see him, it may require a long search to find him, as little cover will conceal him when lying down. Under such circumstances, it not infrequently happens that the dog cannot be found at all, and it is necessary to whistle or call him from his point So much for the advantages and disadvantages of dropping to shot.

The manner of teaching a dog to drop is very simple. Tie a short cord to the dog's collar. Hold it in one hand; give the order "Drop," and push the dog down with the other hand. Give him a tap or two with the whip if he attempts to rise, at the same time uttering the command "Drop." After a time permit him to rise, and after a few minutes repeat the act. After five or six lessons in as many days, he should understand its meaning, but may not obey. Then with the cord held in one hand he is given the order, and at the same time hit sharply on the shoulders with the whip. He will soon drop. If he rolls over on his back, a few light whip taps on his paws will cause him to turn into the right position.

This schooling should be persisted in till he will obey the order instantly. When the order is given, no nosing about seeking for a good place, or seeking to evade obedience, should be tolerated. He should be made to drop in the place where he stood when the order was given. The hand may be raised as a signal to drop, and he will learn to associate it with the act. If he is slow to recognize the signal, obedience can be enforced in the same manner as when the order is given orally. All this is done with the dog close by. Next he should be schooled at a distance. An open field is a good school room. A strong wooden pin may be driven firmly in the ground. Tie the dog to it with 20 or 30yds. of light cord. Make him drop close by the pin. Walk away 20 or 30yds. If he moves, take him back to his place and make him lie down. If he attempts to bolt the cord will snub him, and he can be brought back and forced to resume his place. If he bolts resolutely, a spike collar may be used. After he runs against the collar once or twice, he will give up all attempts to bolt.

The lessons should be continued till the dog will obey instantly, and till the discipline is so firmly established that he will have no thought of disobedience.

He is taught to drop to shot by making him drop to the report of a pistol as if it were a command. To teach the dog to drop to wing, he is dropped every time a bird rises near him, and the previous discipline being so firmly established, he in time learns to drop to wing from repetitions of the act. If he is slow to drop, punishment may be used, and it already being associated with disobedience, he will soon learn to obey.

The order used when the dog is required to rise to his feet is "Hold up," or a beckon of the hand or snap of the finger. He soon learns its meaning, as it is in accord with his inclinations. If he should be sulky and willful, a spike collar may be put on him, and when the order is given a slight pull on the collar will bring him to his feet.

BERNARD WATERS.

Sheep Dog Trials.

THE so called sheep dog trials which are sometimes held in showyards and small enclosures are of very little practical use as real test of working capacity. The dog has to "bring" the sheep a certain distance, then "drive" them between flags, round certain poles, and through one or two gates. Now, if the programme can be known in a general way beforehand, a dog can be taught to be fairly efficient in this ornamental work, for his master can take him to a field at an odd time and train him so far for a show performance. No practical man with a good working young dog would think of putting the animal through the capers needed for a show trial such as those referred to. He would take a three or four-year old dog that would not be easily spoiled by being set to do a lot of meaningless odds and ends. An ideal trial should as much as possible resemble the tests of real life, and this means that it cannot very well be held in a show yard or in an enclosure of moderate dimensions. Then there ought to be tests in parks as well as on hill-sides. An old dog may work admirably in a park, and so may a young one that has never done anything else except confined turns within sight; but the chances are the young dog will prove half a failure when he is set right off to gather a scattered flock on a rough hill side.

"Fanking work," as it is termed is Scotland, or driving sheep into an enclosure, is, to all intents, the most frequent close quarter exercise needed in regular practice. Keeping the sheep in a corner to give the shepherd a chance of catching or narrowly inspecting one or more specimens is also, of course, frequently needed, only in such a case the dog keeps at a moderate distance to prevent a stampede. A dog sees the use of such work, but he has to be directly taught the trick of putting the sheep between flags and round poles. A beautiful exercise, needing two dogs, is the one now and then practiced in the Scottish Highlands when the sheep are counted. The shepherd and one dog stand facing each other some 8 or 10yds. apart, while the other dog is set to drive the flock very gradually in between the two. There is no difficulty once the stream of animals is set steadily flowing. At the outset the dog at hand has to excercise considerable diplomacy in order to get the leading members of the flock to pass between himself and his master, and the gathering dog has to be on the outlook against bursts and hurry. An exercise of this sort is of real practical value, and the like cannot be said of half the tests to which handsome prizes are added.—*Agricultural Gazette.*

A. K. C. Executive Board.

A MEETING of the Executive Board was held in the A. K. C. rooms at 10:30, July 17. Present: Messrs. Belmont, Brooks, Hunnewell, Wilmerding, Schellhass and Watson. The agreement with the Canadian Kennel Club was ratified. In the matter of charges made by Mr. H. T. Payne against Mr. Mortimer for misconduct as judge at the Oakland show, and the charges made by the St. Bernard Club, of California, against Mr. Payne for his action in making the charges against Mr. Mortimer, it was "Resolved that the Pacific Advisory Board call upon Mr. H. T. Payne to supply the evidence to substantiate the public statements made by him regarding Mr. James Mortimer, investigate the same, and report thereon to the A. K. C."

The secretary was authorized to go to the Pacific coast and investigate such matters as he deemed necessary.

In the matter of Washington vs. Cotzhausen, which concerned the matter of a stud fee, the board resolved "That no fraud has been shown by the evidence, and in the opinion of this board it resulted in simply a misunderstanding of letters exchanged between the parties hereto. The case is dismissed."

The French Bull Dog Club was admitted to membership.

The following kennel names were allowed: Bon Accord, to Wm. Strachan; Jubilee, to G. B. Borradaile; Missouri, to Sterling P. Marlin; Shawmut, to Richard H. Hunt.

The suspension of F. G. Bixby was removed.

The report of the Pacific advisory board, concerning charges against A. R. Crowell was read. It was resolved that, Whereas, as the A. K. C. has no agents, the action of A. R Crowell is reprimanded for receiving money for the club, and all persons are warned not to accept any on this account. Also that the action of the secretary for forwarding the matter for investigation is approved.

Pen and-ink sketches were ordered scheduled and sold.

POINTS AND FLUSHES.

Mr. W. S. Bell, secretary of the Continental Field Trials Club, writes us as follows: "Permit me to call attention to Aug. 1, 1897, as the date for closing the entries of the Excelsior Stake (all-age) of the Continental Field Trial Club's chicken trials, to be held at Morris, Manitobo, Sept. 1. Also the same date, Aug. 1, closes the entries for the Blue Ribbon Stake of the third annual field trials of the Continental Club, to be run on quail at New Albany, Miss., Jan. 17, 1898. Advices from both locations insure plenty of birds. I hope owners and handlers will not overlook these two events. Entry blanks and the clubs itinerary have been mailed to all those known to me and will be cheerfully mailed to anyone on application."

Under date of July 15, Mr. C. E. Buckle writes us that the pointers of the Charlottesville Kennels are all in great shape, and that they have a grand lot of youngsters for 1898. In Virginia the summer has been good and pleasant. A very good way to breed good pointers and setters is to devote one's self diligently to it, instead of wasting time writing long letters about bugaboos and bugaboo judges.

In our advertising columns this week Edson W. Safford, Montrose, Pa., offers English pointer. G. G Williamson, Muncie, Ind., offers English setters. J. M. Kelly, Montrose, Pa., offers English setters. Conrad Klein, Coryville, Cincinnati, O., offers a pointer and a setter, both broken. A. Bigelow, Jr., of Boston, offers cocker.

Wheeling.

WHEELING NOTES.

THOUGH steel will continue to be the standard material for the construction of bicycle frames, various alloys of aluminum have been successfully used, and hickory, bamboo and other woods also do service for the same purpose. A novelty in the line of bicycle tubing is made from paper. A fibre similar to that used in the manufacture of railway car wheels is employed, and is said to make a very satisfactory substitute for steel, possessing considerable strength in proportion to weight. Paper bicycles are now to be seen in London, and there is talk of starting a factory for their production, though aside from the novelty of the idea, there seems little to recommend such bicycles.

Bicycle baggage laws are most common in the tier of States north of Mason and Dixon's Line, and lying between New England on the east, and Illinois and Wisconsin on the west. In fact, in the section named they are all but universal. New England, with the exception of Rhode Island, still hangs out for the old order of things, and makes the wheelman pay; but, as a rule, the charges are not excessive. From New York city, a man may check his bicycle as far south as New Orleans, or north to the Canada line, or west to Chicago, without charge, provided he travels by certain routes; but in each case these routes are the best and most available.

Aside from South Carolina, the extreme southern States have not as yet waked up to a proper understanding of the case; and though California and Arizona, and Colorado and North Dakota, are all on the right side of the column, other progressive and enlightened States west of the Mississippi still sit in the shadow of darkness as regards the bicycle baggage question.

New York deserves credit as the pioneer State in this respect, and from her, as a center, the leaven is gradually working outward to the rest of the world. Pretty soon, let us hope, the wheelman will be able to ship his bicycle as baggage almost anywhere short of Mars.

During the annual meet of the League of American Wheelmen, which takes place at Philadelphia August 4 to 7, the Pennsylvania Railroad Company will sell special tickets from all points on its system to Philadelphia and return at the rate of a single fare for the round trip.

Bicycle Prices.

THE recent announcement by a great bicycle manufacturing concern of a reduction in price from $100 to $75 for its standard wheel, and a general scaling down in prices of its cheaper grades, came as a genuine surprise to the trade and public alike.

The company in question has spent thousands of dollars advertising its product, and, as a general thing, stress was laid upon the inflexibility of the price for the standard wheel.

Persons who wanted this wheel cheerfully paid the $100 asked, because they were convinced that there was no way of getting it for less money. Their assurance of this fact also gave them confidence in the bicycle and its manufacturers, and perhaps a sense of superiority over other riders who might possibly have gotten their wheels a little cheaper and with less *éclat*.

Unprejudiced observers are debating as to the wisdom of this reduction in price at the present time.

Apparently, it had to come; but would it not have been better policy, in view of the widely advertised standard price, to put it off till the beginning of the next season?

It is commonly reported that the company will have as a leader next year a chainless bicycle, which will probably be listed at the old figures, and had it waited till then to make the reduction in its standard wheel, the change would have been accepted without comment.

The reaction comes, however, at a time when there is no especial excuse for it available, and when, moreover, the selling season is practically past From this latter fact it is argued that no large number of bicycles will be marketed, and that the money return will be no greater than if the price had remained unchanged.

The reduction probably has its justification from a business standpoint. The men who control the destinies of this great enterprise are noted for their shrewdness and far-sighted business acumen. It may be assumed that the move was intended to carry activity through the dull season. It was made at a time which will assure a certain freedom from competition by their chief rivals in trade. Other makers of high grade wheels may be contemplating a similar reduction in price, but they will wait till next year to make it. The fact that they have been forestalled by their greatest opponent, prevents their adopting a similar policy at present, for the effect would be to make them appear imitators instead of leaders, and would in any case be of doubt-

ful benefit. Thus the company which has chosen this unexpected time for announcing a drop in the standard price of bicycles has for the moment a leading hand, though only experience can prove how the game will result.

In an interview printed in a Hartford paper, the head of this great concern is quoted as saying that the reduction was made: "Because, with our present facilities we can make more bicycles than we can sell at $100 each, and I feel a personal responsibility in seeing that our large force of workmen is kept constantly employed."

The reporter asked him: "Do I understand from that that your output has not been selling?" To which the manufacturer replied: "Oh, no, our business is larger than ever before, but our facilities have been steadily increasing We want to keep our men at work the year round. It has never been our policy to weaken our organization when trade falls off, and later bring in a set of new men who must be trained to our standard. If we can bring our production up to the limit we can sell the bicycles at the new prices and make a fair profit."

This reply naturally suggested a question as to the profits of bicycle manufacturing. The reporter stating that he had seen tabulations which professed to give the cost of making a high grade bicycle as $30. The manufacturer answered:

"If this is correct, why should so many bicycle manufacturers fail when the prices were very much higher than they are now, and when they netted a great deal more than $30 for wheels not of the highest grade? There are many things to consider besides the actual first cost of materials. No manufacturer knows what the goods cost him until he figures up at the end of the year and puts in all his expenses, and many of them have then found that their bicycles have cost them more than twice their estimate."

The matter of making a cut in price in the middle of the season has aroused a great deal of unfavorable comment. Riders who bought before the reduction, could, in many cases, have waited just as well as not before purchasing and taken advantage of the lower price, if they had known it was to be made.

It was taken for granted that the price announced at the beginning of the season was fixed for the entire year, and the reduction came accordingly very much like a 25 per cent. drop in the price of a stock that had been purchased at what was regarded to be its true value. Many riders sell their wheels after a season's use, and the unexpected reduction had the effect at once of scaling down the money value of these second-hand bicycles.

One prominent manufacturer announced that if he had so reduced the price in his wheels, he would consider it obligatory upon himself to send a check for the difference in value to each rider who had purchased a bicycle from him during the season, and the opinion among others was general that they considered themselves in honor bound to maintain the same price throughout the season.

Yachting.

ONE result of the trial races has been to explode the stories current in the spring of the tremendous speed of some of the new boats. One that was credited with some miles in a preposterously short time failed to make anything like the same record over the carefully-legged courses when timed by the race committee and independently by the newspaper men. Another that poses as the winner of a quasi-international contest was beaten by the whole fleet.

THE increase of cost has apparently acted to reduce the number of boats, as was to be expected. With a 15-footer costing from $300 to $650, there were twenty-eight at the line in the trial races of 1896. Now that the larger racing machine costs from $1,000 to $1,500, the number was reduced to ten.

SEAWANHAKA INTERNATIONAL CHALLENGE CUP.

Third Contest, 1897.

Trial Races for Challenger.

OYSTER BAY.

THE third annual series of trial races has filled up the past week at Oyster Bay, and, though the weather has been unfavorable and no decision has been announced by the committee, the standing of the competing yachts has been pretty definitely determined. The races have been unsatisfactory, in a measure; though one was sailed through with no flukes, another was started in a light air and spoiled by a calm in the middle, while the third failed of a finish after much idle drifting and some light-weather sailing. At the same time, it is doubtful whether further trials and in better weather would change the places of the first four boats.

Up to Saturday it looked very much as though there was but one boat—Momo—and no good second to her; but in the two extra races on that day, her sister boat, Al Anka, made an excellent showing. Momo has done uniformly good work throughout the week; on Monday she had a poor start and was in the middle of the fleet for a time, but came to the front on the windward work of the first round; she sailed very fast on the reaches and did excellent work to windward in a reefing breeze and sea. While her victory was due to Skate's capsize, this is nothing to her discredit, as all of these boats—Momo included—are liable to the same mishap. On Wednesday she had fairly beaten the fleet to windward in light weather, when she was hung up on the second round and overtaken by the others; but from that point on she started in to beat the fleet a second time, and did it. On Thursday she was the leading boat all day in light weather. She has shown herself very fast under all conditions: in the drifts and light winds she runs and reaches fast, and is excellent to windward; in a strong breeze she still maintains her superiority. What is most important is that she seems to be a good, consistent and reliable all-round boat—one that can be depended on in any weather.

It has been quite evident during the races that Al Anka was not shown to the best possible advantage; had Momo never been built the latter would have been pushed much harder by her owner. She was well sailed by a good crew, but her first mast was poor and her sails rather heavy, while her second mast, that now in her, was none of the best. She is by no means as handsome and probably not as fast as Momo, but still she is a fast boat, as her work on Saturday showed. With a capsize and a breakdown marked against her, the score in the first two races placed her far below Momo, but on Thursday and Saturday she did very much better, so far as light weather work is concerned. The two are by all means the best of the fleet, probably the only ones that are good enough to represent the club in Canada.

Accepting as correct the position which we as well as many others have always taken, that the fin-keel was not a possibility in either the 15ft. or the 20ft. class, Shark has done remarkably well in the trial and other preceding races. She has shown herself a good all-around performer, fairly fast in light, moderate, or even heavy weather, and sailing very evenly. At the same time, it is evident that her place is from third to fourth in the fleet, and that she is not fast enough to make a good fight for the cup.

The two Huntington boats, Skate and Keneu, have been looked upon by some as certain winners in the trial races, but they have by no means come up to these expectations. While strong on some points, they are weak in others, and neither has shown herself a consistent and reliable performer in average racing weather. Skate gave a wonderful display of sail carrying on the first day, and her speed in reaching was something never before attained, so far as we know, by the same length and sail. Her work to windward in a strong wind and sea was admirable, and she should have won this race on her merits had she shortened sail in time and had she been properly balanced under storm canvas. Under the conditions of Monday she would probably beat Momo over a triangle or even to windward and leeward, and she is far faster than the other when she strikes her best speed, on a reach in a fresh breeze. At the same time such conditions are exceptional, and her speed under them is no guarantee that she will win a fair number of races in ordinary racing weather on the Sound. In light weather she is slow, especially down wind; the conditions of Saturday's races were as near the average as can well be found, smooth water and a light but steady breeze, and at this work the other boats simply lost her.

Keneu is much the same as Skate, very fast under certain conditions but slow under others, the loss, from a racing standpoint, more than offsetting the gain. From their performances through the season it is doubtful whether either boat would be good enough to make a creditable fight on Lake St. Louis in a prolonged series of races in August with a time limit.

The two Olmstead boats, Asthore and Montauk, the latter only sailing in the trial races, are not up to date in model; like all of Mr. Olmstead's boats in the 15 and 20ft. classes, they are fin-keels, of the normal form and staunch and comparatively durable construction and strongly and heavily rigged. As boats, they are entirely too good for the class, being deep and able little ships, handsome to look at and easily altered into useable craft for afternoon sailing. Under suitable storm canvas Montauk should have done very well on Monday, she was third boat as it was, but she has never been near the front in any of the trial races.

The Western boat Mary is even yet an unknown quantity, not only had her crew done little practice work in her at home, but she arrived too late at Oyster Bay for any trials of herself or for any practice sails over the course. Her owners were utterly unfamiliar with the surroundings, they had never sailed in tidal waters, and they did not fully know their boat. In the hard windward work of Monday she did very well until disabled, but she has not been raced in a way to show her true position in the fleet.

All things considered, we have very little hope of the Seawanhaka international cup coming back to Oyster Bay next month, but in Momo the club has a fitting representative to back its challenge; one that may be depended upon to put up a good fight. Just how near to Momo Al Anka is, we cannot pretend to say on the showing of their races about the Sound, but it is certain that if the sole attention of her owner were concentrated upon her, in the absence of the other boat, she would do better than she thus far has; probably well enough to make an interesting fight for the cup. As a fin-keel, and on her showing in the races, Shark is not good enough for international honors. When Mr. Braud came over for the first cup races in 1895 he was very anxious indeed to have reaching races instead of windward-leeward ones—a desire which was not gratified. If the challenger this year could pick reaching courses and secure a short time limit, either Skate or Keneu would probably bring back the cup; but as yacht racing is at present conducted it is the good light-weather performer and the all-around good sailor, especially to windward, which wins.

Momo is the second boat designed for the class by Clinton H. Crane, who designed and sailed El Heirie in the unsuccessful defense of the cup last year. After Mr. Crane had his first boat—Al Anka—well under way, his father, J. H. Crane, and his uncle, A. W. Durkee, neither of them yachtsmen, but deeply interested in this racing, offered to build another boat if Mr. Crane was desirous of trying anything different from his first design. This offer was accepted, and the boat was built, sparred and rigged by the Spalding-St. Lawrence Boat Co., at Ogdensburgh. Momo, the Japanese word for "peach," is 29ft. 6in. over all, with a beam of 8ft. and a draft of 5in., with moderate freeboard and sheer, quite different from the straight sheer line and turtleback deck of El Heirie. She has a boldly curved side line, not parallel, as in several of the class; a flat floor, and a good flare to the side. With the marked characteristics of the new type of small racer, she has still the appearance of a boat, and is by no means of the slab or barndoor type in appearance. Her fore end for about 2ft. is blunted in after a very ugly fashion; but apart from this, which is not apparent when under way, and a general fullness of the lines, she is a very good-looking craft, the handsomest of the new fleet except Mary. She carries a short bowsprit and is rigged with a gaff mainsail. She has no transverse bulkheads, but a shoal watertight cockpit about 6ft. long and 3ft. wide, with deck hatches fore and aft. The hull is of Spanish cedar, shiplap, as is the deck; the frames are very light, but the construction is substantial, and by no means exceptionally light. The workmanship is good throughout.

The tiller is a novelty, the shape of a wishbone, or rather a large Y, a double tiller of bent elm braced strongly but lightly. When the helm is amidships, one arm of the tiller is near the gunwale to windward, and the other to leeward. The centerboard is a large plate of Tobin bronze, weighing about 230lbs., and fitted on the fore side with a roller, on which it may be raised, lowered, or run fore and aft. It is handled by a powerful tackle. The Young spring gooseneck is used on the boom, and a special pattern of brass blocks. The deck fittings are strong and convenient. Abreast of the cockpit on each side of the deck, about 1ft. in from the plank-sheer, is a teak handrail. The sails were made by Wilson & Silsby, of Boston.

Al Anka (the name being the Arabic for bird), the first boat designed by Mr. Crane, is 31ft. over all and 8ft. beam, with about 6in. draft. The hull and spars were built by Lawley & Son, who also built El Heirie, the construction being the same, double-skin with mahogany outside. She is a fine piece of work, the bow being especially difficult to build. On deck it is a semicircle, and the fore end of the bottom is abruptly rounded in to meet the deck. The tiller, centerboard and rig are similar to those of Momo, but she has no bowsprit. Both boats have bronze rudders of a peculiar pattern, not unlike a wide curved dagger or creese. Al Anka's deck is of white pine, with caulked seams.

Shark was designed by Gardner & Cox, and built by the Spalding St. Lawrence Boat Co. after an old system of construction that, however, has not before been tried in that class of boat. The planking is of Spanish cedar, in strips ⅝in. thick and about 1in. wide, worked with one convex and one concave edge, so that no beveling is required. These strips are edge-nailed with brass wire nails at frequent intervals, each nail going through nearly three strips. In addition the hull is lightly timbered and very strongly and elaborately strapped and braced. The deck is also of ⅝in. Spanish cedar. The hull is a remarkably handsome piece of work. The boat is 30ft. over all, 6ft. beam, and about 5in. draft without fin. She has no sheer and the sides are nearly parallel; the bottom is flat, with a round bilge. The transom is cut off square, and though she comes to a point forward a short bowsprit is carried. The model is too nearly of the slab order to be handsome, as compared with the 15-footers or small raters of several years ago, but at the same time the boat presents a very satisfactory appearance on the water. The fin, of the full draft of 5ft., is only 2ft. wide; the rudder is of mahogany, triangular in shape, and about 3ft. deep and 10in. wide. The spars and rigging, made by the builders, are very fine in workmanship. The sails were made by Wilson & Griffin, of New York.

The other fin-keel, Montauk, was designed by Chas. Olmstead, who designed and sailed Riverside, the fin-keel that was second in the trial races of last year. Montauk is 29ft. over all, 6ft. 11in. beam and 8in. draft of hull. The hull is strongly built, with a good keel and plenty of oak floors, the planking being white cedar, carvel-built. The deck is of cedar and canvased. The boat has an open cockpit and no bulkheads. Her fin and rudder are of Tobin bronze, of the usual shapes. The spars and rigging are strong, but heavy, Mr. Olmstead has not gone in to cut weight, as some of the other designers in the class have. Her sails were made by Sawyer & Son. The boat is quite shapely in appearance and will make a very nice little craft for ordinary sailing.

The two Huntington boats are more or less similar to Paprika, the 15-footer of last year. Keneu was the first built, early in the spring; she is 30ft. 6in. over all and 8ft. beam. With a straight sheer, she shows a comparatively high freeboard for the type, her transom is wide and deep, just clear of the water. Her sides are nearly parallel and her bow is rounded in sharply. Skate is by no means so deep in hull, though of the same length and beam, her draft is about 4in. Her sides are parallel and her bow is very full, nearly a semicircle on deck. Both boats have flush decks with only small, oval cockpits, in which to stow light sails. They are fitted with big, sliding plates of steel, that of Skate weighing 280lbs. These plates are simply dropped through the trunk, and there is no provision for handily raising or manipulating them.

Some comment has been made over the fact that Mr. Cox, after designing a boat himself for the class, has ordered one from another designer. In contracting to design and build Shark, Mr. Cox took the 15-footer Paprika in part payment and sailed her early this season, afterward taking her to Bermuda, where he and Mr. Dresser raced her with surprising success against the Bermuda boats. Being impressed with her peculiar qualities, on his return Mr. Cox ordered a 20-footer from Mr. Huntington, intending to race her himself in order to study the type. The design was made and the boat built by Mr. Huntington, who is entitled to all credit for her. She has been sailed in the races this spring, partly by the Huntingtons and partly by Mr. Cox, with Messrs. Dresser and Bullock as crew, showing a very high speed at times, her most successful performance being in the strong N.W. wind of the Seawanhaka regatta on June 26. The two boats were sparred by the Spalding St. Lawrence Boat Co. The hulls are carvel built, of white cedar, with canvased decks.

Mary is the best looking of the class, more after the model of a year or two back; she has shapely ends, a good sheer and side line, and with an outer skin of mahogany, oak plank-sheer and sprung deck of narrow pine caulked, is very shipshape and handsome. She has a shallow water-tight cockpit with deck hatches. Her centerboard is of steel plate, quite large and handled by a tackle, being pivoted in the usual way. She was built by the Racine Yacht and Boat Manufacturing Co.

Arauca is the largest and most extreme of the class; she was designed by her owner, Mr. Howard, in connection with the builder, L. E Fry, and built at Clayton, N. Y. She is 30ft. 8in. over all, 10ft. 1½in. beam, with a very wide transom. The after overhang is very long, wide and flat, just clearing the water. On deck she is very large, with a full bow; the whole boat looks like the deck of an oyster sloop cut off and set afloat. She has a very long and shoal self-draining cockpit and a large centerboard of steel plate, with a long but very shoal rudder. The rig is peculiar, after Mr. Howard's own ideas; the hoist is low, the gaff long, and set at a very low angle. In spite of the great size of the hull, the construction is light in the extreme, the frames and planking being about heavy enough for a 30in. canoe. She was badly balanced, and at times would not mind her helm.

Vagary and Idea were never in at the club station, the former lying up at Cold Spring Harbor, and the latter off the town of Oyster Bay. Vagary was designed by her owner, Mr. Barclay Ward, an amateur, as an experiment in the scow type, and was built and rigged by the Spalding St. Lawrence Boat Co. Her deck plan is a rectangle, with flush deck. She had no opportunity during the races to show whether the experiment was successful or the reverse, being ordered late in the season, and only completed in time for the races. A defect in her rudder disabled her just prior to the first race, and she started but once.

Idea was, so far as could be seen, much after the ordinary type of small yacht; she showed a high freeboard and a good deal of sheer forward, a long fore overhang and rather hollow bow.

Compared with the 15-footers of 1895–6, it is not eviden that any material good has resulted from the change o class. The boats are decidedly faster in absolute speed, but the actual interest in the races, either to participants or spectators, is not increased by this; the fighting was quite as keen and interesting last year as this. The first cost has increased from about $650 for the most expensive of the 15-footers to $1,500 for a similar 20 footer, ranging down to $1,000 for the Huntington boats, of plainer construction. Similarly, the cost of transporting, altering, etc., has increased. The 20-footers carry a crew of three as compared with two in a 15-footer, but there is no special advantage in this. They are larger, but very much more unwieldy to handle in beaching or beside a dock. While abler in proportion to the increased size, they are little better as racing machines than the smaller boats. They are even less useful than the great majority of the 15-footers for conversion to other purposes after their racing days are over. As far as the advancement of naval architecture as a science, or even the improvement of yachts in the larger classes, are concerned, the less said the better.

The results of the races thus far sailed may be considered as final; it was evident to all that Momo was the one boat to send to Lake St. Louis, but the race committee made no decision after Saturday's race, and it is even possible that further races may be sailed. The very favorable showing of Al Anka on Saturday has changed the first opinion regarding her, but still there are no grounds for considering her equal to Momo. It has been suggested that in the probable event of an official selection of Momo in a few days, in which case Mr. Crane will at once take her to Dorval—Al Anka be also taken, for use in working up the other boat on the course over which the races will be sailed. If selected, Momo will be sailed by Messrs. Clinton H. Crane, Stackpole and Pierce, her crew in the trial races; Mr. Stackpole frequently relieved Mr. Crane at the tiller, thus giving him a needed rest.

The courses and conditions for the trial races were practically the same as in the two preceding years, the only material change was that the windward-leeward course was but two miles instead of three; but sailed three times instead of two, to make the twelve miles. This change was made at the suggestion of the racing men, who found that a three-mile beat to windward in one position on the edge of a slab was more than they cared for. The course, as shown on the accompanying chart, was thus limited to something less than a semicircle, of which the center was the black buoy off Center Island, the start and finish of all previous races of the

International cup series. Beginning with the triangular course, the windward-leeward to be sailed in alternation, the races coming on successive days from July 12, and continuing until a choice had been made, at least three races to be sailed. Under the general conditions the yachts were limited to 20ft. racing length, 500sq. ft. of sail, a crew of three men, one professional allowed, no shifting ballast, 5ft. draft for fixed keel boats, and 6ft. for centerboard boats. The races were to be sailed within six hours. The arrangements were in the same hands as in 1895-6, Mr. Oliver E. Cromwell being chairman of the race committee, Mr. Chas. A. Sherman secretary, with Messrs. C. W. Wetmore and Walter C. Kerr. The fifth member of the committee, Mr. D. LeRoy Dresser, as one of the crew of a competing yacht, of course ceased for the time being to serve on it. The steamer Dunderberg being still disabled, the committee chartered the steam yacht Chère Ami, better known as the Puzzle, for a committee boat; and she answered very well, carrying a number of guests, including ladies, and quite a party of reporters, artists and photographers.

First Day—First Race.

Monday, July 12.

TRIANGULAR COURSE.

Monday morning promised a continuance of the prevailing hot weather and at best a moderate breeze, but never were indications more completely at fault. Some of the racing yachts sailed out of Seawanhaka Harbor to the start with a fresh southerly breeze that induced them to turn in a reef or two, while others went out in tow of launches, the distance being some two miles. Arauca was not launched until just before the committee started from the club house. Idea laid up at Oyster Bay, but all the rest had moorings in Seawanhaka Harbor. With her 660lbs. of live ballast up to windward, Skate made no show of reefing, but went out under whole mainsail and working jib, lugging her sail ably enough.

The wind was south and quite fresh when the steamer anchored S.E. of the Center Island Buoy, and after waiting a little time for the laggards, blew the preparatory signal at 12:15. The boats, with the exception of Arauca, busy tying in a reef, gathered about the line, most of them being close to it when the start was given at 12:20. Though first over, Skate made a slow start, swinging about on the line; Keneu was better timed, coming with a swift rush from a distance and cutting the line just after Skate. Close at hand were Al Anka, Shark, Idea and Montauk, all making very good starts. Mary and Momo were slower, the later losing about one and one-half minutes. Arauca was just a second short of five minutes late.

Keneu and Skate set the pace, traveling very evenly, with balloon jibs to port and sheets lifted. Al Anka and Shark were side by side when the former luffed unintentionally. Shark also luffed to clear her and struck a dinghy in tow of a small yacht just on the course. As it proved, she stove a hole forward and began to make water, but so slowly that it was not noticed for a time. The first mark was timed:

	Mark.	Elapsed.
Keneu	12 33 40	0 13 40
Skate	12 33 45	0 13 45
Shark	12 35 08	0 15 08
Al Anka	12 35 50	0 15 50
Momo	12 36 30	0 16 30
Montauk	12 36 50	0 16 50
Mary	12 37 15	0 17 15
Idea	12 38 05	0 18 05
Arauca	Not timed.	

Though timed after Keneu, Skate made the better turn and came on the other's weather after the jibe. With sheets flattened they all hurried across to the second mark, most of them luffing well up and Shark alone steering a straight course. Skate, under her whole sail, traveled even faster than before, though the tide was helping her less. She made a good lead on Keneu before they were timed at the second mark.

	Mark.	Elapsed.
Skate	12 46 16	0 12 31
Keneu	12 47 19	0 13 39
Al Anka	12 50 12	0 14 22
Shark	12 50 35	0 14 27
Momo	12 51 10	0 14 40
Montauk	12 53 08	0 16 18
Mary	12 53 22	0 16 07
Idea	12 57 10	0 19 05
Arauca	12 57 20	.. .. ..

Arauca caught Idea at the mark, but would not mind her helm and lay in irons for some time.

With a little westing, the wind was now nearly on end from the Center Island mark, while the tide, a swift ebb, was cutting across the course. Skate held to the port tack, past the mark and to the westward, but Keneu, Shark and Al Anka stood over for the Lloyd's Neck shore. There was more than enough wind for some of the boats with two reefs in, and a bad sea that was rapidly getting worse. The beat across was stirring work, but the little ships were mostly well handled under exceptionally trying conditions. When Skate worked up to the turn from out in the Sound, Shark, Al Anka and Keneu were all well astern of her as they came across the mouth of the harbor on port tack. Montauk stopped for an extra reef, as did others of the following boats, but Skate drove along under whole mainsail. The end of the round was timed:

	Mark.	Elapsed. Leg.	Elapsed. Round.
Skate	1 37 15	0 50 59	1 17 15
Al Anka	1 41 47	0 51 35	1 21 47
Shark	1 42 20	0 51 45	1 22 20
Momo	1 42 32	0 51 22	1 22 32
Mary	1 44 40	0 51 18	1 24 40
Keneu	1 45 21	0 58 02	1 25 21
Montauk	1 54 00	1 01 08	1 34 00
Idea	1 54 25	1 02 45	1 34 25
Arauca	1 55 08	0 57 48	1 35 48

Shark, the leader of the Eastern division, had done very good work on the wind, carrying her reefed sail well; pointing and footing fast, she had beaten both Al Anka and Keneu. She neared the mark, however, with her bow flush with the water, and skipper Hoyt hailed the steamer for a line, which was quickly passed aboard. She had been leaking ever since the collision, and was now waterlogged and in a dangerous condition. A launch soon took her in tow, and the steamer hurried on in the wake of the flying Skate. Idea and Arauca finished the round close together, and the latter, after steering very badly all day, ran away and slid her huge deck up over Idea, the two then giving up. The first mark was timed after another free reach:

	Mark.	Elapsed.
Skate	1 50 30	0 13 15
Al Anka	1 57 10	0 15 23
Momo	1 58 00	0 15 28
Mary	1 59 00	0 14 20
Keneu	2 01 30	0 16 09
Montauk	Not timed.	

The second leg was sailed under the same conditions as on the first round, but with even more wind and sea, the times at the lee mark being:

	Mark.	Elapsed.
Skate	2 03 20	0 12 50
Momo	2 10 35	0 13 35
Al-Anka	2 10 45	0 12 35
Mary	2 15 53	0 16 53
Keneu	2 15 50	0 14 20
Montauk	Not timed.	

After a poor start, Momo had worked along, until now she was second boat, and the most dangerous rival of the apparently invincible Skate. The latter, however, had lugged sail entirely too long, and the time had come when she was compelled to reef. She hammered along over the seas for some fifteen minutes and then had to luff up and tie in. Her sister boat, Keneu, had long since come down to three reefs, and even then had all the wind she wanted. Skate took in a couple of tucks, losing so much time that Momo, pegging along steadily to windward, was nearly up with her. She had on board only her working jib, a large sail, with no means of reefing it. No great time was required to show that the boat would not work to windward under a double-reefed mainsail and no headsail, and Mr. Dresser was sent forward and spent a bad quarter of an hour on the extreme bow in the effort to set the jib with an Irish reef in, just enough to pay her head off and make it possible to steer her. The result was a bag that enabled her to lay a course, but at the same time held her back. Meanwhile, at 2:30, Al Anka caused some excitement among the spectators by capsizing, her crew sliding out to windward and standing on the centerboard until they pried her up and got her on her course. She sailed on for about twelve minutes, when over she went again, and to stay. A little water that had got below in the first capsize made her tender, and her mast had filled with water, while her crew was nearly exhausted. Com. Benedict, who of course was on hand with Oneida, at once went to her aid, righted her and towed her in.

The race between Skate and Momo was now close and exciting; clipped of her big wings, Skate's wonderful speed was now a thing of the past, and though Momo was also poorly canvased, she was evidently doing the better work. The distance to the finish was short, and when she crossed Momo's bows at about 2:37 Skate seemed safe to win. They worked along slowly, tack by tack, until Skate made her last tack for the mark, at 3:02, when over she went. The crew of this ideal craft had been for over three hours astride of her deck edge or hanging out on her side, the flush deck offering no foothold, even if the wind had not made it necessary to hang out as far as possible to windward. Mr. Cox had, of course, never relinquished the tiller for a moment, and Mr. Bullock had handled the main sheet, without once belaying it, from the start. During the first round Mr. Cox parted with his eyeglasses and was not able to see beyond the end of the boat. Mr. Dresser had done the deck work, including the reefing of the jib out on the front piazza. The strain and hard work of lugging whole sail so long had told even on the magnificent physique of this exceptionally heavy and sturdy crew. When the boat came about the main sheet jammed for a moment and she was over like a flash. Dresser and Bullock climbed out to windward, but Cox went down to leeward and came up in the water to windward, climbing up on the centerboard and aiding the others to right her. Up she came, with sheets in a tangle and some water below, the oval hatch, though small and only intended for stowing light sails, etc., being open, and the hull open from end to end. The others took the sheets, but in reaching for the tiller Mr. Cox went once more into the drink, the boat running away and leaving him to swim. As she started off on her own hook, Momo came up on port tack and the two struck, though very lightly. Again Skate went over, her crew having no command of her, and this time it was to stay. Filled with water, all attempts to right her were in vain; she lay with her mast afloat, and beyond the power of any two men to lift her. Mr. Cox swam about for a time, unable to see the boat, but was picked up by Mr. Thomas Webber out in a power launch. When near to Skate he jumped over and swam to her, but by this time she had turned completely bottom up, so that the 280lb. steel plate slid quietly out of her to the bottom of the Sound. With the best intentions in the world, a naphtha launch came up and passed a line to the sunken hull, and the Skate crew righted her and started to stow sail and clear away. While they were at this work, and entangled in sheets and halyards, the launch started ahead at full speed, and towed the yacht and her crew completely under water. Fortunately she stopped in time and all got clear, the steam yacht Giralda coming up to help. Left alone, Momo soon crossed the line; but it was a long time before the second boat, Montauk, finished and after her came Keneu, the only ones to cover the course.

On the first round Mary did some very good work to windward, and even with more wind and sea on the second she seemed to like it, making very good weather, and rapidly coming up with the leaders. She followed Skate to the westward, but knowing nothing of the waters, overstood the mark; then when she might have lifted sheet and come for the line in second place, the turnbuckle of her starboard shroud parted, so that she was compelled to lie to with jib down for repairs. Knowing nothing of the capsize of Skate and the withdrawal of others, when she finally came to the finish in fourth place, she failed to cross the line. The final times were:

	Finish.	3d Leg.	2d Round.	Whole Course.
Momo	3 11 06	1 00 31	1 28 34	2 51 06
Montauk	3 22 00	.. .. ..	1 28 00	3 02 06
Keneu	3 25 46	1 09 56	1 40 25	3 05 46
Mary	Disabled.			
Skate	Capsized.			
Al Anka	Capsized.			
Shark	Disabled.			
Arauca	Withdrew.			
Idea	Disabled.			

It was just 3 o'clock when Skate capsized, and it was 7 o'clock before her tired crew had her safely moored alongside the gangway in front of the club house, with Mr. Burnham, of Norota, hard at work pumping her out while the tide rose through a couple of holes in her bottom. In the meantime she had been made fast astern by Mr. Renwick's steam yacht Giralda and towed in as carefully as possible, as the least lurch sent her over again. Even after Giralda was anchored off Mr. Bullock's home in the harbor, Skate performed fresh antics, cutting across the tide and capsizing, then jamming herself under the yacht's counter in close proximity to her wheel. In the course of these various antics during the afternoon she received a couple of taps from the wheel which stove in her bottom; her light sails were washed out, but were picked up by a rowboat, and her rigging was cut and strained. Mary also met with a second mishap when sailing up to her moorings in the harbor; her rudder stock broke, being of the almost invariable faulty construction. The blade being of mahogany, floated to the surface, and was picked up and taken to Oyster Bay, where a local smith fitted it with a new steel stock.

The race was in one sense unfortunate and disastrous as interfering with the proposed series of races and preventing a thorough light-weather test of the boats, but on the whole the fleet came out very well indeed from a most exceptional and very severe trial. Had the wind blown at the start as it did after the first round, and with the same sea, the race might not have been started; and the conditions were quite as trying as any that the boats are likely to reach in several seasons of hard racing. In spite of the fact that only three finished, the fleet came through most successfully, and the damage was by no means what might have been expected. The yachts are light in hull and most of them still lighter in rig, and yet there were no serious failures. The one great trouble was that not one of the nine could be properly balanced under storm canvas; not one had the right headsail to balance a three-reefed mainsail, nor had the crews any experience in handling them under the conditions of a half gale and bad sea.

The capsize of Skate was due immediately to her poor canvasing, had she been able to set a storm jib when she reefed her mainsail, she would have finished easily and quickly, beating Momo. It is plain that all of the centerboard boats are easily capsizable, and Skate might have capsized just as Al Anka did, for no special cause; but the same is true of all types of small centerboard racing craft and is no serious defect from a racing standpoint.

The winner, Momo, went through the hard pounding without harm to hull or rigging, though the latter is very light. Montauk is strongly and heavily rigged, and with the proper reduced canvas she would probably have come well to the front on the last leg. Keneu came through without injury. Shark's mishap was a pure accident; she sailed one round without anything giving way, and sailed remarkably fast in the windward work. Al Anka came to grief in that her light hollow mast, already sprung in a capsize in Boston and served at the deck, was filled with water in the capsize, and after being drenched all day Tuesday went all to pieces early in Wednesday's race, the glue dissolving and the two parts separating. Apart from this no harm was done to her.

Mary broke down through a faulty turnbuckle, and her rudder broke, as it well might, but otherwise she was all right. Arauca, with her big shoal hull and very shallow rudder, was unmanageable; she went up to Oyster Bay after withdrawing for a new rudder, and it was not known whether her hull stood the strain or not. Idea sailed through the race all right until disabled by Arauca.

After such a race it would have been in no way surprising to find every hull leaking, fittings broken, rigging strained and stretched and spars carried away or at least badly sprung, and it is greatly to the credit of the new fleet as a whole that the boats came through with only the few minor casualties reported above.

The day was a remarkable one for the numerous and totally disconnected mishaps outside of those in the race; when the committee boat came into the harbor she ran close inshore and just to windward of Montauk and Momo, at their moorings. While a naphtha launch was at the gangway to take off the passengers, the steamer blew down on Montauk and threatened to go on the beach, a strong wind still blowing. One of her hands cast off Montauk's mooring line and jumped on to the little boat, which at once drove ashore and began to pound her fin in the hard sand. The steamer started ahead to get way on and run offshore, and in doing so carried away the stack and boiler casing of the naphtha launch, which burst into a great column of flame alongside. The launch was anchored and the steamer ran clear, the fire, fortunately, burning itself out without serious damage. Meanwhile Messrs. Sherman, Hoyt and Chas. Davis put off in a dinghy with a sailor and towed Montauk to her moorings, but, in coming in, with a fourth man aboard and all of Montauk's light sails, the entire outfit capsized and all went into the drink. About the same time the steam launch Seawanhaka managed to blow the packing out of her cylinder head, the steam flying in the face of the engineer, who jumped and thrust his foot under the crank, where it was quite badly, but not dangerously, crushed. While he was under repairs on the piazza of the club house, the chandelier in the billiard room fell, for no assignable reason, filling the room with gas.

After comparative quiet was restored, the race committee talked with the racing men and decided to postpone the second race until Wednesday. The men were completely tired out, sails were soaked and the hulls more or less wet, while Skate had no centerboard and Mary no rudder, so all hands welcomed the change of plans.

It was well that the race of Tuesday was abandoned, as the day was a miserable one, with a heavy rain and very strong winds, much damage being done at different points on the Atlantic coast. While Mr. Cox went to the city for a new board, the Huntingtons beached Skate by the boathouse and rigged a tent over her, under which they worked hard to repair the holes in the hull and to smooth down the entire bottom. To save time, the hull was finised with shellac, which dried of different colors and gave the boat a most patchy and unpleasant appearance. In spite of the specially disagreeable weather, the day gave a good rest to most of the racing men, and such work as was necessary was done on the boats.

Second Day—Second Race.

Wednesday, July 14.

WINDWARD AND LEEWARD COURSE.

By Wednesday morning the fleet was once more in shape for racing, though not off the beach until the committee boat was ready to start; Skate had a fairly smooth bottom, the leaks had been stopped, a new centerboard shipped, and she was in reasonably good shape. Mary had a new rudder in and the shroud had been secured anew. Vagary, the newest one of the class, had her new rudder shipped. Only Arauca was missing when the whistle blew at 12:50 off Center Island Buoy. The day was of the best, save in the one important detail of wind; a clear sky and bright sun to warm and dry the sailormen after any chance ducking, smooth water and a light wind W.byN. It was now the turn of the windward-leeward course, which, as already stated, had been changed to three rounds of a four-mile course. In order to get the windward leg first, the yachts were sent off to the westward, something never before done in these races. From the very start there was a fear that the wind, already too light and fickle, would shift to the south and make a reaching race, but there was no other alternative but to start, in one direction or the other. When the start was given at 12:40, Keneu was again the first over, followed by Skate, Idea, Momo, Al Anka, Shark, Mary, Montauk and Vagary. The latter was about three minutes late, but all the others started well together, going over on starboard tack, heading in for Pine Island. Momo made a short hitch on port tack to get a clear wind, and then came out once more; Shark following with the same maneuver. Slowly as they moved, the fleet soon divided, Momo heading the leaders, with Al Anka, Shark and Kenue astern of her. While the four were in close company, the fifth boat, Montauk, was a good distance astern, and beyond her were Mary, Idea, Skate and Vagary. Al Anka was doing pretty well for the first twenty minutes, but her hollow mast, soaked on Monday, sprung apart in the glued joint and left her only able to run in for the harbor under her jib. The leg was sailed slowly, the first mark being timed:

	Mark.	Elapsed.
Momo	1 15 25	0 35 25
Shark	1 17 25	0 37 25
Keneu	1 17 55	0 37 55
Montauk	1 20 28	0 40 28
Skate	1 21 11	0 41 11
Mary	1 21 20	0 41 20
Idea	1 24 00	0 44 00
Vagary	1 27 00	0 47 00
Al Anka	Withdrew.	

When Momo came by the mark on port tack her spinaker boom was down and the sail mastheaded, breaking out as she turned. Shark, however, with better judgment, jibed at the mark and then set her spinaker, the others following her lead. After running for about three minutes Momo had to jibe and shift her spinaker, losing some little time in the maneuver before it was drawing on the starboard side. Balloon jibs were soon set and the fleet ran down slowly with the tide, being timed at the line:

	Mark.	Elapsed.
Momo	1 54 30	0 39 05
Shark	1 59 45	0 42 20
Keneu	2 01 40	0 43 45
Montauk	2 04 45	0 44 17
Skate	2 05 17	0 44 06
Mary	2 06 20	0 45 00
Idea	2 07 30	0 43 30
Vagary	2 13 00	0 46 00

With a very light breeze, Momo stood across on starboard tack once more and Shark followed her. A ripple on the water close inshore attracted Momo, and she held over for

OYSTER BAY AND SEAWANHAKA INTERNATIONAL COURSES.

it. When Mary came for the mark her crew, out for the second time on salt water, were in blissful ignorance of the tide, and before they knew what was happening they had been swept well to leeward of the buoy. By this time even the light wind had failed, and they tried in vain to beat up against the ebb tide in a calm. In close companionship of misfortune was Vagary, also beating to windward and sailing to leeward.

Momo caught her inshore breeze and started ahead, but she was soon on the southern edge of the wind, while Shark, further offshore, was right in it, moving along slowly but steadily. When Skate rounded the buoy 9m. astern of the leader in a calm, her case seemed hopeless, but Mr. Cox kept way on her and let her reach across the tide and in under the point of Center Island, on the chance of catching the light southerly breeze that was playing inside the mouth of the harbor. Though making nothing at all in the direction of the course, she thus managed to skin inshore and to avoid being carried to leeward with Mary and Vagary, and when about 2:20 the looked-for wind came in from S.E., she not only had the first of it, but was in a fairly good position. Meanwhile Momo had been becalmed, Shark carrying a little breeze and going by her, and then losing it, the pair merely drifting. By the time that they caught the wind, Skate had caught them, even the rear boats brought up a breeze, and in spite of the long drifting the eight boats rounded the weather mark within four minutes. The times were:

	Mark.	Elapsed.
Momo	2 44 45	0 50 15
Shark	2 45 05	0 46 20
Skate	2 45 10	0 39 53
Idea	2 45 15	0 37 45
Keneu	2 45 20	0 43 40
Montauk	2 46 00	0 41 15
Mary	2 48 16	0 41 56
Vagary	2 48 50	0 35 50

Now began an entirely new race, the leaders starting off as close to each other as though from the gun. Skate, with canvas trimmed for a close reach, soon passed Momo, and the pack rushed away with the tide at a hot pace. The sight was most exciting as the little fellows tugged at their sheets, with hulls heeled to a rank angle and crews hung out, as on Keneu, along the weather bilge. The first three turned the mark together, the times being:

	Mark.	Elapsed.
Skate	3 01 32	0 16 22
Momo	3 02 00	0 17 15
Shark	3 02 23	0 17 18
Keneu	3 03 15	0 17 55
Montauk	3 04 30	0 18 30
Idea	3 04 41	0 19 26
Mary	3 07 40	0 19 24
Vagary	3 08 36	0 19 46

On the last leg out Momo struck a speed that hurried even Skate, and after a short but exciting run, the mark was timed:

	Mark.	Elapsed.
Momo	3 17 21	0 15 21
Skate	3 18 08	0 16 36
Shark	3 18 40	0 16 17
Keneu	3 19 00	0 15 45
Montauk	3 22 13	0 17 43
Idea	3 23 21	0 18 59
Mary	3 25 03	0 17 23
Vagary	3 27 45	0 19 09

There was now strength enough in the good south wind to keep all hands on the edges of their boats, and with sheets in for a close reach they came for the finish in fine style. Momo still led Skate, but only by a few feet, while about 100yds. astern were Shark and Keneu in the same relative positions. Again and again Skate luffed to get Momo's weather, but her halyards had stretched and her throat was down, and she could not make it. She hung in Momo's wake, unable to get by, but unwilling to give up, until they sprung across the line just 6s. apart. The finish of the second pair a couple of minutes later was almost the same, Shark leading Keneu by 8s. The final times were:

	Finish.	Elapsed.	Elapsed Whole Course.
Momo	3 33 17	0 15 56	2 53 17
Skate	3 33 23	0 15 15	2 53 23
Shark	3 35 15	0 16 35	2 55 15
Keneu	3 35 24	0 16 24	2 55 24
Montauk	3 38 49	0 16 36	2 58 49
Idea	3 41 17	0 17 46	3 01 17
Mary	3 41 30	0 16 27	3 01 30
Vagary	3 43 46	0 16 01	3 03 46

As a matter of fact, Momo won the race twice; she showed plainly her superiority in the windward work of the first leg, in a steady but very light air, and she certainly held her own, all things considered, in the reaching in a fresh breeze, which is considered Skate's strong point. Though unsatisfactory in many respects as a race, or even a thorough and and consistent test, the day's sailing was by no means wasted.

Shortly after the finish a heavy squall came up from the westward. Most of the yachts were snug at their moorings before it struck, but Vagary had to go up Cold Spring Harbor. In the first puffs of the squall she capsized and a catboat went to her aid. In the effort to right her the catboat punched a couple of holes in Vagary's bottom, and she filled, but was finally towed in to her moorings in Cold Spring Harbor. The squall just touched Oyster Bay, but proved very violent in other localities about New York. Rain fell during the evening, but all was clear again before morning. During the evening a dance took place at the club house.

Third Day—Third Trial.

Thursday, July 15.

TRIANGULAR COURSE.

Al Anka's crew, Messrs. H. M. Crane and H. G. Barbey, with "Andrew," the professional, who has charge of both boats and sails in Al Anka, lost no time on their return on Wednesday in beaching her and lifting out the mast, which was sprung beyond all repair, the two halves having separated and slid by each other, in spite of the dowels, until it had taken permanently an S curve. Fortunately a spare mast had been brought, a poor-looking stick of Oregon pine, also hollow, and this was fitted and stepped, and the rigging shifted and set up early on Thursday morning. The day was clear and hot, with but a light westerly breeze in the morning, and no haste was made in getting out to the line. When the start was given at 12:55, there was a very light wind, S.W. by W., and a strong ebb tide down the first leg of the regular triangle. The fleet had come down to six boats—Momo, Al Anka, Shark, Montauk, Skate and Keneu. Vagary was hauled out with a hole in her bottom, Arauca was up for repairs, including a new rudder, Idea had disappeared, and Mary lay neglected at her moorings off the club house. Her crew, who claimed for themselves all the blame for the poor performance of the boat, had gone to New York for the day.

With the preparatory at 12:50, and the start at 12:55, the boats went away at a fair pace, thanks to the tide, the order at the line being Al Anka, Skate, Momo, Shark, Keneu, Montauk. The Corinthian crew of Skate had deserted their ship in order to give her designer and builder, Larry Huntington, an opportunity to try his skill with her. At the tiller was Leff Huntington, who won the Zerega helmsman's prize for his handling of Question in the trial races of 1895, and who sailed Olita and Paprika last season; Larry was in charge of the sails, and a friend made up the crew. This crew was a light one, probably 150lbs. less than the Corinthian crew, but as the weather was very light, the disadvantage in this respect was at a minimum.

All but Al Anka set spinakers to port, and she jibed soon after the start. The two Crane boats took the lead of the procession, and were soon clear ahead of the others, Shark being in third place. The run was made slowly, spinakers and balloon jibs being shifted several times. Al Anka ran ahead of Momo, Shark kept a middle place, Skate went to the rear, and Keneu just managed to keep ahead of her.

The times at the first mark were:

	Mark.	Elapsed.
Al Anka	1 40 37	0 45 37
Momo	1 41 10	0 46 10
Shark	1 44 11	0 49 11
Montauk	1 44 50	0 49 50
Keneu	1 46 47	0 51 47
Skate	1 48 00	0 53 00

With a light breeze forward of the beam, the boats stood across for the second mark, where they were timed:

	Mark.	Elapsed.
Al Anka	2 03 35	0 22 58
Momo	2 04 30	0 23 20
Shark	2 08 38	0 24 27
Montauk	2 13 47	0 28 57
Keneu	2 14 35	0 27 48
Skate	2 19 17	0 31 17

The beat across the tide with next to no wind was very dull and uninteresting. The end of the round was timed:

	Mark.	Elapsed.	1st Round.
Momo	3 51 10	1 46 40	2 56 10
Shark	3 57 45	1 49 07	3 02 45
Al Anka	3 59 12	1 55 37	3 04 12
Skate	4 10 00	1 50 43	2 15 00
Montauk	4 17 25	2 03 58	2 22 25
Keneu	Not timed.		

They drifted down the first leg again and were timed:

	Mark.	Elapsed.
Momo	4 29 52	0 38 42
Shark	4 41 40	0 48 55
Al Anka	4 49 00	0 49 48

When trimmed for the reach across the tide Momo failed to make headway, and drifted very slowly. At 4:52 the committee hailed her and declared the race off. Montauk and Skate were still near the beginning of the first leg, and Keneu had given up.

It was announced by the committee that no race would be sailed on Friday, but that in addition to the scheduled race for the Roosevelt cup, on Saturday afternoon, for which most of the 20-footers were entered, a special race would be sailed early on Saturday morning.

Fourth Day—Special Races.

Saturday, July 17.

INSIDE COURSE.

Saturday was another clear and sunny day, with a light S.W. wind in the early morning. The first race was started with the preparatory at 10:40, the starters being Momo, Al Anka, Shark, Skate, Keneu and Arauca. Mary still lay alone at her moorings, Vagary was not repaired, and Montauk had started early in the morning for Riverside. Arauca was ready with a larger and deeper rudder. Skate had for crew Messrs. Dresser, Bullock and Leff Huntington, Mr. Dresser being at the tiller during the first part of the race, but giving it up later to Mr. Huntington. Al Anka had bent a new silk sail made by Wilson & Silsby, in place of her cotton mainsail.

The course was from off the club house float out by Plum Point to the red buoy in Cold Spring Harbor, thence in and up Oyster Bay Harbor to a float off Moses Point Buoy and back to the line, this triangle being sailed twice; then the yachts sailed out to a mark directly in front of the club house, up to the Moses Point mark, and home to the finish. This made 11 miles in all, and, as the wind was all day, it was a run or a free reach over the short leg to Plum Point, a run to the outer red buoy, a beat in and up the harbor to the Moses Point mark, and a run to the line.

After an even start, the boats ran for Plum Point, all setting spinakers to starboard and moving very slowly in a bunch. Once outside the point, a fresher puff started all at a good pace for the buoy. Whey they luffed around the first mark the order was: Momo, Al Anka, Shark, Keneu, Arauca, Skate.

Now came a beat of about two miles into Oyster Bay, the tide running ebb on the south shore and flood along the Center Island shore. The wind was light but steady, and a fair sailing breeze, the crews were to leeward part of the time to heel the boats; but they managed to keep moving all the time and there was no fluking or drifting. Momo parted the lashing of her jib tack early in the windward work, and, though it was soon replaced, the delay threw her into second place. The fight between her and Al Anka was a very close and pretty one and continued until they were well up the bay, Al Anka slowly but steadily gaining. Before the weather mark was reached she had a decided lead, and from the way in which she made it there was little chance of Momo regaining the first place. Shark held third place until very near the turn, when Keneu was able to put her about, thus leading her. Skate was doing poorly, and Arauca was far astern. The times at the Moses Point mark were:

Al Anka	12 06 55	Shark	12 10 01
Momo	12 07 55	Skate	12 11 42
Keneu	12 10 01	Arauca	12 15 30

Momo was handled poorly at the mark, jibing three times after rounding. Keneu came for the mark and passed astern of Al Anka and ahead of Momo after they had rounded; Shark had to give way to Keneu a moment later, being on port tack, and the two were timed together. All set spinakers to starboard for the run to the line, where they were timed:

Al Anka	12 21 00	Keneu	12 23 50
Momo	12 21 09	Skate	12 24 32
Shark	12 23 00	Arauca	12 28 38

Arauca had already fouled one mark, and this time she turned on the wrong side of the buoy.

With the wind a little more to the south'ard than on the first round, spinakers would not draw on the short leg to Plum Point; once outside, they squared away for the red buoy, where they were timed:

Al Anka	12 39 40	Keneu	12 34 15
Momo	12 31 15	Skate	12 36 05
Shark	12 33 20	Arauca	12 41 00

On the beat in to the Moses Point mark Al Anka steadily left Momo, the times being:

Al Anka	12 59 00	Keneu	1 06 30
Momo	1 00 50	Skate	1 11 30
Shark	1 04 40	Arauca	1 21 30

With spinakers to starboard and the ebb tide under them, they ran to the line and were timed:

Al Anka	1 11 51	Keneu	1 20 42
Momo	1 14 06	Skate	2 13 00
Shark	1 17 55	Arauca	Not timed.

Now they made a short reach across to a special mark in midchannel and afterward beat up to Moses Point mark, where the leaders turned:

Al Anka	1 28 50	Momo	1 33 25

After the run to the line the finish was timed:

	Finish.	Elapsed.
Al Anka	1 41 13	2 56 13
Momo	1 48 29	3 03 29
Shark	1 55 30	3 10 53
Keneu	2 00 06	3 15 06
Skate	2 13 07	3 28 07
Arauca	2 24 06	3 39 06

The result of this race was a surprise to all parties, as there was no disputing the clean and steady work of Al Anka in beating Momo from the early part of the race on every point of sailing. It was, however, evident that Momo, though in the hands of the same crew that had done so well for her through the previous races, was very poorly handled, some bad blunders were made and the light sails were handled slowly. Shark made her usual moderate showing, in third place, but Skate did very poorly, and, for no special reason,

she was apparently unable to sail fast in the moderate weather. Arauca pluckily finished the course, but at a hopeless distance astern.

After a rest and luncheon ashore, the crews of Al Anka, Shark and Momo got their boats under way for the Roosevelt memorial cup. Skate was this time steered throughout by "Leff" Huntington, with "Larry" Huntington in charge of the sails and a friend to make up the crew.

The Alfred Roosevelt memorial cup is a trophy of the value of $75, given each year from a fund established by the widow of the late Alfred Roosevelt, one of the old members of the club. It was offered this year in the classes from 43ft. racing length downward, and it was proposed to apply the Cox formula for allowances. Besides the four 20-footers were entered Secret, Dodo, Nameless and Trinket. Dodo is a once-famous sandbag jib and mainsail boat; Secret is a centerboard sloop of modern type, built last year from the design of her owners, E. M. and the late R. C. Townsend; Nameless is the Gardner 25-footer, and Trinket is a small cruising cutter.

The start was made at 3:35, over the same course and with a rather stronger breeze than in the morning, but from the same direction. In place of sitting to leeward to heel the boats, the crews of the twenties were on the weather decks. The order over the line was Momo, Al Anka, Skate, Shark, Nameless, Secret, Dodo and Trinket. The little racers soon left the larger and older boats, the latter only being timed at the finish. No times were taken at the outer buoy, but after the beat up to the Moses Point mark the times were:

Momo	4 16 53	Shark	4 19 35
Al Anka	4 18 10	Skate	4 21 15

Al Anka had been in hard luck, parting her jib halyards outside the point, a mishap which occurred again later in the race. She was slow on the jibe. They ran down with spinakers to starboard, and were timed at the line:

Momo	4 27 20	Shark	4 30 00
Al Anka	4 28 05	Skate	4 33 00

On the next leg, spinakers continued to draw inside the point as well as to the outer mark, where the times were:

Momo	4 35 45	Shark	4 39 05
Al Anka	4 36 25	Skate	4 25 05

The larger boats were so far astern that no times were taken.

The fleet beat in to the Moses Point mark, Al Anka nearly catching Momo when under Moses Point. Both worked the shore as closely as possible out of the tide, Momo keeping Al Anka just under her lee. The mark was timed:

Momo	5 10 06	Shark	5 15 03
Al Anka	5 10 50	Skate	5 18 20

They ran down to the line and were timed:

Momo	5 20 35	Shark	5 25 35
Al Anka	5 20 57	Skate	5 29 07

They now started over the shorter triangle, no times being taken at the channel mark, but they turned the Moses Point mark:

Momo	5 38 27	Shark	5 45 17
Al Anka	5 40 40	Skate	Not timed

The last leg down wind was quickly run, the times at the finish being:

	Finish	Elapsed.
Momo	5 48 58	2 13 58
Al Anka	5 51 59	2 16 59
Shark	5 56 54	2 21 54
Skate	6 02 12	2 27 12
Secret	6 24 12	2 49 12
Namelss	Not timed.	
Dodo	Withdrew.	
Trinket	Withdrew.	

Momo wins the Roosevelt memorial cup for 1897, the cup for 1896 having been won by Mr. Crane in the 15-footer El Heirie. No allowances were computed.

A race for the club cats was also sailed, Mr. Dresser sailing the winner.

Though no official announcement has been made, it is practically settled that Momo is the choice of the committee, and that she and Al Anka will be sent to Dorval as soon as possible.

Larchmont Race Week.

July 17 to 24.

FOR the present week the yachting interest centers at Larchmont, where the following extensive programme has been arranged for the annual race week:

Saturday, July 17.—Open regatta for all classes. Special race for schooners in cruising trim in one class. First race of series for 30ft. class. First race of series for 20ft class. Evening, musical frolic.

Sunday, July 18.—Evening, sacred concert.

Monday, July 19.—Special race for schooners in racing trim in one class. Special race for schooners in cruising trim in one class. Second race of series for 30ft. class. Second race of series for 20ft. class. Evening, local talent.

Tuesday, July 20.—Four-oared gig race for Hen and Chicken colors, presented by ex-Com. Gillig. Two-oared gig race for Dauntless colors, presented by Mr. H. B. Seeley. Dingy race for Execution colors, presented by Mr. H. B. Seeley. Race for naphtha launches exceeding 21ft. l.w.l. Race for naphtha launches 21ft. l.w.l. and under. Tub races and water sports. Afternoon, ladies' reception and band concert. Evening, ball and illumination of club house and grounds.

Wednesday, July 21.—Open regatta for all classes. Special race for yawls over 51ft. racing length (in cruising trim, all in one class). Third race of series for 30ft. class. Special race for yawls 51ft. and under racing length, all in one class. Third race for 20ft. class. Evening, amateur minstrels.

Thursday, July 22.—Race for 51ft. class with cabin trunks. Fourth race of series for 30ft. class. Fourth race of series for 20ft. class. Race for cabin cats, all in one class. Evening, local talent.

Friday, July 23.—Schooner race, all in one class. Race for 51ft. class with flush decks. Race for 43ft. class. Fifth race of series for 30ft. class. Fifth race of series for 20ft. class. Evening, legerdemain, magic and other tricks.

Saturday, July 24.—Open regatta for all classes. Sixth race of series for 30ft. class. Sixth race of series for 20ft. class. Evening, music and a pyrotechnic display.

The races are likely to bring out most of the yachts that are racing this season about the west end of the Sound. No new boats are promised, but the Chicago boat, Vencedor, will make her bebut on salt water. She has recently been rerigged, under the direction of Mr. Wintringham, with a pole mast and larger sails, by Sawyer & Son. She will measure into the 51ft. class with Syce.

First Day.

OPEN REGATTA, ALL CLASSES.

Saturday, July 17.

The race week opened with a regatta for all classes, under the Larchmont Y. C. rules. Saturday was clear and hot, with very little wind, a light S.W. breeze coming in about noon, and the start being given as follows:

Schooners, 1:05—Emerald, Colonia.

Schooners, Class C, 1:10—Amorita.

Cutters, 51ft. class. 1:20—Vencedor, Syce.

Cutters, 36ft. class, 1:30—Acushla, Surprise, Pawnee.

Sloops, 30ft. class, 1:35—Musme, Raccoon, Carolina, Penelope, Goblin, Kite.

Sloops, 25ft. class, 1:40—Vaquero, Houri, Quantuck, Skimmang.

Sloops, 20ft. class, 1:45—Asthore.

Cats, 30ft. class, 1-50—Volsung, Onaway, Kit, Uarda.

Cats, 25ft. class, 1:55—Presto, Grace, Rob Roy.

Cats, 20ft. class, 2:00—Minnetonka, Doroth, Byna, Jane.

The club triangles were sailed, a reach to the eastward marks first, a beat across the Sound and a reach to the line. The first round was timed.

Volsung	3 01 09	Grace	3 24 33
Houri	3 03 40	Dorothy	3 27 38
Kit	3 04 10	Acushla	3 28 03
Quantuck	3 04 44	Rob Roy	3 30 58
Syce	3 05 16	Amorita	3 31 31
Vaquero	3 05 22	Minnetonka	3 31 38
Asthore	3 06 43	Carolina	3 34 32
Skimmang	3 06 52	Raccoon	3 35 06
Vencedor	3 11 28	Surprise	3 35 30
Uarda	3 12 44	Musme	3 35 39
Onaway	3 14 37	Pawnee	3 37 19
Colonia	3 16 22	Byna Jane	3 43 32
Presto	3 19 43	Kite	3 56 08
Emerald	3 22 48	Goblin	4 01 35

The second and final round was timed:

Volsung	4 08 34	Dorothy	4 59 14
Kit	4 08 54	Minnetonka	4 59 44
Houri	4 15 11	Rob Roy	5 07 59
Quantuck	4 16 51	Colonia	5 18 47
Skimmang	4 19 33	Acushla	5 24 06
Vaquero	4 23 32	Raccoon	5 26 22
Asthore	4 26 08	Carolina	5 27 19
Uarda	4 29 01	Emerald	5 27 54
Onaway	4 31 44	Musme	5 31 19
Presto	4 40 49	Surprise	5 37 50
Syce	4 43 06	Pawnee	5 44 06
Grace	4 51 32	Amorita	5 48 07
Vencedor	4 53 44	Byna Jane	5 53 08

The official times were:

	Length.	Elapsed.	Corrected.

Byna Jane, F. S. Ray	18.84	3 53 03	3 51 00

On Sunday evening a sacred concert was given at the club house, with a very large attendance of members and guests.

Second Day.

Monday, July 19.

SCHOONERS—30FT. AND 20FT. CLASSES.

The race of Monday had but six starters, but the two big schooners made an interesting race. The wind was from the east, moderate, and the sky was dull and cloudy, with showers and sunshine in alternation.

As on Saturday, Capt. Hank Haff was at the wheel on Emerald, and when the gun fired at 11:35 he put her on Colonia's weather, and the latter was compelled to give room at the markboat, losing nearly a minute.

At 11:40 the three 30-footers were sent away, Raccoon first, then Musme and Carolina. The only 20-footer to start was Shark. Emerald led in the beat to the easterly mark for about half an hour, when Colonia passed her. They were timed:

Colonia	1 11 30	Emerald	1 12 50

The run under spinakers to the Hempstead mark showed a gain for Emerald, the times being:

Colonia	1 52 11	Emerald	1 53 00

After a jibe they reached for the line with the wind on the starboard quarter, the first round being timed:

		1st Round.
Colonia	2 08 59	2 33 59
Emerald	2 09 57	2 34 57

The windward leg, sailed in a rather stronger breeze, was timed:

Colonia	3 40 06	Emerald	3 26 04

After a slow run in a lighter wind, the jibe at the Hempstead mark was timed:

Colonia	4 50 20	Emerald	4 25 39

The finish was timed:

Colonia	4 38 08	Emerald	4 43 05

The 30-footers sailed a smaller triangle, and were timed as follows; first round:

	1st Mark	2d Mark.	3d Mark.	Elapsed.
Raccooon	12 57 01	1 29 08	1 52 11	2 12 11
Musme	12 59 12	1 30 58	1 53 50	2 13 50
Carolina	12 59 04	1 31 29	1 54 40	2 14 40

On the second round they were timed:

	1st Mark.	2d Mark.	3d Mark.	Elapsed.
Raccoon	2 59 55	. .. ..	4 09 33	2 17 27
Musme	3 04 47	. .. ..	4 14 42	2 20 52
Carolina	3 02 31	. .. ..	4 13 24	2 18 44

The official summary was:

	Length.	Elapsed.	Corrected.
SCHOONERS, IN RACING TRIM.			
Colonia, C A Postley	93.13	5 03 08	5 03 03
Emerald, J. R. Maxwell	91.07	5 08 05	5 06 49
SLOOPS - 30FT. CLASS.			
Raccoon, N. D. Lawton	30.00	4 29 38	4 29 38
Musme, J. M Macdonough	30.00	4 34 42	4 34 42
Carolina, P. Jones	20.00	4 33 24	4 33 24
SLOOPS—20FT. CLASS.			
Shark, Sherman Hoyt	20.00	2 36 31	2 36 31

Royal St. Lawrence Y. C.—20ft. Class.

DORVAL—LAKE ST. LOUIS.

Saturday, July 10.

THE eighth race of the Ross series for the 20ft. class was sailed on Saturday, July 10.

There was a fine, whole-sail breeze from the east with a little northing in it, and the water was almost perfectly smooth, so that the race was an extremely fast one.

Five boats started: Avoca, G. H. Duggan, going across with the gun at 3:30; Rogue, J. C. C. Almon; Millie, Rev. H. Kittson; Glenowen, Shirley Davidson; and Islander, G. A. S. Hamilton, in the order named; and the boats were sent around the starboard course, making it a spinaker run to the channel buoy.

Avoca at once began to draw out, and at the first mark had a clear lead on the fleet; Rogue came second, and Millie third. On the reach across to the Valois Buoy, Millie came up on Rogue, and after a luffing match got past her and took second place, the rest of the boats keeping well together, making it anybody's for the third place until they completed the first round.

The times were as follows:

Avoca	4 08 17	Glenowen	4 12 20
Maida	4 11 40	Rogue	4 12 53
Islander	4 12 20		

Glenowen came up on Millie on the run and almost passed her, but Millie succeeded in getting the buoy, and held her under the reach to the beat, and the second round was finished as follows:

Avoca	4 44 32	Islander	4 53 26
Millie	4 52 12	Rogue	4 53 47
Glenowen	4 52 10		

During the third round the wind breezed up and drew more off the land in fairly strong puffs. Both Avoca and Glenowen got into trouble, their jib halyards jamming in a block aloft. Glenowen sent a man to the masthead, and in a puff was practically capsized, but, although two of her crew had to swim for it, they got on board again, righted her and brought her in within a few seconds of second place. Avoca tied her working jib in stops and set No. 3 to the windward mark and finished with a clear lead on the fleet by 10m., Millie second, Glenowen third, and Rogue and Islander in the order named.

The finish was as follows:

	Finish.	Points for Race.
Avoca	5 50 57	24
Millie	5 20 23	21
Glenowen	5 31 09	17
Rogue	5 33 07	9
Islander	5 36 20	15

Rogue reported fouling the channel buoy on the last round and lost her points for this round.

The standing of the boats in points in the series is now as follows:

Avoca	153	Islander	99
Glenowen	123	Millie	84
Rogue	102	Maida	44

The new flagship of the club, Glencairn II., as Com. Ross has decided to call her, was launched on July 11 by her builders, the Yacht Company of Canada. She was completed within twenty-seven days from the time the contract was signed, complete with all fittings, mast and gaff, and as during this time a good deal of work was done on the racing fleet this is fairly good work. Glencairn II. looks a deal like her immediate predecessors, but her deck is flatter aft, and she is the first of Mr. Duggan's boats with a perfectly flat stern, which does not improve her looks. Her fittings and rig are exactly those of Avoca.

The last race for the 15-footer series was also sailed and was won by Titania. The times were as follows:

Titania	5 01 27	Viva	5 04 53
Anita	5 04 40		

The Sinking of Tomahawk.

THE steel 40-footer Tomahawk, designed by Burgess in 1889 for E. D. Morgan and built by Piepgrass, foundered on July 17. The details are given as follows in a despatch to the *Boston Globe:*

HIGHLAND LIGHT, July 17.—Early this morning, in a strong southwester, the cutter yacht Tomahawk went down off Highland Light. She was formerly owned by B. W. Crowninshield, of Marblehead.

Captain and owner, Albert P. Newell, with a crew composed of George N. Saunders and Lyle Goodwin, transferred their personal effects to the yawl and pulled away from the sinking craft, just in time to avoid being swamped in the suction as the yacht lurched and went down.

When their vessel so suddenly dropped out of sight they were five miles from shore and Highland Light bore west. A nasty and choppy sea tossed their frail boat about, and it required constant watchfulness and skill to prevent capsizing.

Something of the task of gaining the shore may be judged from the fact that they were from 3 A. M. to 3:30 P. M. in covering a distance of five miles, pulling steadily at the oars.

Capt. Newell says: "We had been on a cruise to the eastward, and left Yarmouth, N. S., a week ago, jogging up the north shore without mishap of any kind. Yesterday we worked across the bay and pulled up for Provincetown, leaving there at midnight.

"After rounding Race Point, and when off Highland light, we found the yacht settling rapidly in the water. We lost no time in getting the yawl over, and after putting in our effects we jumped in ourselves, and none too soon, for the craft fetched a lurch and went down head foremost.

"That pull of five miles to shore was the worst experience I ever had in all my seafaring life. We expected every minute the frail shell would throw us out, in her mad tossing. We were assisted in landing through the surf by surfman Dyer and Capt. J. H. Rich, of the Pamet River lifesaving station, who treated us very kindly."

New Orleans Yachting.

THE racing season of the Southern Y. C., of New Orleans, is in active progress, and on June 19 the Walker cup and Sully cup events will be sailed. In 1889 Mr. J. M. Bourg won a handsome piece of plate with his sloop Stella, and he has now just offered this plate to the club again to be put in competition. The directory, in examining this plate, discovered that it had a singular historical value, having been offered by the club so early as 1854. It was therefore thought to be too valuable to go on further as a prize, and it was decided to frame and keep it permanently in the club house of the Southern Y. C. The following letter was therefore sent to Mr. Bourg, which serves well to show the traditions to which this old cup is entitled.

"NEW ORLEANS, La., June 12, 1897.—*J. M. Bourg, Esq., City:* DEAR SIR—In accord with the regulations of the Southern Y. C. the salver which you have presented for competition in a class to be selected by the organization has been laid before the governing committee. I am instructed to say that they have taken the liberty of refusing to offer it as a prize, for the reason that it is of too much historic value to be put to such a purpose. They propose, with your sanction, to accord it a prominent place in the club house.

"The Southern Y.C. has been in existence for nearly half a century. In America it is second in age to the New York Y. C. The date on your trophy, together with the club's inscription, shows that it was won over our course in 1854, when the organization was but a few years old. A valuable relic already, it will not be many years before it will become an heirloom which will serve to perpetuate traditions which would otherwise be forgotten.

"We expect it to be the home stake, around which will be resailed many of the old-time craft which it will recall to the memory of the survivors of their crews.

"Presenting the thanks of the Southern Y. C., I am yours very truly L. D. SAMPSELL, Secretary.

"By order of Com. J. W. Glenny."

E. HOUGH.

New York Y. C. Annual Cruise.

A REGULAR meeting of the New York Y. C. was held on July 15 at the downtown Delmonico's, Com. Morgan presiding. The following members were elected: John W. Cox, John G. Elliott, Richard A. Johnson, E. Burgess Warren, Darwin Almy, Rev. F. Langdon Humphreys, Philip T. Dodge, Colgate Hoyt, Charles Smithers, Effingham Townsend Irvin, William K. Vanderbilt, Jr., H. H. Rogers, John W. Masury, Stephen C. Hunter, Harrison B. Moore, Jr, Commander James M. Forsyth, U. S. N.; Stephen S. Palmer, Charles Sooysmith, Henry C. Eno, Goold H. Redmond, Ernest Iselin, Commander Charles H. Davis, U. S N.; Alexander Van Rensselaer, John E. Cowden, J. De Courcy Ireland, Julian Stevens Ulman.

The regatta committee presented a report on the programme for the coming annual cruise, for which the following general order has been issued:

FLAGSHIP CORSAIR.
NEW YORK YACHT CLUB.

GENERAL ORDER NO. 2

Monday, Aug. 2, 1897.—The squadron will rendezvous at Glen Cove, L. I., in the morning, leaving that day for Huntington Harbor. At 11 A. M. there will be a meeting of captains on board the flagship.

On the same day a race will be sailed, finishing off Huntington Bay.

The programme for the cruise, weather permitting, will be as follows:

Tuesday, Aug. 3, Huntington Bay to New London.
Wednesday, Aug. 4, New London to Newport.
Thursday, Aug. 5, race off Newport for Goelet cups.
Saturday, Aug. 7, race for Commodore's cups to Owl's Head or vicinity.

After the race for the Commodore's cups, the fleet will proceed to Bar Harbor, where a meeting of the captains will be held on board the flagship to decide upon further action.

During the cruise there will be the usual races for the Owl and Gamecock colors, and a race for naphtha launches.

The regatta committee will furnish details for the runs from port to port, and for all other racing events.

Captains are requested to provide their vessels with the N. Y. Y. C. night signal, also to send to the Commodore a list of the names of their guests.

During the cruise the Commodore will be pleased to receive informally the captains and their guests on board the flagship any evening while in the harbor, from 8:30 to 11 P. M.

As it is very important that the regatta committee should know to what extent they can depend on yachts accompanying the squadron to Owl's Head, captains are urged to send notice of their intentions to the regatta committee with as little delay as possible.

By order of the Commodore.

J. BEAVOR WEBB, Fleet Captain.

JULY 13.

The following letter was read:

J. C. Barron, W. Barton Hopkins and J. Frederic Tams, Regatta Committee New York Y. C.:

GENTLEMEN—It gives me great pleasure to offer the following cups, to be raced for during the coming cruise by the sailing vessels of the squadron that have not hauled out to clean since the beginning of the cruise:

1. A cup of the value of $2,000 for the winning schooner in Classes A, B and C.
2. A cup valued at $1,000 for the winning schooner in Classes D and F.
3. A cup of the value of $1,000 for the winning sloop in Class G.
4. A cup of the value of $1,000 for the winning sloop in Classes H, J, K, L and M.

The course to be from Vineyard Haven to the vicinity of Owl's Head, to be sailed in cruising trim, with the regular time allowance of the New York Y. C., in accordance with its rules, and under such conditions as may be formulated by the regatta committee. J. PIERPONT MORGAN.

The following additional prizes have been offered:

By Vice-Com. Lewis Cass Ledyard—A cup for schooners and a cup for single-masters and yawls, to be raced for at Glen Cove, Aug. 2, open to yachts in cruising trim.

By Rear-Com. August Belmont—A cup for the single-masted vessel or yawl winning the greatest number of runs, all sailing as one class, during the cruise; also a cup for a special class of 30-footers, owned by members, two or more to start; also a cup for second boat if four or more start.

By ex-Com. E. M. Brown—A cup for the schooner winning the greatest number of runs, all schooners sailing in one class.

The regatta committee offers cups for schooners and single-masted vessels respectively in a race from Saddle Back Ledge Light to Bar Harbor, with special handicap time allowance.

Royal St. Lawrence Y. C. Ross Cup.

DORVAL—LAKE ST LOUIS.

Saturday, July 3.

THE seventh race of the Ross series for the 20-footers came off on the afternoon of Saturday July 3. There was a very light air from the eastward, and the boats were sent off from the port course, which involved a spinaker run to the Valois buoy against the current. What wind there was seemed to die out entirely in the bay, and it made the race a very slow one indeed, the boats taking about one hour for each round

The start was made at 3:45, and Glenowen got away with a lead, with Millie second and Avoca third. Millie and Glenowen hung close to each other all the way up, and Millie got the buoy and took the lead. On the reach she widened out the distance between her and Glenowen a little, and on the windward work there was a little more air stirring and Glenowen gained on her. At the finish of the first round there was only ten seconds between them. Avoca crept up and passed Rogue on the windward work, and took third place. The finish of the first round was as follows:

Millie	4 55 11	Rogue	4 58 02
Glenowen	4 55 21	Islander	5 01 27
Avoca	4 57 31		

On the second round Millie set her spinaker to port and Glenowen set hers to starboard, Millie handling her sails a little more smartly of the two, and the two boats went up the course almost together. Millie again got the buoy, and on the reach across to the outer buoy Millie drew away a little. After rounding the buoy the two leaders tacked close in shore, and at the end of the first leg Glenowen was able to cross Millie's bow, and she held this lead to the finish line. The result of the second round was as follows:

Glenowen	5 53 52	Rogue	6 01 17
Millie	5 54 06	Islander	6 03 37
Avoca	5 57 02		

The result of the race and of the series to date in points is as follows:

		Total points in Series.
Glenowen	15	92
Millie	15	51
Avoca	12	113
Rogue	10	83
Islander	8	76

Northwestern International Yachting Association.

NEW WHATCOM, WASH.—PUGET'S SOUND.

Saturday, July 3.

THE sixth annual regatta of the Northwestern International Yachting Association was sailed on July 3 off New Whatcom in a reefing breeze. The small number of starters is due to the fact that many yachts from a distance were stormbound by a heavy gale that prevailed for several days preceding the race. The times were:

A CLASS—36 TO 50FT.

Course, 18 nautical miles, one-third windward

	Rating.	Start.	Finish.	Elapsed.	Corrected.
Myth	36 00	3 04 00	6 16 44	3 12 41	3 13 03

Hobe Sound Y. C.

HOBE SOUND, FLA.

Sunday, July 11.

THE Hobe Sound Y. C. sailed the first of its series for the prize pennants on July 11. The start was in a very light wind, and the yachts got away well together at 3:30 P. M. for second class and 3:33 P. M. for first class yachts. Shortly after the start a heavy rain and wind squall struck, which forced all the second class and some of the first class to quit. The five miles were sailed as follows, and the points on the series follow:

FIRST CLASS

	Elapsed.	Corrected.	Points.
Gull	1 16 22	1 15 05	5
Francis	1 22 42	1 20 00	4
Wenona	1 29 30	1 20 35	3
Sprogie	Withdrew.		0
Wanda	Withdrew.		0

SECOND CLASS

The Wawbewawa Canoe Association.

THE Wawbewawa Canoe Association is rapidly gaining the distinction of being the most active canoeing organization in the Eastern Division of the A. C. A. The members celebrated Independence Day by adding two more splendid victories to their already long list. They not only won the war canoe championship of the New England Amateur Rowing Association for 1897 in the Boston regatta, but also sent a crew to Springfield, where they took first honors in the war canoe event of the Connecticut Valley Amateur Rowing Association regatta. At the Eastern Division meets of the A. C. A, during the past few years the Wawbewawas have carried their colors well to the front. The Association was organized in 1874, and has already won the war canoe championship three times in the A. C. A. and twice in the N E. A. R. A., as well as the Connecticut Valley championship

At the canoe meets held in Lowell, Worcester and Lawrence during the last three years, the Wawbes have each time won the single-blade and tandem single-blade events. The club four race also went to the Wawbewawas in 1895 and 1896, and in the former year Messrs. Burrage, Hall, Forsaith and Ashenden won the club four championship of the A. C. A. at Bluff Point.

The club has recently been incorporated under Massachusetts laws, and the members are now enjoying the privileges of a handsome club house erected last spring on the banks of the picturesque Charles in Auburndale. The limit of membership is fifty, and already there is a long waiting list.

The officers of the club are as follows: Capt., Louis S. Drake; Purser, Francis J. Burrage; Sec'y, Wm. V. Forsaith.

Des Moines C. C.

CHICAGO, Ill., June 26.—At Des Moines, Ia., there is a deep dam across the Des Moines River, and above the dam extends a pond of still water some miles in extent, not unsuitable for the purposes of fishing or canoeing. For years this backwater has been utilized by the water-lovers of the city, though nothing has been done toward the organization of a canoeing body. Yet for many years Des Moines has boasted an enthusiast in canoe matters, a gentleman by the name of Tacitus Hussey, commonly known as Tac Hussey. Mr. Hussey has been a regular and devoted disciple of the tiny craft, and his penchant for the sport has made him in the past an object of interest and curiosity in the staid Western city. Mr. Hussey has paddled away faithfully and industriously, talking canoeing, acting canoeing, and upon occasion even writing poetry about canoeing. Finally his enthusiasm has become contagious, and has spread to others of the community. This week a canoe club was organized at Des Moines, with a membership of about forty. Most of these are beginners, but their intentions appear to be of the right sort, and there is all the hope in the world that a good body of canoeists will be the outcome of the movement. following are the names of some of the new members: Com., Tacitus Hussey; Vice-Com., Hal Stapp; Purser, Will Heywood; Sec'y, Edgar Pritchard; J. E Locke, John Mott, Guy Talbott, Harry Posner, J. Younker, A. W. Liddell, Levi Guss, E. L. Chandler, C. M. Stewart, Fred Stapp, J. Crawford, Frank Clarkson, John Clarkson, Mark Teetor, W. Stutz, L E. Stutz, George Warfield, C. H. Kahler, Harry Keyser, C. A. Rawson, Will Jackson, H. Ullrich, Raymond Windsor. E. HOUGH.

Canoe Cruising and Camping.

THE new book just issued by the Forest and Stream Publishing Co. under the above title comes most opportunely at the season, when canoe cruises are in order. The author, Perry D. Frazer, is a cruising canoeist of long experience and thoroughly familiar with the canoe and all its accessories, the gun, the fishing outfit, the camera and the tent. How to use all of these in the enjoyment of a cheap, wholesome and healthful outing is told in a plain and practical manner, the book being intended for the novice and young canoeist. The canoe, camping outfit, clothing, etc., are described in detail, and the author's advice in their selection and use is full and reliable. The book will be found well worth the attention of even experienced canoeists.

The W. C. A. Meet.

AT Delavan Lake, Wis., preparations for the August meet of the W. C. A. are going on. Secretary Huntington has arranged with the Highland Hotel for board for the tars who will be in attendance, and space has been secured for the tents of those who will camp out. The triangular course has been staked out—a half mile to the leg—opposite Highland. The sailing will be in view of the hotel guests at different parts of the lake. E. HOUGH.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.
Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Some people take no stock in the marvelous properties that are concealed beneath the soft fur that covers the bony part of the leg of a cotton-tail! But there are some that do. For instance, Fred Gilbert carries with him the most disreputable-looking rabbit foot we have ever seen; but, disreputable as it is undoubtedly in appearance, it's a "peach," according to Fred, in all other respects. And W. P. Mussey, in our issue of July 10, tells, under the head of "New Muscallonge Waters," how John Haskell's rabbit foot, although "partly eaten and somewhat odorous," worked wonders in the 'lunge-producing line. We also could tell of a certain forefoot of a Mississippi swamp rabbit that is a power in itself. But a clincher for the unbelievers comes from the Oil City shoot. The *dramatis personæ* are Rolla Heikes and C. W. Budd. Charlie has a hindfoot of a snow-white jack rabbit in his right-hand hip pocket all the time, and Rolla managed to secure it somehow, and sped off up the trail and through the brush, with Budd in hot pursuit. Rolla did outrun Charlie, and the latter returned disconsolate. "All my luck's gone!" Then Rolla appeared and mendaciously told Charlie that he'd lost the foot "It must have fallen out of my pocket as I ran through the brush," said he. They set off together to look for it, but of course it couldn't be found, as it was then reposing in Rolla's left shoe! Now comes the climax. Budd was called to the score for the first 25 targets in the E. C. cup race; he went to the score, but all broken up; he started badly, and actually missed something like five or six targets straight. How many more he would have missed had not Rolla handed him the foot just then, it is hard to say; the fact remains, however, that he finished that string of 25 with only one more miss to his credit. From the above it will be gathered that a graveyard rabbit is not a *sine qua non* in the foot-producing line; any old foot 'll do.

Jim Elliott has done just what we have always been hoping somebody would do, yet scarcely expecting that our hopes would be realized. He has challenged Charlie Budd for the Du Pont trophy, Charlie Grimm for the Cast Iron, and Sim Glover for the Kansas City *Star*, and has put up the necessary forfeit to bind each challenge. This insures a considerable awakening of interest in live-bird trap-shooting circles, and has put a pleasing quietus upon all the windy talk we have had to wade through recently. What a delicious contrast was the method pursued by Fred Gilbert in challenging Rolla Heikes for the E. C. championship cup. There was no preliminary talk, and everything was arranged in less than twenty lines in any newspaper. When people really want a match there is absolutely no difficulty at all in the matter with so many championship cups going the rounds of trap shooting circles. And by the way, when is the tie for the "reversed order championship" between Heikes, Van Dyke and Charlie Young to be decided? Wouldn't the shoot-off be an attraction at Jack Parker's shoot next September?

The fifth contest for the Recreation cup will be held at the Bergen County Gun Club's grounds, Wednesday, Aug. 11, at 2 P. M. This cup represents the amateur championship of the clubs of New Jersey, all amateur members of such clubs being eligible to compete for the same. The conditions are 100 targets per man, 50 at known angles and 50 at unknown angles, entrance price of the targets, with an optional sweepstake on each 25 targets. In addition to the contest above mentioned, there will only be two more competitions for the cup (in October and December) before the trophy becomes the property of the shooter who has won it the greatest number of times in the seven contests that will have been held with the completion of the shoot in December. At present the score stands: Remsen and Sinnock, two wins each out of the four contests. In this race all are at scratch, and the cup goes to the high man; the club donates $5 to the second high gun and $2 to the third high gun. Entries can be made up to the end of the first round of 25 targets.

Yale Dolan, of the Riverton Gun Club, celebrated the Fourth of July at Hurlingham (on July 5, of course), and divided £164, the purse in the July £4 Handicap sweepstakes, with A. W. Blyth. There were thirty-six entries, Mr. Dolan standing at 29½yds., Mr. Blyth at 28yds. On July 6, at the Gun Club, Mr. Dolan, on the 29yds. mark, divided £17 with Count Robiano, who was placed at 27yds. The conditions of this event were: £3 entrance, handicap, one barrel only. There were nineteen subscribers, of whom only three managed to score 4 straight. These were the two above mentioned and M. Journu, the great French shot, who was placed at 33yds., a tremendous handicap, when it is considered that he had only the use of one barrel and was shooting at true bluerocks. M. Journu missed his 5th bird, and Dolan and the Count agreed to divide if either killed their birds. Count Robiana killed, relieving Mr. Dolan of any further anxiety.

So far as we can learn from the columns of the London *Field*, C. H. Mackay, of the Carteret Club, was the only American who took part in the programmes carried out at Hurlingham and the Gun Club during the International Week, which ended on Saturday, July 3. Mr Mackay's record for the week compares very favorably with that of many better known men who competed during the week. This is his record: Won first prize, £100, and cup, value £25, in 31yds. rise sweepstakes (thirty-seven competitors), at Hurlingham Club, on Tuesday; won second prize £60, in 32yds. rise sweepstakes (40 competitors), at Gun Club, on Saturday. In the event on Saturday Mr. Mackay tied with Mr. R. M Hawker, an Australian, with 7 straight. On the shoot off Mr. Mackay lost his first bird.

In view of the number of letters we have recently received on the subject, it may not be amiss to state that we always hold that the term "amateur," which appears so frequently in tournament programmes of the present day, includes all who are not "*professionals.*" Our definition of what constitutes a professional has always been as follows: "Any person who makes his livelihood in whole or in part by shooting at the trap; that is, any person who receives a salary or remuneration in cash from a firm of manufacturers of sporting goods for shooting a certain make of gun, a certain brand of powder, or a certain shell, for the purpose of showing the merits of the same, is a professional trap-shooter. Also: Any person who shoots exhibition matches for gate receipts, or who receives pay for taking part in the same, is a professional trap-shooter." *Per contra*, all who do not come under the above heading are amateurs.

G. W. Sergeant, of Joplin, Mo., must be thoroughly puzzled as to how his name is really spelled. When he writes to us he always signs it "Sergeant," but when other people refer to the system of three traps designed by the Joplin shooter, they generally call it the 'Sargent system." We remember well how, at the Pittsburg tournament last June, Sergeant told us that he didn't know whether it wouldn't save him trouble if he just took to the phonetic spelling of his name. Perhaps he has done so, but to date he has not notified us of any change, so we spell it still "Sergeant." And the name of the "bicycle trap" is magautrap, not magantrap, maugau trap, nor anything else but magautrap; the word means *magazine automatic trap*, the italicized letters forming the compound word, with the emphasis on the 'mag." Now will you be good?

The decision of the New Jersey State Sportsmen's Association (for that is now the title of the reorganized body) to hold a tournament Sept. 28-Oct. 1, is an excellent one. The tournament will help to galvanize new life into New Jersey trap-shooting circles, and will be well attended if the programme is made an attractive one. With less than ten weeks for preparation, the committee having the tournament in charge has commenced work at once. We feel a special pride in this reorganization business, FOREST AND STREAM having done more than all the other sportsmen's papers put together, to try to give the State of New Jersey a State Association worthy of the name.

By the time this issue appears on the news stands, 8 Murray street will no longer be the address of Von Lengerke & Detmold. The handsome store at the corner of Broadway and Pearl street, 318 Broadway, the ground floor of the building that was the home of FOREST AND STREAM for many years, is where the firm of V. L. & D. has now hung out its shingle. In this store the firm will have ample room and light to make a good display of its Francotte guns, besides leaving plenty of space for John Wright's department (fishing tackle) and Carl's department, the Humber bicycle.

The New Utrecht Gun Club, of Brooklyn, N. Y., shot a race with the Brooklyn Gun Club on July 10, at the Brooklyn Club's grounds, and met defeat by only 2 breaks, the scores standing 138 to 140 in favor of the home team. The last team race at targets that we remember the New Utrecht Gun Club to have taken part in, was a match with the Boiling Springs Gun Club, of Rutherford, N. J., in 1896. On that occasion, if we remember right, the teams were twenty-one men a side, the shoot being held at Rutherford. In that race, with 525 targets for each team to shoot at, the New Utrechts were unlucky enough to lose by just 2 breaks!

On Wednesday of this week, July 21, the Riverton Gun Club, of Philadelphia, will hold its "first invitation target shoot." This departure of the Riverton Club from the beaten paths of its past history tells very forcibly of the growth in popularity attained by target shooting Hitherto the Riverton Gun Club has been a live-bird club only, at least so far as we have ever learned, and has always had the reputation for furnishing fast birds and fast grounds. It was at Riverton that Yale Dolan recently made the great run of 84 consecutive kills on the last 84 birds in a match with L. Finletter.

The team race shot at Marion, N. J., on Saturday last, July 17, between the Endeavor Gun Club, of Jersey City, and the Bergen County Gun Club, of Hackensack, N. J., resulted in a victory for the Endeavors. The victory was rather in the nature of a surprise, the Bergen county team being a strong one on paper, and favorites before the start. The weather was very warm, but favorable for target shooting, wind being conspicuous by its absence.

From Montpelier, Vt., we learn that the programme of the coming Interstate tournament at that city is about ready for distribution. The local gun club is going to add $200 to the purses, and will spare no efforts to make the shoot a pleasant one for all its guests. Anybody desiring a programme or other information relating to the shoot, should write to Geo. B. Walton, secretary of the gun club, Montpelier, Vt. The dates for the tournament are August 25-26.

Last week we gave a short notice of a new idea in handicaps, showing its weak points. In its issue of the 17th inst. a cotemporary also gives an account of the same system from the pen of its father or godfather, and makes a request that some one would call its attention to any weak points in the system. We take pleasure, therefore, in directing our cotemporary's attention to what we wrote on the subject last week.

As an outcome of the Interstate tournament at New Haven, Conn., and the visit of John L. Winston to Boston, Mass., a match at expert rules was shot between Winston and Dickey on Saturday last, July 17. We do not know what the scores were, but a telegram from Winston to a friend of his in New York winds up with the following: "Beat Dickey easily."

This week there are two good shoots in progress in different parts of the country, and under different conditions. The Indian Wolf shoot is open-to-all, no handicap and nobody barred: the Arkansas State Sportsmen's Association's tournament, at Pine Bluff, is also open-to-all, but professionals must shoot into first or second money or be out of a place.

Jack Parker writes us that he will hold his annual tournament at Detroit, Mich., Sept. 7-10. As Jack is always giving us something novel in the line of programmes, we shall look eagerly for the advance copies of his issue for 1897. He will probably get a line on some of the details for the same at the Indian Wolf shoot at Clear Lake this week.

Preparations for the Emerald Gun Club's merchandise live-bird shoot, at Dexter Park, July 29, are going merrily along. From present indications there will be a good day's sport at this Long Island resort on the above date. Proprietor Lippack promises to furnish extra good birds for the occasion.

On Friday of this week, July 23, the Catchpole Gun Club, of Wolcott, N. Y., will hold its "first midsummer tournament" on the baseball park and shooting grounds at Wolcott. Targets will be thrown at 1½ cents each. Purses divided in the old style—40, 30, 20 and 10 per cent.

It is confidently expected that the Interstate shoot at Lewiston, Me. Aug. 4-5, will be as popular as the Portland, Me., shoot last August; and that's saying a great deal, for the Portland shoot was one of the best on the Interstate circuit for 1896.

JULY 21. EDWARD BANKS.

New Jersey State Sportsmen's Association.

IN our last issue we told briefly the business transacted at the meeting of the New Jersey State Sportsmen's Association, held at Taylor's Hotel, Jersey City, Tuesday, July 13.

At that meeting the committee on constitution and by-laws reported and handed in a draft of a constitution and by-laws, with a recommendation that the same be adopted. The meeting showed its confidence in the capabilities of that committee by adopting the result of its work without having a line of either the constitution or the by-laws read to it. In order that every member of the Association may know just what was adopted, we give below the constitution and by-laws in full:

CONSTITUTION.

ARTICLE I.

This organization shall be called the New Jersey State Sportsmen's Association.

ARTICLE II.

This Association is formed for the purpose of securing and maintaining proper legislation for the protection and propagation of wild birds, game fish and game animals, throughout the State, for the vigorous enforcement of game laws, and for the promotion of kindly intercourse and generous emulation among sportsmen at the trap.

ARTICLE III.

SECTION 1. This Association shall be composed of all regularly organized clubs within the State of New Jersey, that have been duly elected to membership, and each club shall be entitled to three delegates to represent them at all meetings; proxies to count as delegates.

SECTION 2. Individuals may become members of this Association as provided for in Article IV., Section 3.

ARTICLE IV.

SECTION 1. Any club desiring membership in this Association shall present to the secretary or any officer of the Association a written application signed by its president and secretary, setting forth the name of the club, date of its organization, names of its officers and delegates and the number of members comprising it, which shall be acted upon at any meeting of the executive committee.

SECTION 2. No shooter will be considered eligible to compete for any prize offered by this Association, except he be an individual member of this Association or a *bona fide* member of a club or association that is also a member of this Association, and he shall have been a member of said club or association and a resident of the State one month prior to the date fixed for the State shoot.

SECTION 3 Any individual, a resident of the State and not a member of a club which is a member of this Association, wishing to become a member can make application for membership to any member of the executive committee accompanied by the initiation fee of $1, thereby becoming eligible to compete for individual prizes upon the approbation of said committee.

SECTION 4. The membership fee for clubs shall be $2 and the annual dues $1—individual dues $1, payable at any time previous to the annual tournament.

ARTICLE V.

SECTION 1. The officers of this Association shall be a president, three vice-presidents, secretary, treasurer and a board of seven directors, which shall include the president and secretary, four of said board to constitute a quorum.

SECTION 2 The officers shall be elected by ballot at the annual meeting, held the evening of the first day of the annual tournament. The officers then elected shall respectively hold office until the close of the next annual convention or until their successors are respectively elected.

SECTION 3. Any vacancy in either of the offices may be filled by appointment by the president.

ARTICLE VI.

SECTION 1. It shall be the duty of the president to preside at all meetings and to call extra meetings whenever he shall deem it necessary.

He shall have no vote, except on equal divisions, when he shall have the casting vote, and shall appoint all committees unless otherwise ordered.

SECTION 2. It shall be the duty of the vice-presidents in order to perform the duties of the president in his absence.

SECTION 3. It shall be the duty of the secretary to keep an accurate record of all the proceedings of this Association in a book; to notify clubs and individuals of their election, to issue notices of meetings, to take charge of all communications, to reply thereto in accordance with such instructions as he may receive from the Association and to keep a record thereof in a book, and he shall deliver to his successor in office all books or other property belonging to the Association in his possession.

SECTION 4. The treasurer shall receive and hold all the funds of the Association, and shall disburse the same by check as he may be authorized to do by a vote of the Association or by order of the president. He shall keep a correct and detailed account in a book of all moneys recived and disbursed by him, which book shall at all times be open to the inspection of any of the officers of the Association, or any committee duly authorized therefor, and he shall report at each annual meeting a full statement in detail of all receipts and disbursements during the year. The treasurer, upon entering his office, shall execute a bond to the Association in the sum of $500 with sureties to be approved by the president, interest on said bond to be paid by the Association as compensation for the services of such treasurer. He shall deposit all moneys received by him in any National bank and credit all interest accruing upon such deposit to the Association.

ARTICLE VII.

SECTION 1. The annual meeting of the Association shall be held at such time and place as may be designated from year to year.

SECTION 2. Special meetings may be called by the president, provided that at least one month's notice of such meeting shall be given, by depositing written or printed notices thereof in the post-office, directed to the secretary of each club as well as to individual members at their respective places of business or residence.

SECTION 3. Any meeting may be adjourned from time to time by vote.

ARTICLE VIII.

Five clubs shall constitute a quorum for the transaction of business, but a smaller number present at any adjourned or regularly called meeting may adjourn to any specified day.

ARTICLE IX.

No delegate shall be admitted into the Association unless he shall have handed or forwarded to the secretary a certificate of his election or nomination, signed by the president or secretary of the club he may represent.

ARTICLE X.

Immediately after the election of officers at the annual meeting, the president-elect shall appoint two committees of five delegates each, who shall constitute respectively the executive committee and the legislative committee, who shall hold office for one year, or until their successors are appointed.

ARTICLE XI.

SECTION 1. The executive committee shall have charge of all business matters not otherwise provided for in this constitution.

SECTION 2. The legislative committee shall have charge of all matters relating to the fish and game laws of the State, as well as to any legislation which concerns the best interest of this Association.

ARTICLE XII.

All proposed alterations, additions and amendments to the constitution and by-laws shall be submitted in writing to the executive committee, at least one month before the annual meeting, and shall be by said committee reported at said annual meeting with its opinion thereon; and no such alterations, additions or amendments shall be adopted unless it shall have been so proposed and reported, nor unless two-thirds of all the members present at such annual meeting shall vote in favor of such alterations, additions or amendments.

ARTICLE XIII.

In the case of individual members attending meetings, each such individual member shall be entitled to one vote, the same being regularly qualified members.

BY-LAWS.

SECTION 1. The order of business at all meetings shall be as follows: 1. Roll call. 2. Reading minutes of previous meeting. 3. Reports of committees. 4. Proposal and election of new clubs and members. 5. Unfinished business. 6. New business. 7. Election of officers.

SECTION 2. No member shall be allowed to discuss any question under debate without rising and addressing the chair.

SECTION 3. No member shall speak more than twice on any one question nor more than five minutes at any one time, unless by unanimous consent.

SECTION 4. Every member present shall be required to vote on all questions, unless he is directly or personally interested or excused by the vote of a majority of the members present.

SECTION 5. Any member belonging to this Association behaving in an ungentlemanly or unsportsmanlike manner may, by a vote of two-thirds of the members present, be expelled.

SECTION 6 All charges against any member or club must be submitted in writing, and notice of such charges furnished such member or club so charged, who shall be entitled to submit a written defense.

SECTION 7. No outside shooting whatever shall be permitted within the inclosure where the trap-shooting takes place, nor shall there be any contests for money on the grounds of the Association during the days advertised for the annual contests, until the termination of the convention, other than such as have been advertised to take place on such days in the usual announcement of prizes.

SECTION 8. Any change of rules of shooting that may be made, shall not apply unless one month's notice has been given to the different members of the association.

SECTION 9 No person shall be permitted to contend for prizes who is not eligible according to the constitution

SECTION 10 No betting of money, either on individual skill or on the result of matches will be allowed on the ground where the shooting by members is taking place.

The Interstate Association at Portsmouth, N. H.

BY one of those peculiar accidents which will occur in even the best regulated newspaper offices, we overlooked in our issue of July 10 the interstate tournament to be given at Portsmouth, N. H., Sept. 15-16. We, therefore, take pleasure in giving space to the following communication from Mr. W. I. Philbrick, secretary of the Portsmouth Gun Club, dated July 17:

"In the issue of FOREST AND STREAM of July 10 I find in Drivers and Twisters the following: 'The list of tournaments for eastern shooters is fast dwindling down to the elimination points, but July 14-15 at New Haven, Conn., Aug. 4-5 at Lewiston, Me., and Aug 26-27 at Montpelier, Vt., still remain to make the trap-shooter's hearts glad.'

"Why do you omit Portsmouth, Sept. 15-16? We are still on the map; please do not wipe us off entirely; we have kept our place in the list of fixtures, and it seems strange we were not included in your remarks above quoted.

"Our programme is nearly completed, and will be ready when called for by Manager Shaner. We have engaged the Bicycle Park for our shoot, it being more convenient than our shooting grounds for the occasion, and affording a fine background. It is easy of access from the hotels and depot, and provides ample accommodations of all kinds for the purpose, such as, covered grand stands, etc., with dance pavilion, which we shall possibly utilize, to give the boys a good time on the evening of the 15th. And we hope, if proper arrangements can be made, to have exhibition shooting on that evening, by electric light.

"We also expect Miss Kirkwood, the skillful lady shooter of Boston, to be present. I was much pleased to read your complimentary reference to her, as she fully deserves it all.

"Portsmouth is a pleasant little town by the sea, and all who visit it once are glad to come again. We should be more than pleased to entertain our favorite trap editor of FOREST AND STREAM, could it be possible for him to be with us in September.

"Please do not overlook us again, as every indication points to our having some fine sport on the allotted dates, and giving all who attend a grand good time."

At Watson's Park.

CHICAGO, Ill., July 14.—In a match at 50 live birds per man, shot today at Watson's Park, Burnside Crossing, E. E. Niel defeated Dr. Frothingham by two birds, scoring 46 to 44, as below:

E E Neil	2021121222222202021222202—22	
	2222222222222222202222222—24—46

RAVELRIG.

The New Haven Interstate.

FROM data furnished us, we learn that the Interstate Association's tournament, at New Haven, Conn., July 14-15, held under the auspices of the New Haven Gun Club, was the best shoot held by that association this year, in point of entries at least. A general average entry list of about thirty-five for the twenty programme events shot on the two days, is a record hard to beat nowadays, unless there is something very substantial in the way of added money. We had been looking forward to this shoot, feeling sure that it would be a good one, as trap-shooting is having quite a boom in the New England States, and the New Haven club a popular one with the shooters. It was, therefore, something more than annoying to have the heat of the July sun knock one out and put a veto on our presence at the grounds of the New Haven Gun Club, July 14-15. Under the circumstances, we will have to do the best we can with the data furnished us by some of those who were there, and give a report of the shoot based on such information. We also had a long talk with Manager Shaner on Friday afternoon, July 16, and to him we are indebted for many details of the tournament.

BAD WEATHER TO START WITH.

For thirty-six hours prior to the commencement of the shoot at 10 A. M. on July 14, rain had fallen in torrents at New Haven. Everything was wet through, and at 7 A. M. on the above date it looked decidedly unpromising for the success of the tournament. In fact at that hour Mr. Shaner was preparing little notes to put in the boxes of every shooter who was stopping at the Tontine Hotel, informing them that the shoot would be postponed for a day on account of the weather. But just then it suddenly cleared up, and the little notes were not handed in.

Of course, with so much bad weather to contend with, an early start was not to be thought of, the first gun being fired at 10 o'clock; yet with such a late start 6,340 targets were thrown during the day. The trappers worked under great difficulties, being literally flooded out in the trap house which, by the way, is one of the best houses we have ever seen. In order to get around among the traps to put them in working order, and to keep them going right, Manager Shaner had to wear hipboots (waders), the water being some 2½ft. deep in the pit; when the traps were taken up on Friday morning there was still some 6 or 8in. of water covering the floor of the pit. The trappers during the tournament took off their shoes and socks, rolled their trousers up, and sat on inverted empty barrels while they did their work. The surroundings of the club house and grounds are so low and swampy that all attempts to drain the water from the pit were useless.

The club, however, looked well after the comfort of its guests, an awning fully covering the score and the approach thereto from the club house. The large tent of the Interstate Association was also pitched alongside the house, and afforded ample protection from the rays of the sun, that made up on the two days of the shoot for its absence on the previous two days.

With the conditions as they were, it was no easy matter to get things ready for a start even at 10 A. M.; but a good hustle worked wonders, and, once started, the shoot moved smoothly and rapidly, the squads showing remarkable promptness in getting to the score. A large quantity of benches and chairs afforded seats for those who were watching the shooting or waiting their turns to go to the score.

THE CORPS OF OFFICIALS.

In the cashier's office were the following: Cashier, W. H. Hazel; assistant cashier, John Gould; clerk, W. C. Baldwin. Having had the pleasure of taking part in two tournaments on these grounds during the past six months, we can safely say that Mr. Hazel and his assistants did their work most satisfactorily. The referees were M. H. Clark, president of the club, and Frank Potter, who alternated in performing one of the most thankless tasks man ever undertook. The puller was T. Cook, while the trappers were in charge of Eugene Cook, the head trapper of the club. From the personal experience referred to above, we can echo the sentiments of those whom we have conversed with on the subject, and say that the refereeing, pulling and trapping was as good as it could be.

While speaking highly of the capabilities of his help, Mr. Shaner was loud in praise of the scoring; these are his own words: "The scoring was of the very best, and fewer mistakes were made than at any other tournament I ever attended. The manifold scorer deserves especial mention, as I had to change but one target on his sheets in the two days." The officials referred to were: Blackboard, Wm. Merritt; Manifold, W. C. Foote.

For throwing the targets, the Interstate Association's set of five expert bluerock traps were used, the magautrap being only put in commission for exhibition purposes; it attracted lots of attention, being quite a novelty in that section of the country. Bluerock targets, of course, were used, these being the only targets ever thrown at Interstate tournaments.

TRADE STRONGLY REPESENTED.

The trade was strongly represented at this shoot. Here is a list furnished us: Parker Bros., of Meriden, Conn., represented by L. C. Parker, W. F. Parker, J. R. Hull, L. J. Gaines, S. A. Tucker and O. R. Dickey (all members of the Parker Gun Club); the Winchester Repeating Arms Co. was represented by Irby Bennett, Ferd Van Dyke, Frank Potter and B. W. Claridge; J. L. (147) Winston, Austin Powder Co., Cleveland, O.; Capt. A. W. Money and N. E. Money, American E. C. & Schultze Powder Co., Ltd.; E. D. Fulford, Remington gun, Schultze powder and U. M. C. shell; Capt. J. A. H. Dressler and U. M. C. Thomas, of the U. M. C. Co.; W. L. Colville) Dick Swiveller) and J. S. Fanning, Gold Dust Powder Co.; Ed Taylor and M. Herrington, Laflin & Rand's W-A powder; H. G. Wheeler, King's Smokeless.

AMONG THE SPECTATORS

were also Mr. Lyon, of Parker Bros., and Mr. Clark, the advertising agent of the W. R. A. Co. Although mentioned in the ranks of trade representatives, neither Capt. Dressel, president of the Interstate Association, nor Irby Bennett, vice-president of the Association, took any active part in the shooting; both, however, as usual, did their share toward entertaining the shooters. Talking about spectators, we understand that there was quite a large number of onlookers every day, showing the interest evinced in the shoot by the citizens of New Haven.

First Day, July 14.

Up to 7 A. M. on this day the prospects for a shoot were by means flattering. For thirty-six hours previously rain had been coming down in torrents to the tune of about 4in. and everything was awash. Manager Shaner had about made up his mind to postpone the shoot for a day when, at the hour stated above, the rain ceased, and everything came out bright and lovely. After that there was no further trouble, save while the last squad in the last event on this day were shooting their scores.

As a whole, scores were not up to the average on this day, although Van Dyke, Dickey, Leroy and Wheeler did good work, especially the first named. A. W. Sherman, of Freehold, N. J., also shot well, breaking 90 per cent. of the 120 targets he shot at.

The attendance was very good indeed, considering the weather that had been dished out in advance. A total of forty three shooters took part in the ten events on the programme, and of this number twenty-eight shot through everything. The average number of entries was 36.2, a capital average indeed. The highest number of entries in any event was forty one in No. 5, and the lowest was thirty-three in both No. 1 and No. 2. A total of 6,340 targets was trapped during the day, yet shooting did not commence until about 10 o'clock; this total shows plainly enough that either the squad hustling was done in an efficient manner, or that the shooters themselves were extra prompt at the score, or both. Below are the details of the day's shooting:

SCORES OF JULY 14.

Second Day, July 15.

The weather to-day, though warm, was all that could be asked for target-shooting. The boys too, had gotten on to whatever peculiarities there might be in the background, and knocked out some good averages. As told under the head of "General Averages," Van Dyke and Dickey had a struggle for first average, Van Dyke just managing to land on top by a single break.

There were forty two shooters on hand—only one less than on the previous day. Of course, the average number of entries fell off a little; they always do on the last day of a shoot, unless the weather on the first day has been very bad. To-day the average for the ten events was 33.1, the lowest number of entries in any event being 24 in No. 1, and the highest 36 in both Nos. 2 and 3. A total of 6,180 targets (including the 350 shot at in the special 50-target event shot after the programme had been finished) was thrown during the day, bringing the grand total for the two days up to 12,520 targets. This is really good work, for on neither day did the shooting start before 10 A. M.

Seven averages of 90 per cent. or better were made to-day. Dickey and Mills tied for first place with 164 each, an average of 93.7. Then came 147, who began with 49 out of 50 and finished with 68 out of his last 70, ending in third place with 93.1 per cent. Van Dyke was fourth with 92.5, and Fulford fifth with 92. Fanning and Leroy landed in sixth and seventh places respectively with 90.8 and 90.2 each. Tucker came next with 89.7, Sinnock, Parker and Beers being bunched for the next three places with 89.1 each. Thus there were eleven men who made better than 89 per cent. on this day; hot shooting for sure.

There were others, too, who made good averages, but who did not shoot through the programme. Noel Money shot in something like his old form, breaking 126 out of 140 shot at, an average of just 90 per cent. Sherman and Whitney also shot well, breaking 142 and 141 respectively out of 160 shot at, averages of 83.7 and 88.1.

Below are the totals of the day's events:

SCORES OF JULY 15.

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	15	20	15	20	15	20	15	20	15	20

L Gaines	..	..	..	..	..	..	..	..	..	12	20	12	60
Currie	..	..	..	..	..	..	..	..	..	6	20	6	30

The tournament was brought to a close with a 50 target race, expert rules, one man up, $5 entrance, seven entries, two high guns, 60 and 40 per cent. Dickey won first money with 44; second money was divided between Van Dyke, Fanning and Fulford with 43 each. Wheeler scored 41, Howe 35 and Leroy 23. No. 147 did not shoot, as the race was at 50 targets only, instead of 100 targets.

GENERAL AVERAGES.

Eighteen shooters took part in the entire 20 events on the programme. This number is quite large, and shows conclusively that the claim of a successful shoot made by the Interstate Association was not an idle one.

The fight for first place was very exciting, Van Dyke and Dickey singling themselves out from the rest for a fight to a finish. Van Dyke led by 3 targets at the end of the first day; and at the end of the 8th event on the second day he was still 2 targets to the good. In the 9th event, however, Dickey broke 15 to Van's 13, and their totals were a tie with only 20 more targets to shoot at. Van finally won out with a break to spare, Dickey losing 2 to Van's 1 in the last event.

Leroy, who has recovered his form at the traps, shot consistently well on both days, and finished in third place with an average of 91.1, Fulford being fourth with 90.5. Fanning and 147 tied for fifth and sixth places with 89.7 each, while Mills and Gil Wheeler were tied for the next two positions with 89.4 apiece. Sinnock, of Newark, N. J., broke 156 out of 175 each day, thus making his general average precisely the same as each daily average 89.1. M. A. Beers and W. F. Parker both shot well, a few unfortunate slips knocking their averages down a peg or two. Below are the scores:

	1st Day.	2d Day.	Total.	Shot at.	Av.
F Van Dyke	165	162	327	350	93.4
O R Dickey	162	164	326	350	93.1
B Leroy	161	158	319	350	91.1
E D Fulford	156	161	317	350	90.5
J S Fanning	155	159	314	350	89.7
147	151	163	314	350	89.7
H Mills	149	164	313	350	89.4
H G Wheeler	158	155	313	350	89.4
F Sinnock	156	156	312	350	89.1
M A Beers	151	156	307	350	87.7
W F Parker	150	156	306	350	87.4
Capt Money	139	151	290	350	82.8
C Allison	135	152	287	350	82
Puck	141	146	287	350	82
J R Hull	144	140	284	350	81.1
T Howe	133	149	282	350	80.5
C Bristol	138	135	273	350	78
U M C	130	134	264	350	75.4

A FEW REMARKS.

S. A. Tucker's name does not appear in the list of general averages, as he failed to compete in the 10th event on the first day. Outside of that event, he shot through everything and came out with a good average for the 330 shot at. On the first day he broke an average of 87.9 out of 155 shot at, but improved on the second day with 89.7 per cent. out of 175 shot at, giving him just 88.4 per cent. for the two days.

Noel Money has been shooting in and out for several months, and he kept it up at this shoot. On the first day he only shot at 50 targets, breaking 40 of them, an average of 80 per cent. On the second day he went to work in the third event and kept on until the last programme event had been decided, finishing for the day with 126 out of 140, an average of just 90 per cent.

Sherman, whom we take to be A. W. Sherman, of Freehold, N. J., did not shoot through the programme on either day. On the first day he broke 90 per cent. of the 120 targets he shot at; on the second day he shot at 160, breaking 142. This gave him an average of 89.2 per cent. for the 280 shot at.

C. Bristol, the daddy of the New Haven Gun Club, is an enthusiast at trap-shooting. Despite his years of three-score and ten, he still points his gun truly, and on the first day broke 20 straight in event No. 6, his skill being generously applauded, for he is a genuine favorite with all the boys. Of course his scores do not show up as well as they would have done had he sat around and waited for his turn to shoot, but Mr. Bristol cannot and will not do any such thing; he is always busy squad hustling, or doing something to help the shoot along; hence his scores are bound to suffer.

The president of the club, M. H. Clark, is another member of the New Haven Club that won't let his own wishes interfere with the pleasure of others and the success of a shoot. He referees and does any old thing to keep things moving, and loses many a target by reason thereof. His 15 straight in the ninth event on the second day brought him many and hearty congratulations.

Elmer Shaner says: "Don't forget that Messrs. Bristol, Clark, Hazel and Bassett are due a vote of thanks from me for the very able assistance they rendered during the shoot."

We learn with pleasure that neither Captain Money nor Puck kept their respective squads waiting more than once during the entire shoot. This was mentioned to us as one of the memorable features of the shoot.

Ferd Van Dyke landed first average for the two days with his Winchester repeating shotgun, W-A. powder and Leader shell, W. R. A. Co.'s factory-loaded ammunition. Ferd's victory on this occasion was a very popular one, as he has been under the weather pretty nearly all the season. His return to health is marked by his return to the top notch.

This is what some of them say: Capt. Money: "You missed one of the best and pleasantest shoots I was ever at." Ed. Taylor: "Say, old man, it was a rattling good shoot and everybody enjoyed it; I broke 20 straight twice, but that wasn't my fault." M. Herrington: "I never enjoyed myself more at any shoot, even if I couldn't hit them; I don't know what was wrong with me; it wasn't the powder, for look what Van Dyke did with it!" Ferd Van Dyke: "It was a corking good shoot, and I've no kick coming. You missed it, that's a fact." F. Sinnock: "It was a good shoot and a hot one. I lost 19 targets each day out of 175 shot at. What powder did I use? W-A."

Dickey gave Van Dyke a hot chase for first average, but Van's lead of 3 targets at the end of the first day was too much for him, although he finally caught Van at the end of the 9th event on the last day. Van's 19 against his 18 in the 10th event gave him second place by 1 target. Dickey shot his Parker gun and E. C. powder in a U. S. Rapid shell.

Leroy redeemed himself for his poor work at Oil City. His position as third on the list was well earned by consistently good shooting on both days.

H. Mills tied Dickey for first average on the second day, losing only 11 targets out of 175 shot at. His position of thirteen on the list for the first day was due to the loss of 11 targets in the 35 shot at in events 7 and 8. Out of the other 135 he lost only 15.

Prior to going to the score for the last event on the first day, Ed Taylor declared himself to make 20 straight. He did it but we understand that the score was due in no small degree to the massage treatment he received at the hands of Capt. Money and U. M. C. Thomas just before his squad was called.

Owing to the heavy and continuous rain on the afternoon of Tuesday, July 13, no preliminary practice could be had to break in the help. From what Mr. Shaner says, however, it appears that the help didn't need any breaking in.

Commencing at 10 each morning, and with an interval for lunch, the total of 12,520 targets thrown on the two days shows that the shoot must have been run very systematically. With only one set of traps, such trapping is decidedly above the average for the time consumed.

Jack Fanning shot in good form on the second day of the shoot. He lost 20 targets on the first day, but only 16 on the second; a total of 36 out of 350 shot at, an average of nearly 90 per cent. He also came very close to dividing first and second money in the extra event at 50 targets, expert rules, on the evening of the last day. He lost one target out of his last five, or he would have landed with 44, tying Dickey, who won first with that total. Briefly, "Sharkey, the Gold Dust man," was right in it.

Fulford lost only 33 targets out of 350 shot at, his best average being made on the last day—92 per cent. On that day he lost only 14 targets, 7 of them in the first three events! On the first day he lost 19 targets, dropping 7 of them in the last two events.

J. 147 L. Winston shot a great gait on the second day, breaking 163 out of 175, and coming within 1 of landing high average for the day with Dickey and Mills. Curiously enough, out of the 12 targets he lost on this day, 5 were dropped in event No. 6, a 20-target event at known traps and angles!

EDWARD BANKS

Boston Gun Club.

WELLINGTON, Mass., July 14.—The second last Boston Gun Club shoot at Wellington, Wednesday, July 14, while hardly so well attended for various reasons, was no exception to the general run of these gatherings as regards pleasurable practice augmented by good-natured rivalry. The successful shoots held on these grounds for three years past, with no other basis than practice, pure and simple, furnish ample proof that monetary consideration is not an actual necessity in conjunction with trap-shooting, and the shooter who is of the opinion that trap events minus the alluring sweep lack interest and excitement, would be speedily convinced to the contrary upon attending one of these shoots, where many are found deriving pleasure and anticipation from the mere handling and successful aiming of guns. In the hundreds of practice days now gone before, no place or desire has ever been found for the ubiquitous quarter, dime or nickel.

To-day, few being present on account of showery weather, odd events received much attention, and after the usual known, unknown, reverse and pair events, a suggestion was made for one man up, unknown traps. Two rounds were thus shot off, affording excellent practice for the quickening of eye and hand. The principal interest centered in the match, however, as next Wednesday brings the final contest and decides who is who. But 3 targets separate first and second position, Miskay having 85 and Spencer, who won the last series, 82 out of possible 100. Scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	10	10	10	6	10	15	10	10	10	10	10	10	5	10	10

ON LONG ISLAND.

BROOKLYN GUN CLUB.

July 10.—The team race between the Brooklyn Gun Club and the New Utrecht Gun Club, of Brooklyn, took place this afternoon on the grounds of the Brooklyn Gun Club, Enfield street and City line. The intention originally was to shoot 10-men teams, but the New Utrechts could not muster enough to make up the list; so eight men to a team, 25 targets per man, unknown angles, was the order of things. The weather was extremely hot: far too hot, in fact, for any one to display any energy in breaking targets. The wind was from the southeast, and there was plenty of it; but unfortunately for the shooters and spectators, the big cow barn of the dairy attached to the farm on which the grounds of the club are located, shut off every atom of breeze that would otherwise have made life better worth living. Out in the field, just where the targets flew, there was plenty of breeze; there was no question of that, as the targets dipped, scooted, soared and curved from the magautrap in a manner calculated to exasperate any individual who was perspiring in the complete calm that prevailed at the score.

It was hard shooting, and Cornelius Furgueson's 23 out of 25 was an excellent piece of work, and remarkable from the fact that he does not shoot, or even profess to shoot, targets more than about once or twice in a season. Platt Adams had his eye with him, too, and was a good second to his chief. The result of the team race was very close, only 2 targets separating the teams at the finish. The closing rounds of the race were extremely interesting. The squads lined up as follows: No. 1 squad—Halsted, Mason and Dain versus Gaughen, Furgueson and Adams; No. 2 squad—L. Piercy, Herrington and Carl ven Lengerke versus Dudley, Deacon and F. A. Thompson; No. 3 squad—Banks and Remsen versus O'Brien and G. Piercy. The race was divided up into a 10-target event and a 15 target event, it being too warm to permit of a longer race than 15 at one time

When No. 3 squad came to the score for the last 15 targets, the Brooklyns were 3 breaks behind. The first 5 targets of the series resulted in a tie, O'Brien and Banks each losing a target; in the next 5, Piercy lost 3 and O'Brien 1, as against Remsen's 2 and Banks's 1; this left the Brooklyns still 2 behind and only 5 more rounds to shoot. O'Brien lost his 21st and 22d, but Remsen's loss of his 22d left the New Utrechts still 1 ahead. All broke their 23d targets, but in the 24th round both O'Brien and Piercy lost, Remsen also losing his target; the scores were thus a tie with one more target each to shoot at The New Utrecht representatives losing their 25th targets, and the Brooklyn men breaking theirs, the victory rested with the home team by almost as narrow a margin as possible, one team to win. The detailed scores were:

IN NEW JERSEY.

ENDEAVOR VS. BERGEN COUNTY,

July 17.—The Endeavor Gun Club administered a third defeat to the Bergen County Gun Club of Hackensack, this afternoon. The shoot took place at Marion, N. J , on the grounds of the Endeaver Gun Club. Conditions of the race were: Ten-men teams, 25 targets per man, unknown angles. For the Endeavors there were two 24s and three 23s, while Remsen was high for the Bergen County team with 22. The scores show that the Endeavors won by 18 breaks, with a team percentage of 81.2; the percentage of the Bergen County team was 73.2. The day was very warm, with only a slight breeze blowing. Detailed scores of the team race were as below:

Stevens	6	8	7	9	9	..	8	8	..	..	..	..
Miller	6	8	6	..	..	7	6	9	8	8	10	9
Wright	6	..	..	6	8	..	..	..	..	..	..	..
Marble	6	6	7	4	2	..	..	..	5	..	..	..
George	..	6	8	7	8	8	7	6	10	8	9	9

Events 1 and 2 were at regular angles; event 5 was at regular angles, but with traps pulled in reverse order; the remaining events were all at unknown angles.

G. F. STEVENS, Sec'y-Treas.

The Sherbrooke Tournament.

SHERBROOKE, Can., July 10.—It was a lovely day, July 1. It always is when we want to shoot. Given a fine day and forty jolly sportsmen, and you have a great combination.

Almost all our visitors arrived the night before and were on the grounds in good time, so that the shooting commenced promptly. The programme was divided into two parts, the straight sweeps being shot Sergeant system, the extra series of slow events of one man up on another set of traps. The regular series went smoothly and entries were large, but the extras dragged. Entries were slow, the traps too easy. Next time we shall do differently.

The Sergeant system gave satisfaction to most, but was the cause of several hitches and some "balls up." We shall probably continue it among ourselves, but for a tournament it does not seem to be equally fair to those who have not seen it before.

Owing to the civic celebration which went on all day in town, it was difficult to get workers for the different departments, and the expenses were greater than usual. However, we congratulate ourselves on the smoothness with which the shoot went off, the club being particularly happy in the kind, good-nature of all present. We were particularly pleased by the attendance from the United States, and hope to see more from American clubs next time.

J. H. Cameron, representing the Winchester Arms Co., is an old friend of the club's, and has done good work for his firm among the Canadians. B. H Norton of the Hazard Powder Co., was among us for the first time, and his shells in N. G. Bray's Pieper gun made the longest straight of the day, 28. E. C. Ellsworth, representing the Gold Dust Powder, has several backers in Canada, and some of his scores showed there was nothing wrong with his load.

No. 6 was a team match between the Sutton Junction Club, which has held the cup three times running; Waterloo and Sherbrooke, five men, 20 targets each. Waterloo was one man short, so shot 25 each. This event was the closest we have ever had and caused great interest. At the close Sutton Junction stood 73, Sherbrooke 73, Waterloo 69. The first shoot-off, 25 targets, resulted in another tie at 22. Second shoot-off gave Sherbrooke the match by 1 target.

An individual challenge cup was inaugurated, for which five entered, 20 known, 20 unknown, 45 pairs: Craig, Sherbrooke, 39; Westover, of Sutton Junction, 37; Cameron, Montreal, 35; Wootton, Montreal, 32; Eaton, Montreal, 32 It is expected that future challenges for this cup will be frequent and productive of some interesting matches.

In the aggregate (100 targets) the winners were: Craig, 86; Barrett, Montpelier, 85; Fisk, Montpelier, 85; J. E. Macfarlane, Waterloo, 79; O. C. Selby, Sutton Junction, 78; H. E. Colvin, Burlington, 78; A. W. Westover, Sutton Junction, 78; W. L. Cameron, Montreal, 75.

Statistics being of interest to most trap-shooters, the following was compiled by some kind friend: Of guns, 9 were Winchesters, 7 Greeners, 3 Smiths, 3 Parkers, 2 Lefevers, 1 each Remington, Pieper, Needham, Forehand, Clayborough, Ithaca and Loomis. Of shells, 29 used Winchester, 6 U. M. C., 1 Peters. Twenty-two used E. C. powder, 5 Hazard, 4 Gold Dust, 2 S. S and 1 King's. Black powder was entirely absent, although not barred.

Among those present were: A. W. Westover, J. D. Clark, H. E. Hibbard and O. C. Selby, Sutton Junction; J. B. Goodhere, Rock Island; C. M. Hull, J. D. Macfarlane, Dr. Clark and D. Ashton, Waterloo; Geo. B. Walton, Dr. Fisk and C. O. Barrett, Montpelier, Vt.; Dr. H. E. Colvin, Burlington, Vt.; E. C Ellsworth, Cambridge, Vt.; W. L. Cameron, Wootten and E. C. Eaton, Montreal; W. H. Hobbs, Magog; B. H. Norton and J. H Cameron, New York city; J. G. Walton, N W. Walley, J. F. Monkhill, C. D. White, W. G. Bray, F. Loomis, T. M. Craig, C. G. Thompson, etc.

The extra series used up only some 1,500 targets. Barrett, of Montpelier, and Bray, of Sherbrooke, had a hard fight for first place in one of the miss-and-outs, Barrett missing his 20th and Bray his 19th. The former also took two firsts in miss-and-outs with 10 not out. Fred Loomis, of Sherbrooke, got five doubles, all but his last. Incomers proved too easy, one-third of the number breaking them all, in spite of the fact that our game generally goes the other way.

Both programmes were finished at 7 P. M., and as the busses were waiting no extras were shot.

In the evening the visitors enjoyed the illuminations, which were especially fine in the residential parts of the city, as were the fireworks on the river.

In conclusion, not a word was heard from anybody about the old style of class shooting. It is dead in the Province of Quebec. From programmes received from two Ontario clubs, we see that they are still in the dark, but we hope to hear soon that the Rose system is universal.

C. H. Foss, Sec'y.

Soo Gun Club.

SIOUX CITY, Ia., July 8.—Below are the scores made to-day by members of the Soo Gun Club, the occasion being the fifth of the series of medal shoots held over the magautrap. Wells, Tenney, Harris and Gray tied on highest possibles (25), and on the shoot-off, Gray won. Scores:

Sandwich Gun Club.

SANDWICH, Mass , July 10.—The regular weekly shoot of the Sandwich Gun Club was held to-day. A strong northeast wind was blowing right in the faces of the shooters, making the shooting quite difficult, as the following scores will show. Conditions, 25 bluerocks per man, unknown angles:

G H Haines	1000010111111110011010111- 16
E W Haines	0001101110111001000100001—11
W R Procter	1011100000010110000110110—11
J McArdle	0100010000101090010011000— 7

G. H. HAINES, Sec'y.

Missouri State Amateur Shooting Association.

LITTLE ROCK, Ark., July 14.—This enterprising Association is again in the field, as its seventh annual meeting and tournament will be held at Paris, Mo , July 27 to 29. To encourage as large an attendance as possible the local club, under whose auspices the tournament will be held, will add $320 in cash to the purses.

The first day's programme consists of six 20-target events, $3 entrance, and $15 added to each. There are also two live-bird events scheduled for this day, No. 7 being a miss-and-out, $1 entrance, birds extra, while No. 3 is a 10-bird event, with an entrance fee of $7.50.

On the second day there are nine events on the programme, six of these again being 20-target events, with $2 entrance and $15 added. No. 6 is the two-men team race for the L. C. Smith cup. The conditions in this event are 25 targets per man, entrance $5 per team, $25 added, 50 per cent. going to the present holders of the cup and the balance being divided 30, 25, 20, 15 and 10 per cent. No. 8 is a 5 live-bird event, entrance $3.50; No. 9 a 10 live-bird event, $7.50 entrance; this event is for the State medal. There is $25 in this event also, and the purse is divided precisely as in the L. C. Smith cup event.

The Smith cup is at present held by Wilmot and Bates, who won it on a score of 46, Wilmot scoring 24 and Bates 22. Wilmot is also the possessor of the State medal at live birds, winning it on a score of 30 straight

The third day's programme is an exact repetition of the first. Six 20-target events with the usual entrance fee and added money, and two live bird events; one a $1 miss-and-out and the other a 10-bird sweep, entrance $7.50.

The annual meeting of the Association will be held at the Court House Tuesday evening at 8:30 P. M. Mr. Thos. F. Hurd is secretary.

The added money in this shoot has been judiciously distributed, and cannot fail to please those who attend As there has been no shoot of any consequence in the West lately, this shoot is creating quite a stir in Western trap circles. In fact, this and the big Schmelzer shoot will most likely be the principal attractions for the Western shooter—unless that much-talked-of amateur tournament materializes at St Louis.

The latest reports from Kansas City are to the effect that there will be one of the old-time gatherings of producers at the Schmelzer shoot in September.

PAUL R. LITZKE.

Western Traps.

CALUMET HEIGHTS GUN CLUB.

July 11.—The weather to-day was partially cloudy in the morning, but cleared up in the afternoon. There was a high north wind blowing directly in the faces of the shooters, making the targets skyward screamers. The attendance at the traps of the Calumet Heights Gun Club was light on account of this being the week after the holiday of July 4.

In the club shoot, Booth was winner in Class A, and Harlan the winner in Class C. In Class B, Norcom and Marshall tied on 19 each; on the shoot-off at 5 targets, Norcom won, with 5 to 4. Scores:

Club shoot for class medals, 25 targets, unknown angles:

Booth (A)	1001111111111111101111111—22
Lamphere (A)	1111111010001110111111111—20
Paterson (A)	1101011111110101111111 11—20
Metcalf (A)	1101101011010101101111101—16
Norcon (B)	0111111010110110110101111—19
Marshall (B)	1111111000111110111110011—19
Greeley (B)	0011001001011010110101011—13
Harlan (C)	1111111010111111101011111—21
Schmidt (C)	0111111110100001111001101—16

Several small sweeps were also shot, with the results given in the table below. Of the ten sweeps shot, No. 1 was at known traps, unknown angles; Nos. 2, 6, 7, 8 9 and 10 were at unknown traps and angles; Nos. 3 and 4 at reversed pull; No. 5 at 5 pairs, unknown traps and angles:

Events:	1	2	3	4	5	6	7	8	9	10

PATTI.

The International Week in London.

THE international week at Hurlingham and the Gun Club closed on Saturday, July 3. The London *Field* of July 10 gives the following statistics, which will be of interest to American pigeon shooters. The Mr. C. H. Mackay referred to is a member of the Carteret Gun Club:

"In the different contests during the week no fewer than twelve kinds of powders or their combinations were used Last year the majority shot with E. C. and Schultze powder, but on this occasion the former explosive was little in favor. Since last year Ballistite and Amberite powders have become very popular, and over two-thirds of the prizes have been won with the aid of these explosives. Amberite powder heads the list with £1,314 10s. won, Ballistite coming next with £1 199. The balance of the prizes were won by the following powders: Walsrode, £562 10s.; Schultze, £276 10s.; E. C., £86 10s.; Schultze and Ballistite, £56 10s , and French, S. and J , £5.

"Appended in tabular form is a summary of the results obtained by the various kinds of powder, or their combinations, in the thirteen advertised events last week:

Powders, 1897.	Birds Shot at.	Killed.
Ballistite	625	483 or 77 1/5 per cent.
Schultze	612	456 or 74 1/2 per cent.
Amberite	541	416 or 76 8/9 per cent.
Walsrode	224	181 or 80 9/11 per cent.
E. C	103	68 or 66 per cent.
French, S. and J	61	51 or 83 3/5 per cent.
French, J	45	35 or 77 7/9 per cent.
Amberite and Schultze	39	27 or 69 3/13 per cent.
French, S	38	30 or 79 per cent.
Schultze and black	26	17 or 65 6/13 per cent.
Schultze and Ballistite	18	15 or 83 1/3 per cent.
Shotgun Rifleite	7	4 or 57 1/7 per cent.
Total	2,339	1,782

"Owing to the slight falling off in the number of competitors, over 500 less birds were shot at in thirteen events than was the case last year, but the percentage of birds killed throughout the week (76 1/8) showed little difference. The principal prize winners (inclusive of the value of cups and gun), and their total score in the advertised events, are as follows: Mr. T. Taylor (Purdey), A., kills 51 out of 58, £420; Mr. Orchardson (Churchill), B., 56 out of 67, £400; Mr. Turner-Turner) (Reilly), A., 25 out of 30, £370; Mr. Kenrick (Purdey), W., 42 out of 51, £285; Mr. St. James (Boss) B., 20 out of 23, £225; Baron de Pallandt (Holland), W., 56 out of 66, £211; Mr. C. H. Mackay (Churchill), A., 33 kills out of 47, £185."

PUBLISHERS' DEPARTMENT.

Visitors to Lincoln Park in Chicago

WILL be delighted with the souvenir book of this beautiful spot now being distributed by the Chicago, Milwaukee & St. Paul Railway Company. It is a magnificent publication of 96 pages, full to overflowing with delicious half-tone pictures of one of Creation's most charming places of resort for citizens of the Great Republic.

No stranger visiting Chicago should be without a copy of the "Souvenir of Lincoln Park." It can only be procured by inclosing twenty-five (25) cents, in coin or postage stamps, to Geo. H. Heafford, General Passenger Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

Just from the Press.

"NURSING VS DOSING," a treatise on the care of dogs in health and disease. By J. T. Hammond, author of "Training vs. Breaking." Cloth. $1.

This work, from the pen of Shadow, will have a hearty welcome. It comes from one who writes from full knowledge. "The results of more than fifty years of experience are here given," writes the author, "and I assure the reader that no course of conduct is advised, no treatment recommended, no remedy prescribed, that has not been thoroughly tried and tested by the writer, and is believed to be entirely trustworthy in every respect."

Sent postpaid on receipt of price by Forest and Stream Publishing Co.

CANOE CRUISING AND CAMPING, by Perry D. Frazer. Cloth. Illustrated. Price $1.

This is a purely practical manual for the instruction and guidance of beginners in what the author enthusiastically pronounces "a pastime that is the most glorious of all outdoor sports." The chapters are brimful of hints and helps and instructions about the cruising canoe, camping outfits, clothing, firearms and ammunition, fishing tackle and photography—all as within the scope of the enjoyment found in cruising. Everything is here, from the choice of the craft to the repair of a broken paddle. In its completeness and definite detail the book is a model of manual making.

Sent post paid by Forest and Stream Publishing Co.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 31, 1897.

VOL. XLVIX.—No. 5. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

No life, my honest scholar, no life so happy and so pleasant, as the life of a well-governed angler; for when the lawyer is swallowed up with business, and the statesman is preventing or contriving plots, then we sit on cowslip banks, hear the birds sing, and possess ourselves in as much quietness as these silent silver streams, which we now see glide so quietly by us. Indeed, my good scholar, we may say of angling as Dr. Boteler said of strawberries: "Doubtless God could have made a better berry, but doubtless God never did"; and so, if I might be judge, "God never did make a more calm, quiet, innocent recreation than angling."

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. VIII.

IOWA.

Game and Fish Act of 1897.—Sec. 14. No person shall at any time, or at any place within this State, trap, shoot or kill for traffic any pinnated grouse or prairie chicken, woodcock, quail, ruffed grouse or pheasant.

THE SENSE OF SMELL.

An interesting article under this caption has recently appeared in the London *Stock-Keeper* and has been copied in several papers in this country. Being written, as is supposed, by Mr. John Arthur Chambers, it may be imagined that it deals chiefly with the sense of smell in dogs. Attention is called to the different ways in which dogs of different breeds use their eyes and their noses in the attempt to recognize friends and acquaintances, and it is justly concluded that the evidence given to the mind by smell is much more conclusive to the animal than that furnished by sight. It is also stated—and very truly—that it is doubtful whether one breed of dogs can be said to smell better than another, but that the way in which a dog uses his nose depends largely on his education—that is to say, on how much he has been accustomed to use it and to depend upon it. The familiar statement is made that pigs have been used for finding game, and mention is made of the well-known instance where a herd of cattle was used by Col. Pollock to chase and kill a tiger.

Examples of the confidence which the dog feels in the evidence of his nose are often seen. If a dog loses his master and then finds him again, he recognizes him by the eye and is glad; but the first thing he does is to push his nose against him and smell him, so as to be really certain of the fact which his eyes had led him to believe.

It is natural that we should regard the sense of smell as more highly developed in the dog than in other animals, but this belief is founded purely on the fact that we see a very great deal of the dog and very little of other animals. For uncounted generations man has used the dog as a hunting companion, and no doubt long before history began to be written, stories of the dog's wonderful nose were passed about from man to man.

But the savage is well acquainted with many things in nature of which the civilized man is hopelessly ignorant. He depended for sustenance and support upon his skill with primitive arms, to use which it was necessary that he should approach very close to his intended prey. To do this he was forced to match his wits against the keen senses of these wild creatures, and he early learned that of all these senses, the keenest and the most trusted was that of smell. The wild animal might see him, and look for a long time without being able to determine what the hunter was, but if it smelt him it was never for a moment in doubt of its danger, and at once sought safety in flight.

Two motives affecting two widely differing classes of animals would influence the development of the sense of smell. On the one hand, the carnivors, eager for food, depending for existence on their ability to capture animals of rapid flight, use the sense of smell to follow them up, and by persistent and long-continued pursuit at last overtake and destroy them. On the other, the grass-eating mammals depend for protection from enemies chiefly on this sense of smell, and so soon as a whiff of the tainted air is brought to their nostrils they seek safety in flight, putting as great a distance as possible between themselves and the spot where the suspicious odor was observed. Motives stronger than these two cannot be imagined, since in each case life itself may depend on the sense in question.

To Indians and to many old white hunters it is well known that deer and moose when feeding commonly travel up the wind, looking for danger ahead of them and trusting to the rapidity of their movements to outstrip anything that may be following directly on their trail. It is equally well known that when about to lie down both the species named are very likely to turn about, go a short distance down the wind, and then lie down, using both eyes and ears to cover their back trail. It is for this reason that the practiced still-hunter who pursues these animals does not keep on the track, but follows along to the leeward of it, making a series of wide sweeps or loops, and going to the trail only often enough to see that it is still before him.

Many other examples of this keenness of scent will occur to the man who has done much hunting. From our perch on a mountain side we have seen a black-tail buck, frightened by a companion who was hunting a mile or two away, come racing over the prairie with head held high, apparently thinking only of the danger behind him, but when he reached the trail over which we had passed two or three hours before, he stopped suddenly, lowered his nose to the ground and smelt the tracks, and then turned at right angles to his former course, and continued his flight. In the same way in years gone by, bands of buffalo, frightened and running, have been seen to suddenly stop on reaching the trail left by several footmen who had passed over the prairie, and to refuse to cross it, but to run off another way. Some of our readers no doubt have had such a painful experience as was recently related to us, where a hunter who, having put out a bait for a bear, had walked around it early in the day, to see if it had been visited during the night, and then at evening, while watching, saw the bear come boldly toward the bait until it had reached his tracks, then turn and slouch carelessly along them for a few yards, and then run like a race horse toward cover.

The patient, tireless pursuit of the wolf on the track of a deer has so often been dilated on, that it needs no more than mention.

We all know that the odor given out by a flock of sheep or a herd of cattle can be detected even by the human nose at some distance, and in the same way the practiced hunter, as well as his dog, can often recognize the odor of certain game animals, such as elk, bear, white goat and, in old times, the buffalo herd, long after the animals have passed. No doubt the nose of the savage, like his other senses, are much keener than those of civilized man, because more constantly in use.

In writing about the sense of smell, we who are able to write are discussing something of which we know, and can know but little, yet it is certainly well that our few crude and imperfect observations should be set down.

THE NEW YORK ZOO.

NOTWITHSTANDING the dullness and the heat of this summer season, the interest felt in the New York Zoölogical Society does not abate. Up to last spring, when the city authorities set aside for its uses 261 acres in South Bronx Park, no special effort had been made by the board of managers to secure members, as the carrying out of the Society's plans depended on the consent of the Sinking Fund Commission, and it was not certain how these officials would act.

Since then, however, reports of the Society's progress and statements of its plans have been sent out in some numbers to citizens of New York. The results of the distribution of this literature have been very gratifying to the managers, and the Society now has three founders, ten patrons, sixty-four life members, and 307 annual members. Of these, two patrons, eighteen life members and 160 annual members have been added to the list since June 10. The life membership fee is $200, the patrons' $1,000, and the founders' $5,000. Applications for membership are still being received.

The building plans for the park are now being prepared by Messrs. Heins and LaFarge, the official architects, and it is expected that these buildings will be the most complete of any in the world, for they will contain all the good features of the most modern zoölogical gardens of Europe and this country.

Not long since, the director of the Society laid before the executive committee a proposition and detailed plan for an exhibition of oil paintings of American wild animals, to be held next autumn, and it is probable that the suggestion then advanced will be carried out, and that the prizes and the conditions of such an exhibition will be announced before long.

Judging from what has already been accomplished, it seems altogether probable that in the autumn, when the summer travelers have returned to the city, the membership of the Society will largely increase, and that considerable additional subscriptions to the $100,000 fund, which is required before work on the ground can be begun by the city, will be received. It is understood that a considerable share of this fund has already been raised.

Thus, if all goes well, it may happen that work on the Society's park may begin this autumn, in which case the end of the year 1898 may see some portion of the park occupied by collections and open to the public.

GAME FOR GAME PARKS.

To stock a game preserve in a game country is a comparatively simple undertaking: build a fence so constructed as to let the game in and not to let it out again, and there you have it. Preserve projectors in districts remote from the base of natural supply, however, are finding it more difficult year by year to secure a stock because of the more rigid restrictions against the capture and export of live game. While it is highly expedient that the taking of wild elk and deer for preserve purposes should be held within very close bounds and should be regulated very carefully by the game protective officials, we believe that as much latitude should be allowed as may be consistent with keeping up the native stock. The man who wishes to export a band of wild deer for his game park outside of the State is quite as worthy of consideration as the hunter who seeks merely to kill the lawful number of wild deer within the State. Maine has recently made an appreciated concession in this respect. Formerly it was there forbidden to take live deer for export. The law was not always observed; there is reason to believe that numerous deer which were alleged to have come from Canada had, in fact, surreptitiously been captured across the line in Maine. Now this is changed. The new law provides that the "Commissioners of Inland Fisheries and Game are authorized to grant permission to take moose, caribou, deer and birds for park purposes in this State, under such rules and regulations and conditions as they shall establish." This concession will be welcomed by the owners of game parks in the East, and we may depend upon the Commissioners to make such rules as will keep the export of live game within the proper bounds.

In our issue of July 3 we referred to a shipment of live elk from Wyoming, and expressed a suspicion that these might have been some of the elk illegally held in captivity on the Moose Head Ranch in Jackson's Hole. We are glad to be advised by the Wyoming authorities that none of the elk referred to in our article as having been trapped in the snows of last winter on this ranch have been sent out of the State. The Wyoming law makes admirable provision for just such a case as this. The railroads are forbidden to accept for shipment, and in practice they refuse to accept, live game unless accompanied by a permit from the State game warden. It would be impossible, therefore, for the Moose Head Ranch elk to be exported so long as the officials maintain their present determined attitude, which we are advised is that "the State will take the necessary legal steps to secure the release of the elk in question, independently of the county authorities, and will exhaust all legal resources in the effort to protect the game of the State, as well from capture and shipment as from wanton destruction or illegal hunting."

We suggested last week that electric-shock systems of fishing would be put under the head of tabooed appliances. This has already been done in Iowa, where the new law classes electricity with dynamite and other prohibited agencies.

The Sportsman Tourist.

LOST IN THE WOODS OF BRITISH GUIANA.

Of course the old woodsman, like the red Indian, never loses himself; he may lose his camp, as the Indian may lose his wigwam, but he can always turn to himself for counsel where to find it. Nevertheless, the loss even of one's camp may, under certain circumstances, prove a serious inconvenience, as I found to my cost lately.

I had been sick. I was ten days down with pneumonia, and had left my bed only a few days when I was again prostrated with fever. Guiana fevers enjoy quite a reputation for the vigor of their attack, and I must confess that when mine left me after a fortnight's tussle, it didn't leave very much of my former self. I began to rally, however, and a few days later, when my host started on an official tour, I decided to take my gun and go out to look for something for the pot. I was lightly equipped, for I had no intention of going far or of staying long. I took no compass, for I intended to follow the bank of a creek which emptied itself into the river close to the camp; no matches, for I was not yet reconciled to my pipe; and the weather being fine and warm, my clothing was limited to a suit of flannel underwear and a pair of linen pants.

It was pleasant to get into the woods again, and I strolled along the bank of the creek, or rather along the high bank overhanging the ravine through which the creek flowed, for a couple of miles, when I turned to my right in search of heavier timber and lighter undergrowth. A spot was soon found where I could command a view of the surface for from 10 to 30yds. or more all around, and here I took up position between two big trees standing at 10ft. apart. Presently a rush of wind heralded a storm, the sky was overcast, and a shower came down at the rate of an inch an hour. I found shelter for my gun and partial shelter for myself between the buttresses of one of the big trees while the rain lasted, which was about half an hour, when I again took up my old position, with eyes and ears alert. After a while I heard the faint rustle of a leaf behind me, and wheeling round I saw an accourie (a species of guinea pig weighing 12 or 14lbs.) at about 5yds. from me. We eyed each other irresolutely for an instant when he sped, and my gun came to my shoulder. He found cover at 15yds., but I had him in line and drew trigger as he disappeared, and walking forward I found him lying quite dead. Picking him up and tying his legs together with a piece of creeper, I slung him over my shoulder, and decided to make the best of my way homeward and get into dry clothes, for the high trees kept dripping and the undergrowth, which I had to brush through, was saturated. I felt elated at finding that hand and eye were still true, and stepped out briskly, although I was soon so thoroughly wetted that the water dripped off the bottoms of my pants.

After going about two or three miles, it occurred to me that I ought to be near camp, and I first swerved and then wheeled to my right to strike the edge of the ravine. I struck it in half a mile. There was no sign of the river, and the accourie by this time weighed fully 20lbs.; but I plodded on another two or three miles as briskly as I could. By-and-by the bed of the ravine appeared to be rising, and going down to it I found that I was near its source in a broad, swampy depression. As I returned to the rise, feeling pretty well done up, the sun came out, marking 5 o'clock, and showing me that my course was north of west, whereas it should have been south of east.

After shooting the accourie I had started forward instead of backward! I crawled around awhile in search of a hollow tree, but the approach of another shower warned me to take the best immediately available. This was a mora, whose broad, spreading buttresses had divided, leaving a passage through under the base of the trunk, which was about 10ft. from the ground. Here I took shelter from the rain, but saw at once that I could neither lie down nor even sit with any comfort! The space between the buttresses was interlaced with their small branches rising a few inches above ground. Here was a dilemma! Just after a severe attack of pneumonia, and saturated with rain and perspiration, to be exposed without fire to the damp, chilly night air. I tried to sit, using the accourie for a seat, and the buttresses for a support for my back; but it was very uncomfortable, and I had to stand the greater part of the night, threshing myself with my arms occasionally to keep up the circulation. So the night passed.

With the dawn came a light drizzling rain which lasted an hour or more, when the sky cleared. The sun was not visible, but its light was occasionally reflected through openings on some tree in the west, and I started to make as nearly an easterly course as I could for the river. The Guiana forests are not easy to steer through without a compass. There are no landmarks to guide one; the dense, high forest limits the vision to 50yds. at most. The sun is rarely visible until near noonday, when it is so nearly vertical that turning in any direction and throwing your head back, the sun appears before you. Fortunately I had seen a map of the country, and knew that I was in an angle between two rivers: the Mazaruni, flowing approximately from west to east and the Puruni entering it from the north. I was west of the Puruni, and to the best of my judgment three or four miles north of the camp, which I estimated at eight or nine miles distance. I could hardly go astray if I could see the sun before noon. The Puruni was to the east, the Mazaruni to the south.

The sun soon made its appearance, and leaving the accourie behind me, I struck out on a due easterly course, designing to come out above camp and follow the river down. The sun was soon hidden again, and after numerous detours to avoid tangled creepers and undergrowth, I lost my course, and paused in an open space to determine the point at which the light was strongest, resting the stock of my gun on the ground. As I turned to proceed I saw the shadow of my barrels reflected on a wet leaf. Here was a wrinkle. A few trials satisfied me that I could locate the sun without seeing it, so I went forward confidently but wearily.

It was noon when I reached the Puruni, at a point which I estimated at four miles or so above camp, but on peering into the rivers I got a glimpse of two rock masses so nearly like two masses just below the camp that I thought I must be out in my calculations. I was at the mouth of a creek too, very like the mouth of a creek half a mile below camp, and remembering that there was a small boat camp about 200yds. from the creek, I determined to cross the latter and reconnoiter. As my foot sank in the muddy bank of the creek, I observed another foot track pointing the other way which appeared to be mine. This looked conclusive, but I walked on nearly half a mile without seeing sign of the boat camp, and came to the mouth of another creek. I did not recognize it, but I could see that a hill rose in front of me, and went on dubiously for a couple of hundred yards when I came to a boat camp, but apparently a newly erected and complete one. It might be the old camp enlarged! I toiled to the top of the hill, but there was no camp clearing. It was probably miles to the south of me, and I retraced my steps wearily. Two miles lost!

I was not making more than a mile an hour now in a straight line, but when I say that seven miles is an ordinary day's march through the woods, it will be seen that in my weak state I was not traveling without effort. Regaining the spot at which I struck the river, I followed its bank down stream for three miles or so, when the sun sank low, and seeing a hollow tree which promised good shelter, I determined to make camp there. The wood ants had been at the hollow and deserted it, since when a large mass of the fruits of their labor had peeled off and fallen to the ground. Leveling this off, I soon had a comfortable bed, with a raised pillow, and shelter from the rain for all above the knees. Here I stretched myself and soon fell into a sound slumber, from which I was awakened by a noise resembling the blowing off of steam; at least, that was the impression produced on me in my awakening state. I sat up and listened. The sound rose and fell in harsh and melancholy cadence, terminating occasionally in a grunt. It was evidently made by a troop of large animals, but I had never heard anything like it then. I have since become familiar with it as the cry of our baboons. After a while I located it across the river and fell asleep again, awaking refreshed, but chilly in my wet clothes, just before dawn.

I concluded that I was not more than two miles from camp and started out cheerfully, keeping the high land about 80 or 100yds. from the river. The undergrowth was more open here, and I was able to keep the river in sight. After a mile or so I got into a tangle which grew worse and worse until it became impenetrable. If I had gone back 100yds. or more, I might have got to the river bank and found a passable track, but this I did not know; besides, I hate turning back. I could not turn to the river from where I was, but I could turn to my right with every prospect of getting round the tangle. This I did, but I swerved nearly a mile from my course. As the forest opened to my left, I swerved round toward the river again, and after a while saw the gleam of an opening on my left, but it soon disappeared, and after a while I wheeled around due east for the river, striking it at the mouth of a creek. Here again the mouth of the creek, with the fallen logs across it, appeared familiar, and forcing a way through the undergrowth on the bank, I again found two rock masses, resembling those below the camp. Then I remembered that above these rock masses there should be a low bar right across the river, with just one opening, through which rushed a small rapid. There was no bar, no rapids; still, just at the expected place, an occasional point of rock could be seen in line across the river. The fact was, the river had risen and was now rolling quietly over the bar.

I sat down on a log and communed with myself as follows: "If I am misled by appearances and go to the top of the hill above me as I did yesterday I shall lose over a mile, while if I have really passed around behind the camp I am only three and a half miles from the junction of the two rivers and can go there and return by night." It was badly argued, but a *mens sana* is to be found only *in corpore sana*, and my frame was near exhaustion.

I went down stream for a couple of miles and found that its width was nearly double what it was at the camp. There was little doubt that I was nearing its mouth, but I would make sure now. Here I caught sight of a granite ledge jutting 50 or 60ft. out from the bank. A grand opportunity to bathe and wash my clothes. It was high noon, the sun showing brightly on the rock, and the clothes would dry in an hour or so. The bath was very refreshing, and sitting down on the water's edge I washed and beat out my clothes on the rock, and spread them out to dry, while I sought shelter in the forest's shade. An hour passed and the clothes were drying well, when the sky became obscured, the rain came down pitilessly, and there was nothing for me except to gather up my clothes, wet as they still were, and get into them. I had no shelter beyond the foliage, and this was soon dripping. When the rain was over I set out again, and in five minutes I was as wet through as ever, wearier, too; so far from feeling refreshed by the bath, I wanted to sit down on every fallen log I stepped on or climbed over.

It was 3 o'clock when I reached the Mazaruni, and four miles "as the crow flies" to walk back. It seemed hopeless, but I put my best leg forward and trudged on. Night overtook me about a mile from the camp. There was no possibility of pushing forward in the dark, but there was a carpenter at the camp who might hear the report of my gun and come out with a lantern. I fired. As I pressed the trigger a "powis"—a bird resembling a peacock—stepped out from behind a tree, but I could not stay my hand.

The night was cold and I was unable to sleep a minute, but now for the first time my thoughts turned on the needs of the inner man. I began to dwell pleasantly on the prospect of eating. I felt ready to dispose of a quart of chocolate, and resolved that as soon as I got into camp in the morning I would begin with that and finish with ham and eggs. It was too chilly to sleep, and I lay awake all night, rising occasionally to thresh myself.

At the first dawn I was on the move, and in camp before sunrise. The carpenter, who was in his night-clothes, after regarding me a minute, lifted his eyes and exclaimed pathetically, with special reference to my headgear: "I never thought to see that old hat again." "He had heard my shot the night before," he said, "but he did not know it was mine, and if he had known he would not have ventured into the woods alone for anything wealth could give."

I bade him put on a full quart of water to boil, had a hasty bath, got into dry clothes, and was soon seated before a quart of chocolate and a box of biscuits. I disposed of the former and I decided that the ham and eggs could wait for breakfast; my most pressing, immediate need was sleep. This came almost as soon as I laid my head on the pillow. At 11 o'clock I awoke and had the anticipated breakfast of ham and eggs, after which I slept until 4 o'clock, when I got up and had a pea-soup dinner, which was rather too much for my weak stomach. A little fit of indigestion was the result, but I got five or six hours' sleep, and woke the next morning thoroughly refreshed, and none the worse for my outing.

It will appear no great feat, thirty miles in three days, to those unacquainted with tropical forests; but, considering the state of my health, the fact that I was walking fully ten hours a day, without food, and with clothes wet through the whole time, there can be little doubt that it was a severe strain upon the system, and it appears remarkable that I contracted no ill effects from it, especially in a region which has the reputation of being very malarious.

C. F. Amery.

REMINISCENCES OF MAJOR NORTH.

Genesko, Ill., July 24.—*Editor Forest and Stream:* I just this minute finished reading, on your editorial page, a notice of the death of N. C. Creede, coupled with the announcement that he served as an officer on the Pawnee scouts, under Maj. Frank North, in the late 60s. Now, it is the name of Maj. North that causes fancy to ruffle up her feathers, and, with a vigorous shake, spread her broad pinions and soar afar.

It was early in the spring of '72 that I and another boy (Willis Lawbaugh, by name), having turned our earthly possessions into about 50,000 root grafts of apples and other fruits, loaded our effects and ourselves on board the cars headed for the great West.

Landing at Columbus, Neb., our first effort was to find a suitable location for a nursery. We had not much money, but were playing each nickel with a string to it. This, of course, was not known, and we were besieged by people who had the only suitable site near Columbus for a nursery, and who were greatly interested in the establishment of a nursery and wanted to lease us the ground.

But one after another their interest cooled down, when they found we did not intend to pay in advance on the lease a sum equal to at least twice the market value of the land. One day as we were rambling about the country, we chanced upon a beautiful site for our enterprise, some two miles west of Columbus on the bank of the Loup River, and on the farm just north of the Union Pacific R. R. bridge across that stream. There was a small, neat, white house and red barn on the place, and after looking it over we made our way there to inquire about the chance of getting it. The man at work on the place told us the "Major was away, but we could inquire at the house."

We found at the house an elderly lady, another lady somewhat below middle age, and a girl of six summers; these were the mother, wife and daughter of Major Frank North. Making known our errand, we were invited to make our headquarters at the North home until Major came down from Fort Laramie, which he was expected to do, and did, in a few days.

We were given our pick of the farm lands for our nursery on surprisingly favorable terms, and the Major's man was instructed to furnish us horses, plows, etc., when needed. We built a shanty on the river bank and proceeded to put out our stock.

We heard many stories of adventure on the plains during the summer, one of which was of the Major's ride of 102 miles on horseback in one day. Mrs. North showed us a bear-skin rug, the original owner of which the Major had killed with one shot from a .32cal. revolver. The story was that he came suddenly upon the bear in a narrow defile in the mountains with only a small pocket revolver at his command. He opened fire with this, when the bear turned and ran away, but only got a short distance when he fell dead, the bullet having found the heart.

She also entertained us with the story of a buffalo hunt in which she took part herself. During the summer of '72 the Major was in the employ of the Government as a scout and spent the greater part of the time in Wyoming, coming home every few weeks, as opportunity offered. The station was two miles east of his farm, and when the train slowed up at the Loup River bridge he would jump off and walk over or ride a pony which had been previously tied there, by his man, for that purpose.

He was a great hand to ride, and I have often seen him crossing the prairies at a breakneck pace, carrying his daughter Stella in his arms.

The Pawnee Indians, whose reservation was twenty miles up the river, used to flock there in great numbers eager to shake hands with him.

Coming down the river they would stop at our shanty and their eager question, "Is the Major home?" proved that they held him in high esteem.

In the spring and fall the river used to be lined its entire length with swarms of wild geese. We boys each had a double-barrel muzzle-loading shotgun, and we used to have high old times worrying them, bringing one down occasionally and giving a good many more a bad fright.

I remember what supreme satisfaction it was to me to get a chance to show off before the Major, who was visiting at our shanty, by bringing a goose down from a passing flock. I supposed he would be amazed at such a revelation of skill, and he did seem to be. Such is fame and such is conceit. Another circumstance that pleased me greatly happened one day as the Major's brother Lute and myself were seated on the bank of the river. Lute had his needle gun with him, which I was examining, when a flock of geese lit upon a sandbar some 400yds. up the river. At the suggestion of Lute I trained the Needle gun on them and fired. The bullet fell short of the geese by about 100yds., and in the meantime they took wing again. When about 8ft. above the water one of them was struck by the ball, which had glanced up and come down again.

Though I saw in an instant just what had happened, I hoped Lute had not, but a merry twinkle in his eye revealed that he was on to the "how" of it, yet such is the power of success that I was still very happy.

At that time Major North was a sufferer from asthma, and his brief visits to the heavier air of eastern Nebraska usually brought on an attack of that disease. This led him to move his family to Wyoming that fall. Our nursery tock flourished nicely till the fall of the first year, when

the grasshoppers raided and nearly ruined it. This was followed by another hopper raid in '73, which completed the ruin. This broke up the enterprise. The Major promptly remitted the rent due on the land and we organized for a big game hunt on the Upper Loup that winter.

A quarter of a century has rolled away since then, and great has been the change wrought by its passing years, but they have left me still chasing butterflies.

E. P. JAQUES.

SHEEP AND SNOWSHOES.—VI.

A Winter Hunt on the Summit of the Rockies.

No Hunting Weather.

THE morning of March 11 dawned very cold and stormy, and hunting was out of the question. Hunter Powell started for home, agreeing to stop at John Monroe's lodge and feed the dog and young puppies that had been abandoned there, and which we feared would be frozen to death. Before he went home he made an effort to catch some trout, but found the weather too cold. I went out to put some finishing touches on my marten trap, but found the temperature so low that my fingers nearly froze, so that I was a long time in getting the trigger to hold. We never knew exactly how cold it was at our camp at this time; but Major Steell's thermometer at the agency registered 27° below zero on two different nights, the night of March 10 and one a little later. We suppose that it was probably colder at our camp than it was at the agency. Above us in the mountains the white wreaths of snow were flying all day long, and the hunters said that it would be impossible for a man to live up there, or at least to live and hunt with any pleasure. We spent the day, for the most part, sitting about the lodge and listening to stories which our friends told us of the old days. By pulling up the fold of his blanket behind him so that the wind would not have a fair sweep at his back, one could be very comfortable in the lodge, even on so cold a day. But we watched the doorflap very jealously, and the dog Shep, who had a habit of poking his head out and leaving the canvas door ajar, became a subject of frequent maledictions; for the air that came in was Arctic in its frigidity.

Even the least experienced of the party had now learned something of the theory of the lodge, and had come to admire it more and more. Billy Jackson had fixed up a fine bed for McChesney and me, this being in the back part of the lodge—the post of honor. Schultz explained to us that in the old tribal days there was a certain etiquette of the lodge which was rigidly observed. Thus, the back part of the lodge was the place where the "medicine" of the lodge owner stood, this perhaps being supported by a little tripod between the fire and the back of the lodge. It was contrary to the etiquette for any one to pass between the fire and the medicine, and the ceremonious politeness required that to cross from one corner to another in the back part of the lodge, one should go clear around the fire and cross on the side nearest the door. It was contrary to etiquette to have any sticks of wood left pointing toward the medicine when the fire was built or replenished, nor was it considered a fortunate or proper thing to carry out any ashes from the lodge fire. The little life-saving flame in the center of the conical house seems to have been invested with a certain respect or veneration, as indeed it might very well have been; for without fire one would be beyond hope in such a country.

Odd bits of information came up in the snatches of conversation in our daily circle about the lodge fire. Thus Schultz recalled with amusement a certain wedding in which a white friend of his had married an Indian woman. It seemed that this woman had had four husbands before this time. "It was a rattling good wedding, though," said Schultz, "and I remember that there were five gallons of alcohol as part of the refreshments." It seems that custom at weddings vary chiefly in degree, no matter what the people or country.

"Speaking of wives," continued Schultz, "reminds me of old Brocky, one of the chiefs of this tribe. You know, Brocky had four or five wives, and the priests have always been at him to be civilized, and give up all of his wives but one. Brocky said he allowed that that was the right thing to do, and that he would have to get into touch with modern ways of thought by following the priest's advice, but he said to the priests: 'I have had to give up good money to buy these wives of mine, and I can't afford to turn any of them loose without getting paid for it. If you people will give me what my wives cost me you can have the whole outfit, or all of them but one, just as you think is right.' Of course, the priests couldn't see it that way, but Brocky can't understand even to-day why there was anything unreasonable in his proposition." Nor indeed is there, for if we are to believe opera bouffe there are many white men who would gladly do just as Brocky offered to do, though perhaps not in so plural a manner.

We talked something about the religion of the Indian. An odd complexity comes in here. The government tries to civilize the Indians, but yet cannot rank them as citizens. They may go clear up to the line of citizenship, but still in the eye of the law are savages. If they were citizens they would be guaranteed under the constitution the right to worship as they see fit, but as it is they cannot do so. The Indians are all the time asking to be allowed to hold their medicine lodge, which they say it is very hard, especially for the ancient ones of their tribe, to give up. They like their own fashion of religion better than ours, and insist that it is harmless. They claim that at their medicine lodge they sing and pray after the way of their fathers, make presents to their old people, something after the way we make Christmas presents to each other, and do not indulge in any ghost dancing or that sort of thing. The government forbids these ceremonies of the old religion as retarding the progress of the Indians in the ways of civilization, and yet it sets the limit beyond which they may not go in the path of civilization.

Winter Explorations.

If the day of March 11 had been cold, the night following was still colder. We could not tell how low the thermometer went, but as we later found that we nearly always under-estimated the record, we presumed that it must have been in the neighborhood of 30 below that night. We had to use all our extra clothing and were none too warm at that. It was one of the regular amusements of the trip to witness the struggles of the different members of the party to get into the sleeping bags and beds at night. McChesney would wiggle and twist and groan his way to the bottom of his Kenwood, and then I would take a turn, and sometimes Billy would come over and hold up the top of the bags while we were working our way down into the interior. The additional blankets which we put into the bags made them a very tight fit. In the morning we were covered with a dense rime of frost. We did not keep up a fire on any night in the lodge.

The morning of March 12 was still and brilliantly cold, everything sparkling and glittering and wonderfully beautiful, with all the myriad aspects of the mountain to interest and confuse the eye. While the others stayed at camp, Billy, O-to-kò-mi and I took a walk up through the woods to visit the Two Medicine Falls, a cataract not set down in the books or newspapers, but well worth a description as a natural curiosity. These falls are on the Two Medicine Creek, between the lower and the next upper lake of the Two Medicine chain, on which there are in all four or five lakes, great and small. Between the two lakes there is a difference in altitude of 100 or 200ft., a giant wall of rock running across the entire front of the valley at that point. The stream does not plunge over this rock wall, but drops below the top of it, then burrows through it, and comes out of the perpendicular face of the lower side through a round hole, as though from a sewer pipe let into the wall. The actual fall of the water is only about 40 or 50ft., perhaps, but the wall towers straight up above the fall to a great height. The stream plunges out of its confined subterranean channel into a wide and lovely pool of water, a good pistol shot across and many feet in depth—one of the grandest trout pools that ever lay out of doors, and one of the most abundantly stocked, according to the story of our friends, since the trout can get no higher up the creek than this point, and fairly swarm when they are stopped there on their run up in the spring.

We stopped some time at the falls, enjoying the beauty of a spectacle which but few white men have ever seen, and taking some observations of the country round about with a view to later hunting trips in that direction from our camp. We could see no game trails on Rising Wolf Mountain, but the lynx-eyed O-to-kò-mi spied two sheep feeding high up on the side of the mountain across from Rising Wolf and on the south side of the Two Medicine Lake. These sheep looked like tiny dots, far up on the side of the big mountain, and it was some time before I could make them out, even after the others had tried to show them to me. It would have been altogether beyond my ability to see or suspect game at any such distance, and I felt a pronounced wonder and admiration at the Indian hunter's eye.

We found the snow deep and soft in the dense woods, and had a hard hour or two at breaking trail. The weather remained cold, and it was a poor time to expect any game to be moving, yet we rather expected to see more sign of fur than we did. We scared one pine marten off his perch on a pine tree, and saw where he had made off through the snow, so we stopped and built a dead-fall near by, in the hope that we would get him later. We also saw two trails of lynx, a coyote track, and the trail of a wolverine. We also found a "bear tree," where some old bear, a good sized one evidently, had measured his height against the tree trunk, and scraped off the bark for a few feet just to show how big he was. All these little odds and ends of the signs of the woods showed us that we were in a game country. Indeed, one of the beauties of a winter trip is that the snow carries a record of the woods life, so that one can be encouraged by now and then seeing tracks of his game, always great assistance in getting to see the game itself. We were confident that we were in a good sheep country, and had no doubt of getting our sheep as soon as the weather moderated. We could see many angry storms raging up on the mountain tops, and even low down in the valley where we were the air was cold enough for us, as soon as we stopped the exercise of shoeing.

We followed down the Two Medicine Creek for some distance, looking for a crossing place, for the rapidity of this stream prevents it from freezing at many points, and for a distance of perhaps a mile below the falls the water was open for all or part of the way. We wanted to find a crossing point so that we could get over the creek on our way to the upper lake, on which we intended to camp a few days later, making a side trip from the main camp, and going further back into the mountains for a look at the sheep and goats of Rising Wolf Mountain upon its upper side. It was not a very good report that we took back home that night. All we could say was that the snow was too soft for sled or toboggan, and that the whole outfit for a side camp would have to be carried on our backs, with the certainty of a long, sharp climb up the divide between the two lakes in case it was possible to effect a crossing upon some log or felled tree. This difficult proposition did not seem to appeal to the majority very forcibly, especially as we had not yet hunted out the country above us very thoroughly.

Sheep and Beans.

It had proved too cold for fishing that day, and McChesney and Schultz could show no addition to the grub stock when we got back to the lodge in the evening; but we made a great supper of sheep and beans, of which each man ate a most surprising quantity. The mountain men almost without exception prize the meat of a fat mountain sheep more than any other wild game, and we agreed that it was venison hard to beat. Its taste is between that of venison and mutton, not in the least strong, and very sweet and nourishing. As for the bean, its excellence as woods diet is well known. Billy, quoting the words of a Frenchman friend of his, said: "Ze bin is ze best dam fruit what come to Montan'." In this judgment we also concurred.

We passed a quiet evening in camp, the lodge, for some reason impossible to divine, having made up its mind to stop smoking for a time, so that we were very comfortable. I found it possible to read as I lay down upon the bed, with a candle mounted in a split stick stuck into the grouud near by. By this time nearly all the ice had melted from under the beds in the lodge, and it was daily becoming more warm and dry and comfortable.

A Wild Night.

That night, a little past midnight, the climate broke all subsequent records by a wind storm such as rarely happens even in this vale of winds on the Two Medicine. The wind reached the point of a gale, and went howling over our heads in the woods with a force which threatened to blow the lodge from over us. It was not a steady wind, but a series of wild intermittent blasts; the storm at times lulling and then making a determined onslaught, as though under a deliberate plan to overthrow us. It needed small imagination to hear all sorts of voices, screams and callings, orders and threats and exclamations in the air. At times the puffs of air had almost an explosive quality, this betimes added to by the reports of the flopping ears of the lodge, blown loose upon the storm. In the morning Billy Jackson announced gravely that he was sure we had been visited by the evil spirit of the Crees, the mocking demon which comes on the storm and harasses the hunter, firing off his gun, and making all sorts of demoniacal noises as he goes. This word we received with little pleasure, for it began already to appear that we were pursued by misfortune, since we were losing so much time without a chance to get out and hunt. From that time on we had still worse luck in many ways, so that we knew what Billy Jackson had said was true, and that Pah-kuk-kus had indeed made us the subject of his bodeful sportiveness.

It was impossible to hunt on the morning following this storm. The mountains had a very wild and angry look, full of storms and wraiths of snow and mist. Schultz said we might expect a chinook before long, but that we would hardly get to hunt until it came. We could do nothing but sit in camp and tell stories. We talked of all the cold times we had ever seen or heard about. Billy Jackson told us of one gruesome incident of winter warfare in the old times. He said that after the Tongue River fight he was one of the party that brought out the dead soldiers to the nearest fort to be buried, as it was impossible to dig any graves in the snow-covered and deeply-frozen ground. The bodies of the soldiers froze where they fell, froze stiff and solid. When the packers took them out, the corpses were packed on the *araparejos* like so much cordwood, two dead soldiers being carried on each mule, one on each side.

"That was the fight where Yellowstone Kelly made some prisoners," said Billy. "He captured seven squaws, and later on one of the squaws hanged herself. This is not the only case I have known in which the Indian has committed suicide when taken prisoner. I knew three Cheyennes to hang themselves in prison once. I'll tell you about that some of these evenings, if I don't die of rheumatism before then."

Pah-kuk-kus Leaves Tracks.

We had now been in camp a week and had had only one day of hunting. March 14 was fair and fit, so we turned out for a try after game, not stopping to think what day of the week it was. Really it was Sunday, as we later learned, though we had lost count of the days and did not know that it was Sunday. In this we were far more remiss than the Indians. O-to-kò-mi went on the hunt that day without saying anything, but when he got back at night he said that he had known all along that it was no good to hunt on Sunday, but he thought he would not speak of it. At another time later than this I saw this same carefulness not to violate the Sabbath shown by a native hunter. Old John Monroe was lying at his camp, and when asked if he was going to hunt replied that he was not, and that he never did hunt on Sunday, as he was taught that it was wrong. This may appear rather surprising to those who are in the habit of ascribing all manner of bad ways to the Indians and all manner of good ones to the whites; yet it is true that far away in the mountains, where at times the white hunters forget what day of the week it is, the Indian hunters of the reservations know it and observe it, for reasons which to them seem good.

McChesney and O-to-kò-mi hunted together that day, and they saw eight sheep, though only two of them were rams. They were not able to get a shot, although they had a long, hard day of it up near the rocks. Shultz and I went up to the place where I had killed my ram to see what was going on up in that part of the country. We found, as he had predicted, that the big cat had visited the carcass of the sheep. Half the ribs of one side had been gnawed or torn off, and the flesh was beginning to disappear from the accessible part of the carcass. Luckily, we had hung up the two hindquarters when we first skinned the sheep, so that we saved that meat. We thought that the biggest cat, which had made the tracks we first saw, had not been about, but that two cats of some sort, probably very large lynxes, had been operating for two or three nights at the carcass. Again we longed for a trap or some poison, for we knew we now had a chance for some fur. The snow was always blowing so much in the mountains that it was hard to follow a trail more than a few hours old; but we thought that if the trail had been fresher we could have jumped the cat by means of the dog without a very long run, as it would be almost sure that the animal would not go very far away from the bait, but would be back once or twice each day to feed. It is not easy for a lynx or a lion to get ready-made meat in such large quantities, so that such a "snap" is not liable to be overlooked by one of those gentry.

As the tracks of the beast could be seen leading away down the mountain side, Schultz and I concluded to follow the trail, in the hope that we could make it out to a point where the dog could run it by scent, in which case we felt we were sure of our cat. We could not figure out what it was we were following. The track was about as big as a small saucer, but the animal did not seem to break through crust which we hardly thought would have held up a lion, and moreover, at one point where the fellow had stopped we could see no tail marks on the snow where it had sat down, so we concluded it must be a lynx, though a very large one, as the distance apart of the toe pads clearly showed.

Our cat track led us down the mountain almost parallel to the snowshoe trail along which we had come. "See," said Schultz, "he's going back along our snowshoe trail of the first day, to see what sort of things we are, and to spy out any pursuit. I think we'll find that he has turned off into the big swamp below us there."

Sure enough, the cat, after running alongside our trail for a mile or so down the mountain side, did turn into the cedar swamp, and there we followed the deep tracks through a couple of miles or more of the worst sort of traveling. The shoeing was terribly hard here, and the contour of the country about as bad as could be asked. We

expected every moment to jump the cat, but it seemed that the latter had never stopped at all, but had swung right on back up the mountain. To make a long trail short, we came out again right at the carcass from which we had started, and there lost our trail in a confusion of cat trails which seemed to be the result of general cat carnival the night before. Once or twice the dog made as though to run the trail, but we did not let him go, as we wanted as close a start as possible. He was unable to hit off any trail at the carcass, and we concluded that probably the animal, whatever it was, had gone up over the bare country into the rocks above us. We thus had three hours of the hardest sort of climbing for nothing. "Talk about your evil spirit," said Schultz, "do you know what we've been following all day? It's not any cat, but old Pah-kuk-kus himself, that we're trailing. We might as well quit and go home." So we did quit and go home, with no results except a splendid day in the mountains, which were luminous all day long and very beautiful to look upon.

When we started down the mountain we took along both quarters of the ram, Schultz packing these slung across his shoulders. Long before we got into the well-beaten trail which we had now beaten down for nearly two miles, the weight of so much meat began to make itself felt, and Schultz was very tired as well as myself, so we cached one hindquarter in a tree near the trail and only took one into camp. There was no fresh meat killed that day, but we still had enough left to make a good supper. Billy Jackson, having spent the day in camp, and not having had the pleasure of chasing *Pah-kuk-kus* over the hills and far away, or of climbing the ice peaks after sheep to no avail, was unanimously voted cook for the evening. He got out his trusty Dutch oven, and constructed one of his noblest stews, from the bottom up, putting in beef, sheep, tomatoes, macaroni and beans in quantity sufficient to feed a dozen men of ordinary appetite, though it did not last long when we got at it. I should think we each ate about 3lbs. of stew, to say nothing of a dozen or two cakes of the sort composed by Schultz in his happiest moments at the fireside. We did not bake any bread, but after our pilot bread gave out made cakes fresh each meal. As Schultz was the cake artist, he rarely got to eat anything for an hour or so, the others kept him so busy; but under this tribulation he was very patient and good-natured. We had a splendid grub list along on this trip, and surely lived high, considering our unpromising surroundings. We had a keg of good butter, all the tinned vegetables we wanted, some cans of maple syrup, and everything one could ask for a camp menu of more than usual ambitiousness. McChesney and I, who had come expecting to rough it to far greater extent, often commented on our outfit, and we still time and again asked ourselves whether it was really true that we were out in the Rockies in the winter, with snow and ice and storm all about us, while we were so warm and comfortable and well fed all the time.

We passed another night of Indian talk and Western stories and sign language. My friends were very patient with my clumsy efforts with the Piegan tongue. There is a difference between the white man and the Indian in linguistic matters. The white man will make a bluff at speaking what few words he knows, or thinks he knows, of the Indian language, often making himself very ridiculous; on the other hand, the Indian may know a great deal more of the white man's language than he lets on, but he will not speak in any tongue but his own, being much afraid of making a mistake, at which he would be very much ashamed. I found evidence at times that O-to-kò-mi understood a good many English words, but it was very rarely he ever tried to say one, though he would take any pains to repeat words for me, and explain their meanings. Thus we came to know the words for "gun," "knife," "meat," "sheep," "ram," "big," "little," "good," "bad," etc., etc. As for the theory of the Piegan tongue, the forms of its declensions, its grammar, or anything of that sort, I could not get a trace. It seems to me that a man in learning Piegan must learn each word all by itself, and not expect to meet it again in disguised form. But this I say from the standpoint of one but very slightly advanced in the tongue, as I think I know only nine words of Piegan in all, and I sometimes get them mixed.

It being now accepted as a fact that we were being persecuted by evil spirits, as proved by the actual footprints of *Pah-kuk-kus* himself, we all now began to ascribe any unusual or unpleasant incident to such agencies. If a man lost his cap or his gloves, some one would sing out, "*Pah-kuk-kus* has got them," and *Pah-kuk kus* was made subject to more than one uncomplimentary remark. McChesney still denied that his umbrella had anything to do with the condition of the weather or the hunting, but in this he was obviously wrong, and we deplored this evident bias in his beliefs. When O-to-kò-mi went to bed, he shook his head and muttered yet again his dismal word of "*Ai-so-pom-sian!*"

Why Has the Fishing Changed?

Hackensack, N. J.—*Editor Forest and Stream:* Can you or any of your readers explain why it is so many of our fishing grounds, after years of good sport, seem so suddenly to give out without any apparent good reason?

To illustrate: In 1885 I visited Brandreth Lake, Hamilton county, N. Y. This superb little lake at that time was an ideal spot for anglers. The water was cold and deep; the forest, yet untouched, grew down to the water's edge; and all along its shaded shores good-sized speckled trout fairly swarmed, while in the deeper waters lake trout were easily caught at all seasons, some of them of great size. With the exception of suckers and a few shiners, these were the only fish known. Now this lake was strictly preserved and comparatively few fish killed in it, yet I noticed on subsequent visits that the stock of both brook and lake trout was rapidly decreasing, and at the present time it is very poor. The only possible reason I can see is that the suckers, which are on the increase, may destroy the spawn, but that hardly seems sufficient cause. Again, when I first visited Lake Ronkonkoma down on Long Island, black bass of the large-mouth variety could be caught in great numbers, even on the artificial fly, as most anglers know. Now it is impossible to find any sport even with bait, much less with the fly. The sudden failure of the fishing at this favorite resort is utterly without any apparent cause. I could go on and multiply instances of this kind without end.

Natural History.

WHITE AND WOOD BUFFALO.

Editor Forest and Stream:

Having noticed a discussion in your columns of late concerning white buffalo, I beg leave to contribute my mite to the elucidation of a subject so interesting to both sportsman and naturalist.

Having spent some years, the earlier portion of my life, upon the frontier of our country, I passed much of my time both in hunting and in listening to the lore and narratives of those who were hunters and trappers by profession.

During the years 1857-8 I was stationed at Fort Abercrombie, on the Red River of the North, and during my residence at that place was presented with a white buffalo robe by a Yankton Sioux Indian, on account of some professional services I had rendered him. This robe was not entirely white, but showed here and there some reddish-brown spots. The hair was much finer and softer than usual. I was told by those well acquainted with the Indian character that this was considered a valuable present, and was certainly "a mark of his most distinguished regard," to use the language of the diplomatists. If my memory serves me aright, after the lapse of so many years, I gave this robe to Anson Northrop, of Minneapolis, he who placed the first steamboat on the Red River of the North.

Although I have hunted the common prairie buffalo from the borders of Texas to northern Dakota, I have never met with the wood buffalo, so that all my knowledge of that animal is derived from hearsay only, though from the frequent allusions to it made to me by trappers, hunters and *voyageurs*, I have no doubt of its former existence in the wooded parts of the far Northwest. The *voyageurs* always alluded to it as the *boeuf du bois*, whereas they termed the common buffalo the *boeuf de la prairie*.

During my military service in the region in question I was stationed, in the years 1860-1, at Fort Ripley, on the upper Mississippi, about six miles from the Indian village of Crow Wing. At this village dwelt an old hunter and trapper named Morrison, who was, by the by, one of the most worthy men I have ever had the pleasure of meeting. In our frequent conversations about matters pertaining to the chase, Mr. M. often alluded to the wood buffalo, and said that it was a much fiercer and more sagacious animal than the common buffalo of the prairie.

To conclude, and to change the subject somewhat, I will state, as a matter of some interest, that Mr. Morrison once informed me that his brother was Schoolcraft's guide when that explorer visited the head of the Mississippi; and that Lake Itasca was not the true source of the river in question, but another smaller lake in the vicinity was the real source. He also assured me—he spoke the Chippewa language perfectly—that the term "Father of Waters," applied by the whites to the Mississippi River, was a misnomer, and that the true meaning of the word was the "Endless River," so called by the Chippewas, who, on account of the extreme length of the river and the numerous tribes of hostile Indians who dwelt upon its banks, were never able to ascertain where it ended.

Mr. Morrison had an Indian wife, and was a fur trader by calling. He was well acquainted with nearly all of the famous hunters, trappers, warriors and fur traders of the Northwest, and his life was full of thrilling incidents. I was engaged in writing a narrative of his adventures when the civil commotions of the country, soon to be followed by "grim-visaged war," put an end to my praiseworthy project forever.

A MOCKINGBIRD IN VERMONT.

Ferrisburgh, Vt., July 19.—The mockingbird reported in Massachusetts reminds me of one that appeared in this township in 1860, I think. My attention was drawn to it by hearing the scream of a hawk and the notes of several song birds coming in rapid succession from the same point. A cautious approach enabled me to get a good view of the singer of many songs, who proved to be a genuine Southern mockingbird. His presence became known to some bird catchers, whose persistent efforts to snare him soon drove him from that locality. A few days later I heard the same bird, as I supposed, for the vocal performance was the same, in a part of the town at least three miles as the crow flies from the place where I first heard him. I never heard him nor heard of him again, and as there were fortunately no bird catchers nor collectors to molest him there, I conclude that he went his way in peace.

I would be glad to enter into the partnership proposed by my good friend Von W., or if it were possible, to swap a fairly good ear for one of the sharp eyes which note so accurately the doings of Mother Nature and her children. May they be preserved for many a year to come.

The English pheasants which began to scatter from Dr. Webb's Shelburne Farms a few years ago have increased in a way that is quite surprising, since they were supposed to be unable to take care of themselves in our severe winters. They congregate most in the neighborhood of woods where the button-bush abounds, upon the seeds of which they are said to subsist in a great measure during winter. Killing them at any time is prohibited by law, but it is pretty well known that some are shot or snared by pot-hunting poachers and by some who call themselves sportsmen. If these birds could have absolute protection, it looks as if they might become a valuable addition to our game supply in favorable localities. Perhaps they would then increase to an alarming extent, as the deer are said to have done, in the reports of the New York and Boston Sunday papers.

Those who, believing these absurd, sensational stories, come to Vermont next October with the expectation of finding ideal deer hunting are doomed to disappointment. It is a wonder that the Sunday papers do not boom the seal hunting of Vermont, for there is authentic record of at least two seals having been killed in Lake Champlain, one about 1809, the other in 1846, according to my recollection of the dates. The last specimen was in the museum of the Vermont University at Burlington, and, I presume, may still be seen there, or in the State Museum at Montpelier. Seals are not protected by our laws, and they have not become so plenty as to interfere with the navigation of the lake, but there is no telling what they might do with the help of the Sunday newspaper men.

Awahsoose.

The Birds of Riverside.

John E. Marshall, a Baltimore contractor and builder, and superintendent of the Johns Hopkins, the Walters, and other buildings in Baltimore, owns a farm near St. Michaels, Talbot county, Md., on the banks of the Miles River, and on the Baltimore, Chesapeake & Atlantic railway. The farm it named Riverside, and so is the railroad station, at the front gate. Mr. Marshall bought this farm from the Tenant heirs several years ago. It had been in the Tenant family for several generations, and at one time more than one-half of the tract was heavily wooded white oak forest. In the woods the late Col. Edward Tenant met a tragic death. He was on horseback, overlooking men who were felling trees for lumber. In falling, a white oak struck a big limb of a sturdy pine, which broke off, and the fragment in the violent rebound struck Col. Tenant and knocked him from his horse. When picked up he was dead, with a fractured skull. In personal appearance Col. Tenant was the living image, almost, of the pictures of Henry Clay at the same age.

Mr. Marshall has many wild birds at Riverside. When he first made a home there, he established a rule that no one, member of the family, guest, sportsman, pot hunter or farm hand, should shoot a gun on his place, and for fifteen years the rule has been observed. The result is that many of the wild birds of the woods and field have become quite tame, and some of them well domesticated. There are no partridges on Riverside now. These birds perished in the hard winter of 1894.

But there are many singing mocking birds, so tame that they come around the yards and feed with the chickens. They have selected places for building. The old birds return to their last year's nest and the young songsters select with much care their nest sites. "This spring," says Mr. Marshall, "there comes an exquisitely tuned mocking bird about the first dawn of the day every morning. He selects the highest chimney of the house, and from that pinnacle pours forth his melody until nearly sunrise." There are "Kentucky cardinals," orioles, kildeers, robins, nuthatches, larks and other birds in Riverside, all of them tamer than guinea chicks are, because they are never alarmed, and are fed, protected and fondled.

Mr. Marshall had no flickers or yellowhammers on his place, which was a distress to him. These birds build in vertical hollows, like that in the top of a decayed post. Mr. Marshall was told that when his gate posts got old and the processes of time made holes in them, the beautiful yellowhammers would find these hollows and nest there. Therefore, to hurry up their coming, he had big auger holes bored up and down in the sound gate posts, and, sure enough, the flickers found them out and nest there now every season. Mr. Marshall has built a little roof over each post to keep the rain from the nests.

"I walk about the place," Mr. Marshall says, "I come to a gate post with a flicker's nest in it, and a great outcry among the young and old birds is heard in the hollow in the post. I tap with my pencil on the post, and instantly every noise is stilled and there is absolute silence."

There are many kildeer birds in the fields at Riverside, and even the plowman turns his plowhorse aside and leaves the nest undisturbed, because "the boss says so."

The birds have a glorious time at Mr. Marshall's Riverside farm.—*Baltimore Sun.*

Who Else has Seen This?

Edgar, Neb., July 21.—*Editor Forest and Stream:* In conversation with a gentleman who has just made a trip through western Indian Territory, yesterday, I picked up something new and interesting to me in regard to the habits of the prairie dog and rattlesnake.

This party said that a few weeks ago, while resting under a small tree in the territory where there was a dog town, he noticed a commotion among some dogs near him; they would run up to a place and peep at something, and then scamper off. Looking to see what was the matter, he saw that there were about fifteen to twenty dogs around a rattlesnake, which at length went into one of the dog holes. As soon as he had disappeared the little fellows began to push in dirt, evidently to fill the hole up, but about the time they got enough dirt to cover the entrance, the snake stuck its head up through the dirt, and every dog scampered off to a safe distance, all the time keeping up an incessant barking. The snake slowly crawled to another hole about a rod distant and went in, and then up came the dogs again and went to work to push dirt up before them to the hole.

This time they succeeded in their enterprise, and completely covered the entrance to the hole, and then went to work, using their noses to tamp with, and pounded the dirt down hard, after which they went away. My friend went to the place, and said he was surprised to find they had packed the dirt in solid with their noses, having sealed the snake well to the ground.

I had never heard of anything of the kind being seen before, and would like to know if it is something new in the dog and snake lore or not.

The gentleman is perfectly reliable, and has spent many years in the West, but said he had never heard or seen anything of the kind before.

H.

Mrs. Bradford's "Audubon."

Persons interested in birds and bird preservation will be gratified to learn of the remarkable success which has attended the publication of Mrs. Bradford's sketch of Audubon, the naturalist. This charming volume has already passed to its second edition, and the receipts from this sale have all of them been turned over by the author to the Audubon Monument Association, of New Orleans, La., of which she was the founder, and is the President. It is no small undertaking to attempt, with the point of a pen, to raise a monument to one long dead, but it is to be hoped that Mrs. Bradford will succeed in doing this. Certainly, her success up to the present time has been most encouraging.

It is in New Orleans, not far from the birthplace of the naturalist, and in an Audubon Park named after him, that the New Orleans Monument Association hopes to erect its memorial. Mrs. Bradford says:

"Here in New Orleans we have as yet only our beautiful Audubon Park to perpetuate his name; but we trust the day is not far distant when among its grand old live oaks and near the mighty river he loved, patriotic hands will place a noble statue in bronze of the great naturalist of Louisiana, a familiar figure, as he was in life, in hunter's dress, with dog and gun by his side. Let it be the pride of the women of New Orleans, with whom 'to will is to do,' both to undertake and to accomplish this long-delayed tribute to the memory and genius of Audubon."

We shall be glad to supply copies of Mrs. Bradford's book to those wishing to obtain it, at $1 each. The proceeds of the sale of the volume will be applied to the monument fund.

Tree Planting Association of New York City.

NEW YORK, July 17.—*Editor Forest and Stream:* The Tree Planting Association has been organized a year, within which time 149 members have joined, and a beginning has been made in the planting of trees.

In consequence of the circulars that have been issued and of the notices that have appeared in the newspapers, 128 requests have been received by mail for information on the subject of tree planting from the general public, many asking for several duplicates.

Reports from the nurserymen show that 512 trees have been planted, and doubtless others of which the Association has not been notified.

The selection of the proper tree for each locality depends so much on various conditions that it will be safe for intending tree planters to consult with and follow the advice of the nurseryman with whom he places his order.

It is very gratifying to find so much interest taken in the subject by citizens generally, and by the press, who almost without exception recognize the advantages and favor the work of the Association and have done much to forward the plan and to encourage the project. W. A. STILES, Sec'y.

An Albino Quail.

BURNSIDE, La., July 22.—*Editor Forest and Stream:* I enclose you a photograph of an albino quail. It is a perfect specimen of an albino, for it has not a single dark feather. This quail was killed in St. James Parish, Louisiana, last January. For several years one or two albino quail have been seen in this section of the country, but this is the first specimen I have been able to secure. I have never seen so perfect a specimen, although it is quite a common thing to see quail with white patches of feathers. Another specimen that was killed was cream color, with a few brown feathers scattered about over his back. W. P. MILES, Jr.

[The photograph, which, unfortunately, will not reproduce, shows the bird to be as Mr. Miles says, a perfectly white specimen]

A Cuckoo Out of Place.

ROCKLAND, Me., July 17.—*Editor Forest and Stream:* I send you by express a bird for identification. It was shot while swimming in deep water in a pond.

I could not place it; the nearest I could come was a young butcher-bird, a young kingbird, or one of the fly catchers; but neither of these satisfied. I have only "Samuel's Book of Birds" to assist me. J. W.

[The bird is a young black-billed cuckoo (*Coccyzus erythrophthalmus*), a nestling, which could probably fly only a few feet. It was of course altogether out of place in the pond, and very likely fell into the water from the nest, which it must have left very recently.]

The Merchants' Association of New York.

THE Merchants' Association of New York, is an organization of gentlemen, whose object is to increase to as large an extent as possible the number of buyers visiting New York this fall. The officers and directors, who give their services entirely without pay, are assisted by an advisory committee, which includes in its membership representative men in the various departments of trade. The Association will secure for its out-of-town members reduced rates from the various traffic associations, which will give any member, his family or employees the benefit of one and a third fare for a round trip ticket to New York, good for thirty days. Such tickets are also eligible for stop over at Philadelphia or Baltimore. Out-of-town membership may be secured without charge on application to the Association. Resident membership costs $25, and already large numbers of public-spirited business men, who appreciate the advantages to be attained as a result of the Association's efforts, have applied for membership.

The Association has its headquarters in the New York Life Building, Broadway and Leonard street, adjacent to the trade center of New York, Here an attractive reading room will be fitted up, which out-of-town members will find convenient as headquarters while visiting the city. All the facilities of a business club will be provided, including, of course, telegraph, telephone, etc , and there will also a bureau of information attached.

Manufacturers and dealers in sporting goods will find it to their advantage to coöperate with the Association. The special railroad rates will probably apply for the latter part of August and first of September.

Uncle Lisha and Sam Lovel.

WE have especially enjoyed, in our family of seven, the chapters of "Uncle Lisha" whenever they appear—the youngest member of the household is as eager to find Rowland E. Robinson's name in each new paper as I am.

We own the three volumes of the "Uncle Lisha" series and have read them aloud till the characters are familiar friends, and their quaint speeches are quoted aptly on many occasions. The books have also been placed in the public library of our town. Long live Rowland Robinson, to bring us closer to the heart of mother nature; and to help us understand human nature. L. H. BAILEY.

MASSACHUSETTS.

The Pistol-Grip Stock.

NEW YORK, June 5.—*Editor Forest and Stream:* So much controversy afterward arises as to where and when any improved device originated, that it is not undesirable when one accidentally comes across an early mention of an improvement, which subsequently becomes accredited and adopted, to make record of the fact. In that connection I send you, in relation to the now almost universal pistol-grip, the following extract from an interesting book, entitled "The Sportsman in France," by Frederic Tolfrey, Esq. (London, 1841), Volume 2, Chapter 7, "Rifle Shooting by an American Gentleman":

"KINGSTON, Upper Canada, Aug. 4, 1819.

"DEAR SIR:

"* * * I once saw a rifle made at Harper's Ferry, in our State, by order of the then Secretary at War [*sic*], for an Indian chief who had distinguished himself at the battle of the Horseshoe. It was a splendid piece of workmanship. Instead of the scroll guard, a limb, which grew out of the main stock just below where the right hand grasps the breech, was fashioned to resemble the butt-end of a pistol, handsomely chequered and capped silvered. This enabled you to grasp the gun with strength and steadiness, and had a very handsome appearance. I thought it an improvement."

The letter, which is addressed to Mr. Tolfrey, is quite lengthy, and follows an argument, in the preceding chapter, in favor of rifles over ball-carrying guns. It is signed (in the printed book) only with the initials S. S.

From this it appears that the pistol grip at least considerably antedates 1819. Curiously enough, the same letter recommends for a rifle "a foresight made altogether of ivory, * * * as it never glares," which idea I had supposed was to be properly credited to Mr. Lyman.

CHARLES STEWART DAVISON.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, of your dealer will supply you.

AMERICAN GAME PARKS.

The "Forest and Stream's" Fourth Annual Report on Game in Preserves.

Part One.—Fenced Parks.

(*Continued from page 63.*)

KEEPING pace with our diminishing game supply and decreasing covers is the movement for game preserves. The experimental stage has long since passed, and the day when such preserves as Blooming Grove or Austin Corbin's Blue Mountain Forest Park were regarded as interesting, because exceptional undertakings, has gone never to return. Game preserves are now as thoroughly established in this country as they are in the old world, and the fact that they have not as yet exerted a more powerful influence upon American sportsmen is due only to the great extent of our country, which still affords abundant opportunities for the unattached seeker after game or fish.

There is, however, little reason to fear that the rich sportsman will monopolize the shooting, as is the case in Europe, for here there are large areas of hunting country, where either State laws, public sentiment or natural conditions effectually operate against preserves. The conditions which favor preserves are cheap land with attractive natural features, and trespass laws which are well defined and easily enforced.

Under such conditions it is common for individuals or associations of sportsmen to take up large tracts of what might fitly be termed waste land, often almost divested of fish or game, and either by stocking with animals brought from a distance, or else by strict protection of the stock already on the land, vastly improving the sport for their individual benefit. It is worth noting that while such enterprise is unquestionably selfish in its origin, it often redounds to the benefit of all sportsmen who frequent the neighborhood, for such preserves act in measure as asylums for game, and the free hunting in the surrounding country is nearly always benefited.

As an illustration, it is safe to say that there would be no deer hunting on Long Island to-day were it not for the protection afforded by the preserved lands of the South Side Sportsman's Club, and others.

Though the object of our American preserves has been the same as that of their European prototypes, in that they have been organized to afford their owners better sport than could otherwise be assured, we have gone a step further than the old world in one respect and developed a new type in the fenced preserve. In Europe, the hunting country is practically nothing more than a series of contiguous preserves, and there is no need for fences, for while certain game may pass from one owner to another, an exchange is certain to be made sooner or later and the balance restored. In this country, however, many preserves are so isolated that fencing is a necessity in order to keep any game at all, and in other cases owners desire to introduce game not found in the surrounding country, and here again a fence is necessary to keep their own.

This type of fenced preserve is already well established and daily becoming more common. It enables the owner to experiment with exotic game, and also to locate his preserve whenever he pleases without reference to the surrounding game supply. He is also in a position to determine the increase of his game, and under certain limitations to influence its breeding. All which considerations make the fenced preserves extremely interesting to the naturalist and worthy of separate classification.

These reports are intended to show the progress of preserves in this country, and also to furnish material of interest to park owners and sportsmen in general relative to the effects of protection and the breeding of the various native and exotic species in captivity. The first report of this series was printed in our issue for Feb. 17, 1894. In 1895 articles were printed May 11 and 18. In 1896, July 4, 11 and 18.

Litchfield Park.

LITCHFIELD PARK, in the Adirondacks, is the property of Mr. Edward H Litchfield, of New York. Mr. Litchfield is a sportsman of ripe experience, who has hunted all over the United States, and is familiar with the different species of game animals in their native wilds. This fact gives the keynote to his park, for first of all it is designed to be a hunting park, where the game and fish are preserved for the sport their pursuit and capture brings.

Litchfield Park dates back to August, 1893, when Mr. Litchfield purchased a tract of 9,000 acres of wild forest land in the southwest corner of Franklin county, N. Y., and just east of Tupper Lake. The following September he had the park inclosed with Page woven wire fencing, using the growing trees to a large extent for posts. "The fence has stood the racket nobly," said Mr. Litchfield, in referring to it recently. "In a number of instances large trees fell on it, but in every case as soon as they were removed the fence sprang back to its original position, and it is, at the present time, in as good condition as when it was built."

Beginning in the spring of 1894, Mr. Litchfield purchased a small band of elk, which, prior to the completion of the main fence, were kept in a smaller inclosure, and later other elk were added, till last year the herd numbered over thirty. Their numbers have undoubtedly been increased by births, but owing to the extent of the park, and the fact that the elk are scattered, Mr. Litchfield is unable to give any figures bearing on the increase. Thirty-five more elk have been ordered from a Western dealer, and will no doubt soon be added to those already in the park.

In addition to the elk there are several black-tail deer, and a large number of native Virginia deer, besides jack-rabbits, pheasants and smaller game.

Mr. Litchfield visited the park during the winter, in the months of January, February and March, and found the elk in good condition. At the present time they are looking well, and are fat. Mr. Litchfield gives them no hay or other feed, and believes in making them forage for themselves. The idea of feeding his game as though it were domestic stock is distasteful to him, and, moreover, he believes the game will do better in the long run if left to shift for itself. Of course, a careful oversight of the game is kept by Superintendent Du Bois, and if the animals exhibited any signs of starvation, food would instantly be provided. As a matter of fact, however, the elk and other animals are sleek and "sassy," and at the same time as wild as any other like game to be found in America.

Mr. Litchfield has recently added to the area of his land by the purchase of an adjoining tract in St. Lawrence county, extending three miles along the eastern shore of Tupper Lake, and including the islands at the head of the lake as well as a half of County Island, and also a mile of the west side of the lake contiguous to the county line. This new tract takes in the best part of Tupper Lake, with a number of beautiful little islands and a shore line irregular and very picturesque.

Mr. Litchfield is at present engaged in building a good road to connect his park with the railroad at Tupper Lake Village. This road will begin at the park, west gate, and run northeast parallel with the general direction of the shore of Tupper Lake to Moody P. O., a distance of five and one-quarter miles. There is already a good road connecting Moody with the railroad at Tupper Lake Village. The work is being done under the supervision of a competent engineer, and thirty men are employed on it at the present time.

On the preserve proper are a number of lakes all stocked with trout. While fishing in one of the smallest of these last summer, Mr. Litchfield found a brook trout that had been struck by a fish hawk and run up into a little inlet stream and died, that measured 20½in. long and weighed 6¼lbs. Under protection the fishing is greatly improving, and experience all tends to show that where the game is not already extinct protection will achieve wonderful results. In the case of the fishing the natives formerly were accustomed to skin the waters by means of set-lines and fishing on the spawning beds and through the ice. As a result, at the time when Mr. Litchfield first bought the tract the fishing was very poor. Now, however, it is as good as could be desired. To keep up the supply no permits for fishing are given, and all fish not required for the table are returned to the water immediately.

All Mr. Litchfield's pheasants have disappeared, as was to be expected; but, notwithstanding, he has turned out more this year, content to have his neighbors benefit, even if he himself does not. He has not been able to procure any wild turkeys or caribou, though he has advertised for both varieties. Mr. Litchfield is also on the market for moose; but though he has closed contracts for this game it has never materialized.

Blue Mountain Forest Park.

Chief among the fenced preserves, by reason of its size and importance, is the Corbin Blue Mountain Forest Park, near Newport, N. H. Wandering at will within the fences of this immense preserve, which includes a tract of more than forty square miles, are upward of 3,000 large game animals, including deer, elk, moose, buffalo and boar. Its conception dates back only ten years, and the first wild game was turned loose only a little over seven years ago. So much has been written of this park that no detailed description will be attempted here. Full details will be found in previous reports, and also in our issues for March 12, 1891, and May 26, 1892. It is worth noting, however, that the present increase of wild game is due almost wholly to an original stocking of about 300 animals.

The leading varieties of game in the park at present, according to Supt. Stockwell's estimate, are: Buffalo 54, elk 1,150, moose 200, white-tail deer 500, black-tail and Columbia 650. European red deer 75, besides thar, boar, etc.

We are indebted to Mr. Austin Corbin for the following particulars:

"Every species has done well, with the exception of the wild boar. We have hitherto fed these animals with corn during the winter, but decided this past winter to see if they could not get along without it. As a result, a great many died, and I imagine that none of the young ones born during the most severe season lived. The number is probably reduced to less than half of that we had last year. I fancy that we have at least 250 up there. Anyhow, we have quite enough, as these animals are very destructive to pasture land.

The buffalo have also done well, and we have to the present date twelve calves born this spring, and expect several others. The above figures, of course, do not include the portion of the herd sent to Van Cortlandt Park, which were originally twenty five, but received an increase of three young ones this year."

The Berkshire Game Preserve.

One of the most recent of American fenced preserves, and one that promises to be among the largest, is that of Hon. Wm. C Whitney in the Berkshires, near Lenox, Mass. Mr. Whitney owns about 10,000 acres of picturesque hill country, including Washington Mountain. Something more than 1,000 acres of this is at present inclosed with seven miles of Page fencing of a special pattern, which is higher and has a greater number of wires more closely spaced than the standard game preserve fence. It is 9ft. 8in. in height, and has twenty-eight horizontal steel wires and sixteen vertical wires to the rod. For 3ft. from the bottom the horizontal wires are only 3in. apart, so that it is impossible for dogs or even smaller animals to pass through the fence. Higher up, the spacing increases gradually to 4, 5, 6, 7 and 8in.

Last year thirty elk were turned loose in the park, and the game has been increased within a few weeks by the addition of thirteen buffalo, twenty blacktail deer and twenty antelope, ordered from H. K. Glidden, of the Moosehead Ranch, Jackson, Wyo. The buffalo include three bulls and ten cows.

St. Louis Park and Agricultural Co.

The preserve of the St. Louis Park and Agricultural Co. is in Taney county, Mo., in the southern part of the State, and forty miles from Chadwick, the nearest railroad station.

It comprises an area of 5,000 acres, inclosed with a barb wire fence 13ft. high.

It is stocked with elk, native deer, red deer, fallow deer

and Angora goats. The gentlemen interested are mostly officers of the Liggett & Myers Tobacco Co., of St. Louis.

"ST. LOUIS, June 15.—*Editor Forest and Stream:* We do not know that we can say more now than was said in our letter to you of June 29, 1896, except that all reports we have from our preserve keeper are encouraging. For some time past our stock of elk and deer has been increasing right along by births, and we presume this will continue for probably a month to come. We have made more headway this spring in the raising of Mongolian pheasants than formerly, and now we have quite a number of these birds. We are not hunting or killing any game on our preserve, except enough for table use when some of our members visit the club house, preferring to let them multiply; and will only kill them when they become too numerous. None of the members of the club have been able to visit the grounds this year, but all reports we have from there are to the effect that all the game is thriving, while the fishing is good in White River, which runs through our preserve. J. P. LITTON, Sec'y-Treas."

The Page Game Park.

The Page Woven Wire Fence Co. has a preserve at Adrian, Mich., where the different varieties of American game are bred and reared with almost uniform success. There are at the present time in the park two moose, nine buffalo, thirty-nine deer and seventeen elk, besides a small band of coyotes and eight black bears (including four new animals in the shape of cubs) These latter are kept in separate inclosures. Among the deer are a number of black tails. The common deer are from stock captured in the Adirondacks, Michigan and other widely separated localities. Eighteen fawns were born last year, including a number of sets of twins, but owing to the fact that the tract is not very well provided with suitable browse or shade a number of them died. The larger game animals usurped the most desirable shade, and the fawns thus driven out could not stand the exposure to the sun and elements.

The elk were purchased four years ago and have bred regularly since the first year. The buffalo came from three separate herds, which should prove a desirable factor in breeding. Two calves were born this year.

Furlough Lodge.

At his summer place in the Catskills, Mr. George J. Gould has a game preserve of 600 acres. This is inclosed with wire fencing, and is well stocked with ring-neck and Mongolian pheasants and various kinds of hares as well as large game. The greater part of the park is woodland, and the property includes a fine trout lake of twenty acres extent.

Mr. Gould's superintendent writes that there are now sixty-five elk in the preserve, and fifteen or twenty deer, including black-tail and common Virginia deer.

The Alling Game Preserve.

Col. Frank Alling, of Tacoma, Wash., has for some time given attention to stocking Fox Island, which lies five miles off shore to the southwest of Tacoma, distant from the city an hour and a half's steamboat ride. The island is about six miles long by two wide, and has an area of some 5,000 acres It is well watered and timbered, and wild land except for a few fruit ranches. Here Mr. Alling has liberated large numbers of ring-neck, golden, silver and Reeves pheasants, mountain and valley quail, and quail brought from the north of India. Deer are rapidly multiplying under his protection, and all the birds he has liberated are doing nicely, and are now leading about large coveys of young.

The Glen Beulah Park Association.

The Glen Beulah Park Association was recently incorporated under the laws of Colorado in conformance with Section 20 of the act relating to forest game and fish for the purpose of establishing a "park for breeding, domesticating and raising elk, antelope, deer or mountain sheep."

The Association controls 15,000 acres near the head of Roan Creek, Garfield county, seventeen miles from De Beque. This land is so located in the cañon of Clear Creek that it has been found necessary to erect fences in but few places, the walls of the cañon for the most part forming natural boundaries.

The intention of the Association is to protect the native game already within the enclosure. The officers are: President, John A. Hinebaugh; vice-president, E. Bennett; secretary, C. E. Noble; all of Colorado Springs.

Caton Park.

The late Judge John Dean Caton, author of the standard work, "Antelope and Deer of America," was probably the first man in this country to bring together in one park the different species of American game. Since his death most of his game has been disposed of, but as there are at present in the park seventeen common adult deer, eight fawns and one doe mule deer. We are indebted for this information to Mr. R. F. Prettyman, agent for the Rock Island Railroad at Ottawa, Ill., where the park is situated. Mr. Prettyman adds: "Three does escaped a short time ago and are still at large, they are supposed to each have a fawn. The increase since last year's report is the eight fawns above mentioned. There are no fish in the park and no shooting is allowed."

The Caton preserve was of small area as compared with some of the modern game parks, and probably never contained at any one time more than one hundred animals. It is enclosed with a picket fence 8ft. high.

Hon. W. R. Grace.

Hon. William R. Grace has a small herd of deer and a number of English pheasants on his country place at Great Neck, L. I. He writes: "The increase has been fair. There is no fishing on the place to speak of and no shooting is allowed."

Hon. Abram S. Hewitt.

The Hon. Abram S. Hewitt writes of his place in New Jersey: "I regard the attempt to preserve game upon my property at Ringwood as an entire failure. I do not care to enter into particulars, but it has seemed to be impossible to prevent the destruction of the birds and of the fish in the streams by any reasonable amount of supervision and protection. Beyond posting the property, therefore I have concluded to abandon all attempt for its preservation, except such fishing as may be found in the stream passing directly in front of my own residence."

Belle Meade Deer Park.

In connection with his famous stock farm near Nashville, Tenn., Gen. W. H. Jackson has a large deer park, of the type that was once common in Virginia and the South. Writing of his park, General Jackson says: "There are 500 acres in the deer park at Belle Meade. There are some 400 deer confined therein. The deer are well cared for, well protected, and seem to be quite satisfied with their lot. They are prolific breeders, and I cannot say that their confinement interferes in the least with their breeding."

Stave Island.

Mr. F. H. Wells, of Burlington, Vt., has established a preserve on Stave Island, in Lake Champlain, eleven miles north of Burlington. The island has an area of eighty six acres, and is inclosed with Page fencing, a necessary precaution in view of the fact that the lake freezes from shore to shore each winter. The preserve is well stocked with pheasants, quail and rabbits. Mr. Wells writes under date of July 2: "About Dec. 1, 1896. I turned loose three deer, one buck and two does. In June we found two fawn. There may be more fawn, but we have been unable to find them as yet. The quail and pheasants wintered fairly well."

Ne-ha-sa-ne Park.

NE HA-SA-NE, Lake Lila, N. Y., June 12.—*Editor Forest and Stream:* Replying to your letter asking for information regarding Dr. Wm. Seward Webb's Ne-ha sa-ne Park, I am pleased to give you the following: The park consists of about 40,000 acres in the very heart of the Adirondack forests, but only a small portion—about 8,000 acres—is fenced for big game. This was fenced for us four years ago by House & Co., of Chicago, with perfect success, and is, in my judgment, the best and safest forest fence built for this game. The fence is 9ft. high and made of No. 9 galvanized telegraph wire, sixteen wires being used in graduated widths with plenty of "guards" to keep wires in position. The deer in the park are native, and, not having been hounded in the last four years, have increased probably three-fourths. A close estimate of the number of native deer on so extensive an area could hardly be given. We have put in at different times, sixty elk and twenty moose. The elk were turned in during the fall, but I think, for choice of season, I would prefer the springtime. The elk did not seem to breed much the first year or two, but during the last two years every cow has had a calf. The moose have been in only two years, but many young are expected this spring I think the Adirondack forest better suited to moose and caribou than to elk, as the former derive their sustenance by browsing in the forest, while the elk are grazers. Yet elk bred here ought to do well. The number of fish have increased at least three-fourths in the last five years. While the State laws are, of course, strictly observed, we also have our park laws governing guests. No does are killed at any time, and not more than twenty-five trout a day are allowed to be taken by one person. No permits are granted. The park is used only by the owner, Dr. Wm. Seward Webb, his family and their guests. B. P. AMES, Supt.

ELK IN THE VELVET—PAGE PARK, MICHIGAN.

From the Game Laws in Brief.

Biltmore Estate.

IN CAMP, Ecusta, N. C.—*Editor Forest and Stream:* On the Biltmore Estate, owned by Mr. G. W. Vanderbilt, a deer park has been planned for some time. However, it will be a comparatively small affair, and is meant to meet landscape purposes more than sport. It will contain about 250 acres only, and will be stocked with fallow deer.

On the Biltmore Estate (about 6,000 acres under fence) and in Pisgah Forest (about 80,000 acres), the native game and the trout streams have been protected for a few years by an organized system of rangers and assistant rangers. The rangers are in charge of "ranges" containing 2,000 acres each on the Biltmore Estate, and about 25,000 acres in Pisgah Forest. Apart from their functions as game-keepers, the rangers are acting as foremen with any day laborers, and as supervisors with any contractors employed by the Forest Department, within their respective ranges.

A few Mongolian pheasants and a dozen wild goats were turned out. However, my impression is very strong that protection of the native game (Virginia deer, wild turkeys, ruffed grouse, woodcock, quail, and even rabbits) will afford better sport than the introduction of species that are not indigenous to this country.

Game protection, of course, must be combined with feeding during a few weeks in winter, and with checking wolves, bears, wildcats, fox, mink, coon and hounds, by means of steel traps, poison and rifle.

For the deer, some salting-troughs have been put up.

A small lake has been stocked with bass; six fishponds and the headwaters of Davidson's River with rainbow trout.

Pisgah Forest has been made accessible by about 250 miles of footpaths built recently. C. A. SCHENCK.

North Oaks.

President James J. Hill, of the Great Northern Railroad, has a game preserve at his country place, "North Oaks," a short distance north of St. Paul, Minn. Our Chicago correspondent, Mr. Hough, visited this preserve last winter, and the report of what he saw was printed in FOREST AND STREAM, April 3, 1897.

The North Oaks property embraces a tract of about 8,000 acres of rolling land, covered for the most part with a native growth of short oaks and other hardwood trees, and embellished by no less than seven lakes, some of them nearly a mile in their greatest measurement.

These lakes swarm with fish, and afford fine sport at the present time, as a result of protection There is also very good duck shooting to be had each fall, the ducks coming in for the wild rice, which grows luxuriantly about the lakes.

The most noteworthy feature of Mr. Hill's collection, however, is his buffalo herd. Last year there were twenty-two full-blood buffalo, besides six crosses, including four half-breeds and two three-quarter-breeds. These latter were all the offspring of one mother, an old Galloway cow, which raises a calf almost every year to a full-blooded buffalo sire. There were fourteen full-blood buffalo cows.

Mr. Hill has had trouble with his buffalo, and since the original purchase of stock, which was probably from the Allard herd, six animals have died and five others (bulls) were killed. The range given the buffalo is something over 400 acres in extent, comprising meadows, open glades and forest.

Among the other animals in the preserve, the most important, numerically considered, are the elk, of which there are eighteen. Three years ago five moose were released, but all died, probably owing to the scarcity of browse at the place where they were confined.

There are six whitetail deer—five does and a buck—and these, together with the elk, have been kept upon a wooded island eighty-seven acres in extent. The food on this island is insufficient for the game, necessitating feeding with oats, hay and cornstalk fodder, and at the time of our corespondent's visit it was the intention to enlarge their limits by the addition of an adjacent meadow and contiguous strips of low lying woodland and shrubbery The elk have done fairly well, and five calves were born in 1896. There are ten cows at present included in the herd Quail prairie chickens and pheasants are also found on the preserve.

Tranquility Park.

Mr. Rutherfurd Stuyvesant's game preserve at Allamuchy, N. J., includes an area of about 4,000 acres, enclosed with a close board fence 9ft high and one barb wire 11in. above the boards. Mr. C. W. Puffer, superintendent in charge, furnishes the following particulars:

"The deer are increasing fast. I think there are over 200 They wintered well—did not lose a deer last winter—and are having a good lot of fawns this summer. The fawns do not follow the does much yet, but will next month, when I can tell better about the increase. It is Mr. Stuyvesant's wish to have them as wild as possible, and I think they will suit him in this respect, as they seem to be getting wilder every year.

"The elk have done well, even better this last year than previous winters, for we have no losses whatever. I cannot tell how many calves the elk have, for they stay in the woods in the daytime and feed mostly nights in the hot weather, but I saw fifteen calves together at one time.

"We wintered forty-eight elk. We expect to kill some of the old bulls next fall.

"The beaver are increasing. I saw seven all swimming in the lake at once in May. Some of them have gone into the streams in the park and built dams, and as a result we have three lakes or ponds in the park now.

Last winter was a good winter for birds, and we have the pleasure of hearing the Bob White, which we haven't heard in the park before in three years.

"We have a few broods of ruffed grouse and any quantity of gray squirrels."

The New York Zoological Park.

Though the Zoölogical Park to be established in Bronx

Park, New York city, does not, strictly speaking, come under the head of a game preserve, it deserves mention in this connection as a breeding center for American game animals. Here will be found elk, antelope, deer, buffalo and all the principal varieties of our big game living under conditions as nearly like as it is possible to make them those with which they were familiar in their wild state

The plans of the Zoölogical Society, as stated by Director William T. Honraday, include a buffalo range of twenty acres and like spacious enclosures for the other important animals. A herd of twenty or twenty-five buffalo will be kept, including both sexes and all ages. It will be a "show herd," composed of animals selected for their beauty and perfection of type.

Similarly the elk group will be thoroughly representative of the species Here ten or twelve animals will be enough for the typical herd. No attempt will be made to secure a large number of any one species, but on the other hand the greatest care will be taken to present a series of strong, healthy animals at different ages. Whenever possible, the enclosing fences will be sunk so that spectators can look directly at the animals from above. The present plans include at least a mile of enclosures for large animals that can be so overlooked.

The Bear Swamp Game Preserve.

The Bear Swamp Game Park, located in Sussex county, N J., contains about 1 000 acres of woodland, the timber consisting of oak and chestnut principally. A swamp of about 100 acres, thickly covered with pine, hemlock and laurel, near the center of the tract, adds beauty to the park as well as protection to the game. This is known as the Bear Swamp, and from it the park derives its name. The tract was purchased in 1894 by Dr. E S. Dalrymple, of Branchville, N. J., with the view of forming a private game preserve The park was fenced about a year ago with 8ft. Page woven wire. There has been no shooting allowed since 1894, and as a result the native game, consisting of grouse and rabbits, has increased rapidly. Quail are also to be found, though they are not very abundant.

The park is not yet stocked to its full capacity. A number of Canada hares were liberated in the spring of 1896 and have made a good showing, as have also some English pheasants turned out at the same time. Thirty or forty Belgian hares, liberated last summer, have not been heard from, having probably fallen victims to gray foxes, which were at one time quite numerous, and which have destroyed considerable small game. The foxes are now, we think, practically exterminated.

A number of Virginia deer were turned loose in the park last year. They have been seen occasionally since, and have prospered Some fawns have been seen this summer.

The park is watered by a stream and tributaries which empty into Lake Owassa. This lake, which is some two miles in extent, lies along the western side of the park. It affords excellent bass fishing, and is free to the public.

Hon. J. F. Duncombe.

Hon. J. F. Duncombe, Fort Dodge, Ia., writes: "I have had in my deer park from twelve to thirty deer until last March, for twenty-nine years, or about that time. Unfortunately in two nights the dogs got into my deer park and destroyed all of them except two. I have now, I am sorry to say, but two remaining."

In Northern Montana.

COLUMBIA FALLS, Mont., June 16 —*Editor Forest and Stream:* I would say in regard to the information which you desire, that the elk captured by Christensen Brothers, Rogers and myself in 1896, and those previously caught by us, are doing well in the parks of Messrs Howell & Ryther in this valley.

They are very prolific; in fact, three of the four cows which we brought out last spring raised calves that season. White-tail deer in the parks mentioned do not seem to do so well. Deer, in my opinion, should not be confined in parks, unless of large area, as their temperament and delicate constitution is such as will not warrant their being safely handled to any extent, and they do much better when left to shift for themselves.

Mr. Rogers and I have for the past seven months spent most of our time in the mountains in the eastern part of the valley and north to the Canadian boundary, a distance of about sixty miles from Columbia Falls.

Our work was looking up the game and making an estimate—comparing it with what I knew of the game in the vicinity seven years ago. Mr Rogers also did some photographing.

We found that the white-tail deer had increased wonderfully. We saw a great many every time we passed through their winter quarters. Their increase is readily solved when the fact is known that no hunter can get at them after winter sets in without a good deal of hard snowshoeing, for there is a high divide to be crossed before one can get at them. Furthermore, a few of us who are interested in that section of the country, by vigorous efforts have kept the Indians (Stony Indians, from Canada) out of there. They nearly cleaned the country of game ten years ago; in fact, the black-tail deer got such a blow that they never recovered, though a few wintered on the North Fork of the Flathead River, near the boundary, and a few wintered further south on the other side of the river. The remnant of a band of moose that the Indians left have increased fast. We estimated that there were from thirty to forty moose in that section, judging from the amount of sign we saw. We were not in the elk region this winter, so cannot vouch for them, but from inquiries made I did not hear of any being killed by hunters or otherwise. As the winter was exceptionally mild, I don't think they could have decreased in numbers.

The mountain goats do not seem to have decreased in numbers in our vicinity. We could have captured several had we wished to, as they came down into the timber to feed, when the deep snow came. Fishing is good. Trout were taking the fly when we left camp, June 5.

Mr. Rogers caught two bull trout, weighing 3 and 6lbs. respectively, while trolling one morning—the last of May—on Cleveland Lake, a beautiful sheet of water eight and a half miles long by one quarter to three-quarters of a mile in width. Waterfowl are not worth mentioning, as the flight is short and but few birds come this way. Partridges and fool-hens are as plentiful as one could wish, and blue grouse are by no means scarce.

We finished our winter's campaign with a bear hunt this spring. Though not successful in making a large catch, we are perfectly satisfied with the quality. We got two large silver-tips; the larger skin measures 7ft. 6in. in length by 6½ft. in width.

The other bear is a trifle smaller. Both are well furred, and are rare specimens. The weather so far has been cool and dry this season, which is favorable to young birds and game in general. Hoping this may be of interest to your readers, as there is seldom any communication from this part of Montana. C. A. BRYANT.

MAINE GAME AND GUIDES.

STATE OF MAINE, COMMISSIONERS OF INLAND FISHERIES AND GAME, Augusta, July 22.—*Editor Forest and Stream:* So many contradictory statements are being published relative to the hunting, killing, etc., of our big game, and the "guides' registration bill," that I venture to send you an editorial taken from the Bangor *News* of July 21, the leading newspaper in northern and eastern Maine, where our big game is. It is a well considered article, and hits the nail on the head squarely. L. T. CARLETON.

The *News* says: Lumbermen, river drivers and tourists who have lately come down from the up-river woods tell different stories about the big game which they have seen, and concerning which they have heard reports. While individual testimony differs widely, the majority of reports are agreed upon several things. Moose and caribou are rare and shy. They seem to grow less plentiful every year, a fact which is no doubt due to persistent hunting in open season. Though moose and caribou are occasionally killed out of season, the cases of violation are not at all common and grow less frequent every year. The considerate, yet rigid, enforcement of the game laws which the Commissioners have undertaken and carried out successfully has made the life of the professional poacher very sad. He boasts of what he has done and is going to do in the line of slaughter; he tells how easy it is to get a deer or a moose in close time; he calls the wardens fools and cowards, and he makes a lot of verbal warfare which sounds very brave. He does all of this before strangers and tenderfeet who have come to the woods for big game regardless of the law. When a warden comes along he cowers, stammers and pleads for mercy, like an unweaned calf. He never killed a deer; the deer which the warden has found dead with water on its hide and a bullet hole in its neck committed suicide, and finally, to prove that he is honest, he boldly asserts that there are no deer in his region; therefore he could not kill any. The men of this class lived on short commons for two years, and most of them have gone out of the business.

Everybody says that deer are unusually plentiful this year. They are in all parts of Maine, showing themselves boldly at midday and despoiling the planted crops in the fields until the farmers are raging mad. Reports of illegal killing, while common and bloody enough to satisfy the readers of dime novels, are mostly inventions gotten up to vex the wardens and annoy the Commissioners. No doubt that a good number of deer have been dogged during the present summer. A dog running at large is not a responsible animal and does not comprehend the law against dogging deer. While dogs have been chasing deer in several parts of eastern Maine, it is hard work to prove that they were put upon the chase by men, and a community can hardly be blamed for the voluntary crimes of a few curs. This question of dogging deer is a hard one to settle. Those who have visited the sporting camps in the Maine woods have no doubt noticed that nearly every camp supports one or more dogs. When the dogs are hounds, beagles, harriers or mongrels of these breeds, the presumption is that they are kept for the purpose of chasing deer, and thus afford sport for the patrons of the camps. It is an actual fact that most any kind of a dog will follow a deer, and the dogs of the hound kind are not the only offenders for which the wardens should be watchful. The beautiful curly-coated water spaniel, which many men keep for the purpose of treeing partridges, is also a most industrious animal when following the tracks of a deer or a rabbit. It has a sharp, clear voice and a steady way of following which generally ends in success. While it is not argued that all or half the Irish spaniels kept in camps are there to chase deer, it will be safe to keep these animals in view when they run loose in the woods. In fact, a dog is an irresponsible animal that is never safe among game unless it has been thoroughly trained, and is accompanied by some person to regulate its conduct. The tendency of modern legislation is to restrict the liberty of dogs. Should the dogging of deer increase to an alarming extent in Maine, a law compelling owners of dogs to keep them under restraint will be demanded, and if the next Legislature has the same temper of the last one, such a law will receive a triumphant passage through both houses.

Upon the whole, the Commissioners are making a brave effort to stem the tide of tradition and prejudice which still prevails in the far backwoods. They are enforcing the laws much better than they were ever enforced before, and they are making a good fight to preserve the fish and game of Maine, so the great sporting grounds may be a perpetual source of income and pleasure to the people of Maine. No doubt the warden service can be improved, though it is better now than ever before. Most of the wardens who work on salary under orders from the Commissioners are wide awake and earnest men. Some of them are rather too aged for active service in running down poachers, but their minds are alert, and their wide knowledge of mankind makes their services valuable. The trouble lies in the local wardens, whose duty it is to guard certain streams and ponds near their homes. These men, having friends and enemies, are prone to reward the former and punish the latter more than actual justice demands. But this cannot be remedied until the State grants money enough to keep all the wardens under salary.

It is too early to predict the result of the new guide license act, for which Commissioner Carleton made such a great fight last winter. The guides, who oppose the bill and who threatened to shoot, burn and destroy, have nearly all come up and taken out licenses, as the *News* said they would do. To refuse a license and attempt to guide is an open declaration of outlawry—a hoisting of the black flag of piracy. Such threats simply cast suspicions upon the guides who made them, and did not for a moment hinder the enactment of a just and long-needed law. Since the act was passed the Commissioners have been firm and most generous to all their old foes. No competent man has been refused a license because of his former opposition. All that is asked of him is that he observes the laws from now on. His past talk and his past acts are all forgotten, wiped out as if they had never been. The guides are now placed upon their honor. So long as they deport themselves correctly they will receive the cordial support and encouragement of the Commissioners, and whenever one of them steps over the boundary the Commissioners hold his punishment in their own hands. In theory the guides' license act is one of the best laws ever passed by any Legislature. Up to date it is working beautifully. Should the fair promises of to-day be fulfilled in the autumn the new law will save Maine many thousands of dollars every year and will do more in the line of game preservation than an annual appropriation of $100,000.

The fish and game interests of Maine are in good hands. Let the Commissioners follow up the work they have started so well.

BILL CHADWICK'S.

I HAD been sent home to recover from a severe illness contracted in a camp before Yorktown. While debating what I should do and where best to go to hasten my recovery and escape from the heat, some friend suggested "Bill Chadwick's," on Squan Beach, near the head of Barnegat Bay. I had often heard of this spot as a famous place for bay snipe, wildfowl and beach parties, to say nothing of soft shell crabs, bluefish and applejack.

I was not long in finding a shooting chum to join me, and so it happened that one warm July day found us driving along the deep, sandy roads and through the lonesome pines that lay between Red Bank and our destination. Our driver was a good-natured Jerseyman, very jolly, but with a great weakness for stopping at every tavern to sample the applejack, which proceeding, as much as the sandy roads, lengthened our journey to such an extent that it was quite dark before we reached the hard beach along the ocean, which formed the last stage of our journey. This part of our drive was most delightful. The cool sea breeze, blowing fresh off the ocean, was charming after our hot, dusty drive, and banished entirely the clouds of mosquitoes that had tormented us for several hours past. The waves pounded on the shore, sending the salt spray almost into our faces, and the line of foam hissing and curling up to our horses' feet. Plover and bay birds innumerable whistled and called high up in the air, giving promise of glorious sport for the morrow; and in the East the great round face of the full moon lit up the wrinkled surface of the rolling sea; while far away to the south Barnegat Light blinked and flashed its warning to all mariners. We supped heartily and well at Charley Moxon's and resumed our drive. Presently the twinkling lights of Chadwick's hospitable tavern was sighted, but it was fully 9 P. M. before Quango, the Newfoundland, welcomed us with noisy barking and Bill had us out on the long, low-roofed piazza, shaking us by the hand. We were at once ushered into the cozy little bar-room, so thick with tobacco smoke that it was almost impossible to recognize any one across the room. Here a goodly company of gunners and sportsmen were assembled, a most cosmopolitan crowd. After the usual New Jersey welcome we adjourned to the dining-room, where we enjoyed a cup of Mrs. Chadwick's excellent coffee, and then returned to listen to the fishing and shooting talk going on around Bill's bar, to say nothing of ghost stories, tales of shipwrecks and the like, while off in a corner a couple of young men were loudly arguing over the rival merits of the Hong Kong and Yokohama beauties. Tired and sleepy, we were soon shown to our respective apartments by Bill, who promised to call us in time for the early morning shooting.

It seemed to me to be only five minutes after when the flash of Chadwick's candle awakened me. "Half past 3, Major," said Bill; "time to get up." And up I got. We were provided with a bag of stools, as the wooden decoys are called in that locality, and directed to a blind made of green bushes and weeds only a couple of hundred yards from the house. Urged by the distant calls of passing flocks of yellow-legs and dowitchers, we were not long in placing out our decoys on a convenient sand bar and seating ourselves comfortably in our blind. Both my chum and myself were fairly good callers, and as there was a steady flight of the various kinds of bay snipe we soon had a goodly string of birds, notwithstanding many villainous misses. After a couple of hours of good sport the welcome sound of Chadwick's breakfast horn recalled us to the house. Leaving our guns in the blind we started back to breakfast, for which Mrs. Chadwick was justly famous. Coffee, bluefish, clam fritters and flap jacks appeared and disappeared in quick succession, and back we went to our blind. We now regretted having left our guns in the blind, for a flock of fine marlin passed us within easy range in answer to our whistle, but seeing our helpless condition went their way rejoicing. Shortly after a fine bunch of willet swirled over our decoys and departed, leaving a number behind them. By 10 o'clock the sun grew too hot for comfort, so we adjourned to the beach and enjoyed a refreshing dip in the surf in company of a jolly party of young people from Tom's River, piloted over by the veteran Capt. Gulick. Toward sundown there was another good flight, and when we returned to supper we were able to decorate Bill's piazza with a noble string of birds.

To make a long story short, we spent a happy week here enjoying good shooting, and once or twice we varied our sport by a sail down the bay to Barnegat Light, where we enjoyed elegant weakfishing and bluefishing. At the end of the week we returned to the city much better for our trip, and distributed our birds among our admiring and grateful friends.

A villainous railroad now runs down the beach and the bay birds know it no more, so let no sportsman go down there expecting to find shooting. There is nothing left but the mosquitoes, and the glory of Bill Chadwick's has departed forever. WAKEMAN HOLBERTON.

Virginia Game Prospects.

PINE VIEW, Va.—*Editor Forest and Stream:* The call of Bob White is again with us almost in the old-time plenty. I think I am safe in saying that there are 120 pairs nesting (some are out with the brood) within three miles of this place. It will be a close season with them again this year—then for sport that will awaken the sluggish blood of the sportsman. There are about eleven broods of wild turkeys in same scope of country. Pheasants are doing well. Rabbits were never more plenty, with a few deer. W. L. C.

A High-Priced Guide.

A GENTLEMAN of the East, who was probably in search of information for business purposes in regard to good shooting country, recently sent out to Mr. W. B. Mershon, of Saginaw, E. S., Mich., what was probably a circular letter, though on its face it did not bear the appearance of one. The sender probably had very little acquaintance with Mr. Mershon, for the document in question read as follows:

"MR. W. B. MERSHON, Saginaw, Mich.—Dear Sir: Will you kindly tell me what inducements your country offers to sportsmen. What different kinds of game you have, and what you consider the best season for each kind. Also let me know what accommodations you have for taking care of sportsmen, how many you can take care of at one time, whether you have dogs, horses and decoys if necessary. Give me an idea of your usual prices and such information as you may deem necessary. An early reply will greatly oblige."

It happens that Mr. Mershon is not engaged in the business of guiding, though he does shoot and fish a good deal on his own account. He owns a part of the famous shooting car, the W. B. Mershon, which has been elsewhere mentioned in FOREST AND STREAM from time to time, and when he is not out on some shooting or fishing trip, or engaged in handling a political campaign, Mr. Mershon runs a good, healthy business of his own. He receives the request for information as to his ability at guiding very good-naturedly, and says that he has advised the inquirer that Saginaw is not exactly the sort of town the inquirer thinks, but has several boarding houses, about the size of the Adams House, the Vincent or the old Tremont, of Boston, and the hunter could probably get a lunch put up without much difficulty. "As to what I charge," said Mr. Mershon, "I said it all depended on the work I had to to, and that I had come to the conclusion, when my term of office as mayor of the city came to an end a year ago, that $10,000 was a small salary."

Mr. Mershon is, as I may personally testify, an excellent guide, though it is necessary to write him a little in advance, as his time is pretty well taken. He is the sort of guide you find usually in the South—the sort that will not go hunting or fishing with you for anything but the fun of it. Guiding is a peculiarly Northern institution. Of all guides I have ever had along with me with special cars of their own, Mr. Mershon will stand comparison with the best. He has plenty of decoys and very good dogs, and his table is above reproach. I really think Eastern sportsmen might do worse than to engage him, if they can stand the price.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Long Island Meadow Hens.

I DO not understand what the Long Island constables are doing. Last week a party went to Rock Lead (near Long Beach Hotel) and killed twenty seven meadow hens. It is a crime, as just now they have either eggs or young ones. Another family in Christian Huck has been living for several weeks on meadow hen eggs, picked out in the meadow.

C. B.

[The New York law protects meadow hens from Aug 16 to Jan. 1, and permits them to be killed at other times.]

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents.

THE KINGFISHERS.

WHEN we went to Presque Isle Lake, Wisconsin, last year, for our summer camp, we were treated so "out o' sight" by the C. H. & D., Monon, and Chicago & Northwestern Railway people that we have decided to take another hitch at it, and make the camp at the same place, "Skunk P'int," so named by Dick Morris on account of a "flock o' skunks"—five of them—that had a temporary abiding place under an old birch root at the foot of the bank, and only a couple of rods or so from the tents, albeit, I "hived" two of them with a mink trap and drowned them in the lake. (It may not be generally known that a skunk fast in a trap will not open its "perfume valve," but may be carried by the trap chain, tied to a short pole, as a precautionary measure, to any handy water and drowned, without the slightest danger from the "hind eend o' the varmint.")

We found the best fishing in Presque Isle and several other nearby lakes that we have had for years, a fine camping place on a high and dry point well shaded with a growth of hemlock, pine, white cedar and birch, and a wonderful spring bubbling out near the lake under the bank a few rods away; a spring, the temperature of which was exactly 42°, tested by a reliable thermometer.

We "got onto" this lake through a letter in FOREST AND STREAM of Nov. 2, 1895, and took the route suggested by the writer of that letter, via Green Bay and Powers to Marenisco, Michigan, the best connections for anyone going there from south of Chicago. From Marenisco we drove about fifteen miles to the foot of the lake, the last four of which, after crossing the State line into Wisconsin, is a "caution to tender feet."

However, Mr. E. A. Ormes writes me that he has worked that part of the road till it is a very fair road to drive over; that both hind wheels of a wagon will stay on the ground at the same time, which they wouldn't do when we drove over it.

Ormes runs a summer resort, 40 rods across an arm of the lake from Skunk P'int, and it would be hard to find a better place in that region where one could enjoy the solitude of the woods and find quiet and rest for the tired brain and body, away from the noise, and turmoil, and toil, and dust, and dirt, and heat, that make life a burden to the city man and woman during the hot months.

There are more than a dozen lakes that can be reached from Presque Isle Lake by portaging from a few rods to a mile and a half, the best one in easy reach being Pappoose Lake, reached by a portage of about 15 rods across to Katinka Lake, and another of 100 rods across to Pappoose. We took a great many bass out of this lake running from 2 to 3¾lbs. in weight, and several maskinonge. Pappoose Lake lies just south of the "divide," its waters finding their way into the Mississippi, while Presque Isle Lake, not a mile away, has an outlet into Lake Superior through the Presque Isle River. There are no maskinonge found in waters north of the "divide." We took, while camped there, 519 bass, most of which were returned unhurt, as we had no use for them. We got, in all, twenty-five maskinonge—Charley Furr the largest, weighing 14½lbs., and Dick Morris the smallest, a little fellow of just ¾lb. weight, not much heavier, Dick said, than the spoon he took him with. We caught so many pike-perch of 1½ to 6lbs. in Pappoose Lake that we lost the count of them early in the fight.

We had a good time, a good camp, great fishing, and the most glorious spring we have ever found in the North Woods, and we are going to leave over the same trail on the 30th of this month and go back and get some more of it all before it is gone.

The latch-string is always hangin' out at the "Camp of the Kingfishers" for any brother of the rod to pull and come in.

KINGFISHER.

CINCINNATI, O., July 18.

ONLY A BROWN-HACKLE.

Is there anything closer to an angler's heart than his fly-book? I know of a case where a burglar, among other things, took a fly-book. He was arrested, and speedily convicted and imprisoned. He cleared things out pretty well in the house, but the owner seemed to care nothing about the missing fur coats, sealskin sacques, silverware, and other valuable lares and penates, but he did bewail the loss of his book of flies. The other things he could buy again, but to get together such an assortment of valuable flies seemed to him an impossible thing. He had been years collecting them, picking up odd ones here and there, until, for quality and variety, his book could not be excelled.

It was a fly storehouse, as it were. No matter where he intended fishing, or whether for trout, bass or salmon, he could always find a choice assortment to draw from with which to fill up a supplementary book.

Although it was some time ago, he yet bewails the loss of that fly-book. Many have been the efforts to get track of it, but all in vain. He has gone to the expense of sending to the prison, in a distant city, and endeavoring to prevail upon the convict to divulge the hiding-place of the book, but without success. A persistent search of the pawnshops, and periodical advertising, have produced no better results.

There were flies in that book for trout and salmon in Irish waters; flies for the salmon and trout of the Scotch lakes and the English streams, and flies for the salmon of Norway. The favorites from Maine to California, and from one end of Canada to another, were collected in that wallet. Anything and everything, from the feather-down midget with cobweb gut to the lordly salmon fly, absolutely irresistible to the lurking salmon deep down in the icy pools of the Cascapedia.

There were flies in that book on which famous bass, trout and salmon had been hooked, each fly carrying with it memories of battles fought from canoes among the rushing, swirling waters.

Almost every angler has a fish skeleton in his closet that he carries through life, in the shape of a lost fish. When he recalls the loss of that fish a cloud overspreads his face, and, disregarding all rules that relate to chestnut stories, for the hundredth time in his life goes over the ground again. How he struck the fish after the third cast; it was a Jock-Scott fly; the way he ran with the line; the number of times he broke water, and the length of his leaps; the way he sulked, and the short, vicious runs he made; and then came the trying time as he was led up to the gaff, his silvery side showing through the water, and jaws distended—and—and—and—just as the guide was about to set the gaff, one more frantic twist—the leader parted, and he was off. You have caught many salmon in many waters, but the likes of that lost fish you never expect to see again. The look of sadness that covers the face of the narrator is similar to that expression which always accompanies the tale of the stolen fly-book.

And when you come to think of it, what better diary does a man want of his fishing trips than his carefully-kept fly-book? In the midst of winter, on a Sunday afternoon, you are tempted to spend a few moments looking over your tackle. You pick up your fly-book, and, turning over leaves and looking through pockets, you strike reminders of happy pleasant days at every turn.

In one pocket by itself you find a leader and a brown-hackle. You carefully take it out and look it over, and get to thinking. You go back a score of years. It is your vacation time, and you are stepping off the train that has brought you from the hot and dusty city. You are full of life and enjoying every moment, and bound to get out of your two weeks every atom of pleasure. Farmer Brown, whose hospitality you have tested on former fishing trips, is there with his rig at the depot. You gaze at the meadows and surrounding hills and mountains, and greet them as you would old friends.

You learn trout never were so plenty, and they're rising well to a fly, but the boys stick to "worms" There's a monster in the pool below the house, that the boys have all had a try at; but it's the same old story, either the line breaks or the hook tears loose—anyway, they don't get the trout, and he is still to be seen at the bottom of the pool. This kind of talk you listen to with tingling nerves and bated breath. The horse goes too slowly; time flies not fast enough until you can get waist-deep in the stream and try conclusions with that fish. It's late in the afternoon, but you'll have time to change your clothes, get supper, and be at the pool before dusk.

A warm greeting awaits you at the farmhouse, and after shaking hands with goodwife Brown, barefooted Samuel, who has just brought in the cows, takes you one side and tells you the story all over again about the big trout.

Before sundown, with rod in hand and Sam by your side, you are wending your way across the meadows toward the alder-fringed stream. The fish you are after is a wary old fellow, and it takes considerable skill to lure him up. So you walk gently, and as you near an open place in the alders near the pool, you got on all fours and crawl the rest of the way on your belly, being entertained by Sam, who gives you the history of that trout in a whisper. The sun is down behind the hills, and a gentle breeze comes up rippling the surface of the water.

With great caution you straighten out your line, and finally make your cast above the pool. You have used but a single fly, a brown-hackle, thinking best not to startle the trout by too many flies at once. Luck and fortune are with you. A mighty swirl; a disappearance of the fly; a turn of the wrist; a bending of the rod; a shrill screech as the line pays out; a panorama of an immense trout making a traveling rainbow of color as he breaks water, and the fight is on in earnest. You are on your feet, and into the stream up to your waist. You have a veteran to deal with, but the tactics that have broken the lines and torn loose the hooks of the worm-fishing country lads serve no purpose now. The supple rod gives no such purchase as the alder pole, and there is nothing left for the fish to do but dart and leap about, with the gentle but endless strain of the rod and line on his jaw. The stream was wide and deep in some spots, one after another of which the trout sought in his runs.

You are fresh from your desk. Your muscles are soft, and already the fight seems a long one to you: but it is no time to waver. The fish is less active, but yet full of trick and ginger. He doesn't leap so high nor run so far, but there is fight in him yet.

The incessant "Come on" of the rod is telling the story, and if luck does not fail you, in a few minutes more you will have him gasping on the sod. As the fish weakens you become more careful and nervous, for it is at the last of the fight, as a rule, when the big fish is lost. A slack line just for a moment will serve the fish's purpose and see your hook ejected from the torn jaw. Sam, with the net, is in the stream, behind you, and by your orders he moves to shallow water near the bank. Your trout is on his side and does not evidence any more fight; he is tuckered out—has made his good fight and lost.

You work him slowly toward shallow water, where the beach shingles down, and at the word Sam advances from behind, and, presto! the trout is safe. You live the whole thing all over again, and unconsciously wipe a few beads of perspiration from your face. With that old leader and fly before you, you make the fight all over as if it were yesterday. It turns back for you the hand of time, and you live the scene all over again. What a faculty memory is, and in connection with an old fly-book what hours of pleasure one can get by associating one with the other.

What a wealth of old memories; of streams and lakes in all parts of the world; of salmon of mighty weight and length; of rainbow trout and busy bass, were gone for ever when the burglar laid his sacrilegious hands upon that fly-book.

CHAS. CHRISTADORO.

ST. PAUL, Minn.

IN THE SIERRA NEVADAS.

IT was with pleasure and bright anticipations that I looked forward to the near approach of June 1, when I was to pack my traps and start on my annual outing trip to Donner Lake, that gem of mountain waters situated high up in the Sierra Nevada Mountains at an altitude of nearly 6,000ft.

Soon the long looked-for came at last, and with a couple of well packed grips I bade adieu to the "City of Sudden Deaths," and taking the 6 P. M. overland was soon whirling away from the rattle, jar and bang of this dusty city, away into the fresh green fields and from the busy haunts of trade.

Truckee was reached in the morning, where we left our train, and after seeing our traps safely stored we started for the glistening waters of Donner, three miles away.

The smell of the pines was refreshing, the rippling, gushing of the babbling brook and the pure, bracing mountain air added their delights, while in the distance the snow-capped mountain range of the lofty Sierras made a picture time cannot efface.

Donner Lake is memorable on account of the tragic fate that befell a party of pioneers in the year 1846 While seeking the new Eldorado, they were overtaken here by a fearful snowstorm, and forty-six perished from the untold horrors of starvation.

The lake derives its name from the leader of the party. It is a beautiful sheet of water some three miles in length and one in width, and is surrounded on all sides by the Sierra Nevada range.

A rude cross now marks the spot where, fifty years ago, were enacted the scenes of the tragedy.

Here we are once more at Donner Lake. The gentle swish-swash of whose waves seem to extend to us a merry greeting.

After putting our cabin in order and enjoying a quiet lunch, with a drink of pure mountain water—which cannot be excelled on earth—we draw our rods, and, selecting some tempting flies, hurry down to the dam in eager anticipation of the good sport to follow.

Sneaking softly up to the whirling rapids I make a cast, when, with a swish, tug and pull, I have a beauty, and a rainbow, too. Once more, and again do they respond, and not until we had landed fifteen beauties—whose combined weight was 21¼lbs.—did we call a halt.

Gathering up our fish, we were soon on our way back to the quiet little town of Truckee, and found awaiting us a supper prepared by my old friend Mrs. S

We were up long before the sun, and after a hearty breakfast of baked trout, fried chicken, smoking pancakes and hot coffee, started out on a sight-seeing expedition.

After doing the town we laid in our supplies, and, loading our luggage, were soon *en route* for camp life. Arriving at our cabin, which we named Possum Cottage, we flung "Old Glory" to the breeze, and after unpacking and setting things to rights, settled down to a quiet afternoon at home. After a good night's rest—being lulled to sleep by the gentle swish of the waves and the harsh cry of the coyote—we were gently awakened by our old friend of boyhood, Robin Redbreast, singing the same sweet song from his high perch in a mountain pine near our cabin, and which I had not heard for over twenty long years. As I listened I wondered if it was not the same bird that used to sing in the maple that stood in front of the old home in the far away East. Every morning at 4 o'clock, as long as I remained, did this same sweet singer visit me, and from his shady perch warble the same sweet song. It seemed like meeting an old friend.

We gave up this day-dreaming and soon had a couple of rainbows frying in the pan. After a hearty meal, selecting some of our most tempting flies, we stowed ourselves on board our jaunty little skiff, the Possum, for a good row up the lake.

The sun was just climbing over the snow-capped mountain tops as we pulled out, and so engrossed were we in the beautiful scenery, the high range of mountains, with the long, dark line of snow sheds stretching away along their face, the quiet stillness and the glistening water, that we quite forgot our mission. But shaking ourselves together, we resumed our pull and were right among them.

Most of the fish were of what is known here as the cut-throat species (although where they derive that I am at a loss to determine), with now and then a silver beauty.

On reaching Possum Cottage again and counting our catch, found we had just thirty-five, whose combined weight tipped the beam at 96lbs 7oz.

Here are cooling breezes all through the summer, the purest and the best of water, with fishing and scenery that is hard to surpass; and only six miles, with a good road and pleasant drive to Truckee, and the Overland R. R.

Having had our fill of lake fishing, we resolved to break camp and try the famous Truckee River and adjacent creeks.

Next morning before sun up found us doing the Truckee with fair success, but owing to high water our catch was not phenomenal. September is the best month with the fly. Truckee River could and should be the ideal fishing water on this coast, being, as it is, the outlet of Tahoe and Donner lakes; but owing to the many dams, it is utterly impossible for fish to ascend the stream. I used to think that there was a State law obliging corporations doing business on a river to put in fishways, but I failed to observe more than two, and one of these was high and dry on the bank.

Our next visit was to Alder Creek, distance four miles from Truckee, where but a few years since were planted New Hampshire trout, but owing to high water we failed to secure many. Martis and Donner creeks were visited with poor success. While I was fishing at Donner Lake near the dam, a laughable incident took place. I had just landed a beauty, and dropping him into the weeds that lined the bank, I continued fishing down stream about 50yds., when, on looking back, I saw my newly-caught prize in the jaws of a big mink, which speedily disappeared with him in the stream.

One more adventure. While whipping the Truckee, I came to a black, swampy spot, and on looking out for a hard place to jump on to, picked out a low bunch of what I took to be dried willows or dead sagebrush. I reasoned that if I could jump on to that I could jump on to an old log at the next jump, and would be all right then. Reasoning after this fashion, I seized my rod tightly and made the jump. But what struck me? Who am I? Where am I at? For no sooner had I struck that innocent little bunch of shrubs, when w-o-o-s-h! up jumped a big black sow and landed me backwards in the blackest and softest of black mud.

To say that I was rattled fails to express my feelings, for honestly I did not know what town I was in. When I pulled myself together and looked around and saw the author of my strange position, not over 20ft. away, with bristles all ruffed the wrong way, eyes flashing fire and her jaws snapping together like a castanet solo, I suddenly remembered that I had left my gun at home, besides I had fish enough for one day, and, gradually backing away from my dusky companion, I left her to resume her *siesta* undisturbed.

But as every fish line has an end, so has my outing. After enjoying over five weeks of the best of fishing, reluctantly I turned my face cityward, where, after a pleasant ride, I arrived, feeling much invigorated and in a happier frame of mind.

E. NETTLETON.

SAN FRANCISCO.

MEN I HAVE FISHED WITH.

LI.—George Tweddle.

AMONG the playmates of early boyhood now held in pleasant remembrance is George Tweddle, the son of a wealthy maltster of Albany, N. Y. George was a city boy, while I was a "Greenbushwhacker," as the Albany boys termed those who lived in the village of Greenbush, across the Hudson River. As I knew all the desirable fishing places within the reach of boys, George was fond of coming over to see me on Saturdays or other school holidays. We must have been about twelve years old when I took him to fish in the pond of the old red mill, which looked down on the village from a height of some 200ft., and whose waters tumbled about half that distance over the dark slate rock and showed up against it as a foamy cataract from the opposite side of the river. The old mill has been replaced by a smaller one lower down, the pond has shrunken, the stream which supplied it is almost dry, and the water no longer leaps down the precipices and foams over the slopes as it did half a century ago. There are handsome country seats where we boys shot rabbits, and the place looked unfamiliar when I saw it last summer.

When I first showed George how to fish I was under the tutelage of John Atwood, an older boy, whom I wrote of in the third article of this series, exactly a year ago, and who had declared that there was "no fun fishin' with a pole, 'cause you jerk 'em out when your float goes down and don't feel 'em wiggle." So I rigged our lines with light sinkers, two hooks on snoods fastened on each line above the sinkers. Then with baits of angleworms we twirled the lines and dropped the sinkers some 30ft. away in the pond, and awaited the pleasure of the fish. Fishing tackle was not to be had in such variety as to-day, and we village boys bought ours of the grocers, the only ones in the place who kept such stock. We bought Limerick hooks, with the end of the shank flattened, and then cut off a piece of the fish line for a snood and made the hook fast with several half-hitches, clumsy, but strong and effective for our kind of fishing. The hooks were sold two and three for a cent, according to size, while lines cost 2 cents a knot of 15ft, as I remember. We pounded out the sinkers from pieces of lead into long, four-sided, tapering shapes, finished them with a file, and made a hole in the smaller end; and there we were, rigged out for a season's fishing for about 10 cents. George had brought some hooks on gut snells, which had cost 3 cents each, and then I first saw how a hook with a tapered shank was put on a snell. I had seen the hooks, but had no use for them, because I did not believe they could be securely fastened to a line; but here they were, and George did not lose a hook that day, yet it was evident that to whip such a hook on a gut snell or a fish line was far beyond my power.

"George," said I, "your line is too slack. Draw in until you feel the sinker, but don't move it; your lower hook wil then be on the bottom for suckers, bullheads and eels, while the upper one will hang clear for perch, sunfish and rock bass. When you feel a nibble, be ready to strike at a hard tug, and then pull in hand under hand to examine the baits, if you haven't got a fish."

I soon had a bite and pulled in a yellow perch of fair size, perhaps a ½lb., for they did not grow big there, and George danced around it in great glee. It was the greatest fish he had ever seen alive, and in his enthusiasm at seeing me unhook it and put it on a string to keep it alive in the water, he forgot his own fishing, until I had baited and was ready to throw out, when he saw his line running out into the pond, and grabbed the wooden winder just as it reached the water. He tugged away, and after hauling in 10ft. of line landed a large sucker that, to-day my memory says, must have weighed at least 2lbs, but memory is not a steelyard nor a grocer's scale, especially when the guessweight of a fish is attempted fifty years after it was caught. Suckers of 2lbs. weight were often taken from that pond years after, and this was a big one.

"What kind of a fish is it?" he asked in his excitement, "and is it good to eat?"

"It's a sucker, George, and in early spring many people eat them, and numbers are sold, but in summer they are soft and don't keep long; you'd better let it go."

"Let it go! Not by a long shot. I don't care whether it is good to eat, nor whether it keeps in warm weather, I'm going to take that fish to Albany and show it to the boys. Say, can I get it there alive?"

"Yes, if I don't have to cut the hook out of it. You see, you weren't paying attention to your line, and most likely the fish has the hook down in its stomach. Let me see it."

The fish had gorged the bait, as I suspected, and I prepared to cut out the hook, when George said: "Look here, I don't care anything about that hook. What I want is to get that fish to Albany alive, so that people will believe that I caught it. If I cut the snell and leave the hook in the fish, will it live long enough to get to Albany?"

"It may live long enough for that. I heard old John Chase, who sets fyke nets in the river 'most all the year, say that he has caught lots of fish that had hooks in 'em, and John Atwood and I brought up a lot of perch alive from the Popskinny by packing them in wet eel grass in a basket. Cut off your hook and string the fish, and before we go we'll get some water weeds and pack the fish in your lunch basket." We did this, and a week later George told me that the fish lived and that he showed to every man, woman and boy that he knew from the South Ferry to his home in upper Broadway, and he never tired of talking about that fish. It grew with his growth, and although we took pickerel of 4lbs. and over in Kinderhook Lake half a dozen years later, he still enthused over that 2lb. sucker. This shows what memories an angler will retain of his first fish, which is a great event in his hitherto uneventful life, and the author of "The Old Oaken Bucket" has reminded us that the scenes of our childhood are dear to our hearts.

I have spoken of "snoods" and "snells" as though they were two different things. The Standard Dictionary defines the former as short lines by which hooks are attached to the main line, but has no mention of snell. The market fisherman uses a snood and the angler a snell. My distinction is that the latter is made of silk-worm gut, while the snood is of linen or hemp, a distinction without much difference, but the terms are used by men who fish in different ways and for different purposes.

We fished the Popskinny, two or three creeks between Troy and Greenbush, and the Normanskill on the Albany side. With shining morning face I crept unwillingly to school in Fort Cralo, the oldest building now standing in the United States, on the river bank below what was then the village limit, and several times George and I ransacked its great garret for flints and other relics, and watched the wrens nesting in the stones, which were pierced for musketry, but were then plastered up on the inside. A copper plate on the front of the now crumbling building says: "Supposed to have been erected in 1642 as a manor house and place of defense, known as Fort Cralo. Gen. Abercrombie's headquarters while marching to attack Fort Ticonderoga in 1757, when, it is said, at the cantonment east of the house, near the old well, the army surgeon, R. Shuckbury, composed the popular song of 'Yankee Doodle.'" The building was of Holland brick, but the port holes were in several brown stones, each over 1ft. square. When we were going to fish down the river George always wanted to dig the worms in the old Cralo garden, in hope of turning up some relic, and we did find several arrow-heads and a portion of a bayonet. He would dig long after we had more than enough bait. I didn't share his enthusiasm, for I got plenty of the old place six days in the week.

Once while fishing in the pond by the red mill, George had seen me bring in a small painted tortoise, one of the little pond turtles which love to sit on logs when the sun shines, and plunk in the pond when danger threatens or the first drop of rain falls; and he noticed that I put a knife handle in its mouth while I took the hook from its lower jaw. It would have been easier to cut the snell and let the hook go, but I never did like to lose a hook, and so spent time to save one. An hour or so after this I went into the woods to get dry fuel to roast our lamb chops, and to make coffee for our nooning, when I heard George yell, and I ran to him while he kept up the yelling. He had caught a little snapping turtle, not larger than the little "skillypot" I had caught, which was about 5in. long; and the snapper had caught George by the side of his thumb-nail, and seemed perfectly satisfied to hold on to what he had if it didn't tear loose; and it was a question of which was the catcher and which the catchee, and I hardly knew what to do. I stuck a case knife down the reptile's throat, and in trying to pry its jaws open the blade broke, leaving about 1in. of it on the handle. I turned this edgewise and forced the mouth open, and George danced around and sucked his bleeding thumb. As soon as he cooled down, I asked him how it happened that the snapper got hold of his thumb.

Said he: "I was trying to take the hook out of its mouth the same as you did when you caught a turtle, and as I tried to put the knife handle in its mouth it grabbed me, and I couldn't shake it off."

"No, George, that kind of turtle never shakes off; but you are in luck that it was a small one. If it had been 8 or 10in. long it would have taken your thumb off. The one I caught is a harmless thing, although it can bite hard if provoked; but a snapper is always provoked, and will fight at the drop of a hat. This is your first lesson in turtles. No Greenbush-whacker would risk a thumb near a snapper's jaws. Even that little fellow would have crushed your thumb-nail, and made an ugly looking thing of it for life. You got off cheap."

I had turned the turtle on its back and was holding my foot on it to keep it there. George said: "Let's see you take the hook out."

"No, my boy, I don't want a hook at that price," and I cut the snell and picked the turtle up by the tail.

"Can't I have the satisfaction of cutting the hook or the heart out of that beast without getting hurt?"

"No trouble about it if you want to spend the time. All turtles can make a snap straight ahead or over their backs as far as they can reach, but they can't bend the neck on the lower shell. This fellow has swallowed the hook, and I'll put him on his back and stand one foot on its head while I pull on the tail to keep its neck stretched, and you may carve away at him until you get the hook, his heart, satisfaction, or all three." And so George got his hook and also a view of the interior arrangements of a turtle. George carried a small scar on his thumb, but the turtle had no scar, its wounds never healed.

On that same day George caught his first eel, and allowed it to wriggle among the coils of his line in its efforts to get back to the water while George was trying to catch it in his hands and hold it. I was only a few feet away, but was enjoying the fun too much to tell him what to do, until, in a final effort to grab the eel, both went into the pond. He scrambled out, while I grabbed his line and pulled in the eel, stunned it with a stick and unhooked it. Any uneducated eel that has never seen the outside of a mill pond since it came there as an "elver," can tie more knots in a line in a minute than a fisherman can pick out in an hour, and Tweddle's line had evidently been operated on by an expert. We took off the hooks, and sinker and each began at one end to untie the knots which I had tightened by hauling in the line, and it delayed our luncheon about an hour. When we had finished and washed the slime from the line, George remarked: "Oh, I'm learning how to fish, and the next turtle I catch will not get a bite at my thumb and the next eel will never get among the coils of my line. I s'pose there's lots o' things to learn about fishing yet, and I wonder what the next thing that will help my education will be, and how long before I'll graduate."

"You're doing all right," I answered; "for a boy who has been brought up in the city and has seen neither turtles nor eels caught on fish lines, you are doing well. You need to catch a bullhead, yet, and take it off the hook without getting its horns into your hands, for you know I've unhooked all you've caught. But let's go and get something to eat before we starve."

"But is a bullhead hard to unhook? Tell me about it."

"Not now; that's another lesson. See that the tin pail is put over the fire on the pole in the crotches, while I go get some birch twigs." I had to attend to all the details, for George did not know birch from hemlock, and would have been as likely to hang a chop on a pine stick full of turpentine as on birch or beech. He was quick to learn, however, but it seemed queer that he shouldn't know some things about fishing and camping that had been such every-day things in my boyhood life that I didn't realize that I'd ever learned them—they seemed to be things that everybody knew without telling, just as a young honey-bee knows how to gather honey the first day it leaves the hive.

On our previous trip to the millpond we had eaten a cold bite, and George was curious to see coffee made and chops roasted over an open fire. I had cleaned some perch and stuck them on slanting sticks so that they hung before the fire, and had run the birch twigs through the chops and they were roasting, while the coffee was being made. Then, with bread and butter, George declared that he had never eaten such a meal in his life. The fact was that with the exercise, excitement and outdoor air, he had never been so hungry in his life. That sauce of hunger! How many an ordinary, half-cooked dinner it has converted into a feast! This and our fishing for pickerel in Kinderhook Lake must have been before we were fifteen years old, because at that age I left Fort Cralo and went to school in Albany, where my people emigrated two years later. But, like that first big sucker he caught, George loved to talk about his first camp dinner, the eel and the snapping-turtle, up to the last time I met him.

After our nooning we pulled in our lines which had been fishing, boy fashion, while we were feeding, and found bare hooks. In the afternoon we took a few perch and a number of rock bass, but George's bullhead did not come until near evening. "Now, hold on, let me take him off," said he, and then he dropped the fish and remarked on the sharpness of its fins, while a drop of blood showed where he had been pricked.

"Just as I expected. Now, as the fish lies there, put your left hand over its head, straddle its back with your first two fingers and bend them around the thorns on the side fins; they can't hurt, and the other thorn on the back can't reach you and you can take out the hook in safety." He did so, and remarked: "Easy enough when you know how, what else have I got to learn?"

"Oh, there are lots of things, but no one can tell you till you come to 'em; there's much that I don't know, such as catching trout and striped bass, but I'll get out with some of the bass fishers some day and see how they do it."

Since those boyish days I have learned that the catfishes, of which the New York bullhead is one, have the single spines in the pectoral or throat fins arranged with a curious snap joint, and when attacked or caught they set these thorns at right angles to the body, and they may be broken but not pressed down to the side of the fish; but behind the fins are bony triggers, just under the skin, which, if pressed on, will allow the spines to be put down. I once took a small catfish from the stomach of a loon and the pectoral spines were rigidly set, yet their sharp points had not pierced the bird's stomach.

After my people moved to Albany, George left the city, but I found him back again when I returned from the West in the fall of '59, and we then fished for striped bass in the river during the season when young bass follow up the spawning shad and sturgeon, so that he was an expert at this kind of fishing when we initiated Ned Buntline to it in 1865, as related last week. The elder Mr. Tweddle had died before this, and George inherited a portion of his father's wealth, which portion was a fortune in itself. George and his sisters gave to St. Peter's church in Albany a chime of bells which cost $10,000 as a memorial to their father. We fished for a few years, until I left the city, and then George met with business troubles and he went away, and since 1873 I have never heard of his whereabouts, although I've often asked Albanians who knew him. Nothing is left in Albany of the once well-known name of Tweddle except the handsome building which stands on the corner of State and Pearl streets. George was an only son, and had one or more sisters, who, if living, bear other names.

George Tweddle was one of those cheerful companions who, like Mark Tapley, are bound to be jolly under all circumstances, and no amount of discomfort could make him grumble. Once, while we were fishing in the Popskinny in early spring, we were caught in a sudden shower. The banks were too muddy to lie upon with the boat turned over us, and across the meadow, in a ravine which came down to it, I knew of an overhanging rock which would shelter us. This was only a 200yds. dash through the rain, while Rivenburg's barn was a good two mile row, and we gathered our grub, pulled the boat up on shore, made the dash and found shelter.

We were soaked, and might as well have rowed the two miles to the barn; but there's satisfaction in a shelter even if one can't get wetter, and so we shook our coats and hats and George remarked: "This is grand, isn't it?"

"What's grand, this rain? Looks like it was going to make a day of it, and perhaps a night also."

"No, I meant this rock shelter with dry rock for a floor; it's almost a cave, and if we had a fire we'd be comfortable. Can we make a fire here?"

"Certainly," said I, "you sort out the provisions in the basket and find the bottle of matches, while I go and pick up some dry limbs, and hunt for a bit of wood to shave into kindlings"; and I started to seek for fuel.

When I returned with a load, George said: "The little bottle of matches is not here, we must have left it in the boat after it was taken out to light our cigars; but never mind, we can get along without a fire; I'm beginning to dry now; see how my clothes steam? The bread is a little wet, and the salt which was on top of the coffee has soaked down into it; but the corned beef and boiled eggs are all right. I don't care much for coffee, anyhow."

I saw that we would have to camp there for an indefinite time or go back to our boat and the barn, so I said: 'George, wait until I come back," and made a start for a farm house nearly a mile away. I was as wet as a man could be and soon settled down into a walk to the tune of the sposh sposh of the water in my shoes. When I returned with matches, bread and coffee, all dry, the first thing which greeted me was the top of a cardboard box neatly framed with pine cones and suspended by a string wedged in the crevice of the rock, on which was inscribed: "God Bless our Home," while a similar card from the bottom of the box declared that "Home is where the heart is."

Such a fellow would endear himself to any one who camped with him because he never made his troubles a burden to others. He was not the only one who was wet through and chilled to the bone. And therein lies the secret, if there be one, of a perfect camp companion whose constant company is all you have and must endure. A day or two in camp with a man will reveal his character more than ten years ordinary acquaintance. If he is a hog the bristles will be in evidence, either in always getting on the best side of the fire or in carefully selecting the choicest bits in the lunch basket. The grumbler is even worse than the hog, for he can torment you day and night.

If George Tweddle is alive I hope that some kind friend will put me in communication with him, if he has passed to the beyond, *Requiescat in pace* I will say with uncovered head. FRED MATHER.

BOSTON ANGLERS.

BOSTON, July 22.—Mr. Rodney P. Woodman, than whom no man in the world is a greater lover of the rod and reel, the woods and waters, has recently returned from one of his usually successful fishing trips. This trip was combined with business, Mr. Woodman's customers being taken into account as well as the fishing. The start was made early in July, and about the 5th found Mr. Woodman at Long Pond, Me., one of the tributaries, or in the region of the head waters of Lake Onawa and the Sebec waters. This pond is nine miles from the Katahdin Iron Works, and in the neighborhood of Chairback Pond, also a celebrated trout pond, under Chairback Mountain. The pond is reached by a good buckboard road till within about a mile and a half of Brown's camps at the head of the pond. This road was bad, but Mr. Brown promises to put it in good shape early this season. Mr. Woodman found the trout fishing excellent, early in the morning, and on the event of a northwest wind, which sprung up one afternoon, though the weather was generally tremendously hot. All the trout he desired were obtained on the fly, running from 1lb. to 1½lbs. He was also much interested in the fact that Long Pond is full of little landlocked salmon, of from 1lb. weight, up to 2lbs. These fish take the fly eagerly, and all great fighters. Mr. Woodman believes that the salmon there do not grow for want of a plenty of food. Minnows are very scarce, and he suggested to the keeper of the camps that the pond be immediately stocked with smelt, under which condition the salmon should grow larger, and afford better fishing

At Sebatis Pond he took twenty black bass of good size; and at Thompson's Pond, a sheet of water some twelve miles long, above Oxford Village, he got a string of bass that would please even the most enthusiastic lover of catching bass with a fly. Thompson's pond has been stocked with landlocked salmon, and as smelts are abundant, good results are looked for. As for Mr. Woodman, he is pleased with his trip, as what lover of rod and reel would not be. He asks why more men who travel on business do not combine business with pleasure?

BOSTON, July 24.—Fishing in the Rangeley waters with trolling bait has held out the present season most remarkably. But it seems that the freshet and rise of water July 14–15 put on a close time that the State never thought of doing. Since that date the fishing has been poor in all the Rangeley lakes; as it usually is poor by the middle or last of June. One of the biggest blow-hards, who writes in the Maine papers concerning the fishing in those waters, is known to have trolled Rangeley Lake all one day last week without a strike. Wonder if we shall hear of this? It is all right to mention successes—sportsmen love to hear of them; but they love the honesty that can mention the failures as well or better. Not so the hotel men and the railroads. Nothing that comes like the truth about the non-productiveness of certain locations is ever to be mentioned. Thanks to the courage of FOREST AND STREAM, if a fishing trip is a failure, it has the honesty to say so. The trout supply of the Rangeley waters has been tremendously drawn upon.

Still the late trolling in the Rangeley waters has brought surprising results. Mr. G. S. Wright has just returned from a three week's stay at the birches, Mooselucmaguntic Lake. He fished in several of the lakes, taking no big trout, but a plenty of fair size. He says that the fishing was wonderful up to about the middle of July, when it stopped all at once. A few good trout, and occasionally a salmon, are being taken on the fly at the Upper Dam. Mr. Hill, of Lewiston, Me., took a beautiful 8½lb. trout in Richardson Lake a few days before the trolling gave out. Mr. A. N. Thompson, of New York, is reported to have taken 190 trout in one day, on the fly, at Kennebago the other day. It is to be hoped that he threw 180 of them back into the water. Mr. L. O Crane, of Boston, has gone to Round Mountain Lake for his summer fishing trip. His wife accompanies him.

Black bass fishing is reported to have been poor in the Maine lakes and ponds since the great rain and freshet, mentioned above. The impression prevails that it will be good again as soon as the water subsides. Still a great abundance of rain has followed the freshet. SPECIAL.

FAITH IN FISHING.

THERE are times when, however plenty the trout, it is almost impossible to get them to rise to the fly. Change as often as you like, they will not be tempted. I have fished for hours over places where I knew hundreds of big fellows were lying, but not one would show up, although presented with the most charming flies in the most tempting manner. Did I reel up and leave? No, sir. I would get a suitable spot, sit or recline, fill the pipe, and while smoking, would think the problem over, puzzling my brain, whereby some scheme might evolve to seduce these sullen chaps to a better acquaintance. In most cases, with time, patience, skill and faith their diffidence would be overcome, and they would be as sportive and full of life and vim as any other trout. Oftimes I have used a 2ft. leader with one fly, leader close to the tip of the rod, and I myself lying down in the boat, concealed from the water. My fly would move just above and over the water, touching it once in a while, acting exactly like the live insects, then flying around. Many the fine beauty I have captured in this manner.

I have before now been fishing with men who would say after a few casts, "Oh, this is no good; there are no fish here, or if there are they will not look at my flies." I recollect being with a gentleman who had whipped several good spots without success; when we came to a pool in which I knew there were plenty of large trout. He cast around and all over it without a rise. He was discouraged, and said, "I don't believe there is a fish here." "Oh, I am sure there is," was my reply. "Do you suppose that you can catch one?" "No trouble to do it," I remarked. "Here, take the rod and try;" handing me his rod. Grasping it lovingly, and not moving from the place we were, with firm faith in the result I sent out the flies. They barely touched the water, when splash, splash, and two good ones were hooked. I instantly passed the rod over to him, and in a few minutes we had saved one of 2½ and one of 3½lbs. Then his faith rose, or if not, the fish did, and he had splendid sport from that to the end of his stay.

The most remarkable instance of faith in fishing I ever heard of was told by a Mr. Toothacher, of Richmond, Me. His son George would go down to the pond where all the city fellows had been fishing all day with their silver-mounted rods and dandy flies, catching nothing. The boy would have a bit of twine in his pocket with a hook on it Going through the swamp on his way to the pond he would cut an alder, trim off the branches, tie one end of his twine to it, go right alongside of these men who had fished all day and caught nothing, put on a worm, spit on it, throw in and hoist out fish every time. Why, do you know, that boy could catch fish whether they were there or not; it makes no difference to him. And how the old man would laugh when he told this story.

But I prefer to go where I know the fish are plenty, and there, with good tackle and very little skill, lots of good sport will be had. S. J. RAYMOND.

EDMUNDSTON, N. B.

The Wallkill Trout and Bass.

MIDDLETOWN, N. Y., July 15.—*Editor Forest and Stream:* In issue of July 17 Fred Mather says, in "Men I Have Fished With": "The Wallkill rises in Ulster county, N. Y., and flows off N.E. to join the Hudson at Rondout" He's wrong. The Wallkill rises in the township of Wantage, Sussex county, in the State of New Jersey, and flows thence in a northerly direction through Orange county and empties into the Hudson, or rather Rondout Creek, at Rondout, Ulster county, N. Y.

Perhaps he has another Wallkill in view; a small brook possibly. Can it be possible that our Wallkill is a trout stream, or, rather, was as late as 1890? when he was to meet Mr. Zigenfuss at Zach Du Bois's hotel at New Paltz, and does he not mean Hank instead of Zach?

There might have been two Dubois's who kept tavern there I never knew of but one, and he was Hank, and was a character who, once known, would never be forgotten. He's dead now.

The Wallkill is a bass stream second only to the Delaware, and contains no trout, except now and then a straggler from some of its small tributaries.

We enjoy "Men I Have Fished With" very much, although they are nearly all dead or "has beens," but we do object to having our Wallkill confined within Ulster county. We're willing to whack up with our neighbors, however.

We have this year planted over 600,000 pike-perch in the Wallkill and several thousand bass as well.

Why can't some of our Ulster county neighbors go and do likewise next year, thereby helping along the good work that in years to come will afford many a day's outing and fish for our angling friends who cannot get away to other parts? There's many a meal taken from old Wallkill these days that the family would do without were it not for just this kind of work.

It must be done by someone. Pitch in, neighbor, don't wait for 'tother fellow. JOHN WILKIN.

Iowa Bass and Pike.

CHARLES CITY, Ia.—*Editor Forest and Stream:* Black bass are biting in fine shape in the Cedar, below the city. On the 19th four parties secured fifty-nine bass that would average 1lb. apiece, and one pike weighing 3¼lbs. A lad of eleven years landed the two largest black bass—weights, 2 and 3¼lbs.—using soft crayfish as bait. The smaller run of bass are beginning to respond to the white-miller and bucktail fly, the writer having landed three 1lb. fellows a few mornings ago with the latter named fly. VANE SIMMONDS.

Bass in Stockbridge Bowl.

MESSRS. CHAS. M. DONNELLY and Hugh K. Toler, who are visiting Mr. Chas. Astor Bristol, of Lenox, have had splendid fishing during the past week for large-mouthed bass in Stockbridge Bowl. The fish have all been caught on light tackle and by casting with frogs. Some of their catches are given below:

July 15: Eight fish, weighing 2lbs., 3¼lbs., 3lbs., 3½lbs., 3½lbs., 4lbs. 2oz. and 4½lbs., all large-mouthed bass, and two small-mouths, each weighing about 1lb.

July 16: Three fish, 2lbs., 2¾lbs and 4lbs. respectively.

July 17: Two fish, 4½lbs. and 7lbs. 1oz., the latter being the record fish for the lake, caught by H. K. Toler.

July 18: About 100 red-finned perch weighing nearly a ½lb. average.

July 19: One fish, 1½lbs.

July 20: Five fish, 2lbs., 2½lbs., 2½lbs., 3lbs. and 4¼lbs.

July 21: Two fish, 3¼lbs. and 4¾lbs.

On July 20 the anglers forgot their landing net and Mr. Donnelly hooked a great fish, which, after about ten minutes' work, he brought to the side of the boat. In trying to lift him in, however, the hook tore loose and the fish escaped. The boatman said that it was the largest bass he had ever seen.

On account of the very wet season it has been a difficult matter to secure bait.

These gentlemen caught some perch and rock bass on a red ibis fly.

Rod and Yank and Trout.

ALBANY, N. Y., July 20.—*Editor Forest and Stream:* The Albany *Argus* of to-day relates that Mr. Henry Juncks started out last Saturday to a stream in Saratoga county for trout, and was "well prepared—not with a light rod, but a solid fellow of 10oz.; not a little hook, but a good big No. 3 trusty sproat, and not with a dainty fly, but a good, big fat night-crawler; and the very first cast Mr. Juncks made brought Mr. Trout to the surface. Then he grabbed the hook, Juncks gave a great and terrific yank, and the air was filled with flying trout, the big fellow landing back in the lot some 25ft. He not only proved a monster, but the largest caught in Saratoga county this year. He was weighed in Albany twenty-four hours after capture, and tipped at exactly 3¼lbs."

I think that it may be of interest to you, at least to read, as bringing to public notice for the first time, I think, a new species, flying trout. Mr. Juncks is evidently doing his share toward the advancement of science, but where do you suppose he got that rod? C. P. W.

The Kennel.

FIXTURES.

FIELD TRIALS.

Sept. 1.—Continental Field Trials Club's chicken trials, Morris, Man.

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

TWO VARIETIES OF DOG.

Editor Forest and Stream:

Just one-half hour will settle the merits of one dog, and we will climb the mountains to view a spot where the other made a record so different.

A chapter in the life of the first mentioned will be sketched first. A wayside station of a branch of prairie railroad, not a year ago found me the sole passenger. All the town was there on my arrival, which meant the section boss and hands. I had stopped there before, and tried the section house fare, which was in plenty and sustaining, and the boss had a brogue that was good, and better after a sample or two from a flask of mine; many a bird had I knocked over thereabouts, where patches of red willows grew and sage brush at times caught the eye. The wild cherry also grew and ripened on the trees where the banks shelved down to the creek, a volume of water not clear, and that harbored no trout in its depths. Here, without aid of dog, had the chicken, startled by bold approach at such long intervals of time, grown less wary and had oft fallen to my gun.

Yet on this day of which I write was the sport—so thought I—to be invested with a delight more thrilling by the stanch aid of Sport, the dog, the borrowed dog of a friend. I mentioned him not at as a passenger with me at wayside station, slighting this I know, yet we are coming to him. The friend (?) who lent him merely summed up his merits as being a dog "good for chicken," one he had "picked up cheap, sir, dirt cheap"; one of his "few lucky strokes in the dog line"—this he got off as the train was starting.

He had met me at my house with the dog, and drove to the depot to see me on my journey to hunting grounds. During the half-hour's drive but little knowledge could I gain as to why Sport should be a good dog for chickens. His ancestry was the theme thus: So and so was dam, out of —— by ——. There was a dog, and sire ——, just think of it; bench show winners every one. Field trials! training! nonsense! Blood, sir! blood it is that counts. "Why, here we are, sure enough; take care of him; a treasure; you remember that dog ——? Why, he is the exact image of him. Don't forget a few brace for me; but there, all aboard! Just look well after Sport. Yes, sir, imported —" all over again, and the train moves.

Well, not long did it take to make a start after arrival at way station, to follow winding of river a short distance, and the country showed more broken and hilly. Sport following fairly well, yet I fancied with a covert glance at the gun off and on. "Come, brace up, Sport!" I urged, "look a bit sanguine; show some quiver in those limbs so like imported. Range a bit, lad, and get wind of them. Here is the ground. Steady now! work ahead!"

At this uprose a brace from the left. I let them travel, for his actions I wanted to study, and he gave me the chance; for after the birds with a joyous bark, at a pace that was hot, sped the dog. That started the ranging; to right to left they were up with a whirr, long out of gunshot. Yes, he was good for chicken; good to them. Their every in-

terest he seemed to have at heart, and to herald my approach to each single bird and covey, as long as his wind would last, was a plot he must have been thinking over from the start. Come back! oh, no. My! what sport it might have been, and such a day for it; and birds! why, every clump of brush had given one or more shelter, until Sport urged them to wing to a place of safety. This was hardly fun for me, when I noticed Sport pause and look my way, and, sure enough, he was coming back. When about in hearing of the words of praise he looked for, some thought must have come (surely he could think, being out of imp. by imp.) to him that he had left his work unfinished, and again he paused and evidently contemplated looking up some stragglers, to notify them that a change of location would be desirable for their health.

I wondered which ancestor he resembled most at this supreme moment. To be brief, I anchored him there and then in a secluded spot to a stout sapling, and picked up a few birds, unaided by his inherited valued instincts, on the outskirts of the country he had traversed, and not bad sport it was, yet supreme it might have been with a good, trained worker to share in the fun, and give evidence of his delight and appreciation of it as a good dog will.

The first train back took Sport, and I went with him and promptly interviewed his owner as to the working capabilities of imp. —, and as to a few of the practical excellencies of others of the strain.

And now for a climb to where the game fellow once lived, whose owner never knew his sire or dam, nor had he ever heard of them. A jump it will be, from the plains to mountains, and a journey along pack train to where it ends at a miner's cabin. 'Tis the Rockies, and the trip will repay if just for a glance at the wild country. Lash the pack to me, just taut enough; there'll be a stiffish lean upward to the trail now and again, and the feet need grip well at the heel on the down turn when we make for the valley below. You want to look at the rock now and again. Well, you can do that when we get through some of this timber country, and steady along we go, my friend and I, he to hunt a bit after quartz leads, and I to join my partner in the mine we had drifted in, in a search for bed rock of the creek covered many a year ago by landslides. Dark through the timber it is, and but seldom a slant of sunlight; on the level now, and the Douglas fir rears up aloft, chary of spreading a branch till a dizzy height is reached. The cedar shows his bulk much nearer ground, and with spruce and hemlock and white pine, a perfume greets one of the forest, sweet indeed. Up now leads the trail, and steep the climb, with a turn or two, and to an opening on the left where shows the river—the Columbia—rolling along. Steady now, there where the bank shelves down sheer to 500ft. below. Halt for a breathing space and a look opposite, where the mountains strive, by a climb heavenward, to contrast with the blue their snow-covered tops. But a mile across, yet this bounds not the view; to the right stretch the range of peaks till they merge into bluish haze. Rough masses of rock some have to the tops, while others show timber on the sides close growing to where the snow covers the peak. What shades of color greet the eye! Bright where the sun touches a patch, and dark to black where the sunlight has no play; now a turn to the right and into the wood again; ups and downs for some few miles, then straight runs the trail and level the wood on either side. Silent all, but for the mountain streams lending a voice; and so deceiving in tone some are, from distance and changing currents of air, as to call for many a look backward to see if some cunning old leader of a pack train is not jogging along with his bell ringing.

Not far off an opening in the timber and fair-sized clearing, and a little cabin comes in view. Here now at last; so sit a while on this fallen fir and hear of the dog, and a game one you'll call him, when all is told. Jim's dog we called him, for that was my partner's name, who owned him, and in the mining town a record the dog had made, and had thrashed every dog but a bull terrier there living, and with the latter he had a fight whenever they met, until some friend of theirs (and they had many) thought fit to interfere. An Irish terrier was Jim's; no pedigree came along with him, and no particular strain; a rough, wiry coat, reddish; good head and long, punishing jaw.

Well, Jim and I had made a start from the mining town, and were coming along the trail—this same one—a year ago. A stray grizzly wandered about at odd times there. Don't start, they never come this way now, and the dog was following, gaily enough at first. He had looked back as if sad to leave the town where the bull terrier lived, but soon cheered up as the thick timber gave a prospect of bigger game, and he found it, alas! too big for him, and that's why he is not here. Dead! Yes, but we're coming to that.

The three had tramped but half the day, and were coming along where the timber crowded close to the path, when a sharp turn to the right showed a clearing, and a narrow mountain stream rushed foaming along. Just before starting to ford the stream, we had lost track of doggie, who was on a hunt of his own. We both at once got a startler and no mistake, for on the far side, where some bushes lined a stream, loomed up the long yellowish brown back of a grizzly, and with her a cub, a bit of a one only. The old one caught sight of us and gave a growl or two, but swayed her head back and forward once or twice. A sniff of the air told her some strange enemy was hovering near in a direction opposite to us, and her ear caught a sound which the stream in its rush could not deaden—a keen savage bark —and I—well, I thought of several things in a short space of time, sundry happenings of long years ago. As for Jim, no such reasoning for him. A pace or two and he was in the middle of the stream, and, rifle unslung, and a steady hand, once so familiar with such sport, near the trigger.

One shot rang out and bruin got it, just back of the shoulder, as he had moved his long body for his eye to range in search of the cub, that had started to hunt up the Irish fellow lost to view, so thick was the growth. The shot had told. Savage growls made the fact known, and a lurch forward and then more like a rush our way, but not quite straight for us, and down went Jim in midstream, for his foot had slipped on a pebble.

Now each second counted; a few lost and it would have been all up with us, or one of us. As Jim gained his footing, the bear caught sight of our exact location, and as the keen old hunter brought his rifle again to sight—he had never lost grip of it—Bruin was almost on top of us, or rather of Jim. I had helped him in midstream, but was not armed, so useless. One more peal rang out to greet the echoes of the cliffs around. The rifle almost touched the beast in his last rush forward, and rearing on its hind feet one paw was making a sweep for Jim, a killing blow, when a long keen jaw met in the shaggy neck behind. The good old dog had sprung from a fallen timber near and the swaying body met the blow. T'was Bruin's last effort, and he lay where he fell. And Jim's dog! one look from the eyes so keen in fight, and faithful, but blurred, Jim said as he bent over him, and soft-like and sad his own eyes were, I know, as I helped him to bury his comrade from puppyhood up, till he died, where he tackled to such big odds.

Here comes Jim. We will not talk of it now. He never does; in fact, he's not much of a talker, and thinks silence is gold, and that is what he is after. F. E. JAMES.

A. K. C.—C. K. C.

THE following is now in force:

Articles of agreement entered into this 17th day of July, 1897, between the American Kennel Club and the Canadian Kennel Club.

ARTICLE I.

The Executive Committee of the Canadian Kennel Club shall be the Canadian Advisory Board of the American Kennel Club, and shall conduct all business in the territory under its jurisdiction, as hereinafter provided for in Article VII.

ARTICLE II.

The Canadian Advisory Board, which will represent the Dominion of Canada, to be entitled to three duly accredited delegates as its representatives in the American Kennel Club, the chairman of said board to be one of such delegates, and by virtue of his office as said chairman to be a member of the American Kennel Club Executive Board.

ARTICLE III.

All cases of discipline and other matters relating to the Dominion of Canada shall be dealt with by the said Canadian Advisory Board, subject to confirmation or otherwise by the American Kennel Club. In all cases acted upon by said board an appeal may be taken to said American Kennel Club.

ARTICLE IV.

Dog shows held in the Dominion of Canada can only be held under American Kennel Club rules upon the recommendation of the said Canadian Advisory Board, and for every show recommended the Canadian Advisory Board shall, on behalf of said show, pay to the American Kennel Club the sum of $10. The secretary of the Canadian Advisory Board shall file with the American Kennel Club a certified marked catalogue of each show so held, and awards made at such shows shall become recognized awards of record. The Canadian Kennel Club to be held responsible for the fulfillment of all requirements of the American Kennel Club by clubs holding shows under its recommendations.

ARTICLE V.

A complete roll of membership of the Canadian Kennel Club must be kept on file with the American Kennel Club.

ARTICLE VI.

The Canadian Kennel Club agrees to transfer all its right, title and interest in what is now known as the Canadian Kennel Club Stud Book to the American Kennel Club during the continuance of this agreement, and in return for said transfer the American Kennel Club agrees to register in its Stud Book, each year, without cost, two dogs, the *bona fide* property of any member of the said Canadian Kennel Club, in good standing, at its annual meeting, or who may have been subsequently elected and duly qualified as such member, upon the filing of an application for same, with his standing as a member duly certified thereon by the secretary of said Canadian Kennel Club. Also to register all dogs, now registered with the Canadian Kennel Club, at one-half the regular fee charged by said American Kennel Club, upon application for such registration. To register all kennel names, prefixes and affixes now registered with the Canadian Kennel Club, provided same do not conflict with names already registered with the American Kennel Club, upon receipt of application, and two-thirds of the regular fee charged by said American Kennel Club. To supply the Canadian Advisory Board with a copy each year of its Annual Stud Book, and a copy each month of its *Kennel Gazette*. Also, to allow it a special discount of 33⅓ per cent. on the regular price for all Stud Books it may purchase. As a further consideration, the American Kennel Club agrees not to accept any kennel club in Canada as an active member unless recommended by the Canadian Advisory Board.

ARTICLE VII.

The following shall be the By-Laws of the Canadian Advisory Board, until the same shall have been amended by the American Kennel Club:

SECTION 1. This organization shall be known as the Canadian Advisory Board of the American Kennel Club, from which it derives its powers.

SEC. 2. It shall consist of the Executive Committee of the Canadian Kennel Club.

SEC. 3. The officers of the board shall consist of a Chairman, a Vice-Chairman and a Secretary. They shall be elected at the annual meeting of each year, and hold office until their successors are duly elected.

SEC. 4. It shall be the duty of the Chairman to preside at all the meetings, enforce a compliance with the rules, and perform such other duties as usually devolve upon a presiding officer.

SEC. 5. It shall be the duty of the Vice-Chairman to preside in the absence of the Chairman, and to perform in such case all the duties of the chairman.

SEC. 6. It shall be the duty of the Secretary to keep a true and correct record of all proceedings of the meetings of the board; to transmit by registered letter within three days a full and complete copy of the same to the American Kennel Club; to conduct all its correspondence; to take charge of all books, papers, moneys or other property of the board; to pay out such money only by the order of the board, and to turn over all books, papers, moneys or other property belonging to the Canadian Advisory Board, and in his custody as secretary, to his successor in office.

SEC. 7. Five (5) members of the board shall constitute a quorum for the transaction of business. The yeas and nays of all votes shall be recorded on the minutes.

SEC. 8. This board shall be advisory to the American Kennel Club, and shall have jurisdiction in all questions arising in the Dominion of Canada between clubs, and between show committees and exhibitors, and in all such matters as would otherwise be proper subjects for consideration by the American Kennel Club, and its decisions shall be binding upon all parties concerned until reversed by the said American Kennel Club or its Executive Board.

SEC. 9. It shall hear all appeals from the decisions of the clubs or their committees in the Dominion of Canada, under the same rules as govern in an appeal to the American Kennel Club, and report its decisions to the said club, and its decisions shall be binding on all parties concerned until reversed by the said American Kennel Club or its Executive Board.

SEC. 10. It shall receive and consider all suggestions from the several clubs under its jurisdiction regarding American Kennel Club legislation affecting the Dominion of Canada, and recommend such action as it may deem proper and for the best interests of breeders, owners and exhibitors of said Dominion to the American Kennel Club for its final action in the premises.

SEC. 11. It shall exert a general advisory supervision over the kennel interests of the Dominion; encourage the organization of new clubs, and the holding of bench shows wherever expedient; counsel harmony of action, good will, and promote a friendly feeling and unity of action between all sections.

SEC. 12. It shall adopt from time to time such rules and regulations not in conflict with the law of the American Kennel Club, and which shall be approved by said club as may appear from the condition of the section under its jurisdiction to be necessary to promote and develop the best interests of the owners, breeders and exhibitors of the Dominion, and perform such other acts as it may be directed to perform by the American Kennel Club.

SEC. 13. The regular meetings of the board shall be held in the City of Toronto, Canada, and special meetings may be called at any time by the chairman, provided ten full days' notice thereof shall have been given to each delegate, either in person or by notice mailed to his last known address.

ARTICLE VIII.

This agreement if ratified by both clubs, to be duly attested by the secretary of each club, and true copies thereof must be filed with each club, and at any time upon six months' notice in writing given by either club to the other, this agreement may be canceled and become null and void.

Chesapeake Bay Dogs and Others.

STOCKTON, Md.—*Editor Forest and Stream:* Away back in the early 70s I first introduced through the medium of the old *Rod and Gun*, the Chesapeake Bay ducking dog. Afterward at the Centennial Exposition the first exhibit of them was made from my stock, and while speaking of these dogs, the specimens I see now are very little like the old stock I remember. They are much smaller, and in many ways differ from the first types. If I were breeding them now, I would secure a good red Labrador Newfoundland and cross him with the smoothest-haired bitches of the old stock I could find. This, I think, would bring back the old type, for in my opinion they are nothing more than cross-bred red Newfoundlands.

Again I propose to benefit (?) my brother sportsmen, and shall introduce to your notice a strain of dogs not down in the Standard. I am not breeding these dogs, neither have I any to sell; in fact, I do not even own one, but I have a friend, a captain at our life-saving station, who has one of these fine, retroactive animals, and with all its make-up so plain that, like the noble coon dog, its fine breeding can be told at a glance. This dog does not range the fields and point his game like a setter, neither does he fuss around and bark it up like a spaniel, nor does he follow it up like a keen-nosed hound. No, he does not even have to retrieve, and what is more, he does not even find the birds. What is he called? He is the soon-to-be-famous Willet dog.

Imagine daylight is just breaking, and you are nicely fixed beside an old piece of wreck just at the edge of the surf, the roar of the waves in your ears, and the cool breeze from old ocean wafting back the clouds of gnats, mosquitoes and green flies. You have a friend, he is nicely fixed, say half a mile below you, and close at your side sits your wonderful willet dog. Suddenly a shrill whistle sounds. Your dog looks up at you, and then far away down the beach to a dark figure silhouetted against the morning sky. You speak to him: "Go on"—he looks. "Get out," and up goes your hand to him in a moving way. He is off now for your friend and his whistle. A hundred yards is passed, now two hundred, when far out over the surf you see a bunch of willets. Now they are down close to the waves; now they rise high again. Ah! they see your dog, and with wide open bills and piercing squalls they head straight for him. Your dog sees them; he glances at your distant friend, then back to you. You are his nearest friend, so with tail well tucked under he starts for the shelter of your legs. Nearer they come shrieking and darting; wilder leaps the dog as he glances first over one shoulder then the other, and straight as an arrow heads for your protecting limbs. If you are alone there is no trouble in making a beautiful double, but if a friend is with you the chances are you both will miss from laughing, and afterward glance at each other in an unpleasant way.

If the dog reaches the other party without being attacked by these fierce birds, a whistle from you and a hand or foot movement from your friend sends him back. This is kept up while the birds are flying. If the birds see the dog, there is no danger but what you will get a shot. It is a sure thing, a regular cinch, as a Western man would say. The whole attention and also voice of these birds is taken up by the dog; and such a voice, why, an old blue crane's note is a warble compared to the shrill squak that comes from the wide open throat of a willet in pursuit of a receding dog.

We are now having some splendid rains, this will put plenty of fresh water on the marshes and make better shooting. A few birds are now coming in, mostly curlew.

O. D. FOULKS.

As the time draws near for the field trial competitors to cross the Canadian boundary, Mr. W. S. Bell, secretary of the Continental Field Trial Club, desires to call attention to the fact that all dogs that have been duly entered in any of the Manitoba Field Trials Club's events for 1897 are allowed to enter Manitoba and remain for ninety days free of all duty, and that those who contemplate entering their dogs in the Continental Field Trials Club's events—the Blue Ribbon or Excelsior stake—must enter said dogs in the Manitoba Club's events in order to benefit by the above arrangement and pass the ports of entry without delay or annoyance. The Manitoba Club have reduced their entry fee in both events to $5. Dogs entered only in the Continental Club's events will be subject to customs regulations and duty.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

AN EDITORIAL MARE'S NEST.

HEMPSTEAD, L. I., July 21.—*Editor Forest and Stream:* During many years, I have refrained from public discussions with such exhibitors as were disappointed and controversial concerning the awarding of prizes, for the simple reason that no information will change a belief founded on self-interest blended with a deep affection for the dog which failed to win. The average kicker in the cause of his dog feels that he is wounded in his pride, his affection and his pocket. The one who kicks for commercial advantages and for the advertising to be gained thereby cannot be convinced, for that would be diametrically opposed to his prearranged calculations. Moreover, I feel that my judgments are fit topics for true criticism, and to such I have no objection: in fact, I invite it. But wholesale vilification is not criticism. However, the virulent attack upon my honesty in connection with the judging of the late Oakland show, made in the columns of a journal which barely exceeds the dignity of a circular, has by some of my friends been thought of sufficient importance to warrant an answer, although it is difficult to answer a charge which has no specification—one which is made up of mere assertion, as is this one. But as the Pacific Coast is in a way, so far as its canine interests are concerned, an unknown country to Eastern fanciers, and as new complications have been brought into the case through factional action, I have decided to throw some light on it and on other matters.

First, as to the man, Mr. H. T. Payne, who publishes the attack through the columns of the literary bantling aforementioned—he dawned upon the journalistic sporting world but a few short years ago, and with no substantial or adequate experience in the dog world, or knowledge of dogs, he assumed a critic's knowledge and maintained it with an audacity which was marvelous. His stay in the dog world is not from any public belief in his pretensions, or that his estimate of himself is correct, or that he is a genuine power. It is from his affiliation with factions, which identifies him with certain contending interests, such as they may be for the time being; and from the multiplicity of factions which have made up the formative period of the dog world in California, and from the many mutations of it, combined with the absence of any serious journalistic competition, he has managed to keep his head uncertainly afloat. All his writings are marked by coarseness of thought, insolent assumption and acrimonious invective; opinionated, intolerant, narrow, and much given to belauding his own importance, doings and purposes. With a rival paper on the coast, his only competitor, he has been bitterly quarreling for years. The two kennel editors do not hesitate to call each other liars, self-seekers and mischief-makers, and to belittle each other's knowledge and worth with all the wealth of epithets which can be compiled by diligent application; and yet, whatever others may think or write of him, Mr. Payne never fails to publish himself the censor of judges, the preserver of honesty, the champion of right; this man who recently came into the kennel world a fancier ready made.

Yet this is not all his true greatness. The American Kennel Club, a few months ago, was the subject of his intemperate virulence in a paper which circulates among his acquaintances; that is, his own paper. Reforms affecting the Pacific Coast, which the club had for a long while contemplated making for the betterment of kennel interests there, and which it eventually made, he had the effrontery to claim as being the direct result of his editorial diatribes, though the latter were mostly irrelevant, yet irritating coincidents. When the Pacific Advisory Board was formed he became its secretary, although denounced by some as unworthy of the office. Nevertheless the new office gave a new prestige to the editor of the journalistic bantling; his knowledge of dogs was confirmed more certainly, for he wrote more as one in authority, and a new impetus was given to his editorial insolence. Nor did all these comprise his activities in the cause of dog interests. Be it known, he was and is a dog breeder, a dog exhibitor, and a dog broker when a good opportunity presents itself. Such diversity of talent cannot belong to a man of little capacity. Editor, secretary, dog-breeder, dealer, exhibitor and broker, all in one person! Is not that comprehensive?

For an ordinary man it might be difficult to disassociate the editor from the dog exhibitor, or to disassociate the exhibitor's interests from those of the secretary's office, or any one from all the rest; and with his factional affiliations and interminable editorial brawlings, it is difficult to determine which office he would hold aloof from personal matters, if he did not hold them all, or how he could benefit the canine world.

These editorial criminations and recriminations, relentless factional strife, malignings, detraction and promotion of constant trouble are unknown in the East. The attack referred to, if made by one of the responsible Eastern journals, would be treated by the public as being serious and worthy of respect, for the public would know that it was the result of the deep conviction of the editors, who were free from any of the resentments of the disappointed exhibitor, and also that there was a material responsibility behind the journal.

Habituated to concede much confidence to the writings of Eastern kennel journals, the dog fanciers of the East might take it for granted that the same conditions governed the publication of all sporting journals on the Pacific Coast. Such is not the case.

It has been said that for the libelous article which Mr. Payne published against me, I have a remedy in the courts either in a civil or criminal action against him. At first thought this has a plausible force, but as a matter of fact, it would afford no remedy at all. An action for damages if won could result in no material gain, and if prosecuted criminally, there would be but a remote possibility of conviction, for it is a notorious fact that in libel cases it is extremely difficult to secure a conviction, be the case ever so well established, for the jury will confound the liberty of speech with the license of speech, and will be reluctant to decide against the press. The prosecution of a libel suit, moreover, is a long, expensive matter. There are many ways of securing delays, and generally it is years after one is instituted before it is decided. There is in this case the formidable obstacle of a distance of some 3,000 miles to be overcome, and besides, it might be extremely difficult to convince a jury that anything printed in Mr. Payne's paper was really published, since the few copies circulated among his acquaintances could hardly do so much injury as to impress them with its criminality.

In what was presented to his band of readers as a report of the Oakland show, but which was a combination of abuse of the judge and ill-tempered vilification of him and others for no apparent reason other than that Mr. Payne thought differently from him, the following appeared. It is not all, but it gives the substance of the charges, and a fair presentation of that gentleman's style. The factional spirit appears even in this. He said that "even the intelligent winners, realizing the brazen-faced trickery of the judge (?), blushed with shame that they had been the recipients of his favors." Again, "the fiasco of placing the awards was done by Mr. James Mortimer, and done in the most shameful and brazen-faced manner possible, far eclipsing his dirty work at San Francisco a year ago." He states that it was quite generally understood how the awards would be given "from the character of the men who forced his engagement." Of the home fanciers with whom he disagrees he says, "it was the plan of those who forced him upon the Oakland Club to ruin dog shows on the coast if possible, by disgusting the people; but the zeal in this direction of their confederate so over-reached itself, that the intended tragedy became a farce." It should be kept in mind that Mr. Payne was an exhibitor at this show. He then alleges that some of the bystanders could name the winners from the circumstance of what men were showing the dogs. Here is a sample of a criticism: "Almost from beginning to end the St. Bernard awards were a farce, while the handling of the specials were actually damnable." Again: "Mr. Chas. H. Harker, of San Jose, had been visited by three of these officers at as many times, each importuning him not to show in this city. But Mr. Harker is a gentleman far above being a party to their low, spiteful work, and refused to comply with their demands; *therefore* (italics mine), in the specials his Alta Berna, a bitch that is far more than a good specimen, was turned down for a long-nosed, hound-headed, flat-sided bitch that should not have won in her class. Dr. Taylor's fine young dog, Roxie Savage, was also turned down for a long-headed smooth-coat of inferior quality, belonging to an officer of the club." This is the style of ranting about officers, dogs and judges, which is served up by Editor Payne when he takes the public into his editorial confidence.

Mr. Payne adverts to the "dirty work" I did a year ago—that is to say, my awards did not all meet with his approval; but the mild reference to it gives the reader no idea of the abuse which was bestowed upon me at the time. If Mr. Payne believed what he wrote last year, he should have opposed me in every way this year. However, under date of Feb. 15, Mr. John E. de Ruyter wrote me that the San Francisco Kennel Club had made application for membership in the American Kennel Club, with the intention of holding a show in May, and asked for my terms for superintending the show and judging some classes. In a postscript he added: "If the A. K. C. should grant us our charter, would you be willing to accept the appointment as our delegate? Mr. Payne, of ——— ———, has suggested your name to me."

Under date of March 12, Mr. H. H. Carlton, secretary of

THE NORTHWEST FIELD TRIALS CLUB CHAMPION CUP.

the San Francisco Kennel Club, wrote me as follows: "I have the honor to inform you that at a meeting of the San Francisco Kennel Club, held last evening, you were unanimously elected our delegate to the American Kennel Club. * * * We shall feel grateful if you will represent us, as there is no one to whom we would intrust our interests who we feel such confidence in and who would represent us more faithfully."

March 10 Mr. Payne published in his paper the following: "The well-known judge, Mr. James Mortimer, who officiated at the San Francisco show last year, has been engaged."

On April 24 he said: "Mr. James Mortimer will judge all classes. Mr. Mortimer is a well-known judge all over the coast, having judged once at Los Angeles, twice at San Francisco, and once at Seattle. While ——— ——— has criticised some of his awards, the same as it feels at liberty to do, and does do, with any and all judges when it thinks errors have been made, it recognizes in Mr. Mortimer a gentleman of ability, and one whom it can unhesitatingly recommend to the fanciers of the coast."

May 1 he said. "That it (the show) will be a success is already assured. Mr. Mortimer, who has twice officiated on the coast, will do the judging, and this fact alone should lead to a large entry."

On May 15 he said: "Mr. Mortimer judged all classes. The majority of his awards was based upon good judgment and no reasonable fault can be found with them."

All this was published before the special prizes, in which Mr. Payne was interested as a competitor, were awarded. Mr. Payne's dogs did not win. This will explain the "damnable" character of the judging of the specials. Thus it will be seen that the sudden turn against me by Mr. Payne, as editor, was co-incidental with his defeat as an exhibitor; Mr. Payne, the exhibitor, palpably having a great deal of influence with Mr. Payne, the editor, who again might have some influence with Mr. Payne, Secretary of the Pacific Advisory Board.

As showing the harmless nature of Mr. Payne's displeasure and how little it is heeded by the world at large—or even by that portion of it over which he assumes a dictatorship—the following is interesting. Under date of June 8, 1897, the St. Bernard Club of California wired me as follows: "Annual election 9th. Will you act as delegate? Answer." On June 12 Mr. Fred Johns, secretary of the Oakland Kennel Club, wrote me: "The Oakland Kennel Club requests that you will represent it at the American Kennel Club. I indorse credentials herewith. Hoping that you will pardon our taking this action without first consulting you, and that you will be able to accept, I am very truly yours, Fred Johns, Sec'y." Under date of June 17 Mr. A. P. Vredenburgh, secretary A. K. C., sent me the following: "I beg to advise you that I have this day received credentials from the Milwaukee K. and P. S. Ass'n appointing you as its delegate to the A. K. C."

The *Breeder and Sportsman* (San Francisco) of May 15, in its report of the Oakland show, said, "Mr. Mortimer judged all classes and gave excellent satisfaction to the critics. He reversed several of 'Uncle Dick's' decisions, and withheld prizes where he thought the exhibits were not worthy of mention, a practice that cannot be too highly commended; but, on the whole, he pleased both exhibitors and visitors." On May 22 the same journal said: "Mr. Mortimer judged all classes. * * * His method of hewing to the line cannot be too highly commended. Mongrels and third-raters have won prizes enough, and it is time the public were taught what representative specimens of the different breeds look like."

Had the matter stood as above, I probably never should have taken any notice of Mr. Payne's "criticism"; for while to the Eastern fancier it seems very earnest, in Mr. Payne's paper it is merely a weekly commonplace incident, a trifling detail of endless quarreling. Malicious wrangling is the life of his paper; by it he gains his notoriety, his advertising. By an assault on me he seeks to gain a wider fame, and that is why I have studiously refrained from mentioning the name of his paper in this.

At the recent meeting of the A. K. C. executive board, charges were made formally against Mr. Payne by the St. Bernard Club, of California for his malicious attack upon me. I appeared before the Board, and requested that the matter be given the fullest investigation. The Pacific Coast Advisory Board has been instructed to ask Mr. Payne for his evidence. As an officer of the A. K. C., he could have preferred charges against me at once and immediately. If he believed his own statements, it was his duty to bring forth his charge and proof at once. That, however, would not have advertised his paper as he desired it done.

When he published his denunciation he should have produced his proof—if he had it. He did not have it, but that is a trifling matter in his style of journalism.

Now that the matter is to be investigated officially, I ask him to bring forth every particle of proof that he has, and do his worst.

In the meantime the following may be an interesting comparison as showing the opinion of Mr. Payne, the editor, as he published it before the show, and the opinion of Mr. Payne, editor-exhibitor, as he published it after the show:

"It (his paper) recognizes in Mr. Mortimer a gentleman of ability, and one whom it can unhesitatingly recommend to the fanciers on the coast."—April 24

"The majority of his awards was based upon good judgment and no reasonable fault can be found with them."—May 15.

"Mr. Mortimer may, undoubtedly has, won the friendship of those who brought him here and who have been condemned and kicked forever out of San Francisco dogdom. At the same time he has won the condemnation, aye, even loathing, of every intelligent fancier who had no axes to grind by the disgraceful awards."—May 22.

Alas! that the calm, judicial editor could so cheaply be turned into the frenzied exhibitor. JAMES MORTIMER.

International Field Trials Club's Derby.

CHATHAM, July 21.—Our Derby entry list is not large, but most of the old-timers are out, and it is a good sign to see new blood coming in, if even in small quantities. Messrs. John Davidson and E. Warner, late with Mr. George Gould, will judge. Quail promises to be as plentiful, if not more so, than last year, and everything points to a good meeting. Ducks have bred well at Big Point, and I shall pay strict attention to them and the other birds, to make up for not going to Manitoba. We are now in the midst of the wild excitement of cricket.

PEG OF LIMAVADY—J. B. McKay's red Irish setter bitch (Finglas—River Roe).

HEATH GLADSTONE—W. W. Cain's b. b. English setter dog (Dan Belton—Forest Gladstone).

SELKIRK DOVER—W. B. Wells's b., w. and t. English setter dog (Luke—Luna).

MAID MARRIAN—H. M. Graydon's b., w. and t. English setter bitch (Dash Antonio—Lady Mingo).

BELLE OF LONDON—J. W. Humpidge's b. and w. English setter bitch (Brighton Dick—Nancy).

ESSIE D.—J. W. Humpidge's b. and w. English setter bitch (Brighton Dick—Nancy).

HIGH NOON—S. Holmes's b. and w. English setter bitch.

MID DAY—S. Holmes's b. and w. English setter bitch.

JIM BANG—Thos. Wear's l. and w. English setter dog (Dash Antonio—Lady Mingo).

LADY THORNE—E. Glasco's b., w. and t. English setter bitch (Dash Antonio—Maggie G.).

DIOGENESE—F. Hurd's b., w. and t. English setter dog (Dash Antonio—Patti).

NORA—Jake Cline's b., w. and t. English setter bitch (Washtinaw Grouse—Gladstone's Nora).

NOBLE CHIEFTAIN—Geo. Kime's b. and w. English setter dog (Dash Antonio—Rose Rapid II.).

LADY BIRD—Geo. Kime's b., w. and t. English setter bitch (Dash Antonio—Rose Rapid II.).

BARNEY—R. Brodie's l. and w. pointer dog (Paddy—Dot). W. B. WELLS.

Nursing vs. Dosing.

MANY volumes of matter have been written on all the subjects pertaining to the dogin domestication—his training, breeding, spirituality, uses, kenneling, feeding, race characteristics and treatment in health and disease—but none have touched on the subject of nursing excepting as a mere incident of the medical treatment, and many times it received but scant consideration at that. It remained for that veteran canine authority and writer, Mr. S. T. Hammond, to appreciate the universal importance of good nursing in the care of the dog in disease, and to supply a work on it teeming with useful information. For a title he has chosen the suggestive terms: "Nursing versus Dosing."

In the hands of the layman, the most carefully prepared medical work, even though it be written with minute elaboration and free from technicality, rarely results in producing the correct treatment. The layman can read of symptoms, but he cannot recognize other than the commonest ones, and these are often present in many distinct diseases. The variations of the pulse, respiration and temperature, their significance, and the multitude of minor symptoms so palpable to the trained eye of the skilled practitioner and so hidden from the layman, are all without meaning to the average dog owner. Still, as there are so many different diseases whose main symptoms are alike, the layman who is studying symptoms and then searching a book for their significance, finds that the dog may have one of several diseases, or a number at once; so he is moved to give him the medicines prescribed for each disease. As he reads more deeply and his knowledge is becoming dangerous, he changes his diagnosis and begins a new treatment. Medicines are given with a generosity and variety and assurance denoting simple faith—the outcome of ignorance. Instead of a diagnosis and treatment such as the medical author intended, the layman, from his ignorance of the effects of medicine, is continually dosing, and from the uncertainty which alternates with every re-reading of his reference book, he is quite as continually changing his dosing. The harmfulness of all this Mr. Hammond points out in his gentle way, and he treats of the beneficent effects of good nursing, with instructive elaboration.

He also treats of the simple remedies for many of the commonest diseases, but he never loses the theme of nursing, good nursing. As an adjunct to the skill of the physician, good nursing has been long recognized by him as indispensable in successfully treating the human subject. The train

ing of skilled nurses is regular and careful. As concerns the dog, few laymen are qualified to treat him for disease; but all can look after his comfort, prepare the proper food, administer medicine, and avoid doing what they should not do when the correct methods are all plainly pointed out, as they are in "Nursing vs. Dosing."

Mr. Hammond's former work on the dog, "Training vs. Breaking," was one of the most successful in canine literature; and the grasp of his subject, and the skillful arrangement of detail so conspicuous in it, are quite as noticeable in his last work.

Any one who owns a sick dog would not spare any effort to insure his comfort and recovery; but if one does not know how to nurse the dog properly, pain may be inflicted instead of a benefit conferred.

"Nursing vs. Dosing" treats of cleanliness, care of dam and puppies, diet, kennel, exercise, common diseases and their treatment, nursing, and many-related subjects. For sale by Forest and Stream Publishing Co. Price $1.

American Spaniel Club.

A MEETING of the American Spaniel Club's executive committee was held on July 16, at No. 13 West Eighteenth street, New York; Messrs. R. P. Keasbey, S. J. Bradbury, M. D., H. K. Bloodgood and Marcel A. Viti being present. The minutes of the prior meeting were read and approved.

The votes for club judges were opened and counted. The following gentlemen were duly elected judges: (1) James Mortimer; (2) E. M. Oldham; (3) A. C. Wilmerding; (4) Chas. H. Mason; (5) S. J. Bradbury, M. D.; (6) George Douglas; (7) James Watson; (8) J. F. Kirk; (9) Andrew Laidlaw; (10) J. P. Willey.

Owing to the absence from this country of Mr. E. M. Oldham, it was decided to elect a president pro tem, and also a new delegate to the American Kennel Club. Upon motion, Mr. Rowland P. Keasbey was elected President pro tem, and Mr. Marcel A. Viti was elected delegate to the American Kennel Club.

It was decided to offer the following challenge specials, in addition to the four cash specials, at the Toronto show: Sunning Hill challenge cup, for best Irish water spaniel; Field Spaniel trophy, for best field spaniel; Cocker Spaniel trophy, for best cocker spaniel; Bell Paintings, for best brace of cockers under one year old.

POINTS AND FLUSHES.

The following sentence contains an ambiguity, and was in our report of the A. K. C. executive board meeting last week. "In the matter of charges made by Mr. H. T. Payne against Mr. Mortimer for misconduct as judge at the Oakland show, and the charges made by the St. Bernard Club, of California, against Mr. Payne for his action in making the charges against Mr. Mortimer, it was resolved," etc. Mr. Payne's charges were published in his paper and have no official standing, while the St. Bernard Club's charges were lodged with the A. K. C. Mr Mortimer appeared in person before the A. K. C and asked that the matter have the fullest investigation.

The Bull Terrier Club of America have issued a book of majestic proportions, artistic in its detail and its effect, containing a list of officers and members, and constitution and by-laws, points of the bull terrier, produce stakes, trophies, champions of record and some cuts of the cups. The second edition of the book will be issued about next December. R. S. Huidecoper, secretary-treasurer, 154 East Fifty-seventh street, New York.

A nomination and executive meeting of the Canadian Kennel Club will be held at the Queen's Hotel, on Friday, Aug 6, at 8 P. M.

Wheeling.

Connecticut Guide Boards.

THE last Connecticut Legislature passed a bill requiring the selectmen of towns to maintain signboards at all highway crossings, for the guidance of travelers. While highly commendable as far as it goes, the law unfortunately does not apply to cities and boroughs, where the need of guide boards is fully as great as in the country districts.

Partly to remedy this difficulty, and also with a view of assisting the selectmen in the performance of their duties, the Connecticut division of the L. A. W. has decided to furnish a large number of signboards free, for use on the principal highways connecting cities and towns. The roads most commonly traveled will, of course, be given the preference

These boards will be 2ft. long and 1ft. high, and will bear at the top the L. A. W. wheel emblem in red. Underneath will be directions and distances marked in plain letters, and also symbols intended to designate the character and condition of the roads. The characters used in the division road book will be utilized. Here the capital letters A, B and C are used to designate the condition of the road as first-class, fair or poor; while the figures 1, 2 and 3 will serve to indicate its character, whether level, slightly hilly or rolling, or very hilly. An A1 road will be first-class and level, A No. 1 in every respect, while a C 3 will belong to the worst of the roads dignified with guide boards. The idea is a good one, and can be copied with profit in other quarters.

Government Maps for Wheelmen.

BY Congressional enactment approved Feb. 18, 1897, the topographic and geologic maps of the United States must be disposed of through sale. This is an important announcement and one of great interest to wheelmen.

The topographic maps, which are prepared from actual surveys to serve as a basis for the geologic maps, show surface elevations, roads, and all necessary physical and cultural details. The character of the country can be taken in at a glance from these maps, for brown contour lines, generally laid down for every 25ft. of elevation (though in very mountainous countries this is exceeded, while in flat countries contours of only 5ft. are sometimes given), show all grades, and marshes, lakes, rivers and other natural features are clearly indicated. In sparsely settled districts houses are shown, and in cities, street blocks. Like all Government publications these maps are beautifully drawn and engraved.

Aside from the single fact of their not indicating which oads are best, no such desirable road maps for wheelmen have ever been published. Not only is the character of any country apparent, but the actual grade and height of all hills is shown, and it can be told at a glance whether they are rideable or not.

The topographical maps are the ones wanted. They may be purchased at a cost of 5 cents apiece, or $2 per hundred, whether the same or different maps are ordered. They are published in sheets 16½×20in., and each sheet is designated by the name of a principal town or some natural feature in the district, and covers one sixteenth, one-quarter, or the whole of a geographical degree, according as the scale is one, two, or four miles to the inch, the scale varying with the character of the country.

About 900 such maps have been printed, covering parts of nearly all the States in the Union. Massachusetts and Connecticut are complete, while maps may be had of the following cities and surroundings: New York, Albany, Rochester, Niagara Falls, Washington, St. Louis, Norfolk and Denver.

A complete list may be obtained by addressing the U. S. Geological Survey, Department of the Interior, Washington, D. C.

WHEELING NOTES.

The new chainless wheel, which one of the great bicycle companies will put upon the market next year, resembles the French and other bevel gear wheels in most respects. It has, however, two sets of teeth on each of the gear wheels, and means are provided for throwing one set out and the other in, and so changing from high gear to low, or *vice versa*. It is also possible to throw the gear entirely out of action, if desired, for coasting.

Invisible brakes of various types, and brakes that become operative through the action of back pedaling are daily coming into prominence. In Washington there is a city ordinance against coasting, and more than usual temptation to break it, and here a type of brake that permits the rider to coast with both feet on the pedals has had a large sale. With the bewildering array of brakes now upon the market it is strange if every one who wants a brake cannot find something to exactly suit his requirements.

Advance sheets of the August number of consular reports from the Department of State deal with our bicycles in foreign countries. Germany receives the most attention, being honored with three separate reports, but space is also given to Russia, New South Wales and Nicaragua. In all these countries with the exception of Nicaragua, where it seems that Germany has command of the market, American bicycles have made an enviable record.

In Germany wheels of our manufacture lead all other countries in the matter of imports, and also in the price received, while in New South Wales one-third of the total imports are bicycles of American manufacture. In Russia our bicycles seem to lead in respect to quality, though cheap wheels of domestic and German manufacture are in greatest demand.

Yachting.

THE various reports current during the season as to the fitting out of Defender for the New York cruise, have amounted to nothing more than that the yacht has been repainted at her moorings. Mr. Iselin has chartered Intrepid, schooner, for the cruise.

The America's Cup.

THERE is no promise whatever of a new challenge for the America's Cup in the fact that a comparatively small racing cutter has just been launched in England for the home races; but at the same time the discussion has been renewed on both sides of the Atlantic; and a good deal of nonsense has been printed about the alleged intentions of Mr. Charles Day Rose to challenge with his new Aurora. The *Yachting World* of July 23 discusses the question of international racing seriously, as follows:

It is undoubtedly true that a much more cordial feeling exists in relation to sport generally than existed some time ago, but this fact scarcely justifies the hope of another yacht race in the immediate future. Every impartial critic must admit that both parties to the unsavory dispute resulting from the last series of matches went further than was compatible with sportsmanlike behavior.

An imputation, subsequently declared to be unfounded, was made against the honor of those connected with the Defender, while their retaliation was shielded by the New York Y. C. and the anything but magnanimous American press, very prone to condemn the entire British community on the strength of the certainly premature charges brought by the owner of the Valkyrie.

Considerable time will have to elapse before another challenge is issued, and for the purpose of a satisfactory competition the present deed of gift must be thoroughly overhauled.

We have little doubt that the latter end of the Dunraven episode, that relating to the collision, the withdrawal of Valkyrie III. and the accusations of the noble lord against Defender, may be considered closed, and that the majority of yachtsmen on both sides of the ocean are willing to forget it.

The real obstacle to a resumption of cup racing lies further back, in the various deals and dickerings between the New York Y. C. and Lord Dunraven, by which was patched up a compromise over the original question, the fairness and legality of the new deed of gift.

This compromise, equally discreditable to both parties, has, as we predicted as long ago as 1889, when Lord Dunraven first bloomed forth as a yachtsman, proved an utter failure in every way. So far from clearing up the legal obscurities of the new deed, it has increased them, until now no man living can say on what terms the America's Cup is held by the New York Y. C. As a mere temporary expedient to promote international racing by means of special provisions and strained interpretations, it has resulted in a series of unseemly squabbles.

The only hope of a challenge to-day rests on two classes of British yachtsmen, novices, as were Lord Dunraven in 1889 and Mr. Rose in 1895, unfamiliar with the usages of yacht racing and the history of the various deeds of gift; and wealthy business men who see in international racing a profitable method of advertising their wares, whether pills, lotions or liquors. As a mere advertising scheme in these progressive days, the winning of the America's Cup would make the fortune of a speculator in some patent medicine or similar article, and there have been several indications on both sides of the Atlantic that this fact is not unappreciated by some of this class.

We believe that there are still in Great Britain yachtsmen of the true stamp—men such as Sir Richard Sutton, Lieut. Henn and Sir James Bell, good sportsmen and skillful yachtsmen, who are fully competent to carry out properly such a serious enterprise as the challenging for the America's Cup has at last become. At the same time, a look at the list of racing owners will show that the number of such men is limited, and that very few of them are interested in other than comparatively small yachts.

The way to a renewal of Cup racing is through two steps: first, a positive settlement of the terms upon which the Cup is now held, whether under the literal and *quasi-legal* reading of the new deed of gift, as insisted on by the New York Y. C. up to 1892; or by some forced construction of the document to meet the demands of a new challenger, as was done in 1893 and 1895 with Lord Dunraven. No one can say at the present time how much of the new deed has been repudiated and how much retained by the New York Y. C. in the course of the long deal with Lord Dunraven, and until there is a positive understanding on this subject there is little hope of a settlement of the original dispute of 1887, as to the legality and fairness of the new deed.

Until it is understood by the entire yachting world that the America's Cup is once more offered on fair and definite terms to all challengers, there can be no inducement to the better class of yachtsmen to challenge for it. Even when this desirable end is attained it is doubtful whether any one will be found to build a 90 footer; of course a syndicate may be formed, but syndicates, for challenge or defense, are most undesirable as compared with individual ownership. To secure a challenge from an individual, if not from a syndicate, it is desirable that the competition should be transferred to a smaller class, certainly not over 75ft. racing length.

The initiative in both of these movements, for the remodeling of the conditions and the change of class, must of necessity come from the New York Y. C. The entire responsibility for the abrogation of the original trust conditions in two cases rests with the club; and it is also on record as having repeatedly refused a challenge from any but the largest possible yacht. If the club wants another international race it can have it, but only by a decided change of policy on its part unless it is willing to risk another experience like the last.

The Real Work of Designing.

THE following, from the canoeing columns of the *Field*, deals with a subject that is of interest to every yachtsman as well as canoeist at this time, when all craft, from the cruising canoe and the smaller knockabouts, are supposed to be built from designs fully completed and perfected in advance. Only those who have had practical experience in superintendence as well as designing can realize the amount of detail that is absolutely essential if the ideas of the designer are to be fully carried out in a new boat. In our experience we quite frequently encounter men who look upon a sail plan as something that can be sketched in off-hand, without any special knowledge of the hull over which it is intended to go, or who expect that a complete design can be turned out in a single evening.

To produce a satisfactory result, even in a cruising craft of moderate cost, it is most essential that every detail of construction and fitting shall be planned with the same care and skill bestowed upon the lines. However perfect the lines themselves may be, the success of the craft depends upon whether the construction and fittings are properly planned, or whether they are left, as is too often the case, to take care of themselves. If they are to be planned in advance, then the designer who creates the lines is the proper one to do the planning of the remaining details, and in order to communicate his ideas clearly to the builder he must go to great care in drawing every part. The writer of the following is Mr. W. Baden-Powell, an amateur designer of long experience.

A correspondent a few weeks back asked the question: "If you want a canoe for cruising and for racing, will a half model be enough for the builder, or must he be supplied with a design drawing." The answer, of course, is that a model is practically useless, and that one design drawing is equally useless if real novelty of design and of fitment is to be incorporated in the new craft. Those who grumble at the fees charged by a naval architect for a complete design, a specification for building, and plans for sails and rigging, can have very little knowledge of the amount of actual drawing work, let alone time and thought over calculations and compromise-making, which the designer has to put in to make a design fairly entitled to claim novelty and success.

We may at once state that size of craft to be built has nothing to do with the number of drawings or the calculations, except as to internal arrangements, so that, be it a yacht of 200 tons or a canoe of 15ft., practically the same drawings have to be made, and the calculations required for the former may be equally necessary for the latter. For instance, the canoe is now rated for racing purposes on the late Y. R. A. rule of L.W.L. × sail area, and if you do not know that the new ship will float at a nominated waterline you cannot even order the sails and spars without risk of finding them all wrong, and therefore some careful calculations of displacement and estimates of weight of construction, fitment, rigging and ballasting are absolutely necessary. Of course, when the higher principles and even the theories of "utter" naval architecture are to be embodied in the coming craft, many sheets of calculations and of curve drawings will have to be made; but these are not, perhaps, necessary for the production of a satisfactory cruiser or a simple cup-winning racer. None the less, canoe design will improve, and failures will be less visible, in proportion as science enters into the designing, and also a happy medium meeting of the present antagonistic requirements of cruising and racing will be more nearly reached.

As an instance of fact, as to the labor of fully designing a sailing canoe, here is the actual number of drawings made for the construction of the 1897 Nautilus canoe, now being built in conformity with the requirements of the Royal Canoe Club "cruising class," and for racing under such class. Omitting explanatory sketch drawings, and, indeed, all mere plans of detail, there are twenty-nine actual scale drawings, and every one of them is necessary, because they represent that of which there is no previous drawing or sample even sufficiently near for the experienced Mr. Turk to build from without a scale drawing.

The separate sheets of drawings—twenty-nine, actual (though there are ten more of an explanatory nature)—are as follows: One of lines, sheer, body, horizontal, and diagonal; one of curve of displacement and curve of areas at two useful angles of inclination; one sheet of building plans as to detail of construction; two sheets of same at full size for builder to work from; next come fifteen full size sectional plans, each giving detail of planks, stringers, knees, drains, and a dozen other things in its locality. Then come the plans of keel, rabbet and stem and stern posts, and center-plate case. The full-size drawings, with all details of the construction of the drop-plate rudder, and ditto of the center-plate and its fittings; one sail plan with all detail for making; and one rigging and spar plan; and finally one sheet of about seventeen drawings of metal deck fittings and spar fittings, usable as pattern templates; and the metal work of the sliding seat.

Not any one of these drawings could be left out if a complete whole is wished for in the new canoe, and if one or more of the above drawings is not furnished, either the item so neglected will be left to the chance brilliancy of the builder, or will be supplied by a crib from some existing canoe.

Larchmont Race Week.

AFTER some good races on Saturday and Monday, as reported last week, the Larchmont tars spent Tuesday in milder recreations about the club house and the harbor. At anchor off the club house was a large fleet: Colonia, Com. Clarence A. Postley; Oneonta, G. K. Clark; Marietta III., Harrison B. Moore; Emerald, J. Rogers Maxwell; Sachem, Com. Frederick T. Adams; Viator, Albert J. Morgan; Amorita, W. Gould Brokaw; Viola, A. Bodine; Jessie, William Murray; Duquesne, Theodore Hostetter; Giralda, E. S. Renwick; Syce, Fred. M. Hoyt; Emeline, Stephen Roach; Her Royal Highness, Alfred W. Withers; Uvira, Clifford Brokaw; Trochilus, Mayhew W. Bronson; Sayonara, Bernard Thayer; Pawnee, Frank Alexandre; Sultan, Thomas W. Cromwell; Sakana, Oliver Adams; Levanter, William Marshal; Wachusett, Francis T. Holder; Surprise, James Baird; Corinthia, John D. Robins; Half Moon, Charles McLoughlin; Gossoon, Philip T. Dodge; Musme, J. M. Macdonough, and Huron, Vice-Com. E. S. Hatch.

At noon the fleet dressed ship, a very pretty spectacle, and at 1 o'clock the colors were mast-headed on the big flagpole.

Following these ceremonies came the launch and rowing races, which resulted as follows:

OPEN NAPHTHA LAUNCHES—21FT. AND UNDER—COURSE THREE MILES.

	Length.	Horse Power.	Allowances.	Elapsed.	Corrected.
Colonia	21	5	Allows.	0 28 10	0 28 19
Emerald	21	2	0 45	0 29 40	0 28 55
Sachem	21	2	0 45	0 29 49	0 29 04
Pawnee	21	2	0 45	0 23 39	0 32 54
Trochilus	21	2	0 45	0 34 16	0 33 31
Marietta	21	2	0 45	0 30 09	0 29 24
Viola	18	2	1 12	0 32 53	0 31 41
Amorita	21	2	0 45	0 32 06	0 31 21

Colonia wins by 36s., Emerald second and Sachem third.

FOUR-OARED GIG RACE—FOR HEN AND CHICKENS COLORS.

	Start.	Finish	Elapsed.
Colonia	2 36 58	2 57 52	0 20 54
Sachem	2 36 58	2 57 38	0 20 40
Amorita	2 36 58	2 57 14	0 20 16

Amorita wins by 24s.

PAIR-OARED GIGS—FOR DAUNTLESS COLORS.

Duquesne	3 02 15	3 15 06	0 12 51
Syce	3 02 15	3 13 43	0 11 28
Viola	3 02 15	3 15 19	0 13 04
Emerald	3 02 15	3 13 50	0 11 35
Sachem	3 02 15	3 15 15	0 13 00
Viator	3 02 15	3 14 09	0 11 54
Huron	3 02 15	3 14 17	0 12 02

Syce won Emerald second, and Viator third.

DINGHY RACE—FOR EXECUTION COLORS.

Trochilus	3 19 30	3 27 04	0 07 34
Emerald	3 19 30	3 26 43	0 07 13
Oneonta	3 19 30	3 26 36	0 07 06
Lydia	3 19 30	3 26 59	0 07 29
Marietta	3 19 30	3 26 12	0 06 42
Viator	3 19 30	3 27 29	0 07 59
Liris	3 19 30	3 27 05	0 07 35
Duquesne	3 19 30	3 26 38	0 07 08
Amorita	3 19 30	3 26 19	0 06 41

Marietta won, Amorita second, and Oneonta third.

The afternoon was devoted to the annual base ball game, and in the evening the grand ball took place at the club house, the house being decorated and the grounds illuminated for the occasion.

Fourth Day.

Wednesday, July 21.

OPEN REGATTA—ALL CLASSES.

Wednesday brought a strong S.W. wind, with rain and sea, making stirring work for all hands. Colonia and Emerald were again at the line, with Syce and Vencedor. Just before the start Vencedor sprung her starboard spreader, so the start of this class was postponed until she could make repairs, the others meanwhile being sent away. Colonia came for the line too soon and was obliged to recross, while Capt. Haff put Emerald over on time and in a good berth, right at gunfire. They reached across for Matinnicock, where they were timed:

Emerald....12 05 23 Colonia....12 06 34

On the beat up to Hempstead mark Colonia passed Emerald, carrying sail better, and they were timed:

Colonia....12 50 30 Emerald....12 55 21

The finish of the first round was timed:

Houri	1 05 14	Raccoon	1 33 35
Colonia	1 05 48	Acushla	1 33 50
Kit	1 08 10	Musme	1 34 30
Quantuck	1 09 00	Carolina	1 35 55
Volsung	1 10 18	Pawnee	1 37 48
Emerald	1 11 15	Goblin	1 46 05
Norota	1 20 43	Colleen	1 46 57
Surprise	1 24 40	Fidelio	1 49 50
Win or Lose	1 27 30	Kite	2 16 45
Shark	1 28 00	Penelope	2 20 00
Grace	1 30 50		

The second round was timed:

Kit	2 07 20	Colleen	2 59 00
Houri	2 11 25	Surprise	3 35 45
Shark	2 36 00	Acushla	3 14 55
Colonia	2 36 30	Raccoon	3 15 09
Win or Lose	2 39 49	Musme	3 16 28
Volsung	2 47 25	Carolina	3 17 53
Emerald	2 50 25	Pawnee	3 24 15
Grace	2 53 03	Goblin	3 37 29
Norota	2 58 20		

The official times were:

SCHOONERS.

	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	3 01 30	3 01 30
Emerald, J. R. Maxwell	91.07	3 15 25	3 14 09
CUTTERS—CLASS L.			
Norota, D. B. Burnham	41.64	3 14 20	3 14 20
SLOOPS—CLASS M.			
Acushla, H. W. Hanan	34.04	3 24 55	3 23 39
Surprise, James Baird	34.68	3 16 45	3 16 45
YAWLS—CLASS M.			
Pawnee, F. Alexandre	42.50	3 34 15	3 34 15
Fidelio, Robert E. Tod	33.46	Withdrew.	
SLOOPS—CLASS N—SPECIAL.			
Carolina, P. Jones	30.00	3 22 53	3 22 53
Musme, J. M. Macdonough	30.00	3 21 28	3 21 28
Raccoon, N. D. Lawton	30.00	3 20 09	3 20 09
SLOOPS—CLASS N.			
Goblin, C. Whitman	28.11	2 42 29	3 41 26
Penelope, T. V. Ketchum	27.00	4 28 48	4 24 22
Kite, Adee Bros.	28.45	4 25 18	4 25 18
SLOOPS—CLASS P.			
Quantuck, J. L. Delafield	24.63	Withdrew.	
Houri, E. B. Hart, Jr.	24.99	2 11 25	2 08 32
SLOOPS—CLASS Q.			
Keneu, H. M. Clark	20 00	Withdrew.	
Shark, Rouse & Hoyt	20.00	2 31 00	2 31 00
CATS—CLASS S.			
Dosoris II, G. P. Vail	29.24	Not timed.	
Kit, J. T. Dunne	28.85	2 02 20	2 01 51
Onaway, S. C. Pirie	25.88	Not timed.	
Volsung, De Forrest Bros.	28.50	2 42 25	2 41 28
CATS—CLASS T.			
Colleen, J. N. Jackson	22.18	2 49 00	2 45 05
Grace, J. F. Lambden	22.55	3 43 03	2 39 50
Win or Lose, J. S. Appleby	23.75	2 29 49	2 28 45
Sequel, C. Meyer	24.40	Did not finish.	
Presto, H. R. Hatfield	23.30	Did not finish.	
CATS—CLASS V.			
Minnetonka, A. B. Alley	19.75	Withdrew.	

Vencedor and Syce were to start at 12:35, but the former's spreader gave way again and she did not start.

Fifth Day.

Thursday, July 22.

51FT. AND SMALLER CLASSES.

Thursday was rainy, and very unpleasant on account of the excessive heat and humidity, but there was a moderate breeze, varying about S.W.

In the 51ft. class, cabin trunk cutter class, Awa and Choctaw started; in the 30ft. class were Musme and Raccoon; in the cabin cat class were Kit, Dosoris II., Win or Lose and Grace; and in the 20ft. class were Shark and Asthore. The yachts were started to the eastward, the 51-footers at 12:35, 30-footers at 12:40, 20-footers at 12:45 and the cats at 12:50. The rounds were timed:

FIRST ROUND.

	1st Mark.	2d Mark.	Home Mark.
Awa	1 17 28	2 22 18	2 15 23
Musme	1 24 40	2 26 14	2 57 23
Raccoon	1 25 44	2 32 23	3 00 56
Choctaw	1 25 56	1 27 12	2 56 44
Kit	1 16 28	2 06 10	2 22 54
Dosoris II	1 20 16	2 13 28	2 32 57
Win or Lose	1 25 44	2 27 21	2 55 46
Grace	1 27 28	2 29 21	2 59 10

SECOND ROUND.

	1st Mark.	2d Mark.	Finish.
Awa	3 39 52	4 40 00	5 04 41
Musme	3 42 25	4 34 20	4 29 30
Choctaw	3 43 50	4 36 54	5 02 30
Raccoon	3 43 53	4 38 50	5 04 21
Shark	.. .. ..	.. .. ..	3 35 20
Dosoris II	.. .. ..	.. .. ..	3 51 55
Kit	.. .. ..	.. .. ..	3 41 55

CUTTERS—51FT. CLASS—CABIN TRUNKS.

	Length.	Elapsed.	Corrected.

Asthore, P. T. Dodge	20.00	Disqualified.	

Asthore was disqualified for fouling Shark.

Sixth Day.

Friday, July 23.

SCHOONERS AND OTHER CLASSES.

Neither Emerald nor Colonia started on Friday, though there was a fair breeze from S.W. and clear weather. Vencedor was ready, with Mr. Hazen Morse at the stick, and Syce was on hand to meet her. Norota had no competitor, the three thirties were ready again, and Shark was on hand in the 20ft. class. To meet her was the Sibbick 1-rater Wave, a very smart and handsome little fin-keel imported a couple of years since. She has lately been refitted by Capt. J. C. Summers, but with 19ft. l.w.l. and a small sail plan, she is no match for the powerful twenties of this year. The start was made at 11:40, over the 11-mile triangle, sailing to the eastward first and then to the Hempstead mark. Vencedor crossed ahead of Syce, and the two reached very evenly to the East mark. They broke tacks when on the wind for Hempstead, and Vencedor held the lead for a time, but Syce managed to beat her by 1:22 at the weather mark, increasing her lead on the three-mile reach to the line, where they were timed:

Syce	1 37 21	Musme	1 46 38
Vencedor	1 39 26	Carolina	Withdrew.
Raccoon	1 46 28		

Syce continued to gain on the second round, and in the windward work made some 4m. on Vencedor; the final times were:

CUTTERS—51FT. CLASS.

	Length.	Elapsed.	Corrected.
Syce, F. M Hoyt	50.86	2 59 18	2 59 18
Vencedor, H. M. Gillig	48.38	3 06 14	3 03 26
CUTTERS—43FT. CLASS.			
Norota, D. B. Burnham	41.64	3 17 53	3 17 53
SLOOPS—30FT. CLASS.			
Raccoon, N D. Lawton	30.00	3 27 35	3 27 35
Carolina, Pembroke Jones	30.00	Withdrew.	
Musme, J. M. Macdonough	30.00	3 27 39	3 27 39
SLOOPS—20FT. CLASS.			
Shark, Rouse & Hoyt	20.00	2 12 21	2 12 21
Wave, Le Droit Barber	20.00	5 35 00	2 35 00

Seventh Day.

Saturday, July 24.

OPEN REGATTA, ALL CLASSES.

IN spite of a good westerly breeze, there was a rather disappointing fleet of starters on the final day; although thirty-two yachts went over the line, there was practically no competition in the larger classes. Emerald did not start, leaving Colonia to sail over; Vencedor broke down again, and neither Norota nor Acushla had competitors. The start was made at 11:40, Colonia going over alone. Mr. Lovejoy, of the regatta committee, was at the stick on Vencedor, for the first time, and he took her over the line just ahead of Syce. The start was made to the Hempstead mark first a reach across the Sound, with a second reach down the Long Island shore after a jibe, then a beat home. Vencedor led by a few seconds at the first mark, and, though Syce caught her, the Chicago boat had regained her advantage when they luffed round Matinnicock Buoy for the beat home. The fight was a fine one for a short time, but at 12:37 Vencedor's spreader again gave way and she was practically disabled, though she sailed the race out.

The exciting incident of the day occurred at about 1:10, when the yachts were nearing the line. It was blowing quite fresh, and the crew of the catboat Dorothy, her owner, John E. Sanborne, at the stick, and Messrs. C. C. Wright, of New Rochelle, and Henry E. Jane, vice-commodore of the Huguenot Y. C., were all hiking out on the port side, the yacht being on the wind on port tack. The 43ft. cutter Norota was coming down on starboard tack, also at an angle, and neither boat perceived the other until Dorothy was under Norota's lee bow. The catboat struck the cutter and stove in her own stem, carrying away the cutter's rail. Vice-Com. Jane leaped to Norota's deck, but the other two were thrown into the water. The judges' tug, Luckenbach, came to the rescue as speedily as possible, and picked them up just in time, passing a line to the catboat and towing her to the markboat at the finish, but she finally sank. The two rounds were timed:

First round:

Houri	1 09 00	Vencedor	1 41 30
Quantuck	1 12 08	Zahra	1 46 55
Shark	1 17 10	Carolina	1 48 24
Kit	1 18 35	Alice	1 49 28
Syce	1 19 20	Pawnee	1 49 51
Doboris II	1 23 10	Acushla	1 52 22
Colonia	1 24 30	Musme	1 53 09
Wave	1 29 10	Fidelio	2 00 29
Win or Lose	1 30 45	Goblin	2 06 35
Jester	1 31 47	Minnetonka	2 08 10
Grace	1 34 10	Willie D	2 15 12
Norota	1 41 21	Kite	2 27 21

Second round:

Houri	2 20 56	Vencedor	3 20 13
Quantuck	2 24 48	Alice	3 23 02
Shark	2 28 14	Zahra	3 33 53
Dosoris II	2 26 42	Norota	3 24 11
Kit	2 26 43	Minnetonka	3 26 27

Royal St. Lawrence Y. C.—Ross Cup.

DORVAL—LAKE ST. LOUIS.

Saturday, July 17.

THE ninth race of the Ross series in the 20ft. class was sailed on July 17, and was a particularly interesting one, from the fact that Glencairn II., the sixth boat which has been built from Mr. Duggan's design by the Yacht Company of Canada this season, made her first appearance. She is very much like her predecessor in appearance, the principal difference to the eye being that the deck has slightly less crown, and she has a broad, flat transom which is by no means beautiful; but the boat, like all Mr. Duggan's craft, looks remarkably well and fit under sail.

There was a very light N.E. breeze when the starting gun was fired at 3:30; the water was perfectly smooth, and the boats went across with the gun in a bunch, an ideal start. Glencairn II. shoved out of the fleet, and on the first 100yds. had a clear lead of nearly half that distance, but she set a spinaker and could not carry it; in muzzling it she lost way, and Rogue went rapidly to the front. The wind kept falling lighter and lighter, and the reach up was a long one. Rogue kept her lead and increased it somewhat, and the others kept along pretty much together, Glencairn II. and Millie in the lead. It was a reach from the Valois Buoy to the Channel Buoy, and Glencairn II. began to pick up on Rogue at once, and seemed to go very fast. After hauling the wind on rounding the Channel Buoy, Rogue made one long tack in to shore, and Glencairn II., when about halfway down, tacked out into the current and was the first to pick out a change of wind from the southward, which brought her in with a long lead over the whole fleet. The time of the first round was as follows:

Glencairn II.	4 24 00	Glenowen	4 27 52
Millie	4 25 23	Islander	4 29 29
Rogue	4 26 32		

On the second round Millie came up on Glencairn II. and blanketed her, and these two boats jockeyed and blanketed each other well out in the current one whole leg of the course, and let pretty much all of the fleet pass them before they reached the Valois Buoy. At this buoy Rogue led, followed by Glenowen, Islander, Glencairn II. and Millie, in the order named. On the reach, Glencairn II. ran well up on Rogue, taking second place, and continued to make her gain on the close reach to the finish line; but the distance was not long enough to establish an overlap before the buoy was reached, and Rogue finished first by 5s.

The time of the last round was as follows:

Rogue	5 31 30	Millie	5 34 00
Glencairn II.	5 31 35	Islander	5 35 00
Glenowen	5 32 39		

The points won in the race were as follows:

	Points.		Points.
Glencairn II	15	Glenowen	11
Rogue	14	Islander	8
Millie	12		

Westhampton Country Club Regatta.

WESTHAMPTON, L. I.

Saturday, July 17.

THE Westhampton Country Club held its first regatta of the season on July 17, in a light S.W. wind, the times being:

CLASS B.

	Start.	Finish.	Elapsed.	Corrected.
Thetis	3 05 00	4 35 52	1 30 52	1 30 14
Tychie	3 05 00	4 40 58	1 35 58	1 35 23
CLASS C.				
Wyverne	3 08 00	4 43 53	Disqualified.	
Oolah	3 08 00	4 43 53	1 35 58	1 32 27
Defender	3 08 00	4 47 26	1 39 26	1 33 56
Hersunda	3 08 00	4 41 54	1 33 54	1 33 54
Pauline	3 08 00	4 42 41	1 34 41	1 34 23

Oolah protested Wyverne for fouling a mark, the protest being sustained. Defender takes second prize in this class.

Gilbert's Bar Y. C.

INDIAN RIVER, FLA.

Saturday, July 3.

THE monthly field day and regatta of the G. B. Y. C. was held on July 3. The times were:

THE racing in the knockabout class this season has resulted in a decided victory for Gosling over the five Herreshoff boats, her average per cent. for thirteen starts being 53. Cockatoo and Cock Robin, the leaders of the Herreshoff quintette, stand at 45 per cent., having started six and five times, respectively. Gosling was designed by George F. Lawley, and built by the Lawley Co. for Messrs. F. A. North and L. M. Clark.

The Measurement Rule.

IN the hurry of actual racing and cruising, but little attention is now given by yachtsmen to the very important question of a new measurement rule. At the same time it is generally accepted that some change is essential at the end of the present season. If anything essential is to be accomplished, the actual work must be commenced by the end of September, and that discussion which is both inevitable and essential should begin at once. We are always glad to publish anything on this subject, but particularly in the present case, for the double reason that the writer has stated his ideas plainly and concisely in a series of definite propositions; and that these propositions are such that most yachtsmen will agree with him. Without attempting to discuss at present the specific formula presented by him, we are heartily in accord with the general tenor of our correspondent's remarks, and we shall be glad to carry them out by affording every opportunity for a discussion on the lines suggested by him.

The matter is one that concerns every yachtsman, he should have ideas on the subject, and probably most yachtsmen have if they take the time to think about it. The great trouble is that the majority give no attention whatever to the question until some definite proposition is advanced, when they immediately discover that their own toes are trodden upon to the extent of a sixty-fourth of an inch, and proceed to denounce the treader as a theorist and piazza yachtsman.

There never was such a need of improved rules or such an opportunity for their adoption, it only remains for every yachtsman to help the work as best he may, at least by giving careful consideration to all proposals advanced, as is the present one, in good faith and for the love of the sport.

No apology is needed for anything written on the subject of a rule for the comparison of yachts, so that they can be raced together. It may be well, however, to make a few introductory remarks, so that if the present paper serves its purpose, all may meet on a common and well-defined basis.

The writer hopes to provoke a discussion of the suggestions hereafter made, which shall finally result in a concensus of opinion, and suggests:

First.—That all contributions be given simply a designating letter. The reason for following such a course is that under such conditions, a statement or opinion has weight only in so far as it is backed up by reasons stated. This in no way handicaps the man of great experience, since his experience is simply an aggregation of observed facts If his intellect is not of a sufficiently analytical order to enable him to state facts and generalize from them, it is not competent to advise in such a matter as is now being considered. Further reasons are that personal antipathies are in a measure removed, and an opportunity given to the man who is convinced to retract without necessarily admitting it.

Second.—All discussions should follow the regular order of acquiescing in, or disputing each point raised, in regular order, referring to them in a distinctive way, so that an explicit summing up may be possible.

Third.—The subject of classification is entirely distinct from the subject of measuring.

These three conditions should be imposed and enforced by the editor.

A measurement rule should be considered under the following heads:

First—What is intended to be accomplished?

Second—What elements of the yacht shall be considered or employed?

Third—From what source shall the necessary elements be derived or measured?

Fourth—In what manner shall these elements be combined?

First—A measurement rule is intended to

(*a*) Encourage the development of a safe, roomy, speedy and easily handled boat.

(*b*) To equalize the chances of winning prizes between boats of different types and characteristics.

(*c*) To discourage attempts to "beat" it

(*d*) To leave owner and designer absolutely free to produce anything they please.

(*a*) It is assumed that this clause will be admitted, but the writer wants to insist on every word of it as being of vital importance. Of equal importance is the weight we must attach to each of these characteristics, since on this depend many other things. Thus it is evident that a boat may be only roomy, or only speedy, and unless some ratio is established between them, or some credit given for other qualities than speed, yachtsmen will revert to the present practice of building mainly for speed.

It would at first appear as though it were necessary to consider too many elements to take into account these features, but it is thought it will be admitted, that if it can be done it is ideal.

(*b*) It seems to be generally admitted that this is true, if one may judge from the efforts made to get races under this very rule.

The only way in which racing interests can be stimulated is by offering good prizes, to be raced for under conditions which recognize the good points of all boats.

(*c*) Yachtsmen, generally, are a fair minded body of men, and it is believed that if they feel that a rule is fair they will not attempt to "beat" it, but will strive to produce the best boat possible.

(*d*) Yachting is expensive to a certain extent, and so is experimenting, but there are few men that do one that won't do the other, if they feel that it will not cost them too much, either in chances to win races or in money.

In no way can so much positive knowledge be obtained as by experimenting, and so in no way can yachting be so benefited. If this is granted, it must also be granted that a good rule will not limit a designer in any direction, but will rather aid him by offering to credit his boat with any feature which is meritorious.

Second—What elements of the yacht shall be considered:

For safety we must have stability, assurance against sinking, strength of form, and sufficient freeboard.

For room we need a cube—both above and below the waterline—that shall together give proper accommodations.

For speed, small displacement, small wetted surface, large sail area, and deep ballast, and a long and narrow form.

For ease of handling, small sail area, long keel, moderate draft.

Stability is a question of form, amount and position of ballast, and ballast itself is influenced by displacement.

Assurance against sinking can be secured by letting either the hull or air tanks float the ballast.

Strength of form is dependent on the designer and will follow from a good design.

Sufficient freeboard will come with good accommodation.

Speed is influenced by displacement in an unknown ratio; no satisfactory data exists for determining it approximately; The same may be said to be true of surface friction, but this will be admitted by all, that the aim of recent designing has been to get as small an amount of each as possible by using a round full form and a fin keel.

In addition, the force required to move 100lbs. of water along certain lines must be greater than the force required to move 50lbs. along the same lines.

The large sail area gives additional force, and so of course aids, while depth increases the efficiency of the ballast and makes it possible to decrease displacement by making each pound doubly effective, because working with a larger lever arm.

The long, narrow form has always been considered as speedy, and since it causes the smallest possible movement of the water, it is defensible on theoretical grounds.

It follows then that the elements we should consider are: sail area, length, breadth, depth, position of ballast, displacement and total cube of hull.

These elements may be simplified by considering the total cube of hull, the actual L.W.L., when inclined or heeled to the gunwale, and the sail area.

Third—Whence shall these elements be derived? The writer thinks they should be taken from the designs of the yacht, certified to by the designer and builder, and filed with the measurer of the club as club property.

The advantages are:

(*a*) Definite knowledge of the yacht and her elements.

(*b*) Invaluable data of the progress of yacht design.

(*c*) Accuracy of measurement, as close as desired.

(*d*) Absolute fairness of measurement, since every element is taken into account and measured for what it is, from what it is.

The only objection known to the writer is that some designers might object to having their designs known; but to meet this is the rule of many clubs requiring the filing of models or plans before prizes are awarded. There would also be a certain amount of objection from the man who whittles out his models, but he should be discouraged any way.

Much could be said in favor of such a plan, but it is all summed up in the one thought: that you measure that which exists; the actual form with all of its features.

If long overhangs are good *per se* then they are not killed off; if the plumb stem is better, it has a chance; for in each case you measure just what exists and what is used to sail on.

In the sails, you measure those that are used, and the designer can adopt any proportion or form he pleases; there is no way of beating it, and no hindrance to experiment through fear that the rule will produce an undue tax.

Fourth: How shall these elements be combined? Divide the actual sail area in square feet by the actual cube of the hull and cabin house in cubic feet, multiply by 10 and call the result the per cent. of L.W.L. to be added to the L.W.L. measured on the incline for the racing length. The actual L.W.L. used would be obtained in the usual way from the plotted waterline when heeled and the areas measured by the planimeter.

It has been assumed for purposes of comparison and tabulation that the tonnage represents the cube. It does quite closely, and from it and from the published measurements of yachts, assisted by judgment in ascertaining the actual L.W.L., the following table has been prepared.

It is, of course, not exact, but it will give an idea of the working, which seems to be fair. Thus, Akista has a very long body, but a small sail plan and a large cube. In consequence her length is not greatly increased. Acushla has large sail, small cube, and consequently a larger increase. Canopus follows this example also Comparing Choctaw, Eidolon, Gossoon, Penguin and Uvira, also Carmita and Wasp, it will be seen that the boat which has the small cube and large sail area pays for it by measuring up, and under the measures of the suggested rule the yachts are more nearly equalized than under the old. The great advantages are: ease of measuring, equalization of good yachts, credit

given for good points, consideration of all elements, theoretically correct form. Expressed as a formula:

$$R.\ L. = L.W.L + \frac{L.W.\ L. \times S.A.}{10 \times \text{Cubic Contents.}}$$

The l.w.l. to be measured with hull inclined, and the cubic contents to include cabin house.

TABLE 1.

	Cubic Capacity, Feet.	Erect L.W.L.	Inclined L.W.L.	Racing Length, 1897.	Sail Area.	Racing Length, Proposed Rule.
Akista	1,245.00	30.00	36.00	34.75	1,250.00	39.60

Racing at Newport.

THE reputation of Newport as a yachting center has heretofore been based mainly on its advantages as a convenient harbor adjacent to good sailing waters, the racing, save that of the New York Y. C. cruise, being of the most irregular and desultory description. Last year, however, a new order of affairs was inaugurated by some of the many yachtsmen who make their home at this beautiful resort, and from July to the end of the season the 30-footers were kept busy, with several races each week. This year the 30ft. fleet is again found at Newport, and the racing is now on, to last until fall. One of last year's leaders, Asahi, so ably sailed by Capt. Nat Watson, is now east of the Cape and out of the racing, and Musme, Raccoon and Carolina are still about the Sound; the Newport fleet, however, includes Vaquero III., Hera, Wa Wa, Veda, Esperanze, Puck and Dorothy II. The first race was sailed on July 15, a sweepstakes, the course being from Brenton's Cove around Dyer's Island, 18 miles. The wind was fresh S.W. Puck won by a small margin, the times being:

	Elapsed.
Puck. E D. Morgan	2 21 47
Wa Wa, J. Stillman	2 22 35
Dorothy II., H P. Whitney	2 23 07
Vaquero III., H. B. Duryea	2 23 52
Hera, R. N Ellis	2 24 52
Veda, C. Vanderbilt, Jr.	2 24 37

The second race was sailed on July 16, over the triangular course from Brenton's Cove around the Jamestown mark and Bishop's Rock, two rounds, 15 miles. Vaquero led the fleet and won; Dorothy picked up a lobster pot with her fin and withdrew. The times were:

	Elapsed.
Vaquero III.	1 55 50
Wa Wa	1 57 00
Hera	1 58 40
Veda	1 59 20
Dorothy II.	Did not finish.

On July 19 another race was sailed in a moderate S.E. wind, the times being:

	Elapsed.
Puck	2 49 56
Vaquero III.	2 50 54
Wa Wa	2 52 14
Hera	2 52 40
Veda	2 53 15
Dorothy II.	2 54 20

July 20 Mr. Duryea offered a cup for the class, his Vaquero III. not starting. The Dyer's Island course was sailed in a light S.W. wind, which freshened during the race. The times were:

	Elapsed.
Puck	2 26 20
Hera	2 27 10
Wa Wa	2 27 18
Dorothy II.	2 29 20
Esperanza	2 30 55
Veda	2 32 55

On July 21 a sweepstake race was sailed, with but four starters, over the Dyer's Island course, in a light S.W. wind. The times were:

	Elapsed.
Vaquero III.	2 35 52
Puck	2 37 05
Hera	2 38 40
Wa Wa	2 39 15

On July 22 a race was started over the Dyer's Island course before a heavy southerly gale, the prize being a cup offered by H. P. Whitney. On the run up the bay spinakers were set, but soon blew away. On the beat home the yachts suffered considerably, though reefed down. Veda sprung her mast and ran for shelter, fetching up at Bristol. The others met with minor mishaps. Vaquero III. won by 9m. The times were:

	Elapsed.
Vaquero III.	2 02 50
Puck	2 12 00
Dorothy II.	2 18 10
Hera	Did not finish
Esperanza	Did not finish.
Wa Wa	Did not finish.
Veda	Did not finish.

On Saturday, July 24, a race was sailed in a S.W. wind with thunder squalls, the times being:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 09 00	2 03 00
Puck, E. D. Morgan	5 09 55	2 03 55
Dorothy II., H. P. Whitney	5 10 40	2 04 40
Wa Wa, J. A. Stillman	5 11 05	2 05 05
Hera, R. N. Ellis,	Did not finish.	

Shelter Island Y. C.—Ladies' Day Race.

Saturday, July 24.

THE Ladies' Day race of the Shelter Island Y. C., on July 24, was sailed in a reefing breeze, the times being:

	Length.	Elapsed.	Corrected.
SLOOPS—CLASS D			
Dilemma, L. Fish	28.04	1 40 04	1 37 13
Lynx, R B Lynch	28.04	1 44 03	1 41 11
Consternation J. W. Stearns	29.13	1 45 28	1 45 28
Pyxie, Marshall,	24.53	1 56 30	1 50 48
CATBOATS—CLASS 2.			
Cuidao, O. B. Webber	29.38	Withdrew.	
Oseonda, Tangeman	27.18	2 09 23	2 16 19
Vinata, T. M. Towle	27.21	Not timed.	
SLOOPS—CLASS F.			
Nueva, T. W. Brigham	17.69	1 12 01	1 12 14

The open regatta of the club will be sailed on Aug. 7, and the second club race on Aug. 31.

Yampa, schr., R. S. Palmer, sailed on July 21 from St Peterburgh for Kiel.

Winthrop Y. C. Open Regatta.

WINTHROP—BOSTON HARBOR.

Saturday, July, 17.

MASS. Y. R. A. RULES.

The Winthrop Y. C. sailed an open race on July 17 in a light and variable wind, the times being:

	Leng'h.	Elapsed.	Corrected.
FIRST CLASS.			
Emma C., P. A. Coupal	27.06	2 49 27	1 23 51
Harbinger, W. F. Bache	28.01	2 50 45	2 27 35
Little Peter, H. Moebs	24.05	3 34 46	2 58 36
Elfreda, B. T. Hall	28 11	Ran aground.	
Freda, S. J. Wilde	24.00	Withdrew.	
SECOND CLASS.			
Muriel, H. N. Nute	23.11	3 10 35	2 43 57
Nettie, W. Burgess	23.11	3 12 54	2 46 16
Whisper, W. H. Simpson	20 02	3 50 00	3 19 28
Fanny D	Withdrew.		
Rex	Withdrew.		
Privateer	Withdrew.		
Alma	Withdrew.		
Myrtle	Withdrew.		
Mist	Withdrew.		
KNOCKABOUTS.			
Fly, W O. Gay	21.00	3 52 53	.....
Gosling, North & Clark	21.00	Withdrew.	
THIRD CLASS.			
Wrinkle, S N. Small	19.11	3 39 27	3 08 37
Cleopatra, H. M. Faxon	19.11	3 39 50	3 09 00
Alison, Fowle & Hutchins	19.03	3 51 20	3 22 52
Skate	Withdrew.		
Harriet	Withdrew.		
Sue	Withdrew.		
Arab	Withdrew.		
Perhaps	Withdrew.		
Omene	Withdrew.		
Vamoose	Withdrew.		
FOURTH CLASS			
Vitesse, C. D Mower	15.06	3 34 40	2 57 39
Alpine, C. J. Blethen	16.10	3 34 20	2 59 36
Fantasy, W Allerton	16.03	3 34 55	2 59 53
Hector, F. M Crosby	16.06	3 41 43	3 06 18
Glide	Withdrew.		
Spinx	Withdrew.		
Ripple	Withdrew.		
Delia	Withdrew.		

Gosling protests Fly for fouling; Hector protests Vitesse, Alpine, Fantasy for using other means of propulsion than sails. The judges were: Geo. E. Leighton, Wm. A. Garratt, A. T. Bliss and Jas. R. Hodder.

Corinthian Y. C.—First Championship Race.

MARBLEHEAD—MASSACHUSETTS BAY

Saturday, July 17.

THE 109th regatta of the Corinthian Y. C. of Marblehead was sailed on July 17 in a light S.W. wind, the times being:

	Length.	Start	Elapsed.	Corrected.
FIRST CLASS.				
Asahi, S. N. S. Thayer	23.00	3 05 00	Withdrew.	
SECOND CLASS.				
Susie, J. F. Cole	28.06	3 05 00	Did not finish.	
Clara, W. D. Turner	28.09	3 05 00	Did not finish.	
THIRD CLASS				
Hoodlum, A. H. Higginson	24.09	3 10 00	3 04 21	3 04 21
Snipe II., E. A Boardman	22.04	3 10 00	Withdrew.	
Satanic, D H. Follett, Jr.	23.11	3 10 00	Withdrew.	
FOURTH CLASS.				
Koorali, R. C. Robbins		3 10 00	2 13 55	2 13 55
KNOCKABOUTS.				
Mongoose, B. B. Crowninshield		3 15 00	3 24 55	
Cock Robin, C. H. W. Foster			3 25 14	
Sally III., D. C. Percival		Withdrew.		
Hazard, H. M. Sears		Withdrew.		
CLASS A.				
Mistral, Currier Bros		3 20 00	3 27 00	3 20 00
Lillian, H. E. Whitney		3 20 00	Withdrew.	
Eugenia, J S Palmer		3 20 00	Withdrew.	
Metric, J L. Paine		3 20 00	Withdrew.	
CLASS C				
Mayona, C O. Stearns		3 25 00	2 22 35	2 17 35
Dorothy, F. Brewster		3 25 00	2 23 25	2 21 25
Comet, A. A. Lawrence		3 25 00	2 26 45	2 24 15
Aspent, H. A. Moss		3 25 00	2 27 06	2 25 06
Maia, E. Paine		3 25 00	2 32 53	2 31 25
Verona, C B. Tucker		Did not finish.		

The prize winners were Hoodlum, $10; Mongoose, $10; Cock Robin, $7; Mistral, $10; Mayona, $10; Dorothy, $7; Comet, $5. Hoodlum, Koorali and Mongoose each win a leg in the championship.

The judges were G. W. Mansfield, W. B. Stearns, A. G. Simpson.

Pewaukee Y. C.

PEWAUKEE, Wis., July 24.—The result of the weekly regatta of the Pewaukee Y. C. that was sailed to-day over the four-mile triangular course, with a light wind, was as follows:

Eleven yachts entered, but the Gutchon, owned by William Gulach, dropped out on the second leg.

	Time.
CLASS A.	
Lorraine, Schiller & Bauch	0 59 28
Sirrocco, Wallber Bros	1 02 00
Idle Hour, R. E. Gilyohann	1 03 02
Tempest, C. Hasse	1 04 27
Mistral, A. S. Hathaway	1 07 25
Carmela, S. P. Faclintar	1 11 15
CLASS B.	
Kite, Poppert & Rom	1 09 27
Aida, A. C. Zinn	1 11 39
Martha, A. H. Steinman	1 12 39
Sophia, W. H. Meyers	1 00 13

Winners: Class A, Lorraine first, Sirrocco second; class B, Kite first, Aida second.

Judges: George M. Conway, Emil Wallber. Timekeepers: George M. Conway, Em.l Wallber.

The race was very pretty, and at times on the second and third leg was exciting. The wind was steady from the east. Start west. ERNEST E. WHITE.

YACHTING NEWS NOTES.

The Indian Harbor Y. C. will sail its ninth annual regatta on Saturday next, under the rules of the Sound Y. R. U., the start being made at noon. The race will be open to yachts enrolled in any recognized yacht club, in the following classes: cruising trim schooners, in one class, 51ft. and 43ft. classes; racing trim, 51ft., 43ft., 36ft., 30 and 25ft. classes, open sloops of the 25, 20 and 15ft. classes; open cats of the 25, 20 and 15ft. classes, and 43ft. yawl class. Entries may be made to F. S. Doremus, chairman of the race committee, up to July 29.

On the night of July 21 the steam yacht Helen, C. F. Burhaus, of Warrensburgh, N. Y., was intentionally scuttled by unknown parties and sunk in 70ft. of water. She has been located, and will be raised by a diver from the Merritt Wrecking Co., of New York.

Varuna, steam yacht, Eugene Higgins, arrived at New York on July 23, with her owner and friends aboard.

Vigilant, cutter, Percy Chubb, is at City Island this week, where her long boom and cross-cut mainsail, used in her races with Defender, will be shipped and bent in preparation for the cruise races.

Owing to the continued bad weather, the new 51-footer Kestrel was still on the ways at Wood's yard, City Island, up to the time of going to press, Tuesday afternoon. She will be launched as soon as the weather permits, but it will be some time before she is in condition to race against Syce.

On July 21 the naphtha launch Firefly was picked up in Long Island Sound, near Oldfield Point, by the working schooner Observer, Capt. W. Jewell. The launch was running alone under full headway with no one on board.

The firm of Crane Bros., of Westfield, Mass., manufacturers of linen papers and owners of the patents on "Linenoid," is now prepared to make model yacht hulls, duplicating any model of this excellent material. It has already been fully tested in actual use in canoes and boats. From its strength and lightness, it is well adapted to model yacht construction.

Jean, steam yacht, was launched at Bristol on July 19. The yacht was built under the superintendence of Tams & Lemoine for T. A. Gillespie, of Pittsburgh, Pa. On her trial trip she made a speed of twenty miles.

On July 16 the cutter Dysilio, 36 tons Thames measurement, and owned by Joseph Mosely, of Beaumaris, Wales, was in collision with the U. S. ship San Francisco off Godnor Point, on the English coast. The yacht sank in a few minutes, her crew being saved by the warship, which was uninjured.

Velox, schr., H. A. Sieber, of Havre, arrived at New York last week, with her owner and friends on board. The party stopped *en route* at Madeira and Bermuda. Velox was designed by A. Normand, and built at Havre in 1875 She is 123ft. l.w.l., 23ft. 6in. beam, and 12ft. draft. She will return to France after Mr. Sieber and his friends have spent a short time in this country.

On July 12 the steam yacht Margarita II., A. J. Drexel, arrived at New York from Queenstown, with owner and friends on board. She made the run from Queenstown in ten days.

Quissetta, schr., H. W. Harris, is now cruising in Maine waters, and will not race this year.

The race of the Green Lake Y. C., on July 12, was won by Hypatia, whose lines recently appeared in the FOREST AND STREAM. The times were:

Hypatia	1 52 04	Tzin	2 08 07
Pleasant Point	1 54 24	St. Louis	Did not finish.

On July 5 the Fox Lake Ladies Y. C. was formally organized at Fox Lake, Ill., which already boasts a yacht club of the masculine persuasion. The officers are: Com., Miss Jean Brophy; Vice-Com., Miss Marion Tooker; Sec'y-Treas., Miss Florence Brophy. Four races will be sailed this season.

Henry Piepgrass, the yacht builder, has built for his own use a centerboard sloop, 35ft. over all, 24ft. l.w.l., 11ft. beam and 2ft. draft. She has 3,000lbs. of lead on her keel and a centerboard of steel plate, weighing 700lbs.

Alcedo II., the steam yacht recently launched at the Harlan & Hollinsworth yards, Wilmington, for G. W. C. Drexel, made her trial trip on July 11, reaching her contract speed of 13½ knots. On July 17 she sailed for Southampton with Capt. F. E. Dyer in command; but, owing to a mishap to her machinery, she put back, arriving at New York on July 26. Mr. Drexel, with his family, sailed for England on July 21 and will join the yacht for a cruise in Northern waters.

We are indebted to the secretaries of the Corinthian Y. C., of Philadelphia, the Rochester Y. C., Rhode Island Y. C., and the Indiana Y. and B. C. for copies of the club books.

The annual report of the race committee of the Seawanhaka Cor. Y. C. for 1896 has been printed in pamphlet form for distribution to yachtsmen and clubs.

We have received the first number of a new paper, *Land and Water*, published in Boston and devoted to outdoor sports, including yachting. The paper is a monthly, neatly printed and with some good illustrations. The yachting department is in charge of A. G. McVey, "the Boston *Herald* Man," whose introductory is but a rehash of the platitudes and set phrases about "handcuffs on designers," "piazza yachtsmen," "fastest 90ft. single-sticker," etc., that have done so much to impair the standing of the latter paper.

"The Yachtsman's Guide and Nautical Calendar" for the present year has recently been issued by the publisher, M. J. Kiley, of Boston. The book has been very thoroughly revised, and new matter has been added, greatly increasing its value. Among the large number of illustrations are portraits of many of the leading yachts and also of a great many men associated with yachting, club officers, prominent owners, designers, yacht captains and engineers, pilots and furnishers of yachting supplies, etc. The new rules of the road at sea are included, with tide tables, pilotage directions, and much useful matter of a general nature. The low price, 50 cents, affords no idea of the practical value of the book for everyday reference about the water.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. W. Fleischman, 1611 N. 21st St., Phila., Pa.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Francis H. Macnee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Red Dragon C. C.

THE annual regatta of the Red Dragon C. C. of Philadelphia, was held on the Delaware over the triangular course in front of the club house at Wissanoming, Pa. The distance was about four miles, a good stiff breeze was blowing and the race was finely sailed. First prize was taken by E-Cho, A. S. Fenimore and Joseph Edward Murray; second by Feather, F. W. Noyes. Imp was disabled and withdrew from the race.

On the same day over the same course the race for yawls was held. First being taken by Nixie, H. C. Bachman; second by Dragon, W. J. Scott.

The first of a series of three record races for points was sailed on June 26 over the regular club course from buoy off club house to Wheat Sheaf Buoy and return, six miles in all. There was a moderate breeze. First prize, E-Cho, Fenimore & Murray; second, Feather, F. W. Noyes; third, Imp, J. W. Hamilton. Jaekala, R. S. Fleischman, was disabled, owing to a shroud parting just after crossing the starting line, and withdrew.

Jaekala is a new ½-rater just built by her owner, R. G. Fleischman, from a design by the well known amateur designer, H. C. McCormick. She was expected to sail to the front, and the unfortunate mishap was a deep regret to all. In the races later on the owner fully expects to redeem himself.

The second record race was sailed on Saturday, July 10, over the regular club course. At the start a light breeze was blowing which freshened into a stiff blow after rounding Wheat Sheaf Buoy. First prize was awarded to Imp, J.

W. Hamilton; second to Jaekala, R. G. Fleischman; third, E-Cho, Fenimore & Murray. The elapsed time in this race was: Imp, 1:21; Jaekala, 1:23; E-Cho, 1:24.

On July 17 a very exciting paddling race for a special prize was held in front of the club house. There were three entries. First prize was won by M. D. Wilt; second, E. W. Crittenden; third, H. M. Rogers. The race between Wilt and Crittenden was the closest ever paddled over this course, Wilt only winning by about 6in. After the race Mr. Wilt sang "The Yellow Dog" to Crittenden's and Rogers' accompaniment. Morry has completely shaken his hoodoo, and now will stick to his mascot, the left hindfoot of a white rabbit.

Vice-Com. Joseph Edward Murray and M. D. Wilt will attend the annual meet at Grindstone Island. Mr. Wilt is paddling in splendid form, and is in fit condition to win any of the races in which he competes, and sustain the reputation of the Red Dragon Canoe Club as active canoeists.

No more races will be held until September, owing to many of the men going on their annual summer cruise. H. W. Fleischman, with launch Teapot; Nixie, H. E. Bachman, and Dragon, W. C. Scott, will cruise to the Chesapeake Bay, which is the favorite cruising water of the R. D. C. C.

C. Barton Keen and Mate Ben Barney, in the yawl Keren, made the club a visit on July 18. Mr. Keen is an old and popular member of the Red Dragons, but is now more actively connected with the Philadelphia Corinthian Y. C. He was preparing for a cruise down the bay.

The A. C. A. year book for 1897, which is now being sent out, is one of the handsomest we have seen. The cover is printed in red and black, the top being surmounted by the association's burgee. In the center is a half-tone picture of a sailing canoe, the scene being surrounded by a bit of rope. In this case our fellow clubman M. D. Wilt is honored, the picture being one of this popular canoeist. W. K. P.

Transportation to the A. C. A. Meet.

As advised by the camp circular, the Trunk Line Association has granted a round trip rate to Clayton of one and one-third fare. Members will purchase tickets (one way) at full fare, obtaining at the same time certificates, which, when endorsed at camp, will entitle holders to return tickets at one-third the regular rate. Tickets may be purchased three days prior to and during the continuance of camp, and certificates are good for return tickets by continuous trip for three days (Sunday excepted) after camp closes on Aug. 20.

Transportation for canoes and duffle for members from in and around New York city, and going to camp from other points via New York will be the same as heretofore. A baggage car, provided with racks and burlaps, will be at the Thirtieth street station of the N. Y. C. & H. R. R. R. on Monday, Aug. 2; canoes and duffle sent there ahead will be cared for and stored in the car (mark care of J. K. Hand). The car will stop at the Knickerbocker Canoe Club, 152d street and Hudson River, on Aug. 3, at Yonkers (Glenwood) the same night, Sing Sing on Aug. 4, thence direct to Clayton. The return trip will be made as soon as possible after the close of camp, stopping at same points. Members are requested to check trunks and all baggage possible in the regular way, so as to leave room for the canoes, sails, etc., which cannot be carried otherwise.

Trains leave New York (Grand Central Depot) for Clayton: Week days, 7:50 A. M.; arrive at Clayton 4:55 P. M. Every day, 6:25 P. M.; arrive at Clayton 5:15 A. M. Trains leave Clayton: Week days, 8:05 A. M.; arrive at New York 8:45 P. M. Every day, 9 P. M.; arrive at New York 7:45 A. M.

A special sleeper will be attached to the Thousand Islands express leaving Grand Central Depot at 6:25 P. M. on Aug. 6, provided sufficient notice is received by the undersigned.

The Pastime will ply between Clayton and the camp on the following schedule:

LEAVE.		ARRIVE.	
Clayton	6:30 A. M.	Camp	7:15 A. M.
Camp	7:30 A. M.	Clayton	8:15 A. M.
Clayton	10:30 A. M.	Camp	11:15 A. M
Camp	11:30 A. M.	Clayton	12:15 P. M.
Clayton	2:00 P. M.	Camp	2:45 P. M.
Camp	3:15 P. M.	Clayton	4:00 P. M.
Clayton	5:15 P. M.	Camp	6:00 P. M.
Camp	7:30 P. M.	Clayton	8 15 P. M.

Further information gladly furnished, if possible. (Telephone 444—38th street.)

For the Transportation Committee.

JAMES K. HAND, Grand Central Depot.

The Central Division Trophy.

A MEETING of the Central Division regatta committee of the A. C. A. was held at Rochester on Saturday, July 10, to make rules governing the new Central Division sailing trophy. J. C. Milsom, of Buffalo, chairman, and Al. T. Brown, of Rochester, were present; the third member of the committee, A. R. Porte, of Ogdensburg, being unable to attend. The following restrictions were adopted unanimously, Mr. Porte voting by letter; Sail limit, 100sq. ft. Seat limit, 30in. Cockpits, open or self-bailing. Course, 4½ miles. Time limit, two hours.

The Central Division sailing trophy is to be contested for annually at the meet of the A. C. A., or at the division meet, if held.

A. C. A. sailing rules and regulations, not otherwise provided for, will govern this contest.

No part of the sliding seat or base of seat shall be more than 30in. in length.

The winner of the trophy will hold the same for one year; also have his name and the year won engraved upon it; to be returned to the Association annually at its meeting place previous to the calling of the first event on the programme.

A bond of $500 will be required of the winner, to be signed by two A. C. A. members in good standing.

Respectfully submitted,

J. C. MILSOM, A. R. PORTE, AL. T. BROWN,
Central Division Regatta Committee.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Revolver Shooting in England.

MR. W. L. WINANS, of Baltimore, Md., died in his seventy-fifth year in London, Eng., on June 22. In consequence, his eldest son, Walter Winans, was not able to compete for the revolver prizes and revolver championship of England at the Bisley meeting, which began on July 13. Walter Winans has also canceled his entries for the revolver championship shoots of the North and South London rifle clubs.

Calumet Heights Rifle Scores.

CHICAGO, Ill., July 18.—The following scores were made to day by members of the Calumet Heights Gun Club on the club's ranges. Paterson won the medal in Class A, Mrs. Schmidt winning in Class B. Scores;

Class A, 200yds., off-hand, standard target:

Harlan	4474456106—41	Norcom	1012111158—21
Metcalf	4403231227—28	Greely	5613180804—39
Paterson	8773853162—50	Schmidt	5°246?2311—34
Young	2353131135—25	Mumford	6012120121—16
Westcott	01231187?5—30		

Ladies contest, 100yds., Creedmoor target:

Mrs Chamberlain	2433333210—24	Mrs Greely	1000000001— 1
Mrs Schmidt	5143223333—32	Mrs Westcott	0000000000— 0
Mrs Young	4233210000—15	Mrs Mumford	2226200000—14

PATTI.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O Bush, Manager.

Aug. 7.—WISSINOMING, Pa.—All-day target tournament on the grounds of the Florists' Gun Club, under the management of J. K. Starr.

Aug 11.—STERLING, N. Y.—Tournament of the Sterling Rod and Gun Club, for amateurs only. C. F. Wayte, Sec'y.

Aug 11.—HACKENSACK, N. J.—Fifth contest for the Recreation cup. E. A. Jackson, Sec'y.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 24-25.—BUFFALO, N. Y.—Tournament of the Bison Gun Club. Targets. C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 6.—MARION, N. J.—Annual Labor Day tournament of the Endeavor Gun Club. A. R Strader, Sec'y.

Sept 7-10.—DETROIT, Mich.—Jack Parker's annual tournament.

Sept 14-16.—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Co. Merchandise and amateurs.

Sept. 14-16.—DES MOINES, Ia.—Tournament of the Capital Gun Club. F. C. Quimby, Sec'y.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 28-Oct. 1.—————.—Annual tournament of the New Jersey State Sportsmen's Association. First two days, targets; last two days, live birds. W. H. Huck, Rutherford, N. J.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

THE invitation target shoot of the Riverton Gun Club, on Wednesday last, was successful enough to encourage the promoters of that kind of sport in their efforts to popularize target shooting among the members of what has been hitherto purely a live-bird club. We understand that they are shooting targets up at Larchmont occasionally. If such is the case, it looks as if target shooting was going to get a share of the fun when the dead season for pigeon shooting comes upon us in future years. And why shouldn't it? Target shooting is not easy, although we must admit that it has always *looked* easy, especially when one has been sitting on a camp chair in rear of the score when Rolla Heikes or members of the Indian squad were cracking out straights. There is a curious feature about target shooting: A good target shot is certain to be a good live-bird shot; at least, we can't recall any good target shot who is not right in it when it comes to live birds But a good live-bird shot is not necessarily a good target shot, although with practice he can undoubtedly make himself heard from when it comes to smashing bluerocks.

New Yorkers and New Jerseymen who think of attending the Interstate shoot at Montpelier, Vt., Aug. 25-26, can make a very pleasant trip of it by going nearly all the way by water. Take the Albany night boat on Monday, Aug. 23; train from Albany to Lake George, Tuesday morning; thence down Lake George and Lake Champlain to Burlington, Vt, by steamers of the Lake George and Lake Champlain Transportation Company; Burlington to Montpelier by rail. The steamer arrives at Burlington about 5 P. M. on Tuesday evening, Aug. 24, practically twenty-four hours after leaving New York city. Last year a party of three left New York for the Burlington Interstate by this route, and the same three will in all probability journey to Montpelier the same way, but accompanied by two or three others. The Montpelier shoot will also be attended by several Canadians. In fact the Vermont Interstate this year promises to be a very pleasant gathering indeed.

A direct result of the Pennsylvania State shoot at Oil City has been an awakening of interest in trap-shooting circles that could not have been brought about by any other means. The club is in very good circumstances, and the business matters in connection with the recent shoot were wound up at a meeting held on July 10. At the same meeting the club departed from its usual custom, and elected three honorary members, Messrs. John R. Campbell, William Fleming and John B. Smithman. The Oil City *Derrick* of July 20 says: "This is the first time in the history of the association that this distinction has been proffered to anyone, and was decided upon as a token of appreciation of the many acts of kindness and encouragement that have been extended to the club by these gentlemen." Mr. Smithman will be recalled by those who were present at the shoot as the owner of the street car line, Deep Hollow and Smithman's Park, where the boiling springs formed such an attraction.

Secretary George B. Walton, of the Montpelier, Vt., Gun Club, in sending us some scores made recently by members of his club, writes as follows: "While at this stage of the game it is early to say much about the success of our shoot, and whether it was pleasant or otherwise, we can guarantee as pleasant a shooting ground as can be found in this part of the country. Our house stands in the shade of fine large elms, and the shooting platform is nicely shaded except in the morning. In shooting we face the northeast and have the best of light on targets. The background, while not absolutely clear, is practically so, and is considered very good by friends who have shot with us. From indications, such as requests for programmes and the general interest which seems to be manifested, I should judge that we will have a nice lot of shooters, besides those from the States. I have assurances from several of our Canadian friends that they will be with us."

Mr H. D. Swarts, box 566, Scranton, Pa., sends us the following announcement of a shoot he proposes to hold at Scranton, Aug 4: "There will be a live-bird shoot at the baseball park, Scranton, Pa., on Wednesday, Aug. 4. Shoot to commence at 1:30 P. M. American Association rules to govern; 28yds, rise, use of both barrels; 10 birds, entrance $7.50. First prize, $40; second, $25; third, $15; fourth, $12; fifth, $8; total, $100. Other events will be shot after the big event. All entries will close July 31. Parties wishing to enter will please send check or money order through post-office for $5, balance to be paid day of shoot. No one will be allowed to shoot in big event unless their entry is received before July 31. Kindly send money on receipt of this if you care to enter, as pigeons are scarce and it is necessary to know about how many to arrange for."

In our report of the New Haven Interstate shoot, which appeared in last week's issue, we made one guess, and guessed wrong—rather a weak percentage! We said in the "Notes": "Sherman whom we take to be A. W. Sherman, of Freehold, N. J." Mr. M. Harrington, of the W. A Powder Company, kindly puts us right in the matter by saying in a letter to us: "Allow me to set you straight in the matter. The gentleman who did such good shooting is Mr. Frank Sherman, of New Haven, Conn., and there isn't a particle of doubt but what his good work on that occasion, was due in a great measure to the fact that his shells were loaded with —" (what do you suppose?). It looks as if our apologies were due to Mr. Frank Sherman, of New Haven, Conn., and to Mr. A. W. Sherman, of Freehold, N. J.

Ferd. Van Dyke is pointing his gun very straight just now. He broke 49 out of 50 on Wednesday, July 21, and won the second heat for the tea service at the Boiling Springs grounds, the shoot being under the "147 handicap" we commented upon in our issue of July 10. Gus Greiff, captain of the club, has requested us to announce that all future contests for the tea service will be held under the old system of handicapping—allowance of extra targets - as the club is convinced that the "147 handicap" does not give a poor shooter the ghost of a show. It doesn't; he can tie, but he can never win. Its real title is the "lick-him-plenty handicap."

Ben O. Bush, of Kalamazoo, Mich., writes under date of July 17 as follows: "Through reading that item in Drivers and Twisters of this week, any one might imagine that King's Smokeless won the high average at the recent Detroit shoot of the Michigan Trap-Shooters' League. This was not the case, as Mr. F. H. Snow made the high average of the tournament; he is using Schultze powder in Winchester and U. M. C. shells. T. J. Graham had the second high average with Winchester and U M. C. shells; he may have used King's Smokeless and he may not. George Spross made third high average, using Gold Dust powder in Winchester shells. William M. Thompson, with Winchester factory loaded shells, Leader and Du Pont powder, won the E. C. cup."

In a recent three-handed match at sparrows shot on the grounds of the Hazelwood Gun Club, John G. Messner, winner of the Grand American Handicap in '95, scored 40 out of 50 sparrows; J. N Crossland scored 47 and F Wilbert 42, a total of 138 out of 150; tough on the sparrows. On another occasion recently, Crossland, Messner, Stilley, A. H. King and W. S. King shot for the Sparrow Championship of Western Pennsylvania, 25 birds per man Crossland won with 24; Messner scored 23, the King brothers 22 each and Stilley 21. The club championship was also won by Crossland in the next event, another 25-bird event; he again scored 24 birds.

Saturday, Aug. 7, there will be quite a shoot on the grounds of the Florist's Gun Club at Wissinoming, Pa., a few miles east of Philadelphia. As there will not be a meeting of the Trap-Shooter's League of Philadelphia for some weeks, J. K. Starr, secretary of the League, has made arrangements to hold an all day shoot as above. Entrance fees are not large and both systems of dividing purses will be used, "with an effort to find out which the shooters prefer." Targets are thrown at 1½ cents each. Wissinoming station is on the New York division of the Pennsylvania Railroad.

Tom Keller is with us again for a brief breathing spell. Of course he talks King's Smokeless, Peters's shells, and makes matches all day long. We remember John D. Bethel (whom we refer to elsewhere in this column) once remarking that Tom made more matches and shot fewer than any other man of his acquaintance. It may be so, but we remember one he shot at Hackensack last spring! B. Waters was his side partner. The other teams were: Van Dyke and Hildreth, Edwards and J. H. Cameron.

The contest between Rolla Heikes and Fred Gilbert for the E. C. championship cup on July 31 will be a good one. Both men are in good form, and the conditions are such that it is hard to pick a sure winner. The conditions are: 50 singles, unknown angles; 50 singles, expert rules, one man up; and 25 pairs. When Rolla won the cup from Fred on Aug. 20 of last year he beat him just one target in each series of 50; thus: 48 to 47 at unknown angles; 45 to 44, expert rules; 40 to 39 on doubles.

The Bison Gun Club, of Buffalo, N. Y, will hold a two days' target tournament, Aug. 24-25, on its grounds at Walden avenue, city line. All purses will be divided 40, 30, 20 and 10 per cent. Five per cent. deducted from all purses for average money for the four high guns in the tournament. Targets thrown from a magautrap at 1 cent each. Guns and shells shipped to C. H. Werlin, secretary, 1634 Broadway, Buffalo, N. Y., will be delivered at the grounds free of charge.

Harvey McMurchy was in the city just when we most expected he was a couple of thousand miles or so westward. How could the Wolf shoot at Clear Lake progress satisfactorily without its great chief—High Ball? We did not see Harvey, neither did we get a chance to talk to him; otherwise we might have found out how it was that he had deserted his tribe at a critical moment.

John D. Bethel, well known in New York sporting goods circles as a salesman of the W. Fred. Quimby Co. for several years, accompanied by his son, who is a practical surveyor and civil engineer, left last week for the gold fields of Alaska. The many friends of John D. will wish him all the luck in the world when it comes to picking up gold and silver in the new Tom Tiddler's ground

At the tournament of the Cook County Trap-Shooters' League, July 17, the Eureka A team broke 138 out of 150 at unknown angles, a 6-men team average of 92 per cent. The Garfield A team broke 133, an average of 88.6 per cent.; and the Calumet Heights B team broke 129, an average of 86 per cent. The shoot was held on the grounds of the Garden City Gun Club.

N. E. Money, U. M. C. Thomas and H P. Collins will be among the shooters who journey next week to Lewiston, Me., to take part in the Interstate shoot given under the auspices of the Androscoggin Gun Club. The dates for the shoot are Aug. 4-5, and from what we hear, there is going to be a good attendance at this shoot.

Captain Money and Junius H. Davis shot a race at 50 pairs of targets on the Riverton grounds after the programme for the invitation shoot of July 21 had been disposed of. The targets were thrown from a magautrap Captain Money won, after a close race, by 2 targets, breaking 70 to 68 In a sweep at 10 pairs, Billy Wolstencroft smashed 20 straight without turning a hair.

Mr. E. Detmold, junior member of the firm of Von Lengerke & Detmold, now of 318 Broadway, who was recently operated upon for appendicitis, has stood the operation very well and is now on the road to recovery. Meanwhile the firm of which he is a member is settling down into its new quarters.

C. W. Tuttle, of Auburn, N. Y., was in New York on July 21, and took a whack at bluerocks over on the Boiling Springs Gun Club's grounds at Rutherford, N. J., and incidentally he gave Ferd. Van Dyke a hard chase for the silver tea service.

J. 147 L. Winston won the Irroy prize at Elkwood Park on Friday last, July 23. He tied with Fred Hoey on 10 straight each; on the shoot-off, miss-and-out, Hoey lost his 5th bird.

The R A. McCready Co., Limited, of Toronto, Canada, write us that circumstances have arisen that make it impossible for the company to hold its tournament as advertised.

JULY 27. EDWARD BANKS.

Team Race at Peekskill.

PEEKSKILL, N. Y., July 24.—The second round in the contest going on between the gun clubs of the Hudson River Valley was fought out here to day and resulted as follows:

Peekskill Gun Club.

H P Dain	1111111111011111011111111	—23
F Southard	1110111101111111011111111	—22

Vail	0011110011101110111001110	—16 69

The next shoot will be at Poughkeepsie Thursday, Aug 5, when it is expected that at least six clubs will participate.

B. C. EVERINGHIM

Missoula Rod and Gun Club.

MISSOULA, Mont., July 18.—We held no medal shoot this week on account of rainy weather, though a few shooters put in an appearance and had a small practice, the scores of which I enclose:

	No. 1	No 2.
R A Eddy	1111110111011101010—15	100 1010101111101111—14
T L McLeod	1100010001010001010— 8	0010001000000000100— 5
R E Hammond	1101000011100011000— 8	1111 0001 1010001000— 8

In a match at 3 pairs Eddy broke 5 to McLeod's 3.

W. E. GRAHAM, Sec'y

Fulford's to "Charley and Mac."

UTICA, N. Y., July 24.—*Editor Forest and Stream:* Will you permit me a few words in reply to the statements of C. E. Willard and also the recent utterances of Harvey McMurchy with respect to professional shooters?

Who will gainsay the fact that it was largely through the efforts of paid professional shooters and expert amateurs, together with the masterhand of McMurchy, that placed his gun where it is to-day? L. C. Smith was, without doubt or question, the most astute gun manufacturer of his day, and he early saw the advantage of a paid professional shooter to advertise his gun. I trust that Mr. McMurchy, after enjoying the field almost alone all these years, is not now getting afraid of competition.

Will Messrs. Willard and McMurchy kindly come forward and tell us when trap-shooting was ruined, and who did the deed? Again Mr. Willard says, after proposing the establishment of shooting parks, "We believe with this arrangement, and with targets and shells sold at a minimum price, that there would soon be as much shooting as there was a few years back." Why, bless your soul, Charley, don't you know that there was never as much trap-shooting done in the history of the world as is done now? Ask the target manufacturers; ask the shell trade; ask the powder men; and with one unanimous voice they will tell you that their business is increasing in a large ratio every year. The people who talk about the "good old times" are the ones who, in the "good old times," had the professional field to themselves, and reaped all the benefit. Now I contend that professionalism has not hurt trap-shooting at all; it has helped it in the way of introducing better guns, loads and methods in shooting; and if the big tournaments are not now the successes they once were, the cause can be looked for in the general depression and not as a result of professional shooters. The men who formerly went a hundred miles to a tournament now do the same amount of shooting on their own club's grounds That professional shooters are not responsible is proven by the fact that strictly amateur shoots are not as well patronized as open shoots. Stripped of its mask, this wail is simply the cry of the old commercial drummer professional shooter, who sees his preserves invaded by men whose only business it is to advertise goods instead of both advertising and selling. Shooting is not going to the dogs, and if not a single big tournament were to be held next year in this country, there would notwithstanding be five times as many targets thrown as in the "good old days" when a half dozen men had things all their own way. "But," says Willard, "by this I mean that where there are now ten professional shooters employed, there will be but one when the trap-shooting season opens in 1898. Mac and I have talked this over, and we are both of the same opinion that this is the only way in which the good old days can be brought back." But why the one professional shooter, Charley? Why not abolish them all? Or is it that you mean that only you and Mac are to be left to reap the harvest, as you did in "the good old days?" Of course, if you can bar out Heikes, Glover, Gilbert, Parmelee, Winston, Budd, Brewer, Elliott and many others, and only leave in the business those whose business it is to sell to the trade, then, no doubt, it would be "good old days" for Charley and Mac.

But the real fact about the matter is that the manufacturers, whose trade has been doubled many times over by the efforts of these men, will quite likely have something to say as to whom they will employ in 1898. E. D. FULFORD.

Elliott versus Grimm.

KANSAS CITY, Mo., July 22.—*Editor Forest and Stream:* I readily note in several sporting papers, the desire of Mr. E. S. Rice to appear as the backer of Mr. C. M. Grimm, of Clear Lake, Ia., in a series of three matches, and I am willing to concede him the advantage of even naming all the grounds the matches are to take place on. Am glad to see Mr. Rice desires a test of skill on good pigeons, although I have noticed, when two men desire to shoot a pigeon match, the conditions of the pigeons were as equally fair for one man as another, at any season of the year. There has also been, for a number of years, a class of shooters—during the months of July and August—who were usually redhot for a match, but who can never be confined in one until the fall of the year, when birds are good; at which time a necessary postponement extends the time until spring, when the challenges become obliterated by the spring rains and have to be renewed again through the press columns. It is now my purpose to accommodate each one's particular fancy.

With a few modifications and conditions, I will accept Mr. Rice's challenge on behalf of Mr. Grimm, and I will first meet Mr. Grimm at St. Louis, Mo., Saturday, Oct. 2, at 2 P. M.; second, at Omaha, Neb., Wednesday, Oct. 6, at 2 P. M.; third, at Chicago, Ill., Saturday, Oct 9, at 2 P. M. Each individual match to be at one hundred (100) pigeons each man, for one hundred dollars ($100) a side; American Association rules; thirty (30) yards rise. Matches to be shot to a finish the same day, daylight permitting, with a side bet of two hundred dollars ($200) a side on the man killing the highest number in the three matches. The fifty ($50) dollars forfeit to become a part of the stake of the last race, provided the former conditions have been complied with. The loser of each match to pay for the pigeons shot at by each contestant; also a gate receipt of fifty (50) cents to be collected from every visitor, including principals and their backers. The total amount collected to be turned over to the referee and become a part of the stake, going to the contestant winning that day's contest. Mr. Rice being the challenger, is at each point he has named, to furnish inclosed grounds free of charge, further providing A1, first-class pigeons of which he speaks, at a nominal price, not to exceed twenty-five (25) cents each. If surface or ground traps are used, the two hundred (200) selected pigeons which we are to shoot at are to be placed in coops and trapped therefrom, in plain view of both contestants. Not caring to lay out of the use of so much money as Mr. Rice has put up, and considering fifty dollars ($50) a sufficient guarantee of a man's good faith, I have forwarded to Mr. John Watson, Grand Crossing, Ill., that amount, naming him as the holder of final stake and forfeit. Next! J. A. R. ELLIOTT.

Boston Shooting Association.

BOSTON, Mass., July 21.—The team shoot for the *Shooting and Fishing* trophy took place to-day on the grounds of the Boston Shooting Association at Wellington. The race resulted in favor of the Worcester Sportsman's Club by 9 breaks. Scores:

Worcester Sportsman's Club.	Singles.	Pairs.	Total.

Briggs	..	..	..	..	..	..	3	3	16	14	..

Nos. 1 and 4 were at known angles; the rest were at unknown angles, with the exception of No. 2, which was at expert rules.

GEO. B. WALTON, Sec'y.

Limited Gun Club's Summer Meeting.

INDIANAPOLIS, Ind., July 8.—The summer meeting of the Limited Gun Club, which closed to day, was "the hottest ever was." At the coolest place on the wide veranda of the club house the mercury was crowding the 100 mark, while down town the intense heat was hourly claiming its victims. Under such conditions it was not expected that the attendance would be large. The secretary was at home sick, and his work devolved upon Mr John M. Lilly, who was assisted by Mr. A. E. Ballwag as referee, Mr. Ray Williams as cashier, and by Mr. George Miller as scorer.

The programme was alternate events of 15 targets, entrance $5, and 20 targets, entrance $2.50. Ten per cent of net purses was set aside and divided equally between the five high guns shooting in the first ten events.

The out of town shooters were: A. W. du Bray, of Parker Bros.; Ralph Trimble, of the Du Pont Powder Co.; H E. Norton, of the Winchester Arms Co.; H. J Lyons and J. S. Phelps, Jr., Louisville, Ky.; J. W. Penn, Cincinnati; Ed. Novis, Crawfordsville; J. B. Stipp, Bedford; Proctor and Glunt, Union City; Small and Gamble Aurora; Van Dolson and Cartright, Anderson; Thompson, Lafayette; Cumberland and Apperson, Kokomo; Schwartz, Columbus; E. Trimble, Covington, Ky., and F. D. Alkire, Woodlyn, O.

The trade representatives were barred from the sweeps, and shot for the targets only, as did several others, who thought the company too fast for them. In this way about 1,800 targets were sold. The club will encourage this sort of thing in the future. Mr. J. L. Head, of Peru, and Meyers and Webb, of Greensburg, were new men on the second day.

FIRST DAY.

The results of this day's shooting were as below:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Gamble	175	153	87.4	Thompson	175	132	75.4
Parry	175	151	86.3	Lyons	175	129	73.7
Beck	175	151	86.3	E Trimble	125	104	83.2
Alkire	175	150	85.7	Schwartz	105	84	80
Partington	175	147	84	Wildhack	90	77	85.5
Tripp	175	145	82.8	Proctor	85	71	83.5
Cooper	175	144	82.2	Socwell	70	55	78.5
Griffiths	175	142	81.1	Marott	50	30	60
Penn	175	140	80	Stilwell	45	30	66.6
Voris	175	140	80	Grube	35	26	74.2
Stipp	175	136	77.7	Cumberland	35	23	65.7
Small	175	135	77.1	Apperson	30	19	63.3
Phelps	175	134	76.5				

Gamble, Parry, Beck, Alkire and Partington, the five high guns, each received $7.70 as average money,

SECOND DAY.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Partington	175	158	90.2	Beck	155	124	80
Tripp	175	155	88.5	Griffiths	125	102	81.6
Alkire	175	155	88.5	E Trimble	125	100	80
Gamble	175	155	88.5	Webb	100	75	75
Head	175	155	88.5	Wildhack	90	72	80
Parry	175	154	88	Socwell	50	41	82
Cooper	175	151	86.3	Lockwood	35	28	80
Penn	175	150	85.7	Long	15	14	93.3
Meyers	175	139	79.4	Marott	15	10	66.6

Partington, Tripp, Alkire, Gamble and Head each received $5 as average money for the five high guns. R. R.

Boston Gun Club.

WELLINGTON, Mass., July 21.—The final shoot of the Boston Gun Club series took place at Wellington to-day, and eleven assembled to do justice to the event. The afternoon was fine for shooting, and no fault could be found with it; the sun was hidden by many clouds, affording reduced temperature and also a relieved light. Not a few are sorry that the shooting on these grounds is concluded until snow flies, for each Wednesday, as they all too quickly sped away, meant a pleasant hour or two with gun and friends. The series consisted of eight shoots with the four best scores counting for prizes; and one score consisting of 25 targets each day, 15 known and 10 unknown. Winning scores are given below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	6	5	15	10	10	6	10	10	10	10	10	10
Horace	7	8	9	4	4	9	9	7	..	..	..	2	5	5	6
Benton	4	5	6	1	..	11	6	4	3	3	4	..	..	..	..
Miskay	7	8	7	6	..	12	8	3	..	10	6	5	8	7	7
Milner	6	8	..	..	..	9	7	..	..	4	..	5	..	..	..
Wheeler	2	3	..	..	1	4	4	..	..	2	..	..	..	..	..
Nickols	3	6	6	3	..	5	3	1	..	..	..	..	..	..	..
Lyons	..	6	3	..	..	5	2	..	..	3	..	..	..	..	..

BOSTON.

Trap at Lancaster, Pa.

LANCASTER, Pa., July 16.—This afternoon one of the largest and most exciting live-bird shoots that has been held in this section for a long time took place on Clark's shooting grounds, on the Conestoga, just east of the city. The shoot, under the management of Frank Clark, one of our best known shots, was for a handsome gold trophy donated by the Sprenger Brewing Co., valued at $75 Any resident of this county can compete for it. The winner of the trophy is required to defend it against all comers, and to hold it permanently must win it three times in succession. As will be noticed by the score, Messrs. Taylor and Hoak tied for first honors. In the shoot-off at 10 birds Mr. Hoak won, scoring 8 straight, while Taylor lost his 1st, 5th and 8th birds.

H. O. L.

Lake Charles Rod and Gun Club.

LAKE CHARLES, La., July 21.—The Lake Charles Rod and Gun Club of this city, will give its first annual shoot next month, Aug. 18-20. Its programme as yet has not been announced, but the same promises to be very interesting, from the mere fact that there will be a number of guaranteed prizes.

The club was organized May 1, 1896, and is to-day in a most flourishing condition. Its members are a jolly, good set of men, being of Lake Charles's best citizens, and all are typical sportsmen.

It is expected that Dallas, San Antonio and Houston, Tex.; Shreveport, Alexandria, New Iberia and New Orleans will be well represented at the shoot next month. I can promise all sportsmen who wish to attend that the Lake Charles people and members of the gun club will extend to them hospitalities that time will never erase from their memory. A. CARDONA, JR.

The Indian Wolf Shoot.

CLEAR LAKE, Iowa, July 23.—The first annual tournament of the Indian Squad closed to day. The attendance was not as large as was expected with $500 added; possibly the location had something to do with this, as many shooters thought it too far to go to attend a tournament. But those who did attend were amply repaid for the trip, as Clear Lake is one of the pleasantest places to spend a few days in the heat of the summer we know of. Mr. Grimm had every arrangement made for the convenience and comfort of all.

The target shooting was done across the lake from the city, on a place known as Grand View. The traps were set to throw the targets over the water, and the background was perfect. The shooting was very difficult, owing to a high wind, and straight scores were very scarce. About 20,000 targets were thrown in regular and extra events. The programme had ten 20-target events each day, entrance $2.50, with $15 added to each event. The shooting was done under the Sergeant system; coast pigeon targets were used. Mr. Stratton, of the Grand View Hotel, served a fine lunch, and looked after the comfort of his guests.

On Friday, 23d, the shooting was changed to grounds on the opposite side of the lake, near what is known as the camp grounds and Oaks' Hotel, and at 10 A. M. the 25 live bird event commenced. The birds were a good lot and not a straight score was made. Mr. Gilbert scored 24 and won a nice cut-glass lemonade set, donated by Mr. E. S. Rice, of Chicago, and first money.

Mr. Parmelee won high average on targets, leading Gilbert and Heikes by 5 targets, and won a Marlin repeating rifle, donated by Mr. Robbins, of the *Sportsmen's Review*, of Chicago. Four Indians were absent—McMurchy, Parker, Merrill and Erbardt; we have since learned that Mr. Erhardt is very sick, and the Indian squad and his many friends are very sorry to learn of his being ill, and hope for his speedy recovery.

Chicago was well represented by E. S. Rice and family, Mr Richards and wife, Mrs. Dr. Rowe, Mr. Robbins and wife, John Watson and Ed. Bingham and wife; Keithsburg: Tom Marshall, wife, mother and daughter; Mr. Cobine, wife and daughter, and Mr. Eidlesdorf and wife; Omaha: Loomis, wife and family; Frank Parmelee, Goodly Brucker and J. C. Reed; Spirit Lake: Fred. Gilbert and wife; Kansas City: Hermann and wife, Miss Gilkinson and Mr. Gotleib; Marshalltown, Ia.: Dr. Kibby, wife and family; L. C. Abbott-Cook; Forest City: Mr. Howard, E. A. Leach; Tripps, Dak.: Baldwin; Jackson, Minn.: Palmer; Lake Park: G. Hughes; Fonda: Henshaw; Okoboji: F. A. Smith; Hartley: J. G. Smith; Algona: Mr. Corry; Dayton, Ia.: Clark Manson; Clark: Nora Springs; R. O. Heikes and wife, Dayton, O.; Mr. and Mrs. C. W. Budd, Miss Kopp and W. R. Milner, Des Moines.

On Thursday night a party of about fifty attended Barnum & Bailey's circus at Mason City, and report having a great time.

The Indians have not decided on a location for their tournament next year, but as soon as the location is decided on will advise you.

HAWKEYE.

[Since the above was written we have learned from Hawkeye that the Indians will hold a Wolf shoot in '98 and will add $1,000].

Owing to our receiving the scores of the Indian Wolf shoot shortly before going to press, we are able to give only the general averages of those who shot through the programme of 600 targets. Parmelee leads, with Heikes and Gilbert tied for second and third places, Gottlieb, of Kansas City, being fourth:

	1st day.	2d day.	3d day.	Total.	Ave.
F S Parmelee	188	176	184	543	90.5
R O Heikes	181	173	184	538	89.6
Fred Gilbert	175	180	183	538	89.6
Chris Gottlieb	173	175	181	529	88.1
C M Powers	171	162	185	518	86.3
C M Grimm	169	164	169	502	83.6
T A Marshall	157	165	178	500	83.3
C W Budd	164	158	177	499	83.1
J Loomis	145	170	167	482	80.3
Eddie Bingham	157	153	160	470	78.3
Kibby	155	132	163	450	75

Entries did not rule high. On the first day there were 244 entries in the ten events, an average of 24.4 for each event; the average on the second day was 23.2, and on the third day only 18.2.

In the 25 live-bird race on Friday the scores were (eighteen entries):

Gilbert 24. E. A. Leach, Powers and Parmelee 23, Loomis, Marshall and Budd 22, Grimm 21; all the rest withdrew as follows: Hughes 17 out of 18, Herman and Watson 16 out of 21, Brucker 15 out of 20, Heikes 14 out of 19, Kibby 11 out of 16, Plummer 9 out of 14, Barringer 7 out of 12, Gottlieb 5 out of 10, Bingham 4 out of 9.

Wawasett vs. West Chester.

WEST CHESTER, Pa., July 15.—Below find score of the first of a series of those matches at bluerock targets between the Wawasett Gun Club, of Wilmington, Del., and the West Chester Gun Club, of West Chester, Pa., shot at Wilmington to-day. It was a game of guessing who would be the victors, but resulted in favor of the Wilmington boys by 6 targets. Good feeling and the best of order prevailed. The return match will be shot at West Chester some time in August.

H. F. EACHUS.

Portsmouth Gun Club.

PORTSMOUTH, N. H., July 17.—Below will be found a brief summary of the results arrived at in the last four medal shoots held by this club:

June 26.—Class A: Newick 15, Weston 10, Frizzell 9, Noone 7.

Class B: Brown 11, W. J. Philbrick 10, H. E. Philbrick 8, Lewis 6, Manson 4.

Class C; Dow 11, Hussey 7, Dunk 7, Charlsen 6, H. Newick 5, Merwin 2.

July 3.—Class A: Noone 13, Frizzell 12, Newick 11, Weston 8.

Class B: W. J Philbrick 10, Manson 9, Brown 7, R. Weston 7, H. E. Philbrick 7, Lewis 4.

Class C; Dow 7, Charlsen 5, Merwin 4, Dennett 3, Hussey 2.

July 10.—Class A: Noone 11, Newick 11, Weston 10, Frizzell 9.

Class B: Lewis 11, W. J. Philbrick 10, H. E. Philbrick 9, Manson 9, Brown 5, R. Weston 5.

Class C: Dow 10, Charlsen 5, Roper 5, Hoyt 5, Merwin 4, Hussey 4, Dennett 3.

In the shoot-off for the class A badge Newick was the winner.

July 17.—Class A: Noone 13, Newick 13, Frizzell 10, Weston 10. On the shoot-off of the tie Newick won, scoring 4 out of 5 to Noone's 3.

Class B: H. E. Philbrick 13, Manson 13, W. J. Philbrick 10, Brown 10, Lewis 7. In the shoot off in this class each man was still a tie with 3 out of 5. It was then miss-and-out; each man broke his first two and then each dropped his third target Philbrick breaking his fourth target while Manson dropped his. Philbrick was the winner.

Class C: Roper 13, Merwin 9, Hussey 7, Charlsen 6, Hoyt 3.

W. J. PHILBRICK, Sec'y.

Elliott Hears From Two.

GLOVER ACCEPTS AND NAMES A DATE.

ROCHESTER, July 26.—*Editor Forest and Stream:* I have this day deposited with the Kansas City *Star* $50 as the necessary forfeit, in answer to a challenge from Mr. J. A. R. Elliott to contest for the Kansas City *Star* cup, now held by me, and name the date as follows: Aug. 14, 2:30 P. M., in the city of Rochester, N. Y. SIM GLOVER.

BUDD ALSO NAMES AUG. 14.

CLEAR LAKE, Ia., July 23.—*Editor Forest and Stream:* I hereby accept Mr. J. A. R. Elliott's challenge to shoot me a match for the Du Pont Championship trophy, and name the Eau Claire Gun Club's grounds, Eau Claire, Wis., and Saturday, Aug. 14, at 2 o'clock P. M. as the place and time for said match. Race to be at 100 live birds per man, Du Pont trophy rules as last amended to govern; loser of match to pay for birds. C. W. BUDD,

Arkansas State Sportsmen's Association.

PINE BLUFF, Ark., July 23.—The seventh annual tournament of the Arkansas State Sportsmen's Association was the most successful one in the history of this organization, and the members of the Pine Bluff Gun Club, under whose auspices the tournament was held, covered themselves with glory, and are entitled to all the credit for the success of the shoot. While all the members contributed more or less to the success of the tournament, yet the lion's share is due entirely to the efforts of Messrs. J. T. Lloyd, George Clements, John Speers and Ed. Howell. These four worked early and late to bring about the results that were so satisfactory to all the visiting shooters, and which must be no less gratifying to them. They can speak with pardonable pride of the success of this shoot.

In gauging the success of a tournament, the number of targets thrown is not the only criterion to base one's opinion on, but the after-results are also to be considered, and it is just this which makes us state that this tournament was the most successful ever given by the Association. The added money had been distributed in such a manner, and the purses divided by the Rose system, so as to enable all those who shot in for a place to receive at least as much as they put in, even though they only came in for fourth money, and yet those who shot well received fair return for their skill. Thus, there were no big losers at the shoot and of course no big winners. Yet, Thibault, who made the high average of the shoot, is about $50 ahead of the game, an ample remuneration for three days' work—or sport, as you like it.

The principal object the club had in view was to distribute the $500 added money among as many as possible, and in this respect it also accomplished its object. An illustration of how satisfactory the system was is borne out in Kirk's case. This shooter intended to participate in only a few events, but after he started shot through the entire programme, and though he made only 76 per cent. was only out about $5 on his entrance money. While under the old system he would have lasted about six events, as he failed to strike that lucky hole, they harp so much on. No matter what other people think, here in Arkansas the Rose system is voted a success, and will doubtless be used at all tournaments given in the future. In berating the system the conclusions are invariably drawn from tournaments where there is no added money, and the critic also appears to forget that someone has to pay for the targets. There was not one disgruntled shooter at this tournament and not a single objection raised against the system.

Nor was there a shooter present who is not willing and anxious to attend another tournament in the near future conducted on the same plan as this one. Associations and clubs who are really sincere in accomplishing the principal objects for which they are organized would do well to follow the example of this Association. One thing must, however, be borne in mind, that the added money at this tournament, with one or two exceptions, always exceeded the price of the targets.

JUDICIOUS ARRANGEMENTS.

The club had carefully planned to have all the arrangements for the shoot as complete as possible, and in this, too, it succeeded admirably. The customary shelter had been erected at the score, and there was also ample provision made for the shooter when not at the score, as well as for the spectators. There were plenty of chairs, and the only difficulty was to keep the omnipresent small boy from monopolizing them. This was a difficulty hard to overcome, from the fact that the shooting grounds are not fenced in. Aside from this everything was satisfactory. The shooting grounds are located right on the bank of the Arkansas River, and about ten blocks from the center of the city. The club made arrangements with one of the livery companies to take shooters to and from the ground for 25 cents.

There was only one set of traps in position, and these were arranged on the Sergeant system; they were found to be equal to all requirements, and something over 15,000 targets were thrown from them in the three days. The traps faced northeast, and the background was what most people would pronounce good, although some of the shooters complained of the trees that lined the river bank on the opposite side nearly a mile away. Mr. Lloyd was virtually the manager of the shoot, and decided all questions that came up, and saw that all the assistants attended to their duty properly. Mr. Clements assisted him in this capacity. Mr Ed Howell acted in the arduous position of cashier. In fact, all the club members interested themselves in the shoot, and saw that the visitors were well taken care of.

THOSE WHO WERE PRESENT.

Among those present were Drs. A. A. Forsythe, T. Y. Aby and Frank Dabney, Monroe, La.; A. H. Frank, Memphis, Tenn.; E. H. Lindsey, Robeline, La.; P. M. Perkins and M. F. Buvens, Many, La.; E. L. Sharkey and W. Arnold, Greenville, Miss.; J. A. Maxwell, Columbus, Miss.; A. L. Fassett, Ciro, Ill.; John J. Sumpter, Jr., Hot Springs; W. A. Leach and Joe P. Matthews, Ft. Smith; G. H. Wells and A. H. Vaughan, Jr., Clarendon; J. M. Birdsong, W. D. Cobb, T. J. Ellis, C. B. Gregg and J. H. Lane, Jonesboro; John M. Pemberton, Dave Alexander, J. K. Thibault, John T. Fletcher, Col. J. A. Woodson, H. Conner, A. Wade, H. L. Kirk, John N. Dickinson, Jr., W. R. Duley, Little Rock; Swartz, of Swartz, La.; Herbert Taylor, of St. Louis, Mo., representing the Du Pont and Hazard Powder Co's., was the only trade representative present.

THE ANNUAL MEETING.

The annual meeting was held in the parlor of the Trulock Hotel. There was more real business transacted at it than at any two previous meetings, and the Association will now doubtless become a real factor in the game question of the State. One of the principal transactions was the passage of a resolution authorizing any member of the Association to offer a reward of $5 for the arrest and conviction of any one for the violation of our game and fish laws. Said reward to be paid from the treasury of the Association.

A committee was also appointed to draft a new game law. This committee consists of J. A. Woodson, John M. Rose, W. R. Duley and Paul R. Litzke, Little Rock; W. J. Little, Hot Springs, and W. H. Langford, Pine Bluff. The present game law was discussed at some length, and the good of the Association in general was also dwelt upon.

The following officers were then elected: W. H. Langford, Pine Bluff, President; W. R. Duley, Little Rock, Senior Vice-President; E. A. Howell, Pine Bluff, Treasurer; Paul R. Litzke, Little Rock, Secretary. Little Rock was selected for holding the next annual meeting and tournament.

GENERAL AVERAGES.

In arranging the programme for this shoot the club had very wisely set aside $50 for average money, to go to the seven high guns of the tournament. This money was divided as follows: $10, $9, $8, $7, $6 and two $5; but in order to compete for these prizes one had to shoot in all the open events for the three days. These average prizes kept up the interest and were conducive of much good-natured rivalry. It will be seen that fourteen shooters shot in all the events, and of that number eight got part of the money. The total of fourteen shooters recorded above would have been increased to seventeen, had not the Monroe shooters missed the train and thus arrived after the programme had been commenced.

The high average was made by J. K. Thibault, of Little Rock, with a fair margin over Sharkey, who won the $9. Clements, a member of the local club, won third, $8, with one less to his total than Sharkey; then comes Sumpter, 4 breaks less than Clements. Of the fourteen who shot through, six are local men, a very creditable showing for a club with a membership of not over twenty. This shows that the club evidently did not intend to depend entirely on the visiting shooters to make the shoot a success, as is too frequently the case.

Thibault, the winner of high average, shot a Parker gun, Repeater shells and Gold Dust powder; Sharkey shot a Winchester, Leader shells, and E. C.; Clements a Smith, Smokeless shells and Schultze; Sumpter a Smith, Smokeless and Du Pont.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.

First Day, July 20.

The entries in to-day's events were not as large as the home boys had expected, though the awfully mean weather more than anything else is responsible for this. That old threadbare adage that it never rains but it pours, was never more forcibly illustrated than to-day—for it did rain and it did pour to such an extent that in every low place on the ground the water stood inches deep. Notwithstanding this handicap, the events were started promptly at 9 o'clock, as per schedule.

The programme consisted of ten 15-target events, $1.50 entrance, and $15 added to each. There was also a State event for the club team championship. The averages for the day are not high. Clements, a local man, is first with an average of 88. Singularly enough, he was also the first man to the score, so this was not a case of the first shall be last, etc. Speers, Thibault and Sharkey are all grouped together in second position, having an average of 86 per cent. Sorrells and Wade follow with 85.3. The others, as usual, are placed in order of merit in the table. Wade started off at a great clip, scoring 14 in each of the first four events, but after that he let down perceptibly, though he managed to make a straight in the last event. Conner and Forsythe both shot well; the latter wound up with 38 straight. Neither of them, however, shot in all events. The best run of the day was Sumpter's 45 straight. Thirty of these are not shown in the table, as they were made in two extras that were shot after the regular programme. The average entry for the day was about thirty, entries ranging from 27 to 35.

THE FOUR-MEN TEAM RACE.

Only two clubs were represented in this contest, Little Rock and Pine Bluff, but the contest was nevertheless interesting. It was shot in squads of four, two from each team. The first two men on the Pine Bluff team were Sorrells and Clements; Little Rock's two were Thibault and Wade. These pairs tied with 41 to their credit. This virtually left the match with the last two men on each team, and it is here that Pine Bluff won, as Alexander, usually so reliable, went wrong, only scoring 17; Conner scored 22, while the Pine Bluff pair got 43, which made their total 84, and landed them winners by 4 birds. This is the second time that Pine Bluff has won the trophy, having won it in '91, at the first meeting of the Association. The conditions of the race are four men to a team, all members of the same club; no club allowed to enter more than one team, 25 singles per man, unknown angles:

Second Day, July 21.

That gentlemanly and unpretentious shooter, Frank Dabney, of Monroe, La., put in an appearance at the shoot to-day, and proceeded at once to set the pace for the rest of the contestants, finishing with the fine percentage of 91. Thibault, however, was right after him with 90.6, a break less than Dabney. The latter in the first event scored one break more than Thibault; this lead he could never overcome, although he broke 125 out of his last 135, as Dabney did likewise. There is quite a gap between Thibault and Coles, who is third, but Forsythe, in fourth position, is only 1 bird behind Coles, as is Sumpter, who follows Forsyth. In all, thirty-eight shooters participated in the shoot to-day, and of this number twenty-one shot through the ten programme events, just the same number that shot through on the first day. The weather was threatening, and during the early morning a heavy rain fell that made it very disagreeable under foot. The event of interest for the State shooter was the contest for the individual championship.

THE INDIVIDUAL CHAMPIONSHIP.

It is but natural that the interest of the day should center in this event, as there were a number of those who were eligible to contest for this trophy that were in fine form. Sumpter was full of grit; that 45 straight on the previous evening had inflated him considerably, and he expressed himself as willing to wager 1 to 2 that he would land the trophy even against so strong a field as the one he was up against. It did not take the boys long to bet him to a standstill, so that when he went to the score he stood to land quite a nice sum if he could win. Little Joe Matthews was equally confident, and felt sure that he, if no one else, would beat Sumpter out. Sumpter had them all guessing for a while, at least, as he scored 23 out of his first 25, missing his last one. Matthews, who shot alongside him, also scored 23. Conner, however, broke 24 his first time up, and it was evident that the race was between these three. When Sumpter went to the score for his last 25, he ran eight more straight before he dropped one, but then he bunched three misses together, and lost two more before he finished, going out with 43. Matthews made good his threat of beating Sumpter out, as he scored 44. It remained for Conner to win the badge, which he did, as he had added 21 to his first score of 24, and won the trophy by one bird, 45 being his total. Dabney, who scored 47, was not eligible to contest for the trophy, as he is not a resident of the State; neither were Forsythe, Aby and Frank.

The conditions of the race were 50 singles, unknown angles; winner is subject to challenge and must defend the trophy every sixty days if challenged; challenger to post $10 against the trophy, winner to take money and trophy, loser to pay for the targets. Trophy can never become the property of any one, but the Association will redeem it once a year at $10. Scores in this race were:

Conner 45, Matthews 44, Sorrels 43, Sumpter 43, Dickinson 42, Thibault 41, Fletcher 41, Clements 40, Fergus 39, Coles 39, Floyd 38, Duley 38, Marsh 36, Wade 32, Vaughn 25.

The following were not eligible for the trophy: Dabney 47, Forsyth 41, Aby 37, Frank 32.

Scores in the programme events were:

Third Day, July 22.

The interest in the shoot now flagged until the last gun was fired, and the entries ran very uniformly, ranging from 29 to 25, and the total participants up to 31, of which number 33 shot through the entire programme, two more than on either of the previous days. Dabney kept up his fine form of the previous day and was again at the top of the list, but Forsythe tied him, each having an average of 90.6. Matthews was second, with just 90 per cent. Then comes Clements and Sharkey. Forsythe's run of 48 straight was one of the features of the day, it also being the best made during the shoot. Aby, too, made one run of 36 straight. The local club gave all the visitors a pleasant surprise by having them dine as guests of the club. This was greatly appreciated by all. The weather to-day was fine, though very warm.

KEELEY CUP FOR TWO MEN TEAMS.

The special event for to-day was the two-men team race for the Keeley cup, 20 targets per man. This, like the four-men team race, was won by a team from the local club composed of Sorrels and Speers, with a score of 36. Fletcher and Woodson, of the Little Rock club, gave them quite a scare, as they finished only one bird behind, and then each of them lost their last bird. The cup becomes the property of the winners. Ten teams competed, but two of these—Dabney and Forsythe, and Frank and Aby—were not eligible to win the cup, but only shot along for the birds. The scores were:

Sorrels 19, Speers 17—36; Fletcher 18, Woodson 17—35; Clements 17, Coles 17—34; Thibault 18, Pemberton 16—34; Dabney 17, Forsythe 17—34; Matthews 18, Leach 15—33; Lloyd 18, Marsh 14—32; Kirk 17, Wade 12—29; Aby 16, Frank 12—28; Meyer 15, Turner 9—24. PAUL R. LITZKE.

Pawtuxet Gun Club.

PAWTUXET, R. I., July 17.—The Pawtuxet Gun Club finished its prize series of weekly shoots known as the Fisherman's Handicap, this afternoon. The system of handicapping, which has been liberal, has had the effect of increasing the attendance at the club's weekly shoots. Several new men have also been brought to the front. Prominent among these is H. W. Bain, who has jumped from a 60 per cent. shot to an 80 per cent. gait, winning the last four shoots in succession. Another new man in the front ranks is Mr. R. C. Root, who had scarcely handled a gun prior to this spring; he won fifth place, only shooting in four of the eight shoots. J. Armstrong, Jr., has worked up from a 50 per cent. gait to one of 75 per cent. this season; he won fourth prize. The winners and their respective four best scores, together with their handicaps are as below:

H. W. Bain (5), 24, 24, 23, 22—93; first prize, steel rod. W. H. Sheldon, 25, 23, 21, 21—90; second prize, split-bamboo rod. F. Arnold (3), 23, 22, 22, 22—89; third prize, basket. J. Armstrong, Jr. (7) 25, 21, 21, 20—87; fourth prize, split-bamboo rod. R. C. Root (3), 25, 21, 21, 19—86; fifth prize, bass line. S. D. Greene, 22, 22, 20, 19—83; F. Corey, 22, 21, 20, 20—83; tie for sixth prize, one dozen squiteague hooks.

W. Thoene, who was not among the winners, has shown great improvement in form, and in to-day's race broke 25 straight, with the aid of 3 out of his allowance of 7 extra targets to shoot at; his score was actually 25 out of 28. The two extra prizes offered for the highest scores in the eight shoots were won by W. H. Sheldon with 169 and L. D. Greene, Jr., with 155. To-day's scores were as below:

W H Sheldon (0)	1111011110111111011111110	—21
S D Greene, Jr. (0)	1111111011111111111100111	—22

Events 1, 2, 7 and 12 were at regular angles; events 3, 4, 5, 6, 8, 9, 10, 11 and 13 were at unknown angles; event 14 was at regular angles, expert rules; 15 and 16 were at 5 pairs, doubles, each; and 17 and 18 were "snipe" shoots, unknown traps and angles.

G. F. STEVENS, Sec'y-Treas.

Capital City Gun Club.

LINCOLN, Neb., July 16.—Below are the scores made at the regular weekly shoot of the Capital City Gun Club. George Rogers broke the record for the State by scoring 99 out of the last 100 shot at. The practice event at 10 targets was just a preliminary. Gilbert, of Spirit Lake, Ia., formerly held the State record with 98 out of 100 made here in April at the last State shoot. Rogers used a Greener gun, 3½drs. E. C. powder, with 1¼oz. No. 7½ chilled shot in a U. S. Rapid shell. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

SHERWOOD, Sec'y.

IN NEW JERSEY.

RIVERTON'S INVITATION TARGET SHOOT.

July 21.—In "Drivers and Twisters" of our last issue we mentioned that the Riverton Gun Club had departed from its usual custom of shooting at live birds, and had taken to target-shooting to some extent. To-day we had an opportunity of seeing the facilities for enjoying this sport, which the club has at its command.

With some 15 acres of ground surrounding its comfortable club house there was no difficulty in finding room for a magautrap, though there was some trouble in locating it satisfac orily as regards background. Targets have to be thrown to the north of east, if the light is to be favorable at all hours of the day; accordingly, the magautrap at Riverton is located in that portion of the club's grounds which lies between the dead lines of the "new grounds" and the grounds immediately in rear of them. The background is not an easy one, several isolated trees on the river bank and a bunch of trees to the right that looked like an orchard, making it necessary to keep one's attention fixed closely on the target if anything like a good score was wanted. To-day, too, there was a changing light and a strong wind that quartered across the flight of the targets, making shooting very difficult at times. The trap was run very well, and balks were extremely few. The speed of the trap was also well kept up, targets being thrown fully 50 to 55yds. most of the time Prior to the commencement of the shoot, Capt. Money and the man in charge of the grounds had paced off 45yds. and planted flags in a semicircle in front of the trap. The man running the trap was directed to keep the speed of the trap to a pitch that would carry the targets up to and slightly beyond these flags. He did this all the time, but targets thrown to the right—that is, to the wind's eye—would often stand still in the most tantalizing manner, while others thrown to the left, down wind, would make haste in a manner that left many a charge of shot hunting holes in the air.

The attendance for a first attempt was very good, and an extremely pleasant shoot was the result. Rain, which threatened to fall many times during the day, kept off until after 6 P. M., at which hour all were preparing to make for home. The programme arranged for the day called for ten events and a total of 160 targets and an entrance fee of $17 for the programme. There were three 10-target events, three 15-target events, three 20-target events and one 25 target event. The entrance fees (including the price of the targets) were: $1 in the 10s, $1 50 in the 15s, $2 in two of the 20s and $2.50 in the other 20, while $3 was the entry fee in the 25 target event. Sixteen shooters shot through the programme, making an average of over three squads of five men all the time. J. K Starr, of the *Public Ledger*, of Philadelphia, acted as cashier, while Will. K Park, of *Sporting Life*, scored, refereed and shot, helping greatly to keep things moving.

Among those present were Capt. A. W. Money, of the E C & Schultze Powder Company, Limited, the Captain being a member of the Riverton Club; Capt. J. A. H. Dressell of the U M C. Company, was also present as guest of Capt. Money. U. M. C. Thomas was also on hand. H. P. Du Pont Collins, of the Du Pont Company, and J. M. Hawkins and Ducker, all three members of the Baltimore Shooting Association, were there to shoot, Hawkins in particular being well to the front; J. 147 L. Winston, of the Austin Powder, was present and took second place with Billy Wolstencroft, the latter shooting for the first time a new Greener gun, and doing well with it especially in he extra event at 10 pairs; Harry Thurman, Landis, Burton, Anderson, Harry Febiger, Car ledge, Jones and David were also there. A prominent figure was John J. Hallowell, better known to trap shooters as Tucson; Hallowell has left the heated confines of Arizona, and now makes his home and breaks targets within fifteen miles of Philadelphia: he is an acquisition to the trap-shooting circles of Philadelphia that is not to be sneezed at. T. S. Dando and Junius H. Davis, both of the Riverton Club, shot all through the programme, and, for novices at targets, pulverised many a bluerock thoroughly and in good time.

Toward the close of the afternoon a few miss-and-outs at live birds were shot on the grounds back of the target score. We have no details of these events at hand, but we do remember that U. M. C. Thomas distinguished himself by scoring 8 straight in the first event, staying in the race until the round before a division was arrived at. It was a decided novelty for men to be able to shoot a string at targets, and then walk right over to the live-bird score and take a whack at pigeons.

On targets no great averages were made; without a wind, there might be some chance of making something over 90 per cent. on these grounds, but with a strong breeze across the line of flight of the targets when they leave the magautrap, 90 per cent. is not easy to realize. To day's scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	*10*	*15*	*20*	*10*	*25*	*15*	*20*	*15*	*10*	*20*	Shot at.	Broke.	Av.

J H Davis	7	11	16	9	17	12	17	14	5	18	160	126	78.7
J M Hawkins	9	12	15	9	21	12	19	12	9	19	160	137	85.6
Ducker	8	13	17	5	19	13	16	12	9	15	160	127	79.3
W K Park	10	..	..	7	..	..	..	..	7	..	80	24	80
Bill	..	..	..	..	..	..	..	..	15	12	8	12	65	47	72.3
Cartledge	..	..	..	..	..	..	..	..	13	11	..	..	35	24	68.5
Jones	..	..	..	..	..	..	..	..	..	6	..	..	15	60	40
David	..	..	..	..	..	..	..	..	..	12	..	..	15	12	80

A couple of extras were shot, both being at 5 pairs. These were shot on the squad system five men up as for singles, each man firing at 2 pairs before moving. In the first Billy Wolstencroft had no trouble in landing first money on 20 straight; Dando with 16 and Banks with 15 took second and third moneys respectively. In No 2, Dando with 18, Banks with 17 and Wolstencroft with 16 took the three moneys. In the last-named event Dando broke 9 pairs clean, only missing both targets in one pair Scores in these events were:

No. 1, 10 pairs: W. H. W. 20. Dando 15, Banks 15, Thurman 13, Henry, Landis and Hawkins 12, Davis 11, Hallowell 10, Money 7.

No. 2, same again: Dando 18, Banks 17, W. H. W. 16, Davis 15, Landis and Hallowell 13, Thurman 12, Money 11, Collins 8.

EDWARD BANKS.

BOILING SPRINGS GUN CLUB.

July 21.—The second contest for the silver tea service on the grounds of the Boiling Springs Gun Club did not draw a large attendance. Only five men shot for the service, Van Dyke being the winner after a hard tussle with C. W. Tuttle, of Auburn, N. Y. Van's 49 out of 50 was a great score; his total for the contest was 100 out of 105 He used, as usual, his new Model '97 Winchester and Leader shells, loaded with Laflin & Rand's W-A. Scores in this event were as below:

F Van Dyke.. 1111111111111111111111111101111111111111111111111 —49
W H Huck.... 1111111010111111101111011010111111101111010000111 1—38

0 — 0—45
C W Tuttle.... 1111111111111101111111111111111101111111111111101 11—47
11 — 2—49

On the first shoot-off at 25 targets Van Dyke broke 23; Tuttle broke 21 and his handicap of 2, scoring 23 in all; Piercy broke 15 and missed the seventh target in his handicap of 8.

The second shoot off was at 15 targets, the two men shooting from scratch; both broke 14. In the third shoot off Van Dyke broke 14 to Tuttle's 12, and won.

A few sweeps were also shot as below:

W. H. HUCK, Sec'y.

BERGEN COUNTY GUN CLUB.

July 26.—C. F. Dudley was the winner of the E. C. cup this afternoon, at the traps of the Bergen County Gun Club. He shot a gait this afternoon that was totally at variance with some of his recent records, breaking 46 out of 50, then 4 out of 5 of his handicap allowance of 8, finishing up with 24 out of 25 on the shoot-off. H. Blauvelt shot up well, but Dudley's gait in the shoot-off was too hot for him. The two above-named were the only ones who shot off their allowances, none else being able to reach the 50 mark. The shoot was managed by E. G. Horton, who came down from Pleasantville, N. Y., to help out the Hackensackians in the absence of the captain, secretary and pretty nearly all the officials. Barring a slight sprinkling of rain at intervals, the afternoon was a pleasant one for shooting. A strong wind prevailed early in the day, but it died away to almost nothing before the cup shoot was finished. Scores in this event were:

C F Dudley (8).11101111111111111111111111111101111111100111111111111—46

Western Traps.

COOK COUNTY TRAP SHOOTERS' LEAGUE.

July 17.—The regular monthly contest of the Cook County Trap-Shooters' League was held to day on the grounds of the Garden City Gun Club. The attendance of members of the home club was very poor: however, the other clubs forming the League were fairly well represented. The traps were not working very well at first on account of changing the club's traps to set No. 1, and shooting the League traps as set No. 2. Not over 3,000 targets were thrown to day, while last year in the same shoot over 6 000 targets were shot at. Some good scores were made notwithstanding the delays and balks. Scores in the League shoot were:

Cicero Gun Club: Lowrey 20, A. Cheeseman 18, W. Cheeseman 17, Knott 13, Lawler 13.

Garden City Gun Club: Adams 24, Ruble 23, I. K. Hess 23, Halligan 20, Sou hard 16, McHie 16, Levi 15, Goldsmith 13, Smetah 12

Eureka Gun Club: Hollister 25, Glover 24, Steck 24, Antoine 23, Stannard 21, Hess 21, Cromwell 21, Goodrich 20, Cunningham 19, Jones 18, Prickett 18, Walters 18, C. W. Carson 15.

Garfield Gun Club: Kuss 25, Neal 23, Fehrmann 22, Edgar 21, Fisk 21, E. S. Graham 21, Patterson 21, Dr. Shaw 21, Richards 18, T. Graham 17, Bowers 16, Wiley 15, Thatcher 15

Calumet Heights Gun Club: Young 24, Lamphere 23, Turtle 22, Marshall 22, Ferguson 20 Harlan 19, S. M. Booth 18, Harston 18, Norcom 17, Schmidt 15, Metcalfe 15, Greeley 13, Davis 9

Scores in the sweepstake events are given in tabulated form below:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

Greely	..	9	..	..	..	5	..	..	..	..	..

Nos. 1, 2, 5, 6, 7, 10 and 11 were at known traps, unknown angles; Nos. 4 and 8 at unknown traps and angles; Nos. 3 and 9, snipe shooting. No. 8 was 5 pairs, not singles.

The weather was fine to-day, with a light north wind blowing. The club was favored with a large attendance of members and visitors, who indulged in bathing and had a fine time, the water being warm. The trap-shooting was very enjoyable, about 1,300 targets being thrown from five expert traps. PATTI.

Around Buffalo.

BISON GUN CLUB.

BUFFALO, N. Y., July 15.—In the Bison Gun Club's weekly shoot, held to-day on the Walden avenue grounds, Wheeler won the Class A badge, Vine the badge in Class B, and Salesman the Class C badge. The scores made in the badge shoot (No 3 in the table below) and in the seven other events decided this afternoon are given in tabulated form, as usual:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

SECRETARY.

Sandwich Gun Club.

SANDWICH, Mass., July 17.—The regular weekly shoot of the Sandwich (Mass.) Gun Club was held to day. Conditions: 25 bluerocks per man, unknown angles:

G H Haines .....1111111111111111101101111—23
W R Procter.....0110001101111010000101110—13
E E Phillips.....100100011 100100011010001—10
G F Dennis .....0111100101000000001000100— 8
E S Keith.....0100011010000000101000010— 7

It is expected that a gun club is being organized at Sagamore, Mass, the town adjoining ours. We hope this is true, as some fine sport can be had between the two clubs. G. H. HAINES, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

R. P. A., Saginaw, Mich.—What is the matter and the proper treatment for my English setter dog, two years of age? The symptoms are: Appetite very variable, and he will eat principally meat—raw, cut fine, or cooked. I feed him but once a day and then light; for he will not eat much. His mouth is continually filled with a ropy saliva, which strings out of the corners of his mouth and is plastered over his neck and breast, and dries on and is very filthy. At times he has a very bad breath. Every four or five days he refuses food, and eats grass; then will vomit up a wad of it as large as one's fist and mixed with a brown slime. He will then vomit two or three times more, consisting of brown slime. I gave him Glover's condition pills, also Glover's worm capsules; but saw no worms. He is full of life, always busy working small birds and doves Eyes are clear, and he is in good order, but not fat. Have also given pepsin three times a day for a week at a time, but it done no good. Can you help us out? Ans. Wash the gums and teeth well once a day and touch the gums with tincture of iron. Give three times a day, after feeding, a pill containing:

Quinine sulph..... 1gr.
Acid arsenona..... 1/10gr.
Iron powd..... 1gr.
Strych. sulph..... 1/40gr.

PUBLISHERS' DEPARTMENT.

Savage Rifles.

SPORTSMEN interested in small-bore smokeless powder rifles should send for the 1897 catalogue of the Savage Repeating Arms Company, Utica, N. Y. This catalogue contains much interesting information aside from the technical matter relating to the Savage rifle. Mr. Andrew S. White, of Syracuse, N. Y., tells how he killed two bull moose on successive days last fall with single bullets, and there are also testimonials from Ira Dodge and John Sinclair. The following is taken from the catalogue:

"Sportsmen who have never tried the small-caliber rifles and smokeless powder ammunition, are somewhat skeptical as regards the killing or stopping power of the small metal covered expanding bullets. These are far more deadly than black-powder ammunition, however large the caliber. The secret of the deadly effect of these small projectiles lies in their expanding qualities and extraordinary high velocity, which impart a percentage of their energy to the otherwise inert flesh and bone; and these substances, being acted upon by so quick a blow, become themselves projectiles, following a well-known mechanical law, lacerating the surrounding tissues and bone, and leaving a path of destruction which is widened by resistance encountered by the bullet"—*Adv.*

Linenoid.

LINENOID is a composition of pure linen thread reduced to pulp, chemically treated, moulded on wooden or iron forms, subjected to great heat and pressure, and then finished as desired.

The result is a light, tough, waterproof material, capable of taking a high polish and admirably adapted for the seamless construction of boats, and many articles in use by sportsmen. Crane Bros., Westfield, Mass., the famous paper makers, are manufacturers of linenoid. Their latest circular contains particulars relative to boats and canoes listing from $35 up, as well as model yacht hulls, megaphones, bicycle touring cases, etc It will be sent to any address on application.—*Adv.*

Visitors to Lincoln Park in Chicago

WILL be delighted with the souvenir book of this beautiful spot now being distributed by the Chicago, Milwaukee & St Paul R'y Co. It is a magnificent publication of 96 pages full to overflowing with delicious half-tone pictures of one of Creation's most charming places of resort for citizens of the Great Republic.

No stranger visiting Chicago should be without a copy of the "Souvenir of Lincoln Park" It can only be procured by inclosing twenty-five (25) cents—in coin or postage stamps—to Geo. H. Heafford, Gen'l Pass. Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

G. A. R. Encampment, Buffalo.

HALF RATES VIA PENNSYLVANIA R. R.

FOR the national encampment of the Grand Army of the Republic, at Buffalo, Aug. 23, the Pennsylvania R. R. Co will sell special tickets from all points on its system to Buffalo and return at rate of a single fare for the round trip. These tickets will be sold and will be good going on Aug. 21 to 23, and good to return not earlier than Aug. 24 nor later than Aug. 31, 1897.—*Adv.*

THE following letter is from a prominent St. Louis trap shooter:
G. W. Cole & Co., 111 Broadway, New York:

GENTS—I take great pleasure in advising of the good results obtained in using your "3 in One" oil, and this in view of putting same to many severe tests, and I find it does far more than you claim. As a rust remover it has no equal, and for protection against rust it leads all other preparations.

I shot 200 loads of black powder in a Winchester repeater and put gun away without cleaning for two weeks; I then put a rag in barrel of gun at breech and poured a quantity of oil in at muzzle and let it stand over night, soaking thoroughly, and then run a cleaning-rod through, and at the first passage of rod removed all foreign substances and left barrel of gun as bright as a silver dollar.

I also used it on the mechanism of my repeater, and the gun works admirably.

I am now using the tenth bottle since using up the samples you sent me some time ago, and have no doubt that as soon as the trap shooters of the country are advised of the good qualities of your oil you will find a big sale for same, as it is the proper article for guns.

Very respectfully,
—*Adv.* JOHN M. TRENDLEY, Pres. King's Smokeless Gun Club.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 7, 1897.

VOL. XLVIX.—No. 6. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

I never had an ailment a week's fishing would not cure, and I never envied prince, potentate or president so long as I could find the time (and I always did) and had the opportunity to make a cast. I think I am and have been as sympathetic as most men. I know I have lost many a night's sleep on hearing of the misfortune of some friend who deserved a better fate. I know, too, that I would rather toss a dollar to a beggar than exchange salutations with a king, and I have had both experiences. Indeed, my sympathies have uniformly been with "the under dog in the fight," no matter which was the aggressor. But my heart has always been stirred to its deepest depths when I have met a good fellow who was so insensible to his own happiness, so absorbed in his acquisition of wealth, and so inappreciative of the example of the holy apostles as never to have cultivated a taste for the angle. Angling Talks.

ACCIDENTS IN MOUNTAIN CLIMBING.

THE frequently recurring accounts of accidents to mountain climbers call renewed attention to the increasing popularity of this pastime among residents of western America. No recreation is more wholesome, exhilarating and elevating than this, and none deserves greater encouragement. That accidents occur to those who indulge in it is nothing against the sport. This is true of almost every pursuit of life, and the casualties are probably relatively less frequent in this than in most other recreations. In many of the cases reported the accidents are obviously traceable to a lack of experience by the climbers, which leads them to take risks to which an older hand would be slow to expose himself.

Mountain climbing, more than almost any form of recreation, calls for physical and mental vigor. Stout muscles, strong lungs and a sound heart are the first essentials to a good mountaineer; but even these avail little unless backed by steady nerves, cool judgment and a prompt decision. These mental qualifications come to most men only through the experience of actual work upon rough mountain sides, along steep cliffs and over slippery slopes of ice and snow.

No inexperienced climber should attempt the ascent of ice or snow slopes except in company with persons accustomed to work of this kind. So far as one may judge from the newspaper despatches, the accidents lately reported as occurring on Mt. Rainier, and elsewhere, seem to have been due chiefly to an ignorance of possible mountain dangers. Large parties of excursionists start from the sea level to climb a mountain over 14,000ft. in height. Having reached the altitude of the glaciers, they are overtaken by night, lose the trail and scatter in search of it. In the attempt to find it, some members of the party fall into crevasses in a glacier, while another falls over a precipice and is killed. These melancholy happenings tell their own sad story.

While Alpine climbing is a noble recreation, and is as safe as any other, it is yet full of dangers to the individual who undertakes to practice it on difficult mountains without some previous training. The novice, knowing nothing of the conditions which may confront him, is unfitted to face them. He is like the person who, unused to firearms, handles them for the first time, or one who ventures for the first time on the water in a canoe or sail boat, alone. The history of all the most noted and daring mountain climbers of Europe is alike in one respect. If their careers be traced, it will be found that before climbing alone, they passed a long period of tutelage under the guidance of experienced men, whose lives had been spent among the peaks, men who were ever watchful, alert and ready, men for whom heights and depths had no terrors, to whom nervousness in bad places was unknown. Such men, whose whole lives belong to the mountains, have absorbed and again give forth to their associates that knowledge that is indispensable to the mountaineer.

It is true that in our American mountains, so far as they have yet been explored, the dangers to be faced by no means equal those of some of the mountains of Switzerland and the Tyrol. Yet in the Rocky Mountains, the Cascades and the Sierra Nevadas, there are many peaks which have their dangers, and which should be ascended only after a man has passed through an apprenticeship at mountaineering, or else only in company with experienced climbers.

It must be remembered also that even in the case of an experienced climber, an absence of a year or two from the mountains may result in a partial loss of nerve. He who has not climbed for a long time may on his first ascent feel timid about walking along sharp, knife-edged crests, beneath which yawns a fall of some hundreds of feet on either side. But he who has once acquired a head for the mountains will find that—even though he may be shaky at first—a few hours, or at most a day or two, will give him back the nerve that he once possessed, and that he will then be able to run and jump over places where but a short time before he had crawled tremblingly, with his heart in his mouth.

It true that, even to experienced mountain climbers, accidents occasionally occur which are quite inexplicable on any theory of carelessness, recklessness or ignorance. Such accidents, no doubt, are sometimes due to some constitutional weakness in the climber, hitherto unknown. The continued exertion of the ascent and the rarefied air of great heights force one's heart and lungs to do much more than their customary amount of work, and thus tend to bring to light any functional weakness of these organs. A weak heart is especially likely to show itself under such conditions, and it may well be that many of the deaths recorded among practiced climbers are due to such functional weakness.

The accidents which occasionally occur to mountain climbers should not prejudice anyone against this recreation. It should be practiced, however, by both men and women, in an intelligent way. So followed, it will benefit all who indulge in it.

THE FOREST RESERVES.

A SERIOUS blow was dealt to the hopes of those interested in forest reservation in the United States when Congress passed, as a rider to the Sundry Civil Service bill, an amendment suspending until March 1, 1898, President Cleveland's proclamation setting aside thirteen forest reservations in the West. This rider, as a sop to public sentiment on one side, authorizes the Secretary of the Interior to establish a system of forest administration in the old reserves, and to prescribe rules and regulations for their care; but no machinery nor any funds are provided for carrying out such a system. The rules and regulations have recently been published, and so a considerable quantity of ink and good white paper has been wasted.

As is well known to most people, such fiats by the Secretary of the Interior are wholly ineffective. The country has had one experience of their futility on a small scale—the case of the Yellowstone National Park—where for more than twenty years, Secretary after Secretary established rules and regulations which were a laughing stock to all who chose to infringe them. It was only after the enactment by Congress of a definite law, which established a machinery for enforcing the law's provisions, and an appropriation to set that machinery in motion, that offenses could be punished. The regulations with regard to the forest reservations will be as effective as were those issued for the Yellowstone Park; no more so.

The report to the Secretary of the Interior of the National Forestry Commission, appointed by the National Academy of Sciences, upon which a part of these regulations appear to be based, expresses the needs of the Western forests so well that it ought to be read by every intelligent and patriotic person in the land. It shows how almost all civilized countries which have forests, except the United States, protect those forests, and derive from them an annual income, precisely as the fruit grower protects his orchard and sells his crop. It calls attention to the special dangers—fires and sheep grazing—from which our forests suffer, and describes the present condition of the different reservations and the depredations which are committed on them.

It then proposes a system of forest organization, intelligent and effective; but since such an organization cannot at once be set in operation, advises the employment of troops as a temporary police force to protect the forests, citing the good work done in this respect by the troops employed in protecting the Yellowstone Park. It recommends also the establishment of a board of forest lands which shall survey all forested lands in the public domain for the purpose of withdrawing such lands from sale and entry, shall determine what ought to be retained permanently as forest reservations, and shall then recommend to the President the restoration of all other lands to the public domain. It advises also the establishment of two additional national parks, one to include the higher portions of Mount Rainier in Washington, the other the Grand Cañon of the Colorado. Both of these are rapidly being defaced, owing to depredations by tourists and others, and unless in some way protected, many of their beauties will soon be utterly destroyed. These parks, if established, should be treated like the Yellowstone National Park, and would be of almost equal interest.

Several pages of the report are devoted to an abstract of the clumsy, loosely drawn, misleading and ineffective timber laws which have been passed by Congress. These laws in practice afford no protection to the public forests. Under them many millions of dollars worth of timber have been taken from the public lands for which the people of the country have received no return, and besides this, the records of the General Land Office show that during the last eleven years timber to the value of more than $26,000,000 has been taken without any color of law, and suits for the recovery of this amount have been instituted by the Government.

As an appendix to the report, there are printed five bills, drawn by the Commission for the purpose of carrying out their recommendations. The first of these authorizes the employment of troops to protect the public forest preserves and national parks of the United States. The second—a bill to protect and administer public forest reserves—guards the right of settlers and miners, establishes a forestry bureau with all its machinery, and provides penalties for injury to the forest reserves by depredators. A bill for the management of the unreserved public timber land and for the sale of timber thereon, temporarily withdraws from settlement or sale all timber-producing lands until they shall have been surveyed and their value as timber lands determined by the Board of Forest Lands. Then the Secretary of the Interior is authorized to sell the timber on them under certain restrictions, but it is provided that such withdrawal of timber land shall not be allowed to interfere with mining, prospecting, or agricultural operations, and that miners, prospectors, agriculturalists and other *bona fide* settlers, not corporations, shall be allowed to use timber in their operations. The other two bills provide for the setting aside of the upper slopes of Mt. Rainier and of the Grand Cañon of the Colorado as national parks.

The recommendations of this report fully justify all the predictions made about it in FOREST AND STREAM last spring. A broad and liberal view is taken of our forest lands, and of the needs of the adjacent population in connection ith them. Many of those who are especially interested in forestry will regard the view taken as too liberal. On the other hand, the provisions of the third bill, which places all the public forested lands in the hands of the Government, will be thought very radical by others. It is impossible to satisfy every one, but two things are certain: first, that troops should be employed to police the forest reservations; and second, that a bureau of forestry, such as recommended in the second bill, should be established by Congress on its reassembling. As the Western country is settling up, more water is being used, and more is constantly needed. In many places the streams are going dry, hay meadows are turning again to bunch-grass prairie, and ranches are being deserted. Some time before very long a halt must be called, or else portions of our country now sparsely inhabited will become real desert.

Congress took no action on Senator Proctor's bill to regulate the sale of game in the District of Columbia; so the National Capital will continue to serve as a dumping ground for the out-of-season game of the several States. It is disgraceful that this condition should have existed so long as it has. Now that attention has been called to the subject, we may look for an early remedy in a regular session of Congress.

The Sportsman Tourist.

SHEEP AND SNOWSHOES.—VII.

A Winter Hunt on the Summit of the Rockies.

About midnight on the night of the 15th a furious storm began, severe enough to waken even the sound sleepers of the lodge. Nothing was to be done, however, but to grumble and turn over under the blankets. In the morning, when I awoke and looked out of the hole in the top of my blankets, I observed the floor of the lodge to be occupied by a series of long, snowy mounds, under each of which some man was reclining. At the place where Schultz had gone to bed there was a long heap of snow. This now broke apart, as an unshaven face peered out of the blankets. Schultz was not one to grumble openly, so he made no comment, but reached out to the pan of dishes which stood near his bed, and taking up a tin cup, began methodically to bail the snow out of the blankets about his neck. Billy Jackson and his rheumatism made a long and silent cocoon under the flap of his sleeping-bag, and O to-kò-mi had nothing to offer by way of conversation. My own bed was covered a foot deep at the foot, where the snow had drifted under the lodge lining. It was not cold under the snow, though of course we had to carefully shake the blankets clean of it before we built a fire.

All the morning the wind roared and sobbed and whined and tore at the lodge cover, and the snow sifted continually under and through and above the lodge lining. Shep, poor dog, was much put out to find a resting-place, for wherever he turned he found nothing warmer than a snowdrift in the lodge. He finally selected Billy as the best-natured man in the outfit, and thenceforth divided blankets with him. The lodge groaned and flapped and threatened to blow away, and the kettle on the cross-pole above the fire danced a witches' dance as the pole bent and sprung back under the wind. As we sat on the edge of our beds and hugged the fire, our backs needed to be protected by heavy coat or blanket against the cutting blasts which crept in at the back of the lodge. The sifting of the snow annoyed us, so we dug out our bags and guns and pulled down the lodge tight all around, so the snow could not get in. Then we saw it was a case of snow or smoke, for when we cut off the draft the smoke refused to rise above the top of the lodge against the sweeping wind. We wept in what patience we could muster, and reviled Pah-kùk-kus, Ai so pom-stan, and all other evil spirits of the mountains. There was little comfort in either alternative, for to sit all day in a bitter smoke is not pleasant, neither is it comfortable to sit in a wind of unknown velocity when the thermometer is playing hide and seek with the bottom of the bulb. It was a bitterly cold time. We stood it as best we might, lying flat down on the floor of the lodge and rolling up in our blankets. Poor Schultz, who was making effort to cook something for his large and hungry family, had the worst of it. Once in a while a specially severe gust would blow open the door-flap and send a stream of smoke all around him, at which he would drop the frying-pan, roll over on his bed, and groan in the most heartfelt manner.

Evidently there was no hunting that day, for when one of us ventured out into the storm it was impossible to see further than the edge of the woods, the mountains being quite invisible. The whole world was swallowed up in the shifting, swirling sheet of cutting white. It was the blizzard of the mountains, and it made an experience not soon to be forgotten.

On an occasion of this kind, we had one unfailing source of occupation and entertainment. We called such days our "no-hunting days," and forthwith bade Billy forget his rheumatism and fall to story-telling. The weather was very bad for Billy, and at times we had to call a halt in the story, while we rubbed Billy well with liniment before he could go on; but nearly always after such a grooming he was able to resume, although he declared that our rubbing was worse than the rheumatism. We really blistered him in great shape, so that he peeled beautifully; but there is no telling how many stories we should have lost if we had not blistered Billy. He got so that at the first indication of the approaching liniment bottle he would begin to talk fast and very eloquently, telling all the stories he knew.

Stories of Indian Fortitude.

Here are some of the stories Billy told us about the old times, much abbreviated in print, and robbed of their accompaniment of the flapping lodge and the roaring wind and Billy's rheumatic groans, to say nothing of everybody's objurgations at Shep, and the common and unanimous reproof of the smoke waves which flooded us continuously.

"You talk about brave men," said Billy, "but if ability to stand pain is any showing of sand, I reckon the Indians were brave enough in their way. It never seemed to worry an Indian any if he had to suffer or even to die. I remember once I saw the execution of a Cree Indian, up at Ft. Edmonton. That was in 1879 or '78, I forget which. This Indian was arrested for murder, or something of that sort, and was sentenced to be hung. He looked out the window, and saw them building the scaffold for his hanging, the first thing of the kind he had ever seen or heard about; and when they told him what it was for, he laughed fit to split his sides about it. He said it was a funny thing these white men would go to much trouble to kill a solitary Indian, when it could be done so much quicker and easier in other ways. He died in the belief that it was a good joke on the white men.

"Now they are going to have a little hanging this very day, March 15, up at Ft. McLeod. This is the day Charcoal the Blood is to be executed. He was guilty of murder, and was free for some time, although the Indian police were after him. He said he would not be taken without a fight, so it was thought well to be careful. He never would have been taken without killing some one, if he had not been captured by his own family. He went to his brother's house, and his own brothers kept a lookout on him, and finally, taking him unawares, sprang on him, bound him, and then surrendered him to the authorities. That shows you how the Indian sense of justice works. They didn't think Charcoal was doing right not to surrender and be tried.

"You remember the magazine article printed a few years ago, that described the death of two Crow young men, who were demanded by the officers as prisoners, to be tried for murder? These young men said they would not surrender and be tried, but they would come out and be killed like men, without trial. It was therefore agreed, that at a certain hour of a certain day, the chiefs were to give them up. They were to ride out of the Indian camp, and to charge on the line of soldiers, getting as close up as they could in their last warlike charge. And so it happened. At the very hour, these two boys came out on horseback, each fully armed and painted up, and they both came on a-running. They were killed close up to the firing line, and according to their creed they died like men. Maybe they were not so far wrong on the manhood basis, either.

"I have read about the Indian executions among the Creeks and Cherokees, in the Indian Nations. They tell me that when a man is condemned to die there, he is released without any bail or guard, and allowed to go home and get his things put in order for his long absence. He goes home, gets his crop taken care of, sets his affairs in order the best he can, bids his wife or wives good-bye, and promptly on the appointed day he shows up for the execution. It is said that no case has ever been known where an Indian ever failed to keep his date with death. When he has come to town the Sheriff meets him, and after there has been a talk, and good-bye all around, the man stands up, the Sheriff pulls a bead on him with his six-shooter, there is one shot and the affair is done. No Indian has ever been known to weaken at his death in this way, which, according to his notion, is what is to be, and not to be worried over.

"In 1873 there was a little scrimmage going on between some of our Blackfeet and the Crees, up near the old fort which Joe Kipp christened Fort Whoop-up. There was one Cree who was behind a rock, and who fought there for some time before he was cornered. He had no better gun than one of the old Hudson Bay fuques, but as the Blackfeet closed in he killed a warrior with it all right. He was then surrounded, and his gun taken away from him. He laughed in the faces of the Blackfeet who took him. A Blackfoot warrior pulled up one arm of the Cree, and taking out his knife, deliberately unjointed the right arm of the Cree at the shoulder. The Cree still laughed in defiance, and if he felt any pain no Blackfoot there could see it. Angered at his defiance, the Blackfeet cut off his other arm in the same way, and they went away and left him sitting on his rock, still laughing at them, and telling them that they could not hurt him. Of course he was bound to die; but I leave it to you if he didn't die game."

Billy Jackson's Capture by the Cheyennes.

As I have earlier mentioned, Billy Jackson was a scout from the time he was 16 years of age. He was with several generals, besides being with himself a good deal. He was with Terry six months, with Custer two years, and with Miles three years. We asked him to give us a little touch of his own life now and then, for we knew that this long and good-natured fellow had a lot of things up his sleeve in actual experience. Schultz said we ought to have Billy tell how he was once captured by the Indians. What Billy told us, as nearly as I can remember it, was about thus:

"It was in 1879 and in the month of March," said he. "I was under Gen. Miles then, and I had been out four months hunting with the rest of the boys for the Cheyennes, who had broken out from the reservation on the Indian Nations, where they had been transplanted, and who had fought their way far to the north in their attempt to get back to their old hunting grounds. They were known to be somewhere north of the Black Hills, for it had been easy enough to trace them as far as the last railroad, since of course at every railroad they would be reported. But just where they were was a question, for you see this is a mighty big country out here, or anyhow it was before the railroads and telegraph lines came in.

"I had come back from one trip, to the settlements at Glendive for more supplies, and from Glendive I took two other scouts, Indians, a man named Fleury and another, and we started across the Yellowstone River on the ice. It was cold, and the river was not yet free of ice, but was pilled full of it in great gorges. We didn't have time to wait for the ice to move, and we had no other way to get over; so I started across on the ice. We lost one of our mules with its pack through the ice here, but I would not turn back to replace that; so we kept on down toward the south as far and as fast as we could travel.

"Finally we got as far into the south of the Yellowstone as the Hole-in-the-Rock Creek, some fifty miles north of the Belle Fourche. Here I knew there were Indians near around us, for we had their sign plain. One day my Indians wanted to build a fire, but I told them not to do it, but that we would eat our grub raw rather than risk a fire, for we didn't know how soon the smoke might be seen. But they thought it was all right, so they set her a-going. Meanwhile I rode up on a little knoll above camp to take a look around, and I hadn't been up there long before I saw a rim of fire start off down the prairie. The camp-fire had got away, and the boys could not stop her. This was a pretty how to do for scouts, but we couldn't help it. I called to Fleury to make a run for it, and started to get over the hills; but I hadn't ridden over 400yds. when I ran bang into four Indians, who pulled up and signed for me to surrender. I didn't have my gun where I could get at it soon enough, and the upshot of it was surrender or get shot, so I surrendered. These Indians were waiting for me just over the top of a little ridge. I made the best of it, and seeing that we were all going to be taken, I at once pretended to be friendly; and I just turned around in my saddle and called to Fleury and the other fellow to come on, as here were some of our friends! Fleury was a Sioux half-breed, and at that time I was wearing my hair long and was looking pretty woolly; and as it happened I could speak a little Sioux, I concluded I would make a bluff at being a Sioux too. So I told them in fluent Sioux talk that we were glad to see them all; that we were looking for them all the time, and that we had been pretty lonesome all alone out in the prairie until we had found them.

"Of course the Cheyennes couldn't understand my Sioux talk, but they couldn't tell what I was driving at; so they took us all to their camp, where I found that it was really Little Wolf's band of escaped Cheyennes that we had found, only we hadn't found them just the way I had counted on. There was a Sioux woman in their camp, as it happened, which was a pretty good thing for me, I may say. I talked mighty nice to that woman, and she did the interpreting for me into Cheyenne.

"Little Wolf asked me where the soldiers were. He knew mighty well that the soldiers were after him, and that he was going to have a run for it, but he was no wiser than the general of our troops about the whereabouts of the enemy. It was too big a country, and of course we were not following a trail, but trying to pick up a trail by crossing it somewhere out in the hundreds of miles of open and rough country. That is what scouting used to mean. Old Little Wolf asked me mighty hard and particular, three different times, where were the soldiers. 'Tell me the truth,' he said, through the Sioux woman. And three times I replied to him that not for the world would I seek for one moment to deceive a nice old man like him, but that really I didn't know anything about the soldiers any more than he did; that I hated soldiers, and would like to go to war against them; that my companions and myself were just out hunting in that country, and wanted very much to be taken into the band with these Cheyennes and go on north with them.

"Old Little Wolf appeared to be puzzled, I did lie to him so earnestly and beautifully. You see, a fellow can lie mighty fast and hard when his life is upon it, so I suppose I did it scientifically. Anyhow, he concluded not to kill us, but told us to sleep with the camp that night. They took away our arms and horses, and put Fleury and the other man in a lodge by themselves, right in the middle of the camp, while I was kept in Little Wolf's lodge as a guest worth watching. I thought I might as well sleep, so I did, till along toward morning I heard a racket. I knew what was up as well as though they had told me. Fleury and the other fellow had escaped. I was left alone with the enemy. They cut a slit in their lodge, got to their horses, and moved their freight aflyin'.

"When I heard of their escape I thought it was all up with me sure, and it wasn't long before Little Wolf was after me, mad as a wet hen. 'You've been lying to me all along,' he said. 'These men have gone to tell the solders. You are no Sioux at all. I will have you killed '

"'Oh, come now, old man,' I said to him, 'don't get all stirred up over this.' (All the time my own hair was creeping, though I didn't dare show a sign of scare, as you may suppose.) 'Come now,' I said, 'you're away off about this So far from this making me out a liar, it only proves that I have told you the truth. I told you these boys were dead scared of your folks all along, your men have talked so rough to them. They are not Cheyennes, and they don't know your people, and they can't tell a really great and good chief at sight, the way I can. They're afraid to go on north with you any further, for fear some of your foolish young men will slip an arrow into them; so they have lit out. They are men of no sand at all, and I wouldn't pay any attention to them if I were you.'

"Well, I must have been an inspired confidence man; for, anyway, I acted so blame cool and indifferent about it that Little Wolf hesitated again, and again said he guessed he wouldn't kill me. I think he was getting a little nervous about then, and didn't want to kill any more men than he could help, lest it should count too heavily against him in case he should get rounded up any time soon. At any rate he set me free in camp, and told me that I could go along with them, though I could not leave the party.

"It happened that some of the young men were going out antelope hunting that next day, and I asked if I mightn't go out and have a little hunt with the boys myself. Little Wolf said he didn't care, but that I'd better keep pretty close in to camp or some of the foolish young men might shoot me, as a good many of them had expressed an earnest wish to do that. I told him they were only fooling—that I wasn't afraid of my friends. 'But see here, old man,' I said, 'you'd better let me have my own horse, for this cayuse you've given me is no good on earth. I don't want to get laughed at if I go hunting with these young men. Give me my own horse and my rifle and some cartridges, and I'll go out and help kill some meat. I'm a little of a hunter myself, as I'll go on to show you if you give me a chance.'

"Well, that old fool, Little Wolf, was silly enough to let me have my horse and gun again, though he only allowed me to have six cartridges. So I went on out with the hunting party, and before long we got into some antelope. I shot and crippled one antelope, and I set on out after it, shooting at it once or twice to keep up appearances, but being mighty careful not to hit it, for that crippled antelope was better for me than a dozen dead ones. I crowded the antelope on off up into a sort of coulee, the other hunters being all pretty busy off in other directions. I kept on running it, and shouting and shooting, till I only had one more shot left. The antelope was then a little way off from the others. I knew my horse was a good one, and that he was grain fed and able to outstay their ponies. So, when I got as good a start as I could, I dug into him and went off a-flying, hitting the ground in the high places, and all the Cheyennes after me very cordially. They weren't lucky enough to hit me or to catch me, and I kept right on across the country all day and as far into that night as my horse could stand up. Then I took off the saddle and let him feed a little. I went all that day and all that night, all the next day and all the next night. I made a big elbow, some ninety miles in all, from toward the head of Powder River over on to O'Fallon's Creek, and at 9 o'clock in the morning of my next day, I saw a column of soldiers on the march and knew in a minute what was up. Fleury had got to the troops and the column was out after Little Wolf. I had still my last cartridge, and I had had nothing to eat since I left the Indians at the antelope hunt. I ate a slight lunch when I got up with the troops.

"We crowded on after the Cheyennes, and in less than sixty miles we overtook them and surrounded them. Little Wolf surrendered to the troops, and when he saw me he was the maddest man I ever laid my eyes on. He was ready to do all sorts of things to me. But I explained to him how it had been, and told him that I had to do it, and that if he had been in my place he ought to have done the same thing, as it was the only thing to prevent my being killed at once. I told him I was sorry for him, but that he would have been caught anyway, so he ought not to feel hard toward me. And blamed if I didn't confidence him again, so that after awhile he said that he guessed I was right, and that I was justified as a warrior in doing what I had done!

"This band of Indians had left the Indian Nations the summer before this, 1878, and they had fought their way north in the long campaign, which was at the time well known, clear across Kansas and Nebraska and up to where we caught them. That was something of a masterly retreat, when you come to think about that, since they had all the U. S. army after them for several months. In the sandhills of Nebraska, Dull Knife, the head chief, with his band was captured. This was in 1878. The Indians so captured rose on their guards and killed a number of the soldiers and lost a great many killed in return. Little Wolf told us of that, and he said that they had had their hardest fighting wherever they crossed the railroads, as the troops could be massed there to meet them, I suppose."

The Suicide of the Cheyennes.

"Of course, when a band of Indians travels across country this way, they don't go like so many soldiers, in a close mass, but more or less scattered out. I say that we took Little

Wolf's band, and we did take forty-two lodges of them, but really there were a few of his Indians who did not surrender at the time. Of these some came in later and gave themselves up, but there were some who did not surrender at all. As late as June of that summer (1879) near Fort Keogh, some of these fire eaters surprised a party of signal service men who were out a little way from the post, and killed the sergeant of the party. For this they were pursued and captured, and later tried. They were sentenced to death, three of them, and were confined in the prison, or guard house. One morning they were all three found dead in their room. They had had no weapon left them, and at first it was a mystery how they had killed themselves, till it was seen that one was hanging by the neck, and that the others had been choked to death. Then it was a mystery how the other two had been choked, till it was seen by the thin marks on their necks they had been hung with the same cord which was suspending the Indian found hanging. Those three men had determined that they would not die at the hand of the white men, and had resolved to kill themselves. They had nothing to do this with except their moccasin strings, and these were not strong enough unless they were joined together. So they all three took off their moccasin strings and twisted them all together, making a rope strong enough to support the weight of a man. The first Indian had hung himself this way, by the neck, fastening the thong to the grating of the window. He had to swing himself down on his knees to hang himself this way, but he did it, and the others must have sat there and watched him do it. After he was dead, the next man took the thong and hung himself in the same way until he too was dead. Then the last man took the rope and so hung himself, and was found as I said, no one being there to relieve him of the cord.

"Now you talk about hero stories. Maybe no Indian can be a hero. But I allow that from their standpoint those men had plenty of courage and determination, and it suits me well enough to call them heroes."

There never was anything in any of Billy's talk which savored in the least of boasting or bravado, and he always preferred talking about some one else than himself. But I wonder if it is generally known who was the man who really found the Cheyennes on their northern flight, and who stopped them and brought them to retribution? I have never read anywhere that it was Billy Jackson, though perhaps Gen. Miles may have mentioned him in his report. So we were getting a little unwritten history of the plains, perhaps, this windy day in the lodge.

After Billy's story of the three Cheyenne suicides, none of us felt much like any further story telling for a while, but Billy broke out a laughing after a while.

Tom Campbell's Busy Day.

"I can't help thinking of a funny thing that happened once, up at old Fort Union, near the mouth of the Yellowstone. The Assinaboines caught one of our men who wanted to be a scout, and they had fun with him. They threw him into a bed of prickly pear, and Tom Campbell, that was his name, was full of thorns for weeks, so full he couldn't lie down. The whole force at the post took turns picking the thorns out of Tom, and when anybody was out of a job for the time, it was fashionable to borrow a pair of tweezers and help pull thorns out of Tom. My, but his disposition was riled by that! We used to have a little fun now and then, you see, back in the old times, though we did have to wear our six shooters when we went to prayers."

FRIENDSHIP.

And so we passed one no-hunting day. At 4 o'clock in the afternoon the wind began to puff itself out, finally lulling so that we dared go outside. We dug away the snow from about the lodge, fixed up the lodge floor with dry boughs, put down a few trout to bake under the ashes, and set a shoulder of sheep to swinging above the fire on a rope. Gradually the shoulder began to sizzle and grow brown. Gradually our appetites waxed keener. Gradully the coffeepot began to send forth odors which blended with those from the shoulder of sheep. So we forgot the prants of Ai-so-pom-stan for the time.

E. Hough.

Stolen Sweets.

A valued correspondent, who shall be nameless, thus pointedly expresses a state of affairs, familiar to most owners of preserved woods or waters:

"In closing, would say that we use the preserve as a summer home, and do not particularly care to have it brought into publicity sufficient to bring outside sportsmen in there. We find it hard enough now to keep away the natives, who think that if they can only get a hook into our lakes, they can take away all the trout they can carry—simply because it is protected, I suppose on the principle that the more difficult a thing is of attainment the more it is desired."

THE BEE HUNTERS.

We had cast our flies to the very headwaters of Elk Run (the last three or four miles in "green timber," *i. e.*, virgin forest), and had transferred about two dozen speckled beauties to our baskets. Then at Lingo's suggestion we struck across the "divide" into the valley of Cook Run, intending to follow down that stream to its confluence with the Rich River, into which also Elk Run emptied. This divide was the very summit of the Alleghanies, at this point a plateau about a mile wide on the west, descending gradually to the Ohio, on the east breaking abruptly by tremendous gorges into the valley of the Susquehanna.

We found a bear wallow and a bear trap, and came after a while to a circular opening in the forest about a rod in diameter, in which the trees had been leveled by the axe, and lay about in all directions.

"Ah!" said Lingo, "a bee opening, and there is where they spread the honey to take the bees."

He pointed to a stump in the center of the clearing cut with a level surface and about 5ft. above the ground.

"The bee hunter spreads a little honey on that stump and waits Presently a bee flying by smells it, or is attracted by

TALKING.

the clearing and alights on the stump. As soon as he has gathered a load the busy little worker rises and makes a beeline for his store in some old, hollow tree. The hunter notes the direction taken and follows, keeping a wary eye out for a bee tree. If he does not find it after going a certain distance, he makes another opening and repeats the operation, and so on until he finds the tree. There are probably two of them, and they are armed with a double bitted axe, a great, wide-bottomed basket for the honey and gauze veils for the hands and face. The bee tree is probably some hollow giant of the forest, with a knot-hole 60 or 70ft. up, where the bees enter. One of the hunters bares his arms and the sturdy strokes of the axe ring out. It is only a shell and soon topples to its fall. The men stand one side, out of reach of the dead timber, and the trunk lumbers to earth, broken into half a dozen pieces, the bees swarm out; but the veiled men pay little attention to them, they quickly open a cavity around the bees' front door and transfer the honey to their basket. I think I can find the tree these particular hunters were after, if you would like to follow the trail."

He jumped upon the stump and took a long look about, then plunged into the thick forest, I following.

Just north of us the great hemlocks and birches we had been traveling under changed to a dense growth of young timber, chiefly beech, birch, poplar, black birch and wild cherry, quite distinct from the forest proper. Lingo said that a tornado had probably leveled it, and then fire had started and consumed the dead tops and fallen trunks, after which this new growth had sprung up. Several hundred yards away, however, rose several gigantic white birches which had escaped the general destruction, and still towered a hundred feet in air, but old, very old, moss-grown, and dead at the top. My guide led the way thither, and as we came to them successively scanned each scarred and mature trunk. There were holes in them that might have sheltered whole colonies of bees, but there were no signs of their presence.

"There it is," he said, presently, pointing to a mammoth white birch, prostrate and broken into several pieces by its fall. About midway of it a great cleft had been cut in the trunk, and pieces of comb still adhering to it and to the chips, gave evidence of the tragedy enacted therein.

"It was a good hour's work to fell that tree," said Lingo, examining it with the eye of a practiced woodsman, "and half an hour's work to cut the cleft. Then they had to tote the honey a good ten miles to the nearest settlement."

"How many pounds do you think the tree yielded?" I asked.

"Oh, perhaps 20lbs."

"And what became of the poor bees?"

"Oh, they found other quarters no doubt and went to laying up new stores. They are used to being despoiled, for bears rob them whenever they get a chance. They climb the bee tree, thrust in their paws, and withdraw them covered with honey; then lick off the sweets quite oblivious of the stings of the enraged bees, unless one gets stung on the nose, when his antics are laughable."

"Did you ever know bees hive anywhere except in a hollow tree, in caves or crevices of cliffs, for instance?" I asked.

"No, I never did," he replied.

"I once found a colony of bees in the crevices of a huge crag in New England, and there were indications of a large store of honey; but as a ton of dynamite would have been required to open the rock we could not determine the exact amount. This is the only instance that ever came to my knowledge."

We looked around in the hoary old trunks for signs of another bee tree, but failed to find any.

"If I had a little honey," said Lingo, "I would make an opening and try for a tree myself, just to show you how it is done."

Chas. Burr Todd.

ALGONQUIN PARK DESECRATION.

Toledo, O., July 27.—*Editor Forest and Stream:* I have been much interested by your correspondent's account of Algonquin Park. I refer to Dr. McCallum, and to the very interesting letter in your issue of June 26. I have been saddened by it as well. I have made three trips through the district named, and at different times spent almost a year there, and have been saddened by the fact that the grandeur of setting aside a tract of primitive wilderness, of such rare beauty, should be made a piece of flimsy mockery, by the petty spirit of utilitarianism, so often justly laid at the door of "The States."

I refer to the fact which your correspondent mentions as merely incidental, viz.: "Only the pines have been sold, and no other forest groves will be touched."

I am compelled to conclude that Mr. McCallum does not know the effect of removing "only the pine." The loss of those noble trees is bad enough, and pine is a large proportion of the growth from Ox Tongue Lake to White Trout, but the mutilation and defacing of the landscape in getting out the pine is a hundredfold worse.

Canoe Lake, when I last saw it, was a charming bit of natural loveliness—wooded to its brink with grand old pines, the beautiful Muskoka coming in from Big Joe Lake at one end, and out to Tea Lake at the other. In its center a wooded island, christened by us "Toledo Island," commanding all the shore—an ideal place for a camp.

Around the lake were confidential little bays, where water lilies grew, and where deer came to eat the buds. The lake was full of fish and the fish hawk was thoroughly at home. There were many delightful little trips to be taken on Canoe Lake: to Smoke Lake, Big and Little Joe, and Doe Lake—each had its wild, untouched charms. I make all this in the past tense, for it is all gone forever. Here is a picture of the lake, drawn by Thomas Salmon, in 1896, one of our guides, as fine a fellow as ever stopped a buck or reeled in a 4-pounder—and that is praise indeed—and withal a lover of nature, with a tender appreciation of its beauties. I quote: "I was thinking the other day, as I came through Canoe Lake, about the times we had there. Now, I doubt if you would know the lake; all the pine around it is gone. The island we used to camp on has hardly anything green on it. You remember where you shot the old doe—in the bay back of the island—that we did not get untill next morning, and I skinned her, and the wolves ate her up the next night? Well, that is all being cleared up from there to the river mouth, coming in from Big Joe Lake, and a big sawmill going up. Verily, the Canadian Government knows how to run a national park. There is a big dam and lumber depot at Tea Lake Falls. The big sand beach at the head of Canoe Lake is covered by water. The pine around it is all cut away, where we used to get the partridges. An amphibious steam alligator cavorts around those lakes now, so you can imagine what a breeding ground for game our National Park is. There is also a railroad running—or will be next summer—diagonally through the park from southeast to northwest, touching Canoe Lake at the upper end, and also Smoke Lake. The river from here has also been "improved;" a big lumber chute runs right down the center of the two falls, above Ox Tongue Lake. Going up the river in the summer time was, last year, an impossibility; you couldn't float a canoe after the drive came down, which finished the last of July.

BOUNTY.

"Instead of the musical snort of the buck or the 'you'd-better-go-round' of the bull-frog, the steam whistle will charm the ear of the camper. Truly, after all the pleasant times we used to have, came the Deluge, for everything is flooded. You could go with your canoe where we used to stretch our tent."

There is the whole story of desecration—can anything be sadder? To the north of Canoe Lake, at Catfish and the Mud Lakes, may be seen the blasting effects to the country, of taking out the pine by damming; it was taken out there twenty or thirty years ago.

These lakes, as they are now, would have delighted Edgar Allen Poe. It is the "ghoul-haunted woodland of Weir," the "dark tarn of Auber." The timber is killed 40ft. back from the lakes, and the pines, hemlocks and cedars stretch their whitened, shriveled arms to heaven, as if asking the night to come and conceal the nakedness and desolation. The country is given over to the heron and the wolf.

Algonquin Park will be like a beautiful face seared with a red-hot iron. There may be beauty left, but it will be in ruins.

A. J. Secor.

Death of John P. Lovell.

John P. Lovell, head of the John P. Lovell Arms Co., of Boston, died at his home in East Weymouth, Mass., on July 29, aged seventy-seven years. Mr. Lovell was one of the oldest, best known and most highly respected men in the gun trade, and was counted among Boston's representative merchants. His was a well rounded life

Natural History.

LARCO'S PELICAN.

LARCO is an Italian fisherman who has prospered in America and has a house and fish refrigerator a few hundred yards from the beach on the main street of Santa Barbara.

Some years ago Larco acquired a pelican. The bird was said to have been found tangled up in a wire fence near Saugus at quite a distance from the sea. Sarco says that this bird belongs to the race of white pelicans, who love fresh water, while the gray or brownish pelicans, who frequent our coast in large numbers at certain seasons, are more purely marine in their habits.

Jim, as Larco's pelican is called, seems to know when he is well off. He occasionally wanders, but is usually near by, and a good deal of his time is spent fighting dogs, scaring horses or nipping the trousers of Larco's customers Jim possesses a certain saturnine humor, but he is kindly disposed toward Larco's family, and I have seen one of the young women tuck him under her arm, run with him across the yard and toss him into a corner when he was unruly

It is an interesting thing to buy ten cents worth of small fish and toss them to Jim one at a time for his use. If they come tail first or crosswise, they have to be thrown into the air again so as to enter head first into the pelican's economy.

Jim is white, except for some black patches at the lower edges of the wings and an orange-colored membrane at the base of the bill and around the eyes. The iris of the eye is of a very pale, washed-out gray, but you get an impression of a particularly sharp look on his countenance. Perhaps the eye borrows a reflected tint from the surrounding membrane, and the glitter is set off by the solemn appearance of the long bill and the judicial pose.

There is a peculiar thin excrescence on the bill, like half a disk, at this time (in the month of June). This growth is said to be deciduous, and to be found only on the adult birds in the breeding season, offering, perhaps, some analogy to the horns of deer.

My photographs show Isabella and Jim in various attitudes of confidence and friendship, and Jim alone, after the show is over, waddling off to be first in the race for a sunny corner. H. G. DULOG.

[The white pelican (*Pelicanus erythrorhychus*) is a bird of the interior, rare on the Atlantic coast, and unusual at least on the shores of the Pacific Ocean.]

Sense of Moral Obligation in the Lower Animals.

Editor Forest and Stream:

In a letter in FOREST AND STREAM N. D. Elting says: "Man has a sense of moral obligation; the brute is devoid of it, *i. e.*, he cannot be made to understand the moral wrong of an act; he is incapable of moral conscientiousness."

What is morality? Obedience to the laws of society. The laws of society may be right or wrong, but morality consists in obedience to them. There can be no society without laws. This is as true of a society of birds, of dogs or of ants as it is of a society of human beings. Conscientiousness is that which correlates the individual to the laws of society. The crow, the dog, the stork, is correlated to his society as the man is to his; so the brute must have the faculty of conscientiousness.

Without going further, take an accepted incident in ornithology as an illustration. A foreign gentleman placed a goose's egg in the nest of a stork. When the gosling was hatched, the husband stork looked it over, was mortally offended, went off, came back with a number of storks, they sat in trial of the apparently offending wife (who, during the trial, sat cowering upon her nest), condemned her and she was executed. She was the victim of circumstances, but her judges certainly thought her guilty. And could there be guilt without responsibility? And could there be responsibility under the law without conscientiousness, which correlates to the law? Dogs are gregarious, Their communities have laws. They hold more things in common than do storks. But among them there is responsibility to law—in proof of which allow me to refer to the commercial life of the Constantinopolitan dogs—and each individual dog must, consequently, have something that in man we call conscience; though, of course, an occasional dog may lack conscience, as does the exceptional man; it being true that any sentient bring may lack any one of his many faculties or correlations—conscience as well as memory or the sense of color, for instance.

CHARLES JOSIAH ADAMS.

The New Jersey Pine Snake Industry.

THE pine or bull snake (*Pityophis melanoleucus*) is a common, species, inhabiting pine woods from New Jersey to Ohio and southward. There is another species found in the middle West.

Mr. Charles A. Shriner, State Fish and Game Protector of New Jersey, sends us, from his own paper the Paterson *Chronicle*, this note of a curious New Jersey industry: A few days ago a man dropped into the office of the *Chronicle* for the purpose of obtaining some information concerning snakes. People are apt to go to newspaper offices for all kinds of information, but in matters pertaining to natural history the *Chronicle* seems to have a monopoly. The man in question was not seeking after knowledge for the sake of knowledge; he meant business. He wanted to buy pine snakes, and the more he could get the better would he be satisfied. He had been covering the whole of New Jersey but the stock offered was not sufficient for his needs. He was informed that the pine snake is an animal of very rare occurrence in this part of the State and that all to be found in the northern part of the State would be very few in number and small in size. The man refused to state what he wanted to do with the snakes, but he was apparently very anxious to secure a large number of them.

The gathering of pine snakes is a very well recognized industry in the pine belt of this State, and the crop of them every year adds considerably to the income of the people who gather them. There are a number of curious features connected with this snake gathering industry. In the first place, the pine snake is a harmless animal; he is not at all poisonous, and although at times he may strike in the manner of other snakes he is not capable of inflicting any injury worth mentioning. The people who gather them seize hold of them anywhere and no bad results have ever followed. The price of snakes is uniform, and has been so since the industry started a few years ago; they bring fifteen cents a foot, no matter how large or small. They can get along several days without food, and consequently there is no difficulty in keeping them alive until the agent calls for them. At present the crop of snakes is rather small, owing to the lateness of the season; in a few weeks the industry will be at its height, and then agents will traverse the pine belt from one end to the other for the purpose of securing them. The pine snake is perhaps the largest of New Jersey snakes, specimens 5 and 6ft. long being not at all rare. A fair-sized snake does not find any difficulty in swallowing whole a full-grown rabbit. The most curious feature of the whole business is that none of the persons engaged in gathering the snakes has ever succeeded in ascertaining what the snakes are used for. The agents who collect them are very close-mouthed, and invariably refuse to tell where they take the snakes or what is done with them.

The Sense of Smell.

OAKMONT, Pa., July 31.—*Editor Forest and Stream:* Your editorial in this week's FOREST AND STREAM on the sense of smell in animals, is both interesting and valuable; for comprehension of scenting powers in dogs is greatly aided by knowledge as to the same sense in wild animals, or other domestic ones.

The subject may be further extended by the knowledge that mankind seems to have the sense of smell as fully as any animal has, only it is unused. This, I think, is fairly shown by the fact that the deaf-blind have as acute and accurate a sense of smell as any dog, except of course in the cases of those who lost the senses of light and taste at the same time they lost the other senses of sight and hearing.

One deaf-blind girl assorted the clothing of her fellow pupils, after it had returned from the wash, entirely by smelling it. A deaf-blind young man, born in the early years of this century, recognized his friends by their smells. Another girl knows when a friend comes near her by the same sense, and similar powers are common to all the class (with the exceptions above noted).

Therefore, it seems to me that it is reasonable to assume that the sense of smell is a common endowment of all mankind; but that the senses of sight and hearing are so much superior as means of gaining information, that those possessing these senses neglect that of smell entirely, while those deprived of the more useful senses, utilize those they have remaining. W. WADE.

Squirrels Destroy Birds' Nest.

A FRIEND asks if it is true that pine squirrels kill birds, or eat their eggs, or destroy their nests.

"My place," he says, "shelters a great many birds, and also droves of pine squirrels; I occasionally find nests that have been interfered with, and don't know who to blame; I would dislike to interfere with the squirrels, but if they molest the birds, sentence of transportation will issue against them, very certainly."

All the questions asked in the first paragraph must be answered in the affirmative. The red or pine squirrel is very destructive to nesting birds, eating the eggs and young and destroying them through mischief as well. We regard this species as an unmitigated nuisance which should be destroyed whenever opportunity offers. It is as harmful as the Norway rat, and more so than the house mouse.

Kadiak Bears.

NEW YORK, July 31.—*Editor Forest and Stream:* Wm. W. Hart & Co. just completed dressing their last season's collection of Kadiak Island grizzly bears. For size, fur and perfectness, they excel any lot that has as yet come forward. It took five men to lift the bale of twelve skins. They average from 8 to 10ft. in length, and are beautiful silvery brown in color, and every nose and claw complete, as they are skinned by experienced Indian trappers and hunters.

This enormous beast reaches 1,700lbs in weight, and gets much of its food from the salmon beds along the small tributaries. The bear was classified as a distinct species about two years ago by Dr. Merriam. Mr. Hart says the largest one on record is 11ft. in length, which skin he now holds in his collection. W. W. HART & Co.

Colorado vs. Switzerland.

THE terrible Jungfrau of Switzerland is but 14,000 feet high, yet travelers from all over the world journey to Interlaken to climb it, or to say that they have sat in the hotel and wished that they might climb it. Mont Blanc, in the same delightful little European republic, is forever quilted with snow, and for this reason it is one of the most seductive features of travel to the neighborhood of Geneva. The Chor health resort, on the east side of the Swiss republic, is visited by thousands of invalids, because it is one of the loftiest and noblest of European sanitariums.

Then why should not every American, who has the money to spare and the desire to make a journey, get out into Colorado, strap a pair of mountain boots onto his legs, put a spike on an ash staff and attempt to climb Mount Blanca, in the southern part of this State. Mount Blanca is over 14,400ft. high. Or if he does not care to take the risks of this perilous ascent, why should he not come up into the northern part of the State, place his field glasses in his hands, and gaze on the glacier and the perpetual banks of snow that cover Mt. Hallett? Or if tourists be possessed of reverence or of piety, why may they not locate in central Colorado, and fix their eyes upon the great white cross that indents the Mount of the Holy Cross at an elevation of 14,176ft.?

If it is the duplicate of Chor that tourists seek, Manitou, in this State, rests at the foot of 14,000ft. Pike's Peak for them, and is itself 6,300ft. above the sea, while being endowed with health-giving waters the equal of Carlsbad.

There are 110 mountains in Colorado whose peaks are over 12,000ft. above the ocean level. Forty of these are higher than 14,000ft., and more than half of that number are so remote and rugged that no one has yet dared to attempt to climb them. They are as unique as those of Switzerland, and as fearful as the Alps in the warning they offer to the men or women who are so hardy as to defy them by starting upon their ascent. Some of them are massed with snow, others have glaciers over their approaches, and others are merely masses of jagged rocks.

Not even Coloradoans have sought as yet to surmount them, and the profession of "guide" is still open to whoever may care to enter it. Railroads reach within close enough range to provide hotel facilities, but otherwise the mountain climbing of Colorado is yet awaiting its pioneers. Did the Coloradoans or the people of other States fully realize the intoxication as well as the health-giving powers of mountain climbing? Rocky Mountain climbing would become one of the most popular recreations of America.

Only one mountain climbing club is known to exist in Colorado. There is room for a dozen more. There should be one in every city. By the evidences such clubs might offer of their thrilling experiences and of their unexampled pastimes, the fame of the Rockies as a place of pleasure and adventure might be widely advertised, and Colorado thus be pushed forward to the place it must eventually occupy as the American substitute for Switzerland.—*Denver Times.*

Game Bag and Gun.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub Co. on receipt of price, 25 cents. All dealers sell it

AMERICAN GAME PARKS.

The "Forest and Stream's" Fourth Annual Report on Game in Preserves.

Part Two.—Unfenced Parks.

(*Continued from page 87.*)

The Griffith Preserve.

A WRITER in *Harper's Weekly* describing this preserve, which is the property of a gentleman sometimes known as the "lumber king of southern Vermont," says:

"Scarcely more than ten miles from the village of Danby, near the very top of the mountains, a great oval bowl of translucent water lies, 2,500ft high, embosomed amidst great spruce forests. These have never known the ring of the chopper's axe, except so far as judicious cutting has made an easier pathway through the dense wood, or cleared away the timber and underbrush along the bluff which overlooks one side of the lake. Here an ample house with wide piazzas squats with an air of homely comfort, and inside fireplaces gape for big chunks of log; for even in midsummer nightfall often brings a shiver with it. The lake and the streams issuing from it are stocked every spring with yearling trout and two year olds; for these are found to do better in pond waters than the small fry, as the bull pout and pickerel, indigenous to most New England lakes and ponds, make great havoc with the baby fish. Pains are similarly taken by the owner to enrich the thickets with partridges and pheasants, while the bigger game takes care of itself without any helping hand. As the visitor climbs to some coign of vantage, whence he may look down on a great panorama of mountain and valley flashing fifty miles around in the sunshine, the shambling of bruin in an adjoining brake, or the leap of a deer through the ferns of a near ravine may startle him at any moment with a thrill of surprise. Good roads are building, at large expense, in and around this domain, which contains several thousand acres. The timber which must needs be cut out of the dense forest to perfect its uses for sport and its convenience for the sportsman will, it is supposed, go far to pay the cost of making and maintaining the preserve."
